194 to carry the so-called zach, i.e., long, thin, curled wood-shavings, such as are customary in connection with all the events in Gilyak life that are bound up with superstitious ideas, the bear festivals, funeral ceremonies, and the like (1).

1. See p. 662 ff. above.

/518 cont./

226 in general the same everywhere. But the individual peoples
[17] prefer one or another method of fishing, according to their nature and the local conditions in their part of the river. The Gilyak chiefly catch them with nets, which are knotted with large meshes and very strong twine so as not to be torn by the resistance of the large animals. The shape of these nets and the way they are handled differ, however, and in this the season of the year in particular is also a definite factor, for it depends, for example, on whether the fish are present in larger or smaller quantities, whether they stay closer to the surface or at greater depths, whether the river is open or covered with ice, and so forth.

Toward the end of May and in June, when the sturgeon and hausen coming from the sea are most abundant around the mouth of the river and stay near the surface, especially in calm weather, the Gilyak get along with a simple, longish-quadrangular net, on the upper edge of which are fastened a few wooden floats and on the lower edge occasional small stones. In two boats the Gilyak go out in the channel of the
/519/ river with this net, cast it across it, and, holding the upper ends of the net, let themselves be driven downstream by the current against the ascending fish. If the surface of the river is calm, they recognize with a sharp and practiced eye the approach of a large fish from afar, by a gentle swirling of the water, etc., and guide their boats with the net between
[192] them toward the fish. When it has reached the net and has become entangled in it, the wooden float affected gives notice of it, and now both boats go to the spot where the fish is, the net is lifted, and the fish entangled in it is pulled into the boat by means of an iron hook attached to a pole (Gilyak schabtschamrch, Pl. XI /see p.1020/, Fig. 2) and killed by a blow on the head with a club. If the fish is very large and the boat small, it is towed by means of a hook and a stout rope and
[411] taken to land to be killed there. The proper club for this is made out of a branched tree-root and equipped with an end piece of stone -- a circumstance which undoubtedly shows the

/519 cont./

226 (umyssj) running from the walls of the bag betray the entrance
/520/ of the fish, the net is drawn together, and the fish is caught. Sometimes this bag net is set permanently in the river, for which two posts are driven as firmly as possible into the river bed as far apart as the diameter of the bag opening, and the net is fastened to them by means of the rings and cords on its edges on either side. A Gilyak sitting in a boat takes up his station at one of the posts and holds the signal strings in his hand so that, as soon as a fish has entered the net, he either catches it definitively and recovers it himself or he procures the help needed to do it.

The two last-mentioned nets are also used for fishing in winter, but the ice cover of the river then makes necessary a few other devices and manipulations. First of all, for each net, two holes must be made at a distance corresponding to its length, or, in the case of the bag net, to the diameter of its
226 opening. To scoop out the detached pieces of ice floating in
192 the holes the Gilyak use the hand net (Gilyak chuntulk) (1)

[227]

1. The net stretched in the hoop is called assj in Gilyak, the crosspiece in the lower part of the hoop -- lott, the long and crude handle-stick, with which the new ice that perhaps arose in the hole is sometimes broken up -- kip.

[227] illustrated on Plate XL /see p.1020/, Fig. 3. A special instru-
[532] ment is used for setting up the net under the ice: it is a long, flat, wooden staff curved slightly upward toward the tip, the so-called odn, which on the end runs out into an approximately triangular plate with two points directed toward the rear and with two eyes carved in it in a primitive manner, which bears the name odn-tschongr, i.e., odn head (see Pl. XL, Fig. 4).
226 One reaches into one of the holes in the ice with this staff and shoves it forward, close under the ice, until the tip, the odn-tschongr, comes out at the other hole. Here one of the two

/521 cont./

226 Among the Gilyak this fishing is done in the following way. An
[192] anchor (Gilyak tschabch) consisting of a branched tree-root, or of three wooden pegs connected with one another in the manner shown on Plate XLI /see p.1021/, Fig. 10, and fastened to a stone between them, is lowered into the deep channel of the river by a rope (Gilyak tyk) (2) plaited out of willow bast and

2. Perhaps tyk merely means "rope" in general.

many fathoms long. Extending from this thick rope at certain intervals are thinner and shorter bast cords, and at the end of each one there is fastened a wooden clog (Gilyak kita, ibid., Fig. 9) equipped with a pointed and sharply ground iron hook. From the upper end of each of these clogs a thin string runs to the surface of the water where it bears a wooden or bark float. At certain intervals stones are tied to the main rope so that it will remain lying on the river bed, while the clogs with their iron hooks float some distance above it and, thanks to the floats, assume a more or less vertical or slanting position. Finally, at the very end of the main rope, which is lowered into the water last as the apparatus is being set up, a heavy wooden block is attached as a float, which makes the end of the rope easy to find at any time. The fish going up the river run into the clogs, push past them or even play with them, injure themselves in doing so, thrash about, and only remain ever more firmly hung on the hooks, as is revealed by the movements of the corresponding wooden floats. As soon as the Gilyak notice this, they come along in the boats, wind up the rope from the floating wooden block, and lift the fish into the boat by means of the hooks described above.

226 In fishing for sturgeon and hausen, the Gilyak use the
411 harpoon, though again less frequently than the net, simply because, as was said above, they move on the water with great caution and not too easily and boldly. The fish-harpoons customarily used among them are of two kinds: one consists of a simple iron point equipped with a couple of barbs, which

/525 cont./

226 The dates given here for the migrations of S. proteus and
[114] S. lagocephalus at the mouth of the Amur agree very well with the dates given above for various points of the northern part of the Sea of Japan, especially if one keeps in mind, as is required on the basis of the available data, the multiple, intermittent, more or less large migrations or ascents of one and
/526/ the same species. If one also takes into account the greater or smaller numbers in which they appear at the points mentioned above, one comes to the conclusion that S. proteus and S. lagocephalus, moving northward from the northern part of the Sea of Japan reach the Amur-Liman and the mouth of the Amur River, in the course of which the former, especially toward the end of its migration period, enters all the bays and inlets, and even the smallest rivers of both coasts, in great quantities, whereas the latter visits only the larger and major ones among them, but avoids the smaller ones, and in the main, moving against the current coming from the Liman and strongly mixed with fresh water, strives for the mighty Amur in order to go far up into its extensive network and in particular into the large tributaries of its lower course. In the following, while discussing the fishing of the other peoples of the Amur region living upstream from the Gilyak, we shall repeatedly encounter it on its migration. First, however, we must remain for a moment with the appearance of S. proteus and S. lagocephalus in the Gilyak area.

226 The arrival and the mass migration of these two fish
192 especially important for the economy of the Gilyak are, of
805 course, phenomena of such extraordinary significance for them that they are used by them to designate the periods of the year, the months, in which they occur. For instance, May is known among them as the month in which the tengi-tscho (S. proteus) first comes upstream, walten-tengi-long, and June, in which its mass migration takes place, tengi-wota-long (1). August

1. Long in Gilyak means "month"; I am unable to offer a detailed explanation of the expressions "walten" and "wota," but

/526 cont./

226 192 805

1. (cont.)
it seems to me that in these as well as in the following designations for the months the first expression refers to the first and still sparse appearance of the fish concerned, and the latter to the main or mass appearance of it.

during which the lyghi-tscho (S. lagocephalus) goes up the Amur River in colossal numbers and the activity of the entire population is required for the preparation of winter supplies, is called among the Gilyak lyghi-wota-long or pilja-tschrar- (2), or simply

2. The word "tschrar" is undoubtedly related to "tscho," fish.

pilja-long, i.e., the "great fish-month," or also simply "great month." This latter designation gives especially convincing evidence of the great importance which S. lagocephalus has for the entire economy of the Gilyak. In comparison with June and especially with August, July is only poor for fish. Among the species of fish peculiar to it S. lycaodon (Gilyak well, the nerka of the Russians) is the most prominent. This species of salmon, however, only plays a certain role farther upstream, among the Olcha and Goldi, which will be discussed at the appropriate place, but for the Gilyak it is of no special importance, inasmuch as it does not appear by far in such quantities as S. proteus or even S. lagocephalus and does not provide as good and as long-lasting a jukola as these do; indeed, in view of the certain quantities of lyghi-tscho to be expected soon, the Gilyak regard it as useless and not worth the trouble /527/ to prepare jukola supplies from the well. In contrast to August, the "great fish-month," July is therefore called by the Gilyak matschn-

/527 cont./

226 192 805

tschrar-long -- "the little fish-month" (1).

[128]

1. At the appropriate place in the following there will be a discussion of the other designations which the months May-August bear among the Gilyak and which are derived from factors other than the periods of the migrations of fish, as well as the names customary among them for the other months.

226 The direction and the time of migration of S. proteus and S. lagocephalus along the east coast of Sakhalin seem to be somewhat different than in the northern part of the Sea of Japan, in the Liman, and at the mouth of the Amur. According to Mizul, the former goes along this coast from south to north, reaches the Bay of Patience about the middle of June, and in July and until late August goes up the Plyi or Poro-nai and its tributaries. During the first half of August it also appears along the island's coast located to the north of the Bay of Patience, goes up into the Tymy River, and by the middle of this month and until late in the fall is found in its upper course and its tributaries. S. lagocephalus appears somewhat later than S. proteus, and, as Mizul expressly remarks, first in the northern part of southern Sakhalin and not until later in the southern part, so that its migration here, in contrast to that of S. proteus, seems to go from north to south; moreover, it appears there in smaller quantities and not in all, but only in certain rivers, in these, however, every year, though in variable numbers (2). It therefore seems principally to strive

2. Mizul, op. cit., pp. 46-49.

for the larger rivers on the east coast of Sakhalin also, that is, the Poro-nai and especially the Tymy. At the mouth of the latter, in Nyi Bay, Poljakof in 1881 witnessed the mass appearance and ascent of S. lagocephalus into the river, which continued

/528 cont./

226 The great numbers in which the salmon, and in particular the two species repeatedly named, go up the Amur and its tributaries make catching them in the largest quantities an easy matter for the Gilyak. In the small tributaries, such as the Litsch, Kamr, etc., the fish crowd and almost push themselves onto the bank and can be taken from the shallow water simply with the hand, and from deeper water scooped up in dragnets or pulled up with hooks and thrown into the boat. Women and children participate in this work, and within a short time one boat after another, filled with fish, returns home, where the previously described, more strenuous work of skinning, cutting up, and hanging the fish on the drying racks is undertaken. While the women attend to this, the men bring more and more new material. In the smaller rivers, a net is also often drawn across the entire width of the river, and in this manner the whole shoal of fish ascending at the time is caught, insofar as the net permits this without tearing. In the large river where fishing is done exclusively by the men, the schools of ascending fish are likewise so densely crowded that the simplest nets suffice to catch vast quantities in a short time. The fishermen, in two boats and holding a net between them, go downstream toward the ascending fish and draw up the filled net first into the one boat and then into the other, until both are full. Or two men, holding one end of a net, travel downstream at some distance from the shore toward the fish, while a third man, with the other end of the net in his hand, walks along the shore in the same direction. When they notice that the net is sufficiently filled, the fishermen sitting in the boat turn their vessel about and quickly row toward the man walking along the bank, in order to jump out of the boat near him and, joining forces, drag the net to land. The nets used for catching salmon are given different names by the Gilyak in part according to slight differences in shape and the manner in which they are used and, in addition, are differentiated according to the species of salmon for which they are intended on the basis of the size of their meshes. For example, the above-mentioned, simple,

[251] [252] [462] [462] 227 [192]

/528 cont./

227 192

quadrangular net is called tschessk and, depending on the size of its meshes, is a lyghi-tschessk or a tengi-tschessk; another one was named for me as kyrn-kä and likewise distinguished as lyghi-kyrn-kä and a tengi-kyrn-kä (1), etc.

1. Kä in Gilyak means "net" in general.

226 In order to catch greater quantities of the ascending fish without much trouble, weirs are erected from the bank into the river for the purpose of deflecting the fish from the direction of their migration and directing them into a bag net set up alongside. For this, places are chosen on higher banks in the vicinity of a projecting tongue of land, where there is a stronger current and, as is known from experience, the fish usually ascend in great multitudes. /529/ The nature of such a salmon weir, called myr among the Gilyak, is the following. From the bank a series of piles one fathom apart is driven out into the river, and from the end of it, at a right angle, a second, shorter stretch running downstream is driven into the river bottom. The spaces between the piles are then so closely interwoven with osier switches from the surface of the water as far down as possible that the fish can find no exit. Between the lower end of the row of piles running downstream and a single post standing some distance from it and closer to the bank, the bag net, the myrch-kä of the Gilyak, is fastened. This has the shape of a long funnel very gradually becoming narrower toward the bottom: a specimen from the village of Tschcharbach that I measured, spread out on the ground, had a length of six and a half meters and a width of three meters at the upper end and one and a half meters at the lower one. From the upper edge of this funnel-shaped net, equipped with two parallel willow-bast cords, a slit in the net about 12 decimeters long runs down along one side, and on each of the two tips thus formed along the edge of the funnel are put two cords, which, like the similar cord found diametrically opposite them, serve for fastening the net to the appropriate piles. Furthermore, from one of the above-mentioned tips there extends the signal cord (Gilyak umyssj), a

[192] [192]

/503 cont./

very delicately and carefully so that the boards, held together only by wooden pegs, are not driven apart. Therefore, only with the help of a knife, some moss is stuffed from the inside into the seams wherever they permit it, and then a narrow wooden strip is fastened over them, again with small wooden pegs. In addition, however, stronger and wider strips, obtained by splitting thick willow switches, are put over the two long seams from the outside, so that on land the boat rests, so to speak, on two soles, convex on the outside, which, in addition to protecting the seams, also have the utility of reducing the rubbing of the bottom board on the sand and gravel of the shore in pulling the boat into or out of the water and thus protect it against damage. The analogy between these exterior mountings on the boat and the soles, or even more the sole-mountings, on the sleds is so obvious that even the Gilyak, despite the absence of generalization in their language, designate them with the same term as the latter (motassj), whereas they have a special term (twy) for the strips put over the seams inside the boat. Finally, two, or in the case of larger boats even three, pairs of oar-pins /Ruderpinnen/ (Gilyak misgyr), that is, small boards, each equipped with a vertical prong, are put in the front part of the boat on the edges of the sides. They are likewise fastened to the side boards with wooden pegs, so that not a single nail or piece of iron of any kind is used on the entire boat of the Gilyak, or on their sled. Needless to say, the Gilyak do not fail to adorn their boats, too, with a few decorations. For example, the tip of the bottom board projecting below the prow usually runs out into a crudely carved head of a snake, bird, or other animal, the two prow-boards always bear several carved arabesques on their inner surface, and, as a rule, a carved, black or colorfully painted figure, a square, star, or the like, is likewise found on the back of the stern-board. Finally, before the boat is put in the water, it is slightly charred from the outside on the bottom and the lower part of the side-boards for protection against rot,

/503 cont./

396 which is done by raising it on a pair of rather high trestles and lighting the brushwood spread under it.

[192] The oars (Gilyak ywnj) are provided with a broad, rounded blade tapering off to a point and with a hole at a thicker place on the handle for setting them on the oar-pins (Pl. XXXVIII

501 /see p.1018/, Fig. 2) (1). The Gilyak boat does not have fixed

[114] 1. This illustration has a fundamental error, so that one should visualize the direction in which the oar handle is bored as shifted by an angle of 90°, that is, not perpendicular to the blade, but in the same plane.

rowing benches resting on the side walls of the boat, /504/ for they would tear the side boards from the bottom board by their pressure. Instead, the Gilyak use small removable stools which rest only on the bottom board, without touching the side boards. For the same reason, in loading a boat, it is carefully seen to that the entire load rests on the bottom board and does not exert any pressure on the side boards. To this end several pieces of wood considerably shorter than the width of the bottom board are first placed across it, and upon these several boards which are to bear the load are spread the length of the boat -- a precaution which also serves to prevent the objects transported from getting wet in the bottom of the boat. From

114 501 personal experience I realized how necessary it is to treat a Gilyak boat with such care and precaution. In the spring of 1855, when I was about to start on my first summer trip up the Amur and Ussuri, I bought from the Gilyak two boats which apparently had been used very little. Still unfamiliar with their construction, I thought it best if I first had them inspected and put in order in the harbor of Nikolayevsk. One of the naval officers saw to it that they were calked like regular sloops by one of the best experts of the harbor and were equipped with rowing benches and a bench for the erection of a mast. But when I wanted to go aboard and the boats were put in the water, both of them

/504 cont./

114 501 proved to be leaking, and all the efforts of the workers to pair them were in vain. I now saw that through the roug incorrect handling the side boards were more or less torn detached from the bottom board along their entire length amount of hammering, plugging, and calking the seams help any longer -- one of the boats had to be given up al and I reached the nearest Gilyak village in the other only great effort and constant, strenuous bailing. There, in S I bought a new, somewhat larger boat, which I treated fr then on in accordance with its construction and entrusted to Gilyak hands for repairs when needed. And it served m very well, for in the same year I not only went up the Ar and Ussuri and back again to Nikolayevsk in it, but, in th following year, also up the entire Amur and a large part Argunj /Argun/ until I was forced by the drifting ice and cold to abandon it near the village of Mulatscha on the A

501 [192] Entirely different from the oars, the Gilyak steering (Gilyak menj) is provided with an elongated narrow blade at the upper end with a short transverse handle (ibid., Fig As a rule, the Gilyak steer the boat by hand. In order to helm more support in high waves or a strong current, how a short loop of cord or an upright semicircular strip throug the steering oar can be stuck is found at the rear edge of board on which the helmsman sits.

[192] The Gilyak boat does not have a mast. Instead of the Gilyak, if they want to sail, which rarely happens, u two poles tied crosswise (Gilyak kyrsh), which are stuck b their lower ends into corresponding /505/ holes in the sid of the boat, while two long lines running from the upper

[192] are slung around the hindmost crosspiece in the boat. Th (Gilyak tulatsch) consists of a square piece sewed togethe of fish skins, which is attached by corners to the upper en the above-mentioned cross-mast, but at each of the lowe ones is provided with a sheet to haul in and to stretch or l the sail as desired. With such inadequate equipment it is standable that the Gilyak are no masters or heroes at sail

/505 cont./

501 and in any brisk or gusty wind using the sail is cautiously avoided. I also observed that the Gilyak, and likewise the [114] Olcha and Goldi, who accompanied me as guides or oarsmen [157] in my boat always became mortally afraid when sailing in a brisk wind, in spite of the fact that my boat had a mast (1)

1. Needless to say, after my above-mentioned experiences with the Gilyak boat, I had adequate mast bearers put on the bottom board.

and a regular sail, they usually sat there deathly pale and implored me to pull in the sail and to go ashore as soon as possible. There is no doubt, to be sure, that a boat without a keel, when it is heavily loaded, can easily draw water and even capsize with high waves and an unskilled steersman. In order to prevent the boat from drawing water at the side, the edge is sometimes raised on either side by a board attached to [192] the side wall. The Gilyak equip their boats with such sham-[484] edges (Gilyak ardsch) in particular when they undertake sea voyages, for instance, along the coast of Sakhalin to the Japanese, etc.

Of great usefulness on the Gilyak boat is the continuation of the bottom board extending under the prow, because it not only protects the latter from the immediate impact of the waves and possibly also from a severe impact on steep rocks along the shore, with another boat, etc., but it also permits the boat to glide over the waves more easily. Since the oars sit on fixed prongs, very little effort is required to propel a Gilyak boat if it is not moving against a strong current or high waves. It is not very well adapted to battle against them, however, and demands skilled and powerful handling of [114] the rudder. More than once it has happened to me in traveling around rocks and capes protruding into the Amur River that the boat, seized by the strong countercurrent, suddenly turned around and was irresistibly driven back. Undoubtedly the

/506 cont./

501 184 [192] trunk. I saw such a boat (Gilyak mlo-mu) (1) in the winter in the

1. Mu in Gilyak means "boat" in general.

village of Ytkyrn, standing on a trestle next to the yurt and with the snow carefully removed from it. It was about 20 feet long, widest in the middle, and narrowing toward the two ends -- the rear end, finally, blunted vertically and board-shaped, the front end provided with a small tip. On the edge on either side a strip as thick as the side walls was added, to which, from edge to edge at a distance of about two feet apart, cross-strips were fastened, which undoubtedly, like the knee timbers at several places in the interior of the boat between the bottom and the side walls, served to give the side walls more stability and power of resistance. Perhaps the boat was not quite new anymore and needed such supplementary bracing. It did not have any oar-prongs on the edges, such as the Amur boats had, and, accordingly, the oars lying nearby lacked the holes for setting them on such, but otherwise they were of the same form as on the Amur, except that the blade was not as wide. These [171] boats are certainly also propelled, especially over shallow places in the river, merely with the help of poles, as the Kamchadal do with their similarly shaped so-called batt, and as is done also among the Tungusic peoples of the Amur region with like vessels. Finally, just as is done there, here, too, /507/ 396 824 171 only trees with soft wood, namely, poplar, are used for making such boats (1). The Tymy Gilyak use the balsam poplar

1. Cf. Steller, op. cit., p. 56, 75; Krascheninnikof, op. cit., Vol. I, p. 257.

(Populus suaveolens Fisch., Gilyak musskrj), which they specifically designated to me as "mu-tschchar," i.e., boat wood. According to Schmidt, the Ainu of Sakhalin hollow out of the trunks of the same tree canoes which they use for communication on the rivers and short voyages along the seacoast, while for

/545 cont./

prong (Pl. XLII /p.1022/, Fig. 1), on which the ordinary harpoon-point (tugngy), equipped with a long strap, is set. At its rear end, on the other hand, where a deep groove is carved, the board is joined to a pole (Gilyak tla) 10-13 fathoms long and made up of several pieces (1). Thanks to such a length of the handle, an

1. On the island of Ulsut, from which much seal-hunting is carried on, I saw such a pole lying flat, which was 40 paces long.

attack on the shy and cautious animals can be made with this weapon from a considerable distance. For this purpose, the whole weapon is lowered to the water and pushed along, slowly and carefully with its tip toward the seal resting on a stone or otherwise in view, by the hunter lying hidden as much as possible in the boat or on the bank, until it is close enough so that a sudden forceful thrust suffices to drive it into the animal's body, which then, by means of the long strap attached to the harpoon, is pulled toward the boat or onto the shore and clubbed. At places frequently visited by seals the Amur Gilyak also customarily fasten one or more floating beams to a post driven into the river bed at an appropriate distance from the shore in order to lure the seals out of the water and then kill them from hiding with the lych held in readiness (2).

2. The drawings for the woodcut on the following page and for those presented on pp. 751, 763, 780, 791, and 825 were made by the curator of our Anthropological-Ethnographic Museum, Mr. Fr. Russow, in part from the original sketches made on the spot by my travel companion, Mr. Poliwanof, or contained in my diary of the journey, and in part from the pertinent objects in our museum. I therefore take this opportunity to express my sincere gratitude to him.

224 /551 cont./

and Tro Gilyak paghlant and paghlantsch, i.e., the red one) in its different color variations (1).

[104] 1. Concerning the designations for these color variations of the fox among the Gilyak and the other Amur peoples, as well as the kinds and the geographic distribution of both the mammals named and those still to be named in the following, one should read my pertinent discussion of the first volume of this work.

The Gilyak for the most part catch the sable, unquestionably standing first in importance, with traps. The one most commonly used is the so-called ha, a pinch-trap /Quetschfalle/, which is set up in the following manner. In the trunk of a tree, at a height of about three or four feet above the ground, a hollow is made, and in it the end of a beam of corresponding thickness is stuck and supported by a little stick resting upon another little wooden stick or plate, which starts at the bait at the bottom of the hollow. As soon as the animal lured by the bait, a piece of fish (jukola) or seal blubber, nibbles at it, the little supporting stick slides off its base and lets the beam fall. But in order that the latter pinch the animal more firmly and securely, the edge of the hollow lying under it is framed by a small wooden crosspiece. The ha is naturally set up at places which the sable likes to visit, in particular in the bottoms of valleys, on the banks of small rivers, in which case the pinch-beam is laid across the brook, because sables like to use fallen tree trunks as bridges in order to cross over from one slope of a valley to the other (2). Thus,

[192] [191]

2. Przewalski (op. cit., p. 101) even maintains, having often observed it, he says, in the tracks of this animal, that the sable never goes around a fallen

/551 cont./

224

2. (cont.)

tree-trunk, but always runs over it lengthways.

/552/ in the small side valleys of the upper Tymy River on Sakhalin I repeatedly came across either sable traps of this kind still set up or traces of them remaining on the trees. To the chagrin of the Gilyak, however, other small and more or less worthless animals often get caught in the ha instead of sables, such as squirrels (Gilyak lakr and lakrs, in the interior and along the east coast of Sakhalin lafkor), ermine (Gilyak tymr and tymrsch, in the interior and along the east coast of Sakhalin tchymr), and on the mainland especially frequently the Mustela sibirica (Gilyak zongrsk), which is so much like the sable in its way of life and is absent on Sakhalin, and, indeed, in the village of Warki on the Liman, the Gilyak even brought me a jay (Garrulus glandarius) which had been found in a ha and bore the marks of the pinching on its neck. This sable trap of the Gilyak, by the way, is not at all original, since, apart from the Amur Tungus, it recurs with the same or quite similar construction among a number of Siberian peoples, for example, among the sedentary Koryak on Penshinsker /Penzhina/ Bay, in the northern Kamchatka (1), among the Russian Tungus in the Stanovoi

[192] [191] [113]

principle that the traps used for catching polar fox, hares, etc. throughout the polar north of Siberia are based on (3).

[114] 3. A detailed description and an illustration of this last trap is to be found, among

224 [114] /552 cont./

3. (cont.)

others, in Middendorff (Sibir. Reise /Siberian Journey/, Vol. IV, p. 1387).

The same can be said of a second device used among the Gilyak for catching sable, a clamp-trap /Klemmfalle/ constructed with a bow. This trap, distributed throughout Siberia, has already been described and illustrated many times by travelers (4), and I could therefore pass over it quickly if it did not seem

[191]

4. Recently, for instance, by Bush (Reindeer, dogs and Snowshoes, London, 1872, p. 316) and by Middendorff (Sibir. Reise, Vol. IV, p. 1388).

to me of interest to point out, besides its in part peculiar use among the Gilyak, the designations customary among them for its individual components in comparison with those, in part identical, for another apparatus to be discussed immediately below, which can be done much more briefly and clearly with the help of illustrations. Among the Gilyak the clamp-trap in question, shown on Plate XLIII /see p.1023/, Fig. 4, bears the name klai and is made as follows: a simple wooden bow (Gilyak puntsch, a of the illustration) is set into appropriate lateral notches in two sticks (Gilyak assj, b of the illustration) put together in the form of a fork and joined at the top. Above the crossboard (d, Gilyak lyms) connecting them at some distance from their lower, pointed ends, they are provided with longitudinal cutouts, into which the lower part, consisting of another such crossboard, of the wooden piece c, connected at the top with the bowstring, is stuck and can move up and down depending on the tautness of the bow. Curiously enough, the wooden piece c is simply called ku, that is "arrow," by the Gilyak -- a striking /553/ generalization such as is not often found among them otherwise, and, correspondingly, an upper crosspiece (e) connecting the two side staffs with each other and provided with a cutout for the movements of the ku is called kurschoögr)tich (1). A small stick (f,

224 [136] 224 192

[104]

1. The letters in parentheses are only

224 192 [104] /553 cont./

1. (cont.)

barely pronounced, like a faint growl.

Gilyak tschymrch), fastened to the side staffs as well as to the bowstring, serves for stretching the bow, and another (h, Gilyak ksull), which is connected with the former by a cord (g, ksullpuks), holds it taut, which is possible only as long as it is itself supported at its lower end on a thin stick (i, Gilyak taghr-tschissj) inserted into the cutouts in the side staffs between ku and lyms. The slightest pressure on it is sufficient to make the little stick h fly off, whereupon the taut bowstring is released and shoots the ku down to the lyms, tightly clamping anything found in between. In order to set up the klai, the Gilyak first make a hollow in a tree trunk directly above the snow, into which they put some jukola or seal blubber as bait, and then stick the trap under discussion in the snow in front of it in such a way that the animal can only reach the bait by way of the wooden step i and thus inevitably must be caught. In the klai, also, aside from sable, the above-mentioned, worthless small animals are all too often caught. According to the Gilyak, they sometimes also use this trap in their dwellings in order to catch in them the very numerous and annoying rats (Mus decumanus, Gilyak njagrsch), which, by the way, are not used in any way among them.

Taking advantage of the above-mentioned fondness of the sable to run the length of tree trunks felled across a brook, the Gilyak set up snares on them to catch the little animal. For this purpose, in about the middle of the trunk, a cross row of upright sticks more or less hidden by the tree branches is set up and only a single opening just large enough for the sable to slip through is left between them. Not far from them an upright flexible tree branch is stuck in the bottom of the stream, and the tip of it is bent down to the horizontal trunk by means of a string ending in a noose and is fastened in the opening left for the sable between the cross-sticks, in which the noose, too, is found, with the help of a little hook. The latter, since the opening is small, must inevitably fly off when the sable enters it, whereupon the bent branch jerks upward and the noose tightens around the

/553 cont./

224 animal and lifts it off the beam so that it hangs in the air above the brook and in this position is kept safe from beasts of prey. The hunter, therefore, even in case of a delayed inspection of the traps set by him, does not lose his catch. As customary as this method of catching sable, which is also used by other Amur and Siberian peoples, may be among the Gilyak, I never happened to come across it and am unable to give their name for it.

[171] [171]

Furthermore the Gilyak pursue both the previously named especially precious animals and some others by means of an apparatus which /554/ has much in common with the above-described clamp-trap and, though likewise known throughout Siberia, must be discussed here in greater detail for the reasons already stated. It is the so-called self-firer /Selbstschuss/ (Russian ssamostrel) (1), a bow which at the slightest touch shoots

[192]

1. It is very indicative of the common principle of these two devices that the clamp-trap, which is generally called tscherkan in Russian, is also called ssamostrel in the Orenburg Gouvernement, according to Tscherkassof (Zapiski okhotnika Vostochnoi Sibiri /Notes of a Hunter in Eastern Siberia/, St. Petersburg, 1867, p. 336).

(2)

224 off an arrow. Among the Gilyak it is called ngarchotsch and has 192 the following nature. A simple wooden bow, as in the case of the clamp-trap, is fastened at its center to a wooden crosspiece (Pl. XLIII /see p.1023/, Fig. 1, c, Gilyak ksull) (2), on which

2. The identification in the naming of this piece with the small wooden piece h in the klai is most striking; we would rather expect such a one with the fork sticks (assj) of the klai.

/554 cont./

224 the arrow to be shot (d) lies. By means of a looped cord put in
•192 its upper part and a little stick f (Gilyak tschyhrch) bent in a right angle (cut from a branch) and likewise fastened to it, the bow is stretched and through that the upper end of the arrow lying in front of the stretched bowstring is pressed so strongly against its support that it cannot slip off even if the whole apparatus were inclined. Finally, when the bow is stretched, a small piece of wood (Gilyak wett(a)k, g and Fig. 2, ibid., natural size) (3),

3. In this figure, it is shown in a reversed position, the upper side turned downward.

equipped with a long and as fine a cord as possible, is inserted by its upper, flatly pointed, and polished end at the upper end of the tension stick and the looped cord. A slight pull on the cord of this little piece of wood (h, Gilyak tschoch) is sufficient to make it fly off, whereupon the looped cord also slips off the tension stick, and, as a result, the arrow is shot. The self-firing bow is set up on a tree trunk, or on a special pole (Gilyak kips) stuck in the snow for the purpose, in a more or less inclined position, and the above-mentioned thin cord, in a taut state, is drawn across the place where there is an animal trail or where one expects an animal to pass. The main thing is to give it the proper inclination so that the arrow will not shoot beyond the animal or into the ground in front of it or underneath it. The inclination naturally varies in accordance with the kind of animal expected and according to the distance at which the self-firer is set up from its probable path. For each type of animal, special aim must be taken in setting up the self-firer and adjusting the arrow, and for this the Gilyak use a special target-stick, their so-called tschraff (ibid., Fig. 3), which they know to be accurate by experience. In setting up the self-firer, it is put at the point where the animal is to be killed, and the arrow is aimed at one of the transverse stripes marked on it, according to the

/554 cont./

224 kind of animal expected. I have seen only the target-stick used
•192 for the three most important fur-bearing animals, sable, otter, and fox, as well as for hares (Gilyak chuĭ and chuĭk, along the east coast and in the interior of Sakhalin ossjk and kanak, i.e., the white one). /555/ On it three stripes or bands, each between
224 two transverse lines, are marked off: if a fox is expected, the arrow is aimed at the uppermost stripe, point a of the illustration; if the shot is readied for a hare, one aims at the second stripe, point b; for sable one aims the arrow toward the third stripe, point c, and, finally, for the otter, toward the base of the target-stick, point d. The height of these transverse lines and stripes above the base of the target-stick is the following:

Height of transverse line ef above the base (rs)	245	mm.
" " " " gh " " " "	240	"
Average target-height for fox, point a	242 1/2	"
Height of transverse line ik above the base	188	"
" " " " lm " " " "	180	"
Average target-height for hare, point b	184	"
Height of transverse line no above the base	118	"
" " " " pq " " " "	112	"
Average target-height for sable, point c	115	"
The length or height of the whole target-stick amounts to	260	"

target-height for fox; target-height for hare; target-height for sable

[192] The arrow (Gilyak kor) used with the self-firer for the animals mentioned has, in comparison with ordinary arrows, a very peculiar iron point which consists of two prongs equipped on their inner sides with one barb each (1). So that the animal struck by

1. It is noteworthy that whereas the

/555 cont./

224
•192

1. (cont.) downward-shooting wooden piece on the klai, in no way resembling an arrow in its form, is designated in a generalizing fashion only as ku, "arrow," this proper arrow, distinguished only by the form of its point, has a special designation among the Gilyak.

the arrow, but possibly not fatally and only wounded, will not escape, the arrow is fastened by a loosely hanging cord (Gilyak toghr-puks) to the pole on which the self-firer rests.

224 The high value of sable, fox, and otter furs makes the use
[435] of the self-firer in the form described very general among the Gilyak, and in the forests surrounding their dwellings one can easily run into an apparatus of this kind set up, which makes caution necessary when roaming in them. It is surprising that on the above-described target-stick the worthless hare has been given consideration along with the three most highly prized fur-bearing animals. This perhaps may be explained by the fact that it is very common in the entire lower Amur region and on Sakhalin and, in the absence of other animal trails, often provides booty for the self-firers, whereby a good piece of meat and a fur for his own needs always fall to the hunter.

/556/ On the other hand, I have never heard it said that the Gilyak use the self-firer for killing other, more or less valuable, but larger animals, such as the lynx, wolf, alpine wolf, musk deer, reindeer, and elk. There may be various reasons for this.
[191] In general, the Gilyak are not hunters enough and are not enough interested in hunting animals other than those with precious furs to undertake long and strenuous hunting trips over a wide territory, to lay out barricades, and to set up self-firers with arrows aimed horizontally in their passageways, as is customary, for example, among the Tungusic peoples and is discussed at length by

/556 cont./

224 by the native tribes, Tungus, Yakut, Ostyak, Samoyed, and by
[191] the Russians for slaying all the animals possible, from the largest, such as bear and elk, down to the sable and squirrel, is used much less among the Gilyak and is limited to only the most important fur-bearing animals -- a circumstance which is likewise evidence of their slight inclination for hunting and, at the same time, their predominant and decisive interest in trade.

The great benefit that the Gilyak derive from fox fur both in trade and for their own use induces them to hunt this animal, not only with the self-firer, but also in other ways. For example, they likewise use for catching it a clamp-trap, which, constructed in the same way and only somewhat larger, /557/ is also used for
224 wolves. This is their so-called kasma (1). It consists of a peg
•192
[104]

1. The s is pronounced softly here, like the French z.

stuck into the ground and running up into a two-pronged fork at the top. The two prongs, only very gradually diverging from each other from their common base, are of unequal lengths. The shorter one (called wa in Gilyak) is sharpened on its inner side, side, the longer one rounded off. On the latter, not far from its tip, there is a cross-stick (Gilyak tabs-tigrsch) (2), on which

[104] 2. The s again pronounced softly. Tigrsch means "wood" in general.

the bait, a piece of jukola or meat, a dead crow, or the like, is
224 put. The fox or wolf jumps against the peg in order to reach the bait with its paw, whereby its foot slides off the cross-stick and remains clamped between the two prongs. The height of the kasma is different for the fox and the wolf: for the former it must rise to about three and a half feet above the snow; for the latter, four and a half feet.

/557 cont./

224 Finally, the Gilyak also set out poisoned pellets in order to
208 catch foxes and wolves, and the poison seems to be strychnine,
•192 which they buy for the purpose from the Chinese for a high price
437 and, in accordance with the use that they make of it, call kăkch-ochť, i.e. fox poison (3).

3. Among the Gilyak ochť means "substance" in general -- a meaning which we shall encounter on several occasions in the following, but also "medicine" and in the present case probably "poison" -- a naïve-instinctive identification of curative and deadly agents, medicine and poison!

41 When I was among the Gilyak, firearms were not used at a
170 though they were acquainted with them, and, to be sure, from
436 directions: in the first place by way of their northern and western neighbors, the Russian Tungus, Negda, and Samagir, among whom, thanks to Yakut traders, one of the well-known, small-caliber, Russian-Siberian rifles (a so-called pea-shooter (4) is

4. Accordingly, among the Samagir on the Gorin, the powder also had a name borrowed from the Russian (pŏroki"): pŏroke.

occasionally found, and, on the other hand, by way of their southern neighbors, the Olcha and Golds, to whom, though likewise only rarely, one of those often-described, long and clumsy Chinese matchlock penetrated (5). The Gilyak also have their

[113] 5. According to Barrow (Reise durch China im Gefolge der grossbritannischen Gesandtschaft in den Jahren 1793 und 1794 /Journey through China in the Retinue of the Ambassador of

/557 cont./

411 197 489 113

5. (cont.)
Great Britain in 1793 and 1794/, translated from the English by Hüttner, Vienna, 1805, Vol. I, p. 302; Vol. II, p. 58), these are exact copies of the old Portuguese matchlock guns imported to Macao and therefore are by no means very old.

411 192 The Gilyak also have their own, in part very characteristically formed terms for the gun, its individual components, and various kinds of ammunition. For example, among them a gun, regardless of type, is called mäotscha, the barrel of it -- kolm (6), the gunpowder --

6. Accordingly, a single-barreled gun is designated as njakr-kolm-mäotscha, a double-barreled one as mjakr-kolm-mäotscha.

mäotscha-ocht, i.e., "gun substance," or, according to the above observation, in view of its deadly effect, perhaps also "gun poison," the bullet -- mäotscha-ku, i.e., "gun arrow," shot -- matschi-ku (short for matschi-mäotscha-ku), i.e., "small arrows," and the piston -- pachlan-tur, i.e., "copper fire" (7). It was

7. In the case of the Russian-Yakut gun, the Gilyak call the fork fastened movable to the barrel, and used to support the gun while shooting, simply ngytschch (i.e., foot or feet), and for the powder horn they use the expression notrossj, whose etymology is unknown to me.

411 197 152 It was surprising how little /558/ pleasure the Gilyak showed over a gun, whereas a Tungus goes into noisy rapture and shouts for joy at the sight of a neat gun -- obviously they not only lack practical knowledge of the thing, but also a true hunter's heart. At the

/558 cont./

123 152 203

1. (cont.)
of this event had spread from Ulban Bay to the Amur and Liman, and the Gilyak were afraid that I might have a similar magic wand.

411 171 [192]

In my time the only shooting weapons of the Gilyak were the bow and arrow, which they used on occasion against large as well as small animals. The bow (Gilyak puntsch, on Sakhalin punt) is of the same nature as among the Tungus and other Siberian peoples. It is made of the wood of young ash trees [824] or, lacking them, of good birch wood. In the Tymy Valley [192] on Sakhalin the Gilyak designated to me the kind of wood called per by them, i.e., according to Schmidt and Glehn, Evonymus macropterus Rupr., /559/ as their "punt-tschchar" (bow wood) (1), as is also the case among the Ainu (2).

1. Or, as they said as a rule, "punt-lytynt-tschchar," that is, bow-making wood.

[113]

2. Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin, Botanischer Theil /Travels in the Amur Region and on Sakhalin Island, Botanical Section/" (Mém. de l'Acad. Imp. des sc., seventh series, Vol. XII, No. 2, pp. 99, 213, 215).

411 239 53

In order to protect the wood from dampness and to retain its flexibility, the bow has fine birch bark pasted on it, or, as I have seen on especially fine specimens, for example, on the bow from Tebach shown on Plate XLIV /see p.1024/, Figs. 4 and 5, is covered with fine elk skin on the inside, i.e. on the side turned away from the marksman when shooting, but on the outer side turned toward the hunter, with whalebone (Gilyak asm) (3),

[104]

3. The s is soft here, like the French z.

/559 cont./

411 239 [53] [192] [439] 411 192 239 [283] [415]

which also bears fine silver decorations on the specimen illustrated. Sometimes used for this purpose are thin plates from Chinese buffalo horn, which for this reason the Gilyak call puntsch-ngynif, i.e., bow bones, or from the nose-piece of the Rhinoceros tichorhinus, which presumably reaches the Amur region by way of the Tungus and Yakut. The bowstring (Gilyak kich) is twisted out of fine strips of the skin or gut of the white whale. A case made out of fur or fish skin (Gilyak puntsch-chal) is used to protect the bow, especially on trips. The arrows (ku) have wooden shafts with vanes from the tail feathers of the fishing eagle (Haliaëtos albicilla) set in the lower part of two opposite sides (Pl. XLV /see p.1025/, Fig. 4) (4) and points of various forms,

4. By this characteristic alone they are essentially different from the simple shafts of the arrows used on the self-firer and, accordingly, have a special designation in that they are called uch, but the latter winngyr. The eagle feathers on the arrow shaft are called kyla-ngar in Gilyak; the notch at the lower end of the shaft, used for setting the arrow on the bowstring, is called korm.

depending on the animals for which they are intended. In my time among the Gilyak iron arrow points (Gilyak luch) were almost the only ones used, but there were also some of bone (Gilyak krangch), which were supposedly made of the leg bones of the musk deer in particular. Some of these iron arrow points intended for larger animals, elk, reindeer, and the like, and equipped on either side with a more or less sizable barb and in most cases also with a series of smaller barbs and notches, are illustrated on Pl. XLV /see p.1025/, Figs. 1-3. The two-pronged point (kor) used on the arrows for both the bows and the self-firer for killing smaller animals, sable, otter, fox, etc., has already been discussed above. An arrow with a very special shape, called

/559 cont./

411 [192]

vghli or orkai by the Gilyak (Pl. XLVI /see p.1026/, Fig. 1), is used to kill wild fowl, ducks, geese, and the like. It consists almost wholly of wood, in that at the top the shaft runs out into a knob crowned with a point and in which are found three iron points, but blunt ones, turned in different directions (5). I have

411 171 175 [113]

5. There is mention of similar, knob-shaped arrows among various peoples of Siberia in some of the oldest reports on it. For example, Georg Adam Schleissing in his work, Neuentdecktes Sieweria, worinnen die Zobel gefangen werden /Newly Discovered Siberia, Where the Sables Are Caught/, etc. (Danzig, 1692, p. 49), reports that the people there do not shoot pointed arrows but rather "in order that the rare hide not be damaged, the arrow, instead of a point, has a thick iron knob with which they shoot the sable down from the tree, so that it is dizzy and then they run up and beat it to death." Pallas (Reise durch versch. Prov. des Russ. Reichs /Journey through Various Provinces of the Russian Empire/, Vol. I, p. 323) mentions wooden arrows with knob-shaped points which the Kalmyk use to kill birds and small animals. Sujef (in Pallas, op. cit., Vol. III, p. 49) reports on the arrows with a blunt bone knob used among the Ostyak along the Obj for shooting smaller animals, and in Middendorff's travel work (Vol. IV, p. 1276, woodcuts e and d), there is an illustration of such a knob-shaped Ostyak arrow point.

/560 cont./

411 [192] [171]

Among the Gilyak the thrusting weapons, bear pikes, spears and lances, are far more popular than the bow for hunting the large animals of the forest, and they handle them /561/ much more skillfully than the shooting weapon. The bear pike universally used among them (Gilyak lachtsch,(2) Pl. XLVI /see p.1024/, Fig. 2) is of the same nature as among the Tungusic and other Siberian peoples -- a large, broad, single-edged, pointed blade which is attached to a sturdy wooden shaft five to six feet long. [192] The lances (Gilyak kach) (1) are of even greater length. The

1. I heard the Gilyak sometimes call the whole lance this and sometimes only the iron lance-point, just as is done in German with the word "Speer /spear/." And yet they certainly must have different designations for them, as we have seen above in the case of the harpoon and its point.

shaft is uniformly thick and does not begin to taper off toward the point until about two feet from it. The spears sitting on this shaft are two-edged, long and narrow, and along their middle line have a projecting, rounded keel gradually flattening out toward the tip. The spears used in daily life are of cruder workmanship [531] and undecorated, but there are also elegant, very neatly and finely [126] worked pieces, on which all kinds of animal figures, arabesques, and the like are inlaid in silver, copper, and brass, such as the specimen illustrated on Plate XLVI /see p.1016/, Figs. 4 and 5, which I saw and acquired in Tebach (2). Such specimens, however,

2. The illustrations were made by Mr. Maximowicz on the spot. On one of these spears (Fig. 4), among the identical figures on both sides, are to be found excellent representations of the sable as it bites into a fish, etc.

/567 cont./

114 325 326 192 On the other hand, I did have the opportunity of watching the Gilyak forge iron in the village of Tyk on Sakhalin. The smithy was set up in the very rear of the earth yurt, opposite the entrance. For this purpose several boards from the sleeping benches had been removed there, so that the earthen floor underneath was exposed. Here lay two longish bellows (Gilyak chigr) made out of sealskin, whose long tubes converged toward the ends into one common tube. In front of its mouth was set up a semicircular block made of hard, dry clay (Gilyak chugn), which on its lower side was provided with a cutout, the size of which corresponded exactly to the mouth of the bellows tube, and immediately in front of it was the fire, into which were thrust the iron pieces to be forged. In order to keep the bellows tube immovably in place, the two arms were weighted down by several longish and narrow boxes such as are used among the Gilyak, placed on top of one another. A youth worked the two bellows, alternately lifting the one and lowering the other, and another, adult Gilyak, with a pair of tongs (Gilyak watsch) (3), took the

[104] 3. The w is pronounced here like the English w.

iron pieces to be forged out of the fire in order to hammer them on a nearby small, triangular, iron anvil (Gilyak mik). These tongs are of varying sizes depending on the size of the iron pieces to be wrought. Made in my presence were a blade for an ordi-
[243] nary knife used for cutting wood, and the like, a so-called yidshakko (4), and a second, finer piece, a so-called kessj-kessj,

4. See p. 590 above and Plate XXXI /see p. 1011/, Fig. 4.

that is, one of those chains, sometimes rather complicated /568/ which, equipped with various small pendants, an iron pipe-cleaner, a steel for making fire, and the like, are worn at the belt by the

/568 cont./

114 325 326 192 [243] Gilyak (1).

1. See p. 590 above and Plate XXVIII /see p.1009/, Fig. 1.

325 326 For this type of work among the Gilyak, in addition to iron (Gilyak wytsch), other metals, as has been mentioned, are also used, especially copper (Gilyak paghla, i.e., red), brass
[531] [435] (Gilyak tussj), and silver (Gilyak totta) (2). The more of the

[192] 2. The quicksilver which they saw in my possession was totally new to them and caused great surprise among them, but they immediately gave it the characteristic designation of "totta-tschach," that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of the piece. Since it is used only for this purpose or to make orna-
[439] ments, such as rings, ear pendants, clasps, and the like, they prefer the Chinese silver above all others as the softest, because pure, and therefore the easiest to use for their purposes (3).

[436] 3. A few words about the use of silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

[174] The high degree of skill that is expressed in the above-mentioned Gilyak spears, knives, and the like indicates that the forging of iron and other metals is an art practiced by the Gilyak for a long time, and the above-mentioned report by Strahlenberg
325 stands in agreement with this. Undoubtedly, however, they have
197 borrowed this art from one of the two civilized peoples of East
174 Asia neighboring them. The only question is whether from the Chinese or from the Japanese. The circumstance that their relations

G 714 174 325 /572 cont./ of the continent (2), as may be presumed for various reasons,

2. See p. 247 above /untranslated/.

they still had no knowledge of iron and obtained this only after they had become peripheral peoples, that is, after they had been pushed to the extreme eastern coast of the mainland and to the islands and peninsulas lying in front of it and had thus arrived in the vicinity of Japan (3).

3. The question as to the origin and development of ironworking in Japan lies, of course, outside the scope of this work.

G 714 If we now return to the Gilyak after this digression, this is the place, in concluding the above discussion of their weapons used for hunting on land and on the water, to mention a few other pieces of their armament. First to be mentioned here are two
G [192] types of armor (Gilyak petsch) which are completely different in form, material, and origin, /573/ and which, to be sure, are no longer in use at present, but are of no little historical-ethnographic interest.

[192] One of them is iron armor (Gilyak wytsch-petsch). This consists of thin, longish, iron lamellas provided with holes, by means of which they are fastened close to one another on animal or fish skins with straps. The headpiece of this armor (Plate XLIV /see p.1024/, Fig. 2) has the shape of a helmet. The upper, rounded ends of its iron lamellas are bent back somewhat and wound with a strap; a piece designed for the protection of the neck hangs down from its lower edge. The breast or body piece (ibid., Fig. 3), of which I saw only individual parts (in the village of Tebach) consists of several rows of iron lamellas overlapping from top to bottom, which are wider and longer than
G 114 those of the headpiece. In speaking of the Smerenkur (Gilyak)
714 of Sakhalin, Mamia Rinsô (1) mentions this iron armor and says
192

1. Op. cit., p. 194.

/573 cont./

114 714 [192] that it is known under the name of "bettsi," in which can be recognized without difficulty the above-mentioned Gilyak designation "petsch" distorted in Japanese fashion. He says of it that, although little used, it was greatly esteemed and in war was the chief decoration of the one chosen as the leader. In the case of
714 556 the latter statement the imagination of the traveler may have put in a word, but the former one is perfectly correct; in my time these pieces of armor were not used at all, but, though most of them were in a damaged condition and, indeed, were often to be found only in fragmentary parts, they were regarded as such valuable objects that they gave their owners an aura of extraordinary wealth and respect, and a few of them sufficed for the purchase of a wife. Today, therefore, they are only rare antiques
[177] of fabulously high value. They owe this to their foreign origin, for, according to unanimous statements by the Gilyak, they came from the Manchu, and, as Mamia Rinsô also states, are highly prized by the latter themselves.

It is known from the oldest European reports on the subject (2)

171 195 714 [113] 2. Cf. Neuhof, Die Gesantschaft der Ost-Indisch. Gesellsch. in den vereinigt. Niederländern an den Tartarisch. Cham u. nunmehr auch Sinisch. Keiser /The Embassy of the East Indies Company in the Territories of the Netherlands to the Tatarian Khan and Now Also to the Chinese Emperor/, Amsterdam, 1666, p. 394. Also Witsen, Noord en Oost Tartarye, second edition, Amsterdam, 1705, pp. 3, 6, 13.

that even the ancient Manchu (Njutschi) had pieces of armor and helmets, which, like the ones described above, consisted of iron lamellas placed over one another like scales and connected with one another by pins or fastened to a leather foundation. After the conquest of China by the Manchu such armor and helmets were also worn by the Chinese soldiers, officers, and by the

G 325 171 /574 cont./ to the peoples of the lower Amur region, but it does not seem to have gone beyond the Goldi on this route, while the peoples living farther downstream along the Amur and on Sakhalin, the Ainu, Gilyak, and Olcha, had already received it earlier, as discussed above, from the Japanese. During the past decades, finally, the peoples of the lower Amur region have had the opportunity to become acquainted with the Russian manner of forging iron.

G 714 The net armor (Gilyak kä-petsch) is entirely different in nature from the iron armor. It consists of a sleeveless camisole
[192] [239] or short shirt (Pl. XLIV /see p.1024/, Fig. 1), which is plaited with multiple strands of nettle-yarn cord, such as is also used for knotting fish nets, and with individual strips of whalebone
G [234] added here and there. The neck opening is trimmed with long-haired dog fur and has a button and a loop for buttoning it; otherwise the armor, pulled on over the ordinary dog-fur coat, remains open in the front. The net armor is very heavy on accoun
G [126] of the coarse plaiting containing a great quantity of material; the specimen illustrated, which I bought from the Gilyak Mradamn in Ssabach, is 2' 4" long, 1' 10" wide, and weighs 28 pounds (Russian). Whereas the iron armor is of Manchu-Chinese origin, the net armor is genuinely Gilyak. According to the
G [623] Gilyak, the net armor was formerly used by them during major feuds when, as the result of a murder, wife-stealing, or the like, a village took to the field against another one. In my time, however, it was no longer used and, it was said, was to be found
G 714 126 556 in only a few specimens. In fact, the piece acquired by me shows the signs of great age, and its aged former owner was of the opinion that neither his father nor his grandfather had seen it new. Nevertheless, the Gilyak attribute little value to this armor because it was made of worthless material and by them /575/ themselves and is not to be compared with the former, often fragment and rusted Manchurian armor (1).

G 714 171 1. The armor of two other peripheral peoples of East Asia living to the south and to the north of the Gilyak is also made in part

/175 cont./

out of the same material as the Gilyak [illegible]
perach or a wooden sword, to be used in battle
fights which the North Americans had with
the Chinese in 1857 and which lasted four days
in attack which continued of forty layers of
most coarse material and we almost im-
penetrable for other or bayonet (Nordische
Fauna, 1871, No. 214, according to a re-
port sent to the Times by its reporter in
Shanghai). On the other hand, Dittmar
(Ueber die Gestalten und Ornamente
/The Koryak and Chukchee/ " - Bull. de
la cl. hist. phil. de l'Acad. Imp. des sc.
de St. Pétersb., Vol. XIII, p. 131; Mél.
russes, Vol. VIII, p. 51) related that the
Chukchee use armor made of whalebones
and thick animal skins.

To conclude the remarks concerning the weapons of the Gilyak, I must mention, in passing, to be sure, a bribe in nature, but is nevertheless interesting and characteristic. It is their so-called mugamchi (Pl. XXII item 2-10b/, Fig. 20), a roundish or slightly regular stick of hard wood about five feet long, which from top to bottom has been ornamented. Inside indented spiral design which is found on all the shafts of their lances, spears and harpoons and which, despite the smoothness of the latter, nevertheless offers a certain resistance against the pulse of the hand pressed on it. The upper end of the mugamche is rounded off to the shape of a knob, or, more correctly, an arrow. In the lower third it is either merely tapered gradually or flattened somewhat like a wedge. The lower end is provided with a deep groove on the back. From the Gilyak this strange weapon also has advanced to the Negak along the Amur River, among whom it is called mukamchi, evidently a distortion of the Gilyak designation for it, and is generally called mugamchi. Nikolay became acquainted with it among them. In his travel account

/176 cont./

it was even otherwise in their life and household has been developed among them. This necessarily presupposes, however, the existence of an accepted standard of value, which is used by them, through the multiplication of which the operation of the obtaine is made or their price standardized. What is this unit of value or of what does it consist? Gilyak tell us, to be sure, no determine this, as one will see from the following reasons. Since the Gilyak are only familiar with barter, they answer any question about the price of an article, as a rule, by mentioning the quantity of goods desired in exchange, for example, the number of sobacce, two fathoms of cloth, etc.). A question as to the objects in exchange for which they are willing to give up their themselves, the furs of even barter-trade, it rarely understood and only by the more intelligent. As a result, one sees no consum of only a number, preceding the verb "to cost, to be worth." Gilyak are, therefore, in the same position, the unit of value upon which their evaluations are based would have been apparent to one without any difficulty, substantially, as it were. Incidentally, the unit of value borrowed from the Chinese, since it is not representative among the Gilyak, is always only an imaginary quantity for the Amur people, and they are able to turn only an approximate idea of it in terms of the number or quantity of the corresponding piece of goods or other articles. Gilyak can tell, for example, the approximate price of a silver piece is current in the form of coins — the round brass coins with a square hole in the center (Gilyak nachax, which are usually strung one and a thousand on a string. On account of their insignificant value, however, the Gilyak pay no attention to them, and, like the variously shaped bean breadlet, they are used only as decorations for women's skirts or occasionally also in skirt and belt buttons. In the Amur region, however, Gilyak called nachax (that is, probably "coin" in general) by the Gilyak, were not accepted either by the Negak or the Manchu nature of the lower Amur region, both out of complete unfamiliarity with their value and because the Chinese coins, which otherwise would have accept them (1). Through their association with the Russian,

Unfortunately, or at least very soon after its birth, the child
is given a name, usually toward evening of the same day or in the
morning of the following day. The name is not given to him
in the daytime or during the night. This takes place without any
ceremony. The father, or, if the latter is absent, his wife or
the mother, or [illegible] a Gilyak who happens to be present may
propose a name, and the father approves it and adopts it for his
child. It must be expressly stressed that no divinatory rite are
practiced either in connection with the birth or the name-giving.
The Gilyak, who are fond of gambling, have not even a special
superstition. Well-to-do people, however, occasionally express
their joy at the birth of a child by a feast, at which they also give
with a few villagers and friends.

Among the Gilyak, as among the Ainu, it is placed in a cradle
(Gilyak nichakh). This was a very peculiar nature: it consists of
a rectangular frame, the upper part of which is a bent piece of
fringe and which that the upper body of the child, up to its head,
can be bent so that the upper body can be raised, or, if
pointed, remain open, the lower end is closed with a crossboard
which is provided with a hole, through which the child passes
hole. The child, wrapped in bandages and in its naked buttocks,
is set on this board so that the upper body rests in the hollow,
whereupon the cradle is placed in a vertical or slightly inclined
position, and the child is fastened with a strap or two strips of
the other to prevent the child from falling out. A small basket half
filled with sand, which is placed between the cradle and
the opening in the little seat-board, and then the cradle is
hung on a crossbeam of the house, above the sleeping bench
(Gilyak [illegible]. Pl. XXXIV, Fig. 9 [illegible]). Provided with
a hole in the middle, through which the child passes
on it below the cradle. The long strap by which the cradle is
suspended are so skillfully drawn and indeed that the latter can be
set at a slight or steep inclination, as the case may demand
position desired. To quiet or to amuse the child, a bundle of various
small objects (wood or metal) is hung on the back of the cradle and,

/181 cont./

Finally, they also embrace the communistic principle in
that they have no limitations or restrictions on fishing and hunting
to one's own or to others' property. It is true that they have
salmon weirs and those open in the forest where their traps and
deadfalls are set, but these are not fenced off, wholly without
limitation, when the Linnan Gilyak go to the Amur River to fish,
and the Tymgi Gilyak go to the Amur and Ussi-suri to the Tymgi
for salmon fishing, and the latter, in turn, move to the south-
coast to catch lungi. It is true, the Tarkunti and the Tymgi
Gilyak have tim of hospitality with each other. Also, the
[illegible] face the Gilyak people even chuka and farnage to permit
[illegible] to hunt and fish without restriction.

Like the communists, the inviolability of property is also
a foreign idea to a considerable degree. I have been even told that
[illegible] Gilyak men who could not raise a small cloth, for ex-
ample, a female kerchief, or a female dress or a shirt. Some people

[796] [

(the work of stretching the hides on frames and of cutting straps is performed by men). Finally, the heads have to be cooked and prepared for throwing out into the sea.

I watched the two wives of Xitkun work after he returned from the hunt. The younger of the two was busy peeling suet from hides. In this she was helped by a woman, the wife of one of Xitkun's kinsmen. The job of peeling suet from hides is very hard. Most of the time the woman has to work in a bent position. I saw Xitkun's wife lift a hide in the process of cleaning it of suet by seizing a part of the cleaned hide with her mouth. At the same time she held the peeled suet with her left hand and continued the peeling process using a large narrow and somewhat curved knife which she held with her right hand.

The Gilyaks prepare thin seal fat in the following manner. They cut the suet (ŋɔ) into pieces. They put the pieces into a barrel (in the past they used to put them into a large, deep trough) which they then place in a warm spot. There the suet begins to decompose and to melt (I am not in a position to give a more detailed account of the process which takes place in the suet). This yellow fat (tom) flows out of the suet. Depending on the age and variety of the seal the fat is either light or dark and turbid. The Gilyaks pour the melted fat into dried seal stomachs. They give the leavings of the melted suet (ta) to the dogs. Stomachs of seals are used by the Gilyaks for storing seal fat. Having killed a seal the Gilyaks empty out its stomach, blow air into it and hang it up to dry. The fat can be stored for a long time in such a bladder. Once the bladder is filled with fat, it is hung in the barn.

While one of Xitkun's wives was busy peeling suet from hide, the other wife, Hemanχ, 'old woman,' was preparing the heads for cooking. It was certainly no accident that it was Hemanχ, Xitkun's older wife, who was preparing the heads for cooking. Preparing of the heads requires a certain knowledge of religious ceremonies the guardians of which are the old people.

[93] À propos the interpretation of the words hemanχ old woman' and hemar 'old man'. Both words have in common the sound combination hem and differ in their respective endings ar and anχ. Ar means in the Gilyak language male and anχ - female. What then is hem? In the village Chayvo where a certain form of the Sakhalin dialect is spoken, they call an old man hajmŋar. In comparison with the Amur dialect the Sakhalin dialect has retained a great many ancient forms. The etymology of the word hajmŋar can be easily

193 explained. In the same dialect there exists a word ja-jmnd
197 'to know' (to this word there corresponds in the Amur dialect the word jajmd). In the direct object, which according to the rules of the Gilyak language merges with the predicate, the letter j alternates with c h. Thus for instance "I know Mizgun" sounds in Gilyak Ni Mizgun-hajmnd. In this way the verb jajmnd gives rise to the second form of the stem - hajmnd which exists independently of the first as a distinct word (just as the intransitive form of the transitive verb jajmnd 'to know') meaning 'to get old'. Hajmnd means 'to get old'. (In the Gilyak language intransitive verbs are formed out of transitive verbs by alternating the first consonant of the stem of the transitive verb.) In the Gilyak language "to know" and to "get old" derive their origin from the same stem and this is understandable for in the case of primitive man knowledge came with experience and so with age. We have thus explained the origin of hajm in the word hajm ar: hajm is derived from the intransitive form of the stem which, in this form, means 'to get old.' - is the suffix which transforms verbs into nouns. We already know the meaning of ar. Thus the word hajmŋar means 'the knowing male' or 'old male.' The Amur hem is, of course, the same as hajm-ŋ in the Sakhalin dialect which change considerably in the Amur dialect. The disappearance of in it is understandable for the Amur dialect drops its final ŋ's as against the Sakhalin dialect which does not. For instance, 'horse' is murŋ in the Sakhalin dialect and mur in the Amur dialect, 'dog' is qanŋ in the Sakhalin dialect and qan in the Amur dialect. At present we find it difficult to explain why hajm became hem in the Amur dialect, contrary to the rules which would lead us to expect hɔjm as the counterpart of hajm; thus, hɔjmr instead of hemar. At any rate it is incontestable that hemar and hajmŋar have the same meaning and, accordingly, hemanχ means a 'knowing female' or and 'old female.' It is possible that at one time or another the Gilyaks meant by ar not only male but also man. This is quite probable for at present they use two words for man: azmɔt in the Sakhalin dialect and utku in the Amur dialect.

252 Hemanχ sat in squatting position at the trough containing
237 the heads of the sivuchs. The skin was taken off the heads of the sivuch right down to the level of the eyes. The skin on the snouts was untouched. First the old woman cut out the throat together with the tongue. Then she took out of the heqr kuti (?) the plant pisker placed there by the hunters. Then she pulled out the whiskers and put them in a separate cup. After

197 "with the father", while ygryr means "with him", and nygryr: "with me". [F.S. Examples omitted]

193 Often the preposition is entirely omitted (see below). There are almost no grammatical forms. There are no declensions. The verbs sometimes change so much that they are hard to recognize, but these metamorphoses are not so constant that fixed rules could be derived from them. There are some conjugational forms, but they exist within such broad limits that there is room for arbitrariness, that is, one can use one or another form. [F. S.: Examples omitted]

[253] From these examples it may be seen 1) that the verbs are to a large extent modified, but 2) that it is difficult in these modifications to find a constant applying to a particular time, person, and number. It seems certain that up to the present time nothing of the kind exists. At least my Gilyak professors did not object when I used a certain verb in an indefinite form for all moods except the imperative, and for all persons and numbers. Only the imperative always seemed to end in "ya", with the accent on the last syllable. But many verbs are strongly abbreviated or changed; for instance "to sing" is lunyt; "sing" [imperative] is luya. [F. S: Other examples omitted]. The indefinite mood, with few exceptions, ends in "ty".

[254] There are no genders; "he" and "she" are the same. Singular and plural are also the same, only the pronouns are an exception.

The prepositions are usually placed after the word to which they refer; for example: "through the forest", pal (forest) shmy (through).

The adjectives have no comparative and superlative, instead the word lele (very) precedes them. For some things which can be large or small there are related expressions, of which the one referring to the larger object is a repetition of the one referring to the smaller object; for instance: a "small river" is la, "river" is pilala.

/681 cont./

533 Njaungur showed special virtuosity in singing: even the melody was much more varied than the previous ones; in addition, however, he, too, produced the stuttering, the loss of voice, strangulation and the stopping of the gutteral sounds, besides the subsequent belching out /682/ of the words like greater skill, and, moreover, besides the sobbing gutteral trill, he also made a falsetto nasal trill. In his case the trills, and especially the latter, reminded one vividly of the vibrating sound of the jew's-harp. These trills require a great deal of practice, and it is impossible for us to hold them so long and to produce them so clearly. It is also interesting physiologically that in producing these trills the soft palate plays an important role."

Middendorff continues: "From all these songs the differences caused by the individuality of the singers became clear: whereas Lamran, with a good voice and a clear trill, had in his way a melancholy, pleasant, and grave style of singing, the other two singers were like our artistic virtuosos who play violin variations on the cello. Along with the singing it must also be kept in
•[194] mind that the Gilyak language, and thus also the anga, sounds as though the nose had a chicken wishbone clamped on it; in addition there is the childish pronunciation of the r, which sounds as though it were midway between the r, g, and l and which is connected with d, g, and h, and, furthermore, the French ng, the English th and w, the g combined with d, etc."

114 533 Middendorff also noted down the words of the last two songs, but unfortunately I must disregard them here since they cannot be even approximately deciphered. And this should not surprise one, for, in view of the traveler's very short sojourn among the Gilyak, the many and very peculiar sounds of their language must have sounded most strange and bewildering to his ear, which was as yet wholly unaccustomed to them. And there is also the circumstance, making comprehension more difficult to so great a degree, that the singer has the greatest freedom to change and to modulate the words as he pleases to make them fit his rhythm and melody -- a freedom which he does not give up as a rule even in repeating the words, because they were once impressed upon his memory this way during the singing. Hence it is more than doubtful that an interpreter, of

835 832 833 582 584 585 [195] an'ĝej with regard to an anticipated seance, they go through the same symbolic actions that people go through during the betrothal and wedding ceremonies, namely, they smoke or eat together. To say to a woman of the an'ĝej category, "Let us have a smoke together," is equivalent to an offer to her to exercise her marital right.

832 835 684 The legal essence of this specific right, as we have said, is in the fact that its realization, even when it becomes known to all, does not provoke a reaction either of the persons concerned or of social censure, and likewise it does not constitute a violation of religious morals, a privilege of an extremely important character, for sexual intercourse with women outside of this category incurs grave consequences. If this be a completely alien woman -- although at the present time this does not constitute a religious transgression -- then it provokes, as we have already mentioned, bloody punishment if the fornicators are caught in flagrante delicto, or at best a cruel duel with sticks and a fine. There are many reasons for believing that intercourse with female strangers was even once under a religious prohibition. The following curious custom, by the way, testifies in favor of this notion. If a woman who is not bound to a man by class relationship tries to seduce him, catches him by the leg in some isolated place (a symbolic offering of herself to the man), then he (if, it goes without saying, he does not succumb to the temptation) is obliged, under penalty of punishment of the gods, to demand publicly an expiatory ransom from the woman (1).

[114] [629]

1. I personally happened to be a witness to such a ceremony of ransom. It was in the settlement of Tamlevo. One of my traveling companions, a Gilyak already middle-aged, once woke me early in the morning and with anxiety asked me to go with him to "court" in the neighboring yurt. There I found a large assembly of the masters of the settlement. My

/189 cont./

602 speech, in the form of orders, business advice, and so forth, is always permitted between brothers, between daughter-in-law and the father and mother of her husband, even between a man and the wife of his younger brother, with the use of the vocative case. But ordinarily they seek to avoid direct address. If there is a person of a permitted category at hand, they transmit their wish to this person, addressing their message in such a manner that it is audible to the prohibited individual, who, in turn, answers in the same manner. If not, the address is in the third person or in the impersonal form. For example; "the daughter-in-law, the brother, etc., could do such a thing," instead of "daughter-in-law, do it!" Or, "thanks to my brother," instead of "thank you, brother" etc. Owing to this custom of getting around the prohibition on speech by the use of the third person, the Gilyak have formed the custom of frequently using the third person in general instead of the second, especially in reference to strangers, out of fear, apparently, that they may turn out to be persons of prohibited categories. Again and again, upon the entrance of an unknown Gilyak, one hears the phrase: "Where has the Gilyak come from?" (instead of "where have you come from?"). Perhaps there is concealed in this custom, brought about by the prohibition on conversation and not peculiar to the Gilyak alone, the reason for the origin of these strange forms of the third person in place of the second that we find in Italian, Polish, Tatar, and other languages. Finally, the plural number, which is commonly used in addressing old people and honored persons or strangers, is most frequently used in addressing persons of forbidden categories. Thus, for example, in addressing the wife of an elder brother they commonly use the singular, chi, while in addressing the wives of the younger brothers, on the other hand, they use the plural, chin.

583 although in such cases in several places on Sakhalin there is already some question of bride price; and 3) in both cases in the sense of the Roman term -- uxorem ducere, i.e., the abducting of a woman into his house, as is usually practiced at the present time.

585 178 184

At first glance the origin of the feminine term javind, which in this form is only a marriage term for designating a woman's getting married, is not as clear. Its original meaning, however, is not difficult to make out from forms which are etymologically close to it. First of all we have the form closest to it, the reflexive verb p'avind = pi + avind, signifying -- "to support oneself," "to nourish oneself," and, finally, "to live," in the economic sense. Here is a characteristic example: n'ĝ:vyvr' n'ŋvyn' pyrk pavrà -- "a Gilyak himself alone (i.e., singly) lives" (in the economic sense). If several persons are concerned, this verb takes the meaning of "to live together," i.e., to nourish themselves in conjointly, to have a common economy. From this comes the adverb p'avind -- together. Further, we have the derivative form of the active voice ĵivund -- to support someone at one's own expense, to take someone as one's charge, to adopt, to nourish -- in the form of the middle voice it signifies to nourish oneself, to graze (jaivun ekhan -- a grazing cow). Finally, javind, javend means also "to warm" someone (with fire), to shelter.

195 196 58

Thus, the term javind, used by women with respect to a man and at the present time signifying to get married, must originally have meant literally "to take a man at one's own expense," "to receive into one's house." If this etymology is true, which one could hardly doubt, then it follows from this that originally among the Gilyak the system of maternality /materniteta/ prevailed, as it does at the present time among their neighbors, the Ainu, where the husband as a common rule moved into the house of his wife, just as the masculine term g:end -- "to take for oneself" -- bears witness to the contemporary form of paternity

[194] [591] [171]

/263 cont./

195 196 58 [171] [194] [591]

/paternitera/, with the wife moving into the house of her husband. At the present time the original meaning has disappeared from the consciousness of the people to such a degree that often for the expression "to get married" there is added to the verb javind the verb vind, avin vind, which would mean literally -- "go take a man and support him," but this is an obvious contradictio in adjecto, for it signifies moving into the husband's house and, /264/ consequently, being supported by him. A linguistic remnant of the old form of marriage is shown in the fact that in the old language, as far as the texts indicate, all the terms of joint marital life are expressed by means of forms derived from javind. The reflexive verb v'avind means -- to live in marriage with someone, the joint marrying of two persons, or, for example, ytk menakh vavin kull ityind, i.e., "father ordered us to get married," literally, "father ordered us to support each other." Further, the active verb ajvund is used in the sense of to be married, to have a wife, for example, mnyn ruyn an'ĝej n'ŋnyn' ajvutà -- "two brothers lived in marriage with one wife," literally -- "they supported one wife," etc.

In contemporary life there are likewise preserved several remnants of the former maternality. Eloquent testimony of this is found in the contemporary formula of common marriage law of which we spoke earlier, namely -- yngai arinkh jagu'ndra -- "one must feed the son-in-law," although, according to the general rule, the son-in-law takes his wife to his home and prays from the father-in-law.

178 602 59 [171] 602

[197]

Clearly, such a formula could only arise in a system where the son-in-law either moved into the wife's house for good, or, as among the Ainu of today, he regularly came to live at her house for a certain length of time, and it goes without saying that the wife's family was obligated to feed the son-in-law on the same bases as those on which at the present time the husband's family is obligated to feed his wife.

/299 cont./

567 calls him a slave, he can bring suit against them, and therefore
[683] when you ask the descendant of a slave what clan he is from, he
[614] replies quietly: "Pilavon kshal purarâ hokhagin ox' krygys" (1).

1. Krygys -- an Ainu slave; akh -- a Chinese one.

i.e., that he is from the Pilavo clan, by origin a slave ("root
[195] slave"). When people have sneered, they say: "You are pure only to your neck, while there you are impure."

/300/ If a krygys bought himself free and his master had to give him a wife, an economy, and part with him, he would still be considered a krygys, impure. Every krygys was considered a kshal, and, until he passed to a free state, he was avenged, and he participated in the sacrifices. A good krygys
[692] is given a share of his earnings -- he has the right to half of the income and can claim it through the courts -- of the khlaj-n'ivukh; older women have the right to participate in a trial (they are invited and have the right to come themselves if they feel sympathy for the slave). It is permitted to complain about beatings.

A krygys woman cannot demand a share in court, because she is married. Nor can a share be demanded for her by her husband.

A Chinese slave, akh, has the same rights as the krygys.
[682] A free one is kistylygy n'ivukh ("pure"). The killing of a slave
[614] is punished by the clan. When drunk, they revile the murderer:

"If you are a brave man, we have an elder bear (pai pila kvor -- big mountain bear, mer ede -- tiger), fight with him: it would have been better if you had killed a bear and treated us. We do not need brave men like you. You can only exhibit your courage in front of your wife." The women in particular attack him. Even at the present time, however, the descendants of the
[162] krygys are treated with condescension. In 1909 two yurts of former slaves still stood in Tabiata.

[580] Slaves were most frequently acquired through the purchase of Ainu women, who received a male and a female slave as a

/248 cont./

836 advice as to whether he should not "buy" a pretty woman who
837 had taken his fancy, although he had been married for a
159 long time and could not praise his wife enough. He did not,
it is true, take part in the nightly adventures of his young
companions, but only because the risk-competition was already
too great without that, since it very nearly went as far as
revolvers among the young men.

839 By reason of the comparative accessibility of women, the
use of force upon them is rare. I have, however, heard of
instances where a group of youths, at the season when the women
go for several days to places very distant from the villages after
berries and saxaa, made gemaine upon the defenseless
women, and, when the women have not yielded voluntarily,
they have had no scruples about using force. Violence, how-
ever, principally amounts to /249/ tearing the cloth trousers
which, as among the Chukchee and the Koryak, are made
closed, without any openings. Such adventures, like all
romantic pursuits in general outside one's own kinship circle
of women, bear the characteristic designation ^anish nan'gynd --
• [196] "to hunt after women." This term, however, is also ap-
plied to searching for a bride, since it has two meanings:
"to hunt" and "to seek something, somebody in general."

464 Special distant expeditions to alien settlements in search
83 of women, of course, are exclusively the affair of real
836 amateurs, so to speak, since in a distant village the new
arrivals ordinarily encounter the fierce competition of the
local youth, and the women already have their local ad-
mirers, not to speak of husbands, and special qualities are
required to win an easy success on alien soil. I managed
to meet such fortunate individuals; they are ordinarily good
and worldly tellers of tales, jesters, and singers. There
are, however, very few such outstanding lovers, even
among the Gilyak, and there is a special term for them.
Ordinarily the unmarried youth is either content with the
women of his own village or pays visits to the settlements
of his ahkmalk'i, where, as we have seen, a most joyous
reception always awaits him.

/262 cont./

583 although in such cases in several places on Sakhalin there is
586 already some question of bride price, though, to be sure, a
178 very insignificant one.
184

XIII.

Marriage Terms and Survivals of Maternality

195 The terms used in the Gilyak language for designating
• 196 the act of getting married are quite characteristic in a
58 sociological sense.

Like Old Aryan and contemporary Russian, the Gilyak language has no common term for both sexes, such as the English "to marry," French se marier, German "heiraten"; on the contrary, in the Gilyak language, in this case, there is a special term for the individuals of each sex.

When a man is involved, the verb gend, ishgend (root ge) with the addition of shankh (woman) or an'g:ej (wife) is used; thus, shankh gend, an'g:ej gend. When a woman is involved, an entirely different verb is used -- avind (root av), with the corresponding addition of nigvynj -- person, or pu -- husband, or, if without the addition, simply javind (1) (ie -- him + avind).

[197] [164] 1. I choose the term of the eastern dialect; the terms are the same in the other dialects, with the usual dialectal peculiarities.

What is the basic meaning of each of these individual terms g:end and javind?

/263/ As concerns the first, the male term gend, its basic meaning is entirely clear. This is one of the most frequently used verbs in the Gilyak language, signifying "to take something" and "to buy." With regard to marriage,

/263 cont./

195 therefore, the meaning of it is this, that 1) a man takes a
• 196 woman into his possession as his lawful wife; 2) he buys his
58 wife by means of a payment of bride price; and 3) in both cases in the sense of the Roman term -- uxorem ducere, i.e., the abducting of a woman into his house, as is usually practiced at the present time.

At first glance the origin of the feminine term javind, which in this form is only a marriage term for designating a woman's getting married, is not as clear. Its original meaning, however, is not difficult to make out from forms which are etymologically close to it. First of all we have the form closest to it, the reflexive verb p'avind = pi + avind, signifying -- "to support oneself," "to nourish oneself," and, finally, "to live," in the economic sense. Here is a characteristic example: nig:yvyn' n'ency' pyr:k pavrà -- "a Gilyak himself alone (i.e., singly) lived" (in the economic sense). If several persons are concerned, this verb takes the meaning of "to live together," i.e., to nourish themselves conjointly, to have a common economy. From this comes the adverb p'avind -- together. Further, we have the derivative form of the active voice àjvund -- to support someone at one's own expense, to take someone as one's charge, to adopt, to nourish -- in the form of the middle voice it signifies to nourish oneself, to graze (jaivun ekhan -- a grazing cow). Finally, javind, javend means also "to warm" someone (with fire), to shelter.

Thus, the term javind, used by women with respect to a man and at the present time signifying to get married, must originally have meant literally "to take a man at one's
[194] own expense," "to receive into one's house." If this
[59] etymology is true, which one could hardly doubt, then it
[191] follows from this that originally among the Gilyak the system of maternality /materniteta/ prevailed, as it does at the present time among their neighbors, the Ainu, where the husband as a common rule moved into the house of his wife, just as the masculine term g:end -- "to take for oneself" -- bears witness to the contemporary form of paternity

/263 cont./

• 195 /paternitetà/, with the wife moving into the house of her
196 husband. At present time the original meaning has disap-
58 peared from the consciousness of the people to such a degree
that often for the expression "to get married" there is added
[197] to the verb javind the verb vind, avin vind, which would
[164] mean literally -- "go take a man and support him," but this
[591] is an obvious contradictio in adjecto, for it signifies moving into the husband's house and, /264/ consequently, being supported by him. A linguistic remnant of the old form of
196 marriage is shown in the fact that in the old language, as
58 far as the texts indicate, all the terms of joint marital life are expressed by means of forms derived from javind. The reflexive verb s'avind means -- to live in marriage with someone, the joint marrying of two persons, or, for example, ytk menakh vavin kuil ityndi, i.e., "father ordered us to get married," literally, "father ordered us to support each other." Further, the active verb ajvund is used in the sense of to be married, to have a wife, for example, menyn ruvn an'g:ej n'ency' ajvutà -- "two brothers lived in marriage with one wife," literally -- "they supported one wife," etc.

178 In contemporary life there are likewise preserved several
602 remnants of the former maternality. Eloquent testimony
597 of this is found in the contemporary formula of common
171 marriage law of which we spoke earlier, namely -- ymgai
667 arinkh iagu:n'idra -- "one must feed the son-in-law," although, according to the general rule, the son-in-law takes his wife to his home and lives apart from the father-in-law.

Clearly, such a formula could only arise in a system
[177] where the son-in-law either moved into the wife's house for good, or, as among the Ainu of today, he regularly came to live at her house for a certain length of time, and it goes without saying that the wife's family was obligated to feed the son-in-law on the same bases as those on which at the present time the husband's family is obligated to feed his wife.

/265 cont./

602 preserved in the form of remnants even among peoples who
604 by now have shifted to paternity, for example, the peoples
191 of the Caucasus, where a tribesman has the right to steal his uncle's horse, if the latter refuses to give it as a gift. Among the Altaians the saying that "a tribesman is worse than seven wolves" has been preserved to this day.

584 Moreover, the role of the brother in giving his sister in
593 marriage is quite characteristic. In many cases, it is not the father, but the brother who plays the main role in this affair; the agreement to the marriage depends on him, and the bride price is handed over to him.

Not a few other extremely indicative traces which may be considered remnants of maternality have been preserved
• 194 in the language and customs. Thus, if a Gilyak wishes to say
591 that he is married, that he has a wife at home, he says:
171 n'i-umgarvo ivrà, literally "I have a wife's village" (n'i -- I, umgar -- wife's, vo -- village, ivra -- there is), an expression completely corresponding to the present-day way of life of the Ainu, among whom to this day maternality has been preserved, and often husband and wife live in different settlements, and the former shows up to live with her for several months, and then he returns to his own settlement, so that a man has, besides his own native settlement, still another settlement where his wife lives.

Another example: the term for designating a person's origin is the expression pandos', literally "root of birth." This term indicates not the clan of a man, as would naturally be expected under the contemporary agnatic system, nor the settlement in which he was born, but the place of his mother's clan. It is interesting to note in this case the reverence with which the Gilyak regards the homeland of not only his mother, but also her female ancestors. No matter how distant such a settlement might be, every man tries to find an occasion to visit, and more than once my /266/ Gilyak companions during the time of my travels amazed me by the tenderness and

/298 cont./

614 A bear festival is held also for other reasons, /299/ for
796 instance, for reconciliation with one's son-in-law /syat'/, ki
666 or alien. If a person offends his son-in-law, for example, in
682 making a purchase, he keeps silent, and the k:khal keeps silen
but they will continue to talk until a bear festival is held by t
offender for reconciliation (urla lymydz).

796 A bowl, hyl, for the head is necessary for each new bea
415 festival. The head of the bear is always placed in a new bow
while the old one is used for meat and the like. Anyone can
prepare a dish for the bear festival. The bowl for the meat is
bound with the penis of the bear. A bowl from which the bea
is fed for the last time in the yurt, and always on the side
opposite the door, is called pukstov-n'ir.

796 When a brother gives his sister a bear as a gift, he hims
431 is not permitted to bring it; he must come after it with pomp
[231] The bear is greeted with zadz-chadz music. When the maste
feeds his bear for the last time, he says to it: "U'rur humyjd
Wingan ğrur humyjd--live well! When you go, live well."

The gift giver does not shoot the bear and departs as soo
as the festival is over, without even tasting (a morsel), while
he must bring with him mos' and all kinds of dishes.

796 When a bear falls sick, then they hold pylng-tvysk and
pare uig, mos', from all sorts of delicacies and all sorts of be
Luk; -- a dog which has been born specially for the uig

Slaves

567 The son of a slave remains free to the neck (i.e., his h
• 196 is free), his grandson -- to the belt, his great grandson -- to
feet; in the fourth generation -- the descendants are "pure."
[238] Then he is a k:khal, i.e., a kinsman of the master, and if an
[219]

28 In putting the Gilyak language into writing it is easiest to use Russian letters, for several sounds are pronounced exactly as they are in Russian and in the Slavic languages in general. The Russian letters Я, Ю, Ц exist in the Gilyak language, especially the latter sound which can be represented neither by the West-European "Y" nor by "ui", and which is pronounced exactly as in the Russian word b'il. The letter "i" is pronounced peculiarly full as in Slavic languages before a, u, o, and ui (1) and at the end of some

1. I use these two letters for the Russian Ы although they do not accurately reproduce it.

words; and for this there is no corresponding sound in the Germanic and Romance languages. The letters g, k, and h or really ch [German pronunciation] occur frequently in Gilyak words and are sharply accented by pressing the tongue against the soft palate, so that this language (like th Semitic tongues) has a peculiarly guttural sound. There ar so many consonants that it probably deserves to be called a hard and not a beautiful language. The language of the Goldi is softer. The t and tch, the k and ch [kh] often coincide and the y is sometimes pronounced almost like the sh and the French g.

7 The language of the Amur-Gilyak from the sea up to the village of Bogorodskoye resembles the Sakhalin language sufficiently so that the people can at least make themselves understood after a fashion. But it, too, already shows som deviations which even occur in neighboring villages. Thus the word "cough" is yeret in Kaka; in Vaida which lies on the shore about one and one-half German miles from it, the word is yaat. In Mikhil which is about 100 versts (about 14 German miles) up-stream, the deviations are more numerous. For instance, the word "friend" is there called napkhe; the word "heaven"; tle. In Vaida and Kaka these words are amgan and tly. In Mikhil the expression "good day" is designated by the Goldi word sarodé. Even in one and the same place many words are differently [252] pronounced; for example, ytyk ("father") is also pronounced styka. Other words change so much according to the way they are used that they are no longer recognizable. For instance "rufrokh" means "with the brother": ytyktokh,

resettled. In southern Sakhalin, individual families live in the village of Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan—dog; pil'a-ɣan—big dog). The agglutinating features include the addition of affixes (kkan-gu—dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives have many similarities with verbs. The Nivkhi numerals are interesting: in the Nivkhi language, there are no numerals common to all objects. Instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and manlike spirits; 7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled; and n'a—one handbreadth, etc.

As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants. There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware—flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Shternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasiliy Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to as "Gilyak peasants." According to these reports, they lived in large villages in wooden winter houses, flanked by barns, racks for hanging fish and log structures for bears. The Nivkhi wore clothing of fishskins and animal pelts; they kept many dogs, engaged in fishing, and their diet consisted mainly of fish. They traded with the Chinese, Ainu and Tungus.

/xxix cont.-

of the fact, however, that the material presented by Sternberg convincingly testified to the rudiments of class differentiation among the Gilyak. he did not discover this, because he looked through the spectacles of the Popular and Holy Rus as the appearance of class differentiation the manifestation. not of the immanent economic laws of this society. but merely the effect on the Gilyak of thel neighbors -- the Russians.

A significant part of the monograph is devoted to the religion of the Gilyak. /xxx/ Here the conceptions of Sternberg about the masters. first stated by him in "Sakhalinskie gilaki." were unwound in all their breadth. "Each element has its 'master' (hin'u) a god, but just as in each clan there are many gods, many persons. wealthy men. of whom one is the richest ('the master.' according to the everyday terminology of the Gilyak). so are there 'masters' among the spirits. who. according to the beliefs of the Gilyak. also live in clans. With this concept Sternberg ties the reflection of the social structure in the religious views. The views of Sternberg on the relationship of totemism to clan society also deserves attention. According to Sternberg, "... it was not totemism. "The belief in descent from one or another kind of animal. that created the clan gods. which is the accepted way of thinking. but the other way around: the clan gods created totemism. One cannot explain the interdictions among the totemists by saying the meat of totems in their food by anything except a fear of killing a kind of clansman turned into an animal."

Sternberg contests the opinion that fear created god and advances his own understanding that the cult of a number of animals (e.g.. the bear and swallow) is caused by their seemingly protective relationship to man.

In 'Gilaki' Sternberg also. for the first time. formed his opinion that the Gilyak is divided into two halves:

"Obrazny materialyed po inochenitu gilaskogo yazyka i fol'klora" and Materialy po inochenitu gilaskogo yazyka i fol'klora contained the ideas (groups of Sternberg's work on the study of the Gilyak: included here also is the summary of a paper at the Fourteenth Congress of Americanists in Stuttgart. "Bernskungen

/xxx cont.-

über die Beziehung zwischen der Mophologie der gilijakischen und amerikanischen Sprachen." where he proves a grammatical similarity of Gilyak language with certain languages of the American Indians. The published data on Gilyak folklore and language constitute only a part of the material collected by him. During his lifetry he did not intend to publish Gilyak grammar and dictionary. and supplementary folklore material. but what he did publish on the study of this exceptionally difficult language. along with the discoveries cited above on the study of the clan. and the structure of the Gilyak. is so significant that in the history of ethnology and linguistics Sternberg justifiably considered. he known as a great Gilyak specialist and the first serius researcher and expert on the Gilyak language.

/xxxi/ The next realm of work by Sternberg as a Far Eastern ethnologist was the study of the Tungusic-Manchu peoples. Of the indigenous population of the Amur region. he first of all studied the Orochi of Sitar Strait. although he spared them little more mention. he also succeeded in making a number of important observations and discoveries here. which he published in the article "Orochi Tatarskogo proliva" (Not belief in descent from one or another kind of animal. that created the clan gods. which is the accepted way of thinking. but the other way around: the clan gods created totemism. "Bernskungen über die Beziehung zwischen der Mophologie der gilijakischen und amerikanischen Sprachen." where he proves a grammatical similarity of Gilyak language with certain languages of the American Indians. The published data on Gilyak folklore and language constitute only a part of the material collected by him. During his lifetry he did not intend to publish Gilyak grammar and dictionary. and supplementary folklore material. but what he did publish on the study of this exceptionally difficult language. along with the discoveries cited above on the study of the clan. and the structure of the Gilyak. is so significant that in the history of ethnology and linguistics Sternberg justifiably considered. he known as a great Gilyak specialist and the first serius researcher and expert on the Gilyak language.

/1/

If a linguistic basis is used for the classification of tribal composition. the aboriginal population of the Amur region /Primorye Little Hinge. Primorye. and Sakhalin oblasts/ Gilyak falls into three completely dissimilar groups: 1) The Tungus group of nationalities. spread throughout the entire region and speaking different dialects of the Manchu-Tungus language; 2) The isolated tribe of the Gilyak. whose language is completely different from the languages of the Siberian peoples and in its structure stands closest of all to the American languages; 3) the equally isolated tribe of the Ainu. speaking a language which is completely distinct from both the Siberian languages and the American and language. Only the Ainu has preserved in its structure pronounced features of monosyllabism.

These groups also differ considerably from one another in other essential traits. which testify to a complete absence of tribal kinship among them. specifically: The Ainu with their characteristic traits -- an abundant hair-covering over the entire body and. in particular. the abundant growth of hair on the face -- still represent an unsolved anomaly among the peoples of the Mongolian stock. and. moreover. have made the rarity of facial growth. furthermore. in their material culture. religion. and family structure (characteristic features of maternality /natemnete/). they differ considerably from the Tungus and Gilyak. Such a classification is all the more necessary because certain groups introduced into the ethnography by Schrenck as distinct nationalities actually do not exist.

But on what basis are they to be classified?

Least of all would be to construct such a classification on the basis of the economic way of life. If we ignore the southern group -- Manchu. Daur. and Solon. who have little to do with the Russian Primorye. the Tungus group /nomads/ is very far apart from Gilyak territorially. then all the remaining nationalities could be divided into two large groups -- some have a reindeer economy. in other words. they are a group of nomads -- reindeer-herdsmen. such as the Tungus proper. Orochon. Sakhalin Orok; the other

/1 cont./

As for the Gilyak. although anthropologically they have been assimilated to a considerable extent with the surrounding nationalities. yet in their language and culture they stand apart especially in their social structure they stand equally far apart from the Tungus peoples and from their neighbors. the Ainu. Thus. the Gilyak. speaking both of the latter groups are distinct from the first one. The Gilyak and the Aina occupy strictly delimited. almost continuous territories (the Gilyak in north and central Sakhalin and on the basin of the estuary and mouth of the Amur: the Ainu -- on southern Sakhalin and on Lake Bosji). furthermore. the dialectical distinctions of each of the two groups are so insignificant that all the members of a tribe easily understand one another. and therefore among each of these peoples a full awareness of tribal kinship among all members of the Gilyak and the Tungus group. on the other hand. have separated from one another and are dispersed over the entire huge region. and certain dialects have developed dialects considerably different from one another.

Furthermore. they differ considerably among themselves in their way of life as well. so that. in spite of all their linguistic. anthropological. and historical kinship. they fall into separate. small groups. each with their individuality.

These separate nationalities. separated from one another specially. historically. linguistically. and. finally. in the realm of material culture. in fact have become. each. a separate tribe. a distinct nation. and. moreover. have lost all tribal kinship. Such a classification is all more necessary because certain groups introduced into the ethnography by Schrenck as distinct nationalities actually do not exist.

1. See the article. "Ainskaia problema /"The Aina problem.'/ below /tuttamalard/. fd.

/14 cont./

The Gilyak are not the only ones who find themselves in such an isolated position in northeast Asia. The Aina. the Yukagir. the Chukche. and Koryak find themselves in the same position. An attempt has even been made to combine them in a common group of Paleo-Asiatics (Schrenck). but the basis of this classification was purely external in character. namely. their common position on the edge of the continent. and the consequent probability that in the course of time these once numerous peoples were in part destroyed and in part driven out by more recent newcomers. Yet. in spite of the same fate the same fate the continent to the edge of Asia. All hope of discovering a genetic relationship between the Gilyak and the rest of the other tribes has not been. however. Hypotheses about a common origin of the nationalities of the Pacific coast of Asia and the tribes of North America were advanced. but not in the proper manner. Sternberg. however. was convinced one that this hypothesis may finally be fully confirmed. Besides the similarity in the common structure of the Gilyak language and the American languages. Sternberg also pointed out a number of pronouns with verbs and with nouns. the tendency /15/ toward polysynthesism. the extreme nobility of phonetic changes. the tendency to alternate /16/ in the initial sounds. and. in particular. particular points which are extremely characteristic. for example. one that is common to all of them is a highly developed class system of numerals. according to which different categories of objects can be combined only with the numerals that are peculiar to them. A system so complex. so far as I know. does not have any similar in any of the languages of the Asiatic continent. All this. however. is a problem for the future. perhaps the very near future.

Meanwhile. an easier question is still unsolved. the question of how long the Gilyak have occupied their present positions. On the basis of three names borrowed by the Gilyak from Tungus tribes for animals (the elk. the roe. the reindeer) it is known for sure that the bear. but absent on Sakhalin. the late academician Schrenck. the only authority up to the present on the ethnology of the natives of Primor'ikai. asserted that the original homeland of the Gilyak was Sakhalin Island and that in any case the Gilyak now living on the continent are descendants of immigrants from Sakhalin. His opinion is based on an obvious misunderstanding. The three

/81 cont./

Gilyak remained the indigenous type of the original Gilyak tribe? Yes. that original type intentionally disappeared. The body of the Gilyak tribe died forever. but its spirit is alive. alive in its language. A language which. as we have already mentioned. is unique among all the languages of the Asiatic continent. and in its peculiar customs and institutions which. reflected in its language. have survived all the vicissitudes of its physical transformation. The persistent preservation of the language is striking. It has not only protected itself against distortion by roots and forms from other tribes. but. in spite of the small membership of the tribe. has preserved two large dialects and no fewer than five or six subdialects. Nowhere else in the world is there such a phenomenon. The Gilyak language was spoken by many tens and perhaps hundreds of thousands of individuals scattered over a vast territory. who left in numerous idioms as proof of their existence.

But not only the language of the Gilyak tribe continues to testify to its isolated position among the surrounding nationalities its social institutions. clan organization. religion. and especially /22/ the institution of marriage. amazingly peculiar norms of sexual intercourse. and equally amazing kinship nomenclature clearly testify to this. Before we proceed to this aspect of their life. however. we shall first touch upon. within the briefest limits. the external conditions of life in the nature which surrounds them. and the outward appearance of the Gilyak.

II.

132 Environment. Type. External Life.

The nature amidst which these people live at the present time is full of the greatest contrasts. In spite of the southerly latitude (between 49° and 54 1/5° north latitude). the average temperature in January is -18° Reaumur. The Amur. the Gilyak of mercury in the middle of the island is a common phenomenon. Even in July there are minimums of 5.2°. Ice floats off the

/163 cont./

even to his own clear advantage. but he has. as we know. an already well-tested expedient. with the help of which he persuades the gods with full observance of his own interest; he resorts. as in other cases. to pious deception of the gods. which offers him the possibility of fulfilling his religious duty and yet obtaining material gains from the conflict. Usually. this most important religious procedure of the institution of blood money is completely ignored. and indeed traces of religious ceremonies of reconciliation are not preserved among all peoples. among the Gilyak. as we shall recount later on. this is distinctly clear from the ritual of ransom. which demands a preliminary imitation of blood revenge in the form of a battle between representatives of the warring clan. the killing of dogs. and the feeding of the spirit of the dead man with their blood.

Now let us proceed to the practice of this institution.

The place where the ceremony of reconciliation is played by the so-called khlaj-nivukh (1).

1. I use the term of the more widespread western dialect.

Khlaj-nivukh -- literally: the explaining man. /104/ eloquent. orator. Such a man enjoys special regard in the eyes of the Gilyak. In the clan this individual is the representative of the clan. particular deity who constantly inspires him. dwells in him. and inspires in him beautiful. convincing speeches and an irresistible influence on the people. The very quickness of speech. the ability to speak fluently and rapidly for a prolonged time. even about such matters as the content of the speech. is already considered a talent of the highest order. "With tongue turn like the wings of a windmill." Thus. with awe. does the Gilyak characterize outstanding orators. The latter. in turn. regard themselves as chosen ones. On the continent they always carry a wooden rod. on the head of which is carved a human face. depicting. apparently. that which gives them and helps them to perform miracles. At pathetic moments they wave these threatningly. swearing to break them in the event of the failure of their arguments and bring the wrath of the gods upon themselves and their intractable opponent.

/135 cont./

of mixing between the Gilyak and their neighbors, one can only be surprised that these kinship terminologies turn out to have so little in common.

The etymologies of the Gilyak kinship term themselves testify to this uniqueness of the Gilyak terminology with great palpability; the greatest part of them can be traced all the way back to their original roots, which point to their firm stability over a long period of time (1).

1. This cannot be said with regard to many kinship peoples. Thus, for example, at the famous Turkish special-ist, V. V. Radloff, has in fact reported to me, among the Turks, judging by Orkhon and Uigur monuments, the kinship terms that were in use from the tenth century and with the exception of one or two terms, has changed completely, even in such form as father and mother, and so forth.

(2) We shall adduce a few examples. Thus, the group "ata" — father, "ata" — grandfather, "ata-ata" — great-grandfather, "ata" — grandmother, "yokhsh" — old man, husband, "achish" — aunt, sister of the father, "ya-ya" — man, (western dialect) have a common root "ya" — body; the group "ana" — mother, "ynagir" — son-in-law, son of the sister, "ana-gir" — woman (western dialect) have the common root "yin." Further, "anKyel" — wife, from "anKh" — female; "anKnych" — beloved, husband, man (western dialect), from "ax" — male and the root "ynych" — be, to become; "ynych" — husband, "ynych, ynnich, yanich" — woman and "yanich" — sister, etc. is of

(3) Dialectical differences in kinship designations remain to be documented. These differences are of a minor nature. In the fundamental terms there are either no difference whatever,

/135 cont./

or the differences are of an insignificant phonetic character. Thus, for example, "yrh, yniF" — father, mother — are completely identical in all dialects; "ynen, ynen" — brother (eastern dialect) are slightly changed to "yn" in the western dialect; "ok-ka, ok-ing" in the Tym' and the eastern dialect of Sakhalin are equivalent to "o-ka" in the western dialect. In cases where the terms are completely different phonetically, this is due either to borrowing from very near neighbors, as in the previously mentioned "ata" and "ana," or to the formation of corresponding terms from different synonyms common to all dialects. Thus, for example, "ghaqir" — woman in the eastern dialect has been formed from the common word "ax-nih" — female, and "ken-gir" — woman in the western dialect has the same root as the common word "ynych" — mother; in exactly the same way "ni-ax" — man in the western dialect has the same root as "ynych" — husband, and the corresponding axFnych in the eastern dialect is from ax — male, etc.

In the table of kinship nomenclature and the relationships for it, we shall give the terms according to dialects and territories, indicating in parenthesis the dialect of the Amur with the abbreviation (A.D.), the dialect of the Tym' with (T.), and the dialect of the eastern shore of Sakhalin —(E.D.), and of the western (W.D.). In the table of kinship terms we shall always use the first of the synonyms of the eastern dialect.

Now we proceed to the explanation proper of the kinship terminology. We only forewarn the reader that the Gilyak reckon kinship through the male line and that the agnatic (western) dialect has the common word "ynych" — husband, "anKyel" — wife, from "anKh" — female; "anKnych" — beloved, husband, man (western dialect), from "ax" — male and the root "ynych" — be, to become; "ynych" — husband, "ynych, yanich, yanich" — woman and "yanich" — sister, etc. is of

/137 cont./

the contrary, designate exclusively relationship either through the mother or through the wife, but under no condition on the father's side. Kinship through the father bear the same al-ready mentioned by us: kakhal, kakhal-ch'gyyr.

Table of Relationship

by marriage and cognate relationship are completely identical in concepts among the Gilyak. We shall see how this has come about upon examining the table of relationship. It is precisely to an examination of each category of kinship separately. Cognate kinship, kinship within the clan, has taken the clan the Gilyak distinguish only three lines: 1) the ascending generation "the generation of my father's), without distinguishing between direct and collateral line, since the brothers of the father are called by the same term as own father; they only distinguish the generation of the ascending line; 1st generation, 2nd, 3rd, 4th, 5th, etc.

2) the descending generation ("the generation of my children"), in which by children is understood the children of the descendants of the speaker and of the whole clan of his own brothers and sisters (Gilyak clan) and his own line for all the subsequent descending generations of these persons.

3) within each generation the lines of collateral kinship, embracing the cl. a of brothers and sisters (own and collateral), the so-called clan "nun."

In addition, for each generation of classmen the class of husbands and wives is distinguished.

The class of brothers and sisters ("nun"). For a better understanding of what is set forth below we shall copy the table called /139 cont./

1. A term borrowed from the eastern dialect; in the western dialect it is ref-

/139 cont./

The Gilyak who speak the western dialect, i.e., the Gilyak of the continent and the western shore of Sakhalin, especially beginning from the settlement of Vaas and to the north of it, use the same terms, "ata" and so on (1), to

1. A full enumeration of the terms-synonyms is given below in the table.

designate, besides own father, all his male twin, i.e., his own and collateral brothers and, in addition, all the husbands of his own sisters. The term "ata" is used, however, in precisely only in the settlement of Tamlevo and to the north of it, together with "yin" and its synonyms still another term is used to designate the brothers of the father — "ytinag," corresponding in meaning to the analogous Tungus ayin — elder. Another group, the western Gilyak, designate for all the brothers of the father and called by the same term as own father; they only distinguish the generation of the ascending line; 1st generation, 2nd, 3rd, 4th, 5th, etc.

2) the descending generation ("the generation of my children"), in which by children is understood the children of the descendants of the speaker and of the whole clan of his own brothers and sisters (Gilyak clan) and his own line for all the subsequent descending generations of these persons.

/139 cont./

Table of Kinship Terms

1. The sole exception that I found during the time of the census in the settlement of Kot was one case in which the wife of the older brother of the father called by the Tungus term yuqi, which is explained by the presence of a Tungus in the settlement of Tungus origin.

3) all the wives of his father, i.e., his stepmothers; 4) outside the clan: all the "sisters" of his phmnn. Only the Amur Gilyak have a special subject, designation for all the husbands of the husband — nfmnj (= cf. — my + qej — husband), a term also known to the Tymovsk Gilyak (1).

The class of the descending line. The class of the descending line within the clan, the clan ogilang, ogilg, is completely identical with the ascending line, the clan ata, ata. Finally, to all the sisters of the wives of these last. To the wives of the clan of younger "brothers" (nun) the clan ogilang, ogilg, is also applied, and also to all the children of his "brothers" (nun), just as /141/ a woman gives the same ogilg not only to her own children, but to the children of all the "brothers" of her husband without distinction; but the term ogilg is applied not only to the first generation of children, but also to the second generation of the descending line, not only one's own, but also those of the whole clan of nun. Thus, the Gilyak gives the one and the same term ogilg to the children of the clan or to the children of nephew, but to all of their descendants, i.e., grandson, great-grandson, etc. Here we see the same phenomenon that we find in the terminology of the ascending line, where the one term "ata" defines all the generations above father

/140 cont./

of his other sanish and a'kh — older "sister," and, conversely, — younger "sister."

The class of husbands. The class of husbands corresponds to the terminology of the foregoing class — "wives." Within the class of her husband the woman gives the same of "husband" (ch. 1ch, 2Xmn, etc.), not only to her official husband, but also to the representatives of the class of his "brothers" (nun), with, however, the following exceptions. The eastern Gilyak and a part of the western Gilyak differentiate between the younger "brothers" (nun) of the husband and the older ones; a woman calls the younger ya, ya, ybnn, ybnn, ya, ya — in-law, in formal husbands, and she calls the latter ata. The Gilyak of northern Sakhalin and the western Gilyak generally do not differentiate between the younger and older brothers of the husband, calling them ata, ya, ybnnn. Only the Amur Gilyak have a special subject, designation for all the husbands of the husband — nfmnj (= cf. — my + qej — husband), a term also known to the Tymovsk Gilyak (1).

The class of the descending line. The class of the descending line within the clan, the clan ogilang, ogilg, is completely identical with the ascending line, the clan ata, ata. Finally, to all the sisters of the wives of these last. To the wives of the clan of younger "brothers" (nun) the clan ogilang, ogilg, is also applied, and also to all the children of his "brothers" (nun), just as /141/ a woman gives the same ogilg not only to her own children, but to the children of all the "brothers" of her husband without distinction; but the term ogilg is applied not only to the first generation of children, but also to the second generation of the descending line, not only one's own, but also those of the whole clan of nun. /140 cont./

/147/ The terms of kinship in a figurative sense. It is curious how the kinship terms are reflected in the terms used between persons who are not married to each other — sweethearts. It seems that they are often transferred to them from the fundamental terminology. Thus a woman calls her sweetheart Xmn (husband, in the eastern dialect), axFnych (man, husband, in the eastern dialect), hn (groom), nanih (from the terminology of the group of father-in-law and son-in-law with, however, the reservation that the unrelated wives of "brothers," and, jokingly, men who have an extramarital relationship with the same women, sometimes call each other by this last term, as well as by the term ashmnih, while the terms nanih and ashmnih in practical life have taken on the meaning of "sweetheart" or "participant in a common attack." Thus, the term "nanih" by its meaning in these cases entirely corresponds with the famous Hawaiian term punalua in the family group which takes in name from this term.

As a result of our survey of the kinship terminology, we arrived at the Gilyak a typical classificatory system of kinship.

Summing up the terms for agnate and cognate kinship, we get the following scheme. (See following page.)

/320 cont./

although in such cases in several places on Sakhalin there is already some question of little price, though, to be sure, a very insignificant one.

/321 cont./

orthodox marriage. For an agreement concerning an orthodox marriage (1) a young girl there is even the special term tlnkagual (eastern dialect tqqyyal).

Marriage Terms and Survivals of Maternality

The terms used in the Gilyak language for designating the act of getting married are quite characteristic in a maternal society.

Like Old Aryan and contemporary Russian, the Gilyak language has no common term for both sexes, such as the English "to marry," French se marier, German "heiraten". On the contrary, in the Gilyak language, in this case, there is a special term for the individual of each sex.

When a man is involved, the verb gond, lhgond (root gy) with the addition of shmnih (woman) or axFqel (wife) is used; thus, shmnih gond, axFqel gond. When a woman is involved, — the verb ynych (root ynych) and ynych yyn, with the corresponding addition of nigyyn — person, or ax — husband, or, if without the addition, simply javind (1) (or — him + ynych).

1. I choose the term of the eastern dialect; the terms are the same in the other dialects, with the usual dialectal peculiarities.

What is the basic meaning of each of these individual terms gond and ynych?

/322/ At concern the first, the male term gond, its basic meaning is entirely clear. This is one of the most frequently used verbs in the Gilyak language, signifying "to take something" and "to buy." With regard to marriage,

/320 cont./

orthodox marriage. For an agreement concerning an orthodox marriage (1) a young girl there is even the special term tlnkagual (eastern dialect tqqyyal).

1. On the side of the groom the representatives are: 1) father and mother; 2) brother of the father; 3) elder brother of the groom; 4) husband of the sister of the father. The role of the latter individual is explained apparently by the norms of orthodox marriage. According to this law, the husband of the sister of the father is the father of the husband of the sister of the groom. Since by the norms of Gilyak marriage his daughter cannot marry the brother of his wife, the son of the father of the sister of the father considers it his duty to marry his own daughter-in-law. If the father is dead, he is replaced by one of the ulda n'yivih (honored persons) among his classmen. Since the Gilyak have a special subject, designation for all the husbands of the husband — nfmnj (= cf. — my + qej — husband), a term also known to the Tymovsk Gilyak (1).

The Tymovsk and the Chikonk Gilyak have one law

journey to it.

The surprising answer to my further question as to what happened to the soul of a person killed by a bear ran: Such a soul assumes the shape of a bear and wanders in the forest and in the mountains.

/762/ Undoubtedly among the Gilyak (as well as among the Olcha (*) this is the conception of a transmigration of souls, for

* See Appendix 45, p. 1224 .

they put the body of a person killed by a bear into a special little burial house (tschchyf-ngych) and bring it berries, supplies of fish, and the like (**). Nevertheless, the dead person himself, i.e.,

** See Appendix 57, p. 1237 .

his soul, is said to go into the forest in the shape of a bear, with the skin and fur, etc.

Only the difficulty, with an inadequate knowledge of the language, of reaching an understanding about abstract concepts with a primitive people little inclined toward abstraction has kept me from learning the Gilyak expression for "soul." The above-mentioned views concerning the consequences of death among the Gilyak make it clear beyond any doubt that they are familiar with the concept of the "soul" as a spiritual force innate in the human being. The above-mentioned concept of the metempsychosis of a person killed by a bear also explains to a certain extent why food provisions are brought to his corpse. His soul still wanders about

197

/347 cont./

101 spring up even between primitive peoples is curious and yet characteristic: the Tungus with indignation and proud contemptuousness deny their kinship, not only with the Gilyak, but even with the Orochon, saying: "We are the Tsar's people and baptized, while the Gilyak and the Orochon eat dogs!"

101 829 The Gilyak themselves include themselves in the Mongol-Manchu tribe, asserting that the Gilyak and the Manchu are "khal-nyakhr" ("khal" -- clan, people, tribe; "nyakhr" -- one). The Gilyak also consider the Chinese and the Japanese kindred peoples, saying that a Manchu was "ytk-utgu" (father, ancestor, man), and a Japanese was "ytk-umgu" (ancestress, woman), an assertion which will be clear from the material below. The Sakhalin Gilyak speak a language in common with the

199 language of the Gilyak /348/ living at the mouth of the Amur and on the continental coast of the Tatar Strait, but quite distinct from the language of the Lower Amur Gilyak and the Tungus.

103 As to the question of the appearance of the Gilyak on

129 Sakhalin, there is no doubt that they are arrivals from the conti-

174 nent. The materials of the 1891 census and observations and interviews with the Gilyak equally confirm in this case a conclusion which could have been made a priori. The census first of all proved that the settling of the island by the Gilyak went from the north to the south. The ancestors of the Gilyak of the settlement of Tyka, for instance, came from the settlement of Nyur, which is the northernmost settlement on the western shore of

[174] Sakhalin. Of the two foremost clans in the settlement of Arkyyvo, one comes from the settlement of Nyanivo (in the north of Sakhalin), the other from the settlement of Tanga, whose inhabitants in turn belong to the ancient clan of the settlement of Choma (on the continent), etc. The census further proved that each clan of the Sakhalin Gilyak is only a branch of a clan which lives along the continental coast. Finally, the language,

[184] religious beliefs, customs, and morals and manners of the Sakhalin Gilyak are identical with those of the Gilyak of the continental coast,

SS /6 cont./

114 the lower Amur region who undoubtedly are the most interesting, since, due to their greater remoteness from the Manchu, Chinese, and Japanese, as well as the Russians, their way of life has best been shaped and preserved in a peculiar way. In particular,

G [197] however, this is true of the Gilyak, who, linguistically as well, stand wholly isolated among all the Amur peoples (1).

1. It may be noted in passing that even during the preparations for the second Bering Expedition, the instructions drawn up in the bosom of the Academy for the ethnographic investigations strongly urged

SS [113] a visit among the Gilyak. (Baer, "Kurzer Bericht über wissensch. Arbeiten u. Reisen /Short Statement concerning Scientific Work and Travels/," etc., see Beitr. z. Kenntn. d. Russ. Reichs, Vol. IX, Part 2, St. Petersb., 1855, p. 408, note). This request could not be complied with until over a hundred years later through Middendorff's and my travels.

SS

114 Nevertheless, here, too, in spite of frequent contacts with

122 the natives, a detailed investigation of their practices, customs, religious views, and the like still faced many obstacles. The greatest of them for a traveler, especially if he is a natural scientist and not a linguist, is his ignorance of the language of a people and the difficulty of learning it in a short time well enough to be able to converse in it. As a rule, one can overcome this difficulty by hiring an interpreter, but when the first contact with a people is made, he does not yet have one. On my first trip up the Amur to the Olcha, Goldi, and Samagir, the Cossacks accompanying me understood so little of the languages of these peoples that I myself, noting down immediately every word whose meaning I learned, had to serve them as an interpreter.

/101 cont./

101 as Klaproth insists, Fiaka, is used, due to insufficient knowledge,

114 as a collective term for a number of different peoples of the Amur region or their language, and among them the Gilyak. And the same must be concluded from the statements of the Chinese U-tschen, who, as was stated above, spent 17 years -- from his birth on -- in Ninguta, to which his father had been exiled, and later, in 1722, having returned to China, he wrote a description of his birthplace. Downstream from the Cheidsin or Chādshen on the Amur River, he has the region of the Fei-ja-cha come next, the description of which, however, only in part fits the Gilyak, and to a greater extent -- for example, the nose rings, /102/ the birchbark boats, fishing in the sea, etc. -- the Goldi, Olcha, and Orochi (1). Finally, Iakinf expresses

[113] 1. In Wassiljef's /Vasil'ev/ translation: "Zapiski o Ningutie /Notes on Ninguta/" (Zap. Russk. Geogr. Obshch., Part XII, 1857, pp. 90-93). It is also said there

G [197] that the Fiaka, Cheidsin, and Churcha or Chulcha address one another with the word "andā." This, however, is a Tungusic word that also occurs among the Goldi, Olcha, etc. and means "friend"; in Gilyak it is "amalā."

himself quite definitely in this sense in declaring that all the different tribes that live downstream from the Chādshe on both banks of the Amur River and also occupy the northern part of Sakhalin were included under the common name Fjakā (Fyake) (2).

[113] 2. Iakinf", Statist. Opis. Kitaisk. Imperii, Part II, p. 12.

All this permits one to draw the conclusion that the Fiaka of the Manchu-Chinese geographers or reporters are not always the Gilyak by any means; although better informed individuals actually might have referred to the Gilyak by this designation,

/102 cont./

Gi 101 inquired among the Goldi about the name of the Samagir or of

114 the people on the Gorin and those on the Kur, they named the one as well as the /103/ other for me repeatedly as the "Kile," evidently because they bore this collective name among the Chinese and then designated themselves with it when dealing with them. The Gilyak also gave me the name "Kil" for the

G [101] Samagir. Since the Goldi and the Gilyak languages are com-

Gi Gi pletely different, the obvious conclusion is that this can only be

G [197] a foreign name. Finally, I have sometimes heard Chinese mer-

Gi Gi chants traveling along the Amur designate even the northern

101 and more distant Goldi, as a rule the Olcha, and, indeed, even the Gilyak with this or a similar name. One such merchant, for instance, whom I met in Amtscho on the Amur, eagerly asked me whether the "Kilam" or "Kilang" living farther downstream had many sables, and, in order to make himself better understood, he also named this animal in the Kilam language the word sounded like "lombr," and the Gilyak "lumr" can be

G 101 clearly recognized. The Gilyak were quite similarly called "Ki-li-mi" by the Chinese companions of the missionary Venault when he went down the Amur in order to investigate the death of de la Brunière, who had been killed by them (1).

G [113] 1. Venault, "Excurs. dans les parties intér. de la Mandchourie /Journey into the Interior Parts of Manchuria/" (Nouv. Ann. des Voyages, 5th series, Vol. XXX, 1852 /Vol. II/, pp. 216-223.

G Gi 101 114 From all that has been said it is clear that the Chinese include under the collective designation Kil, Kile, Kilang, Kilam, etc. both the peoples of the left, northern and western tributaries of the lower Amur River, of the Kur, Gorin, and Amgunj, and the dwellers along the lower course of the main river, itself, and, to be sure, especially the Gilyak, whom they know least, but also the Olcha, and sometimes even part of the Goldi; or, in other words, just as in the case of the Fiaka and Chādshen,

10
[361] resettled. In southern Sakhalin, individual families live in the village of Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

197 The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

[194] In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan—dog; pil'a-gan—big dog). The agglutinating

[193] features include the addition of affixes (kkan-gu—dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives have many similarities with verbs. The Nivkhi numerals are interesting:

802 in the Nivkhi language, there are no numerals common to all objects. Instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and manlike spirits; 7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled; and n'a—one handbreadth, etc.

197 As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

174 In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants. There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware—flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Shternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

175 The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasiliy Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to

[361] as "Gilyak peasants." According to these reports, they lived in large vil-
[342] lages in wooden winter houses, flanked by barns, racks for hanging fish and
[343] log structures for bears. The Nivkhi wore clothing of fishskins and animal
[291] pelts; they kept many dogs, engaged in fishing, and their diet consisted
[231] mainly of fish. They traded with the Chinese, Ainu and Tungus.
[262]

7: Kreinovich--23 E-5 (1931) 1934 Gilyak

281 (the work of stretching the hides on frames and of cutting
462 straps is performed by men). Finally, the heads have to be cooked and prepared for throwing out into the sea.

281 I watched the two wives of Xitkun work after he returned from the hunt. The younger of the two was busy peeling suet from hides. In this she was helped by a woman, the wife of one of Xitkun's kinsmen. The job of peeling suet from hides is very hard. Most of the time the woman has to work in a bent position. I saw Xitkun's wife lift a hide in the process of cleaning it of suet by seizing a part of the cleaned hide with her mouth. At the same time she held the peeled suet with her left hand and continued the peeling process using a large narrow and somewhat curved knife which she held with her right hand.

237 The Gilyaks prepare thin seal fat in the following manner.
415 They cut the suet (ɣ[illegible]) into pieces. They put the pieces into
251 a barrel (in the past they used to put them into a large, deep trough) which they then place in a warm spot. There the suet begins to decompose and to melt (I am not in a position to give a more detailed account of the process which takes place in the suet). This yellow fat (tom) flows out of the suet. Depending on the age and variety of the seal the fat is either light or dark and turbid. The Gilyaks pour the melted fat into dried seal stomachs. They give the leavings of the melted suet (ta) to the dogs. Stomachs of seals are used by the Gilyaks for storing seal fat. Having killed a seal the Gilyaks empty out its stomach, blow air into it and hang it up to dry. The fat can be stored for a long time in such a bladder. Once the bladder is filled with fat, it is hung in the barn.

888 While one of Xitkun's wives was busy peeling suet from
252 hide, the other wife, Hemanχ, 'old woman,' was preparing the heads for cooking. It was certainly no accident that it was Hemanχ, Xitkun's older wife, who was preparing the heads for cooking. Preparing of the heads requires a certain knowledge of religious ceremonies the guardians of which are the old people.

193 [193] À propos the interpretation of the words hemanχ
197 old woman' and hemar 'old man'. Both words have in common the sound combination hem and differ in their respective endings ar and anχ. Ar means in the Gilyak language male and anχ - female. What then is hem? In the village Chayvo where a certain form of the Sakhalin dialect is spoken, they call an old man hajmnar. In comparison with the Amur dialect the Sakhalin dialect has retained a great many ancient forms. The etymology of the word hajmnar can be easily

198

SPECIAL LANGUAGES--marginal languages (e.g., pidgin, trade languages); languages confined to a particular sex, occupation, social class, or ethnic group; special adaptations of speech (e.g., yodeling, whistling, ventriloquism); etc. See also:

Sign languages . . . . . 201 Writing 212

411 called əmləus and the sea-end is called əz-baχ-puks
225 'master's stone tie.' To this end, which is lowered into the
283 sea, is tied əz-bax 'master's stone' or 'master stone,' which, according to the Gilyaks, weighs two poods. This stone, the Gilyaks explained to me, forms the anchor of the seine. In place of plummets, stones are attached to the bottom of the seine. They are called tatr-paχ . Large wooden floats (vaŋ) are fastened to the upper cord of the seine. When the head of a sivuch gets caught in the net, the sivuch starts to flounder; at times so violently that it throws the lower edge of the seine together with the plummets over the upper cord and finds itself literally in a sack. Sometimes dolphins fall into the seine. The seals pəγt are shrewd and are seldom caught in the net.

In the past as well as at the present time the Gilyaks of the village Kul set the tola-k'e at Kivf-ŋalu, Ke-ŋalu, Vilk, Loŋri, and ət.

614 According to old man Virp, some clans in the village Kul
225 owned seal hunting places in the past.

423 Thus clan Qavjuŋ owned: 1. Lulvəχ-pər, 2. ŋaγqej,
524 3. ət.

471 Lulvəχ-pər and ŋaγreqej are names of rocks sticking out of the water. Seals crawl out of the water onto these rocks. ət is a small island close to which there is another such rock.(3)

3. In a fog the hunters come alongside of the shore or of the small island ət. Then the young hunters amuse themselves and play. There are onət two laqr-paχ stones for a game: "who can lift it and who cannot." Close to the rocks there is a flat place where the Gilyaks compete. The competition consists in jumping on one foot (teŋot ferd).

Clan Tnaunuŋ owned: 1. Mat-loŋri, 2. Tŋəri-γrə, 3. Zomi-vər.

The first two places form parts of the shore and are resting places for seals. The third is a rock.

Clan Kezoŋ owned the shore off Vilk, a resting place for seals and Hapzə- vər - a stone.

225 [84] Once at sea, the hunters take a number of measures
552 to ensure a successful hunt. Thus, in conversation, they
198 substitute prearranged names for the usual names of certain
825 objects. This prearranged language is an echo of a distant
789 past when hunters used it to keep their plans from animals

225 assumed to understand human speech. (1)
552
198 1. For details see the paper of D. K. Zelenin-"Tabu
825 slov u narodov Vostochnoĭ Ievropy i severnoĭ Azii"
789 [Taboos pertaining to Names as found among the Nations of Eastern Europe and Northern Asia]. Sbornik Muzeia Antropologii i Ėtnografii v. VII; 1929. The work is interesting and contains an abundance of facts.

198 Thus, during the hunt instead of
225 Vo, 'village', the hunters say hiulaf.

mif, 'Land', they say otχ 'excrements.' If they are far from land, they say tevl otχta, if near - knemla-otχta.

mu 'boat' they say orq.

ke 'sun' they say am.

la urd 'good weather' - literally 'good wind,' they say am sodra.

tełu 'fog' they say verq.

umgu 'woman' they say hiuləd.

qan 'dog' they say aim.

to 'fish' they tomr 'leaf.'

loq 'flounder' they say pna-domr.

loŋr 'trout' they say manm.

nemla 'linek' they say naχ-tomr.

vaŋs 'lake-salmon' they say vətik.

alŋon 'kunzha' they say doχti. (2)

177 2. The Gilyaks say that they borrowed the words manm and doχti from Tungus.

198 tiŋr 'fire wood' they say ops; tuin ops-ket tuγr-arguda
225 'having taken fire wood here, we will feed the fire.'

laŋr 'seal' they say vaad; mor-vaad 'two seals,' tor vaad 'three seals.'

laŋr pud 'the seal came to the surface' they say ləŋr.

iŋd 'to kill' they say ŋazd.

pət 'tomorrow' they say mandəŋa.

eŋr vida 'let us return' they say pəχtkuda.

saru-mu 'full boat' they say ulvəta-mu.

kər-ŋoqod 'hungry,' 'I want to eat' they say tava-ŋod 'tava hurts.'

krəzd '(I, you, etc.) have had my fill' they say mat-toqn-taŋgad 'the little finger sticks out (?) or tot-ŋod 'the hand hurts.'

7: Kreinovich--11 E-5 (1931) 1934 Gilyak

198 urla-dus 'good meat' they say amra-elvla-dus 'amra bad
225 meat.'
ǝkila-dus 'bad meat' they say amra-urla-dus 'amra good meat.'
etc.

225 Apart from taboos pertaining to names the hunters must
784 also observe other taboos during the hunt. Thus, for instance one must not pour water out of the boat onto floe where seals had been killed. Xitkun, who told me about it, said that he all but lost his sight as a result of pouring water out of the boat onto floe with killed seals on it.

It is forbidden to stick a knife in the ground during the hunt.

It is forbidden to spit in the blood of a seal, etc.

[85] Not only the hunters are supposed to observe a number of taboos; the same holds for those who remain home and, especially for women.

Thus, those who remain home must not do any laundrying in the house of the owner of the boat. They must not pass any objects to one another across the fire, for, in that case, the seal at the seine would swim through it.

They must not cut leather for shoes (kiriid), otherwise the tola-ke might tear.

They must not cook hearts of seals until after the hunt.

A pregnant woman must not approach the sea shore, otherwise all ice might be carried off to sea and the hunters would not be able to hunt seals.

115 In this connection I quote from my Sakhalin diary one of my conversations with the Gilyaks. This conversation took place in the village Khoi on the western shore of Sakhalin (50 versts from the town of Aleksandrovsk on June fifth, 1928. I was sitting in Gilyak Roygin's yurt. Present were, besides Roygin and myself, the Gilyaks Kavzgun, Chulkin, Furaga and the late old man Pletunka, as well as one of my friends and the interpreter L. IA. Shternberg.

225 Roygin said: "When you go seal hunting in the spring you
825 know all that is going on at home. The seal will tell all. The
787 seal will not tell the good things, but he will invariably tell the
626 bad things that are going on at home. If, say, the woman at
784 home starts scratching her head, the seal on the floe will scratch his head with his paw. If they are fighting at home, the seals will start fighting. If the woman wash something at home and hang it out, the hunter is bound to miss the seal even it if were not more than five steps away from him. We say that all the hunter can do is hit the linen. Obviously, the 'god' kas

20

20 COMMUNICATION--general statements dealing with several aspects of communication over space. For communication over time, by means of records, see 21.

1: Shternberg--548 E-5 (1890-1897, 1910)1933 RX2 Gilyak RX2

[The eastern Coast and the Tym' Basin]

/388 cont./

162 The ratio of the number of males to that of females (416:287) is such that there are 694 females per 1,000 males. In Russia there are 1,023 females per 1,000 males, and in Asia as a whole 960
165 females per 1,000 males. The infant mortality rate is 33.7%.
231 Every Gilyak, on the average, has two dogs and each adult Gilyak,
492 three dogs. There is very little hunting equipment, especially
411 guns, on the whole.

614 The Tymovskie and the Okhotsk Gilyak belong to 18 clans (2),
162

[126] 2. The property of each person has been registered to this or that clan, the figures on the number of clans, etc.

of which especially numerous clans are: Chuy-guy in the settlement of Chayvo (114 persons), Ady-Tymovskiy (156 persons), Mymyzi in Nyyvo (94 persons), Urlandzh in Chayvo (55 persons).
361 The most notable settlements in population are: Chayvo (151 per-
103 sons), Kekhrvo (90 persons), Nyyvo (46 persons), Tekhrvo (51
162 persons), and on the Tym' -- the trinity of settlements, Ady-Tym' and the neighboring Khomrvo and Plyuvo (106 persons), not counting the immigrant population from the western coast, Moz'bvo
• 20 (Rykovskoe, 56 persons), and others. Communication between the
361 first two of these settlements, Chayvo and Kekhrvo, is extremely
[484] difficult; aside from the shallow water, the journey is difficult because in several places it is necessary to carry the boats over long stretches of dry land. As has been mentioned above, there is communication from the settlement of Kekhrvo to the village of Pomr and the western shore.

133 North of Kekhrvo the coast is uninhabited, and summer
484 travel to the north is extremely difficult and completely impossible along the shore itself for lack of any means of transportation
484 across the wide mouths of numerous bays. The only means of
492 transportation is on reindeer by way of the taiga and over the mountain ridges. If one adds to this the fact that a draft reindeer makes its way with great difficulty in the summer, it is clear how difficult and slow such a journey is.

201

201 GESTURES AND SIGNS--patterned expressions of emotion (e.g., affect aggression, derision, fear, disgust); gestures of affirmation and nega indications of size and shape; directive signs (e.g., beckoning, warni sign languages and their use (e.g., by the deaf, in intertribal communi etc. See also:

193 explained. In the same dialect there exists a word ja-jmnd
197 'to know' (to this word there corresponds in the Amur dialect the word jəjmd). In the direct object, which according to the rules of the Gilyak language merges with the predicate, the letter j alternates with c h. Thus for instance "I know Mizgun" sounds in Gilyak Ni Mizgun-hajmnd. In this way the verb jajmnd gives rise to the second form of the stem - hajmnd which exists independently of the first as a distinct word (just as the intransitive form of the transitive verb jajmnd 'to know') meaning 'to get old'. Hajmnd means 'to get old'. (In the Gilyak language intransitive verbs are formed out of transitive verbs by alternating the first consonant of the stem of the transitive verb.) In the Gilyak language "to know" and to "get old" derive their origin from the same stem and this is understandable for in the case of primitive man knowledge came with experience and so with age. We have thus explained the origin of hajm in the word hajm ar: hajm is derived from the intransitive form of the stem which, in this form, means 'to get old.' is the suffix which transforms verbs into nouns. We already know the meaning of ar. Thus the word hajmŋar means 'the knowing male' or 'old male.' The Amur hem is, of course, the same as hajm-ŋ in the Sakhalin dialect which change considerably in the Amur dialect. The disappearance of in it is understandable for the Amur dialect drops its final ŋ's as against the Sakhalin dialect which does not. For instance, 'horse' is murŋ in the Sakhalin dialect and mur in the Amur dialect, 'dog' is qanŋ in the Sakhalin dialect and qan in the Amur dialect. At present we find it difficult to explain why hajm became hem in the Amur dialect, contrary to the rules which would lead us to expect həjm as the counterpart of hajm; thus, həjmr instead of hemar. At any rate it is incontestable that hemar and hajmŋar have the same meaning and, accordingly, hemanχ means a 'knowing female' or and 'old female.' It is possible that at one time or another the Gilyaks meant by ar not only male but also man. This is quite probable for at present they use two words for man: azmət in the Sakhalin dialect and utku in the Amur dialect.

252 Hemanχ sat in squatting position at the trough containing
237 the heads of the sivuchs. The skin was taken off the heads of the sivuch right down to the level of the eyes. The skin on the snouts was untouched. First the old woman cut out the throat together with the tongue. Then she took out of the heqr kuti (?) the plant piskər placed there by the hunters. Then she pulled out the whiskers and put them in a separate cup. After

es, St. Petersburg, hold that their language knits them in origin to
Pacific coast of Northern Asia, and America, and the Aleutian isles."

194 XVIII. Language.

128 In putting the Gilyak language into writing it is easiest to use Russian letters, for several sounds are pronounced exactly as they are in Russian and in the Slavic languages in general. The Russian letters Л, Ю, И exist in the Gilyak language, especially the latter sound which can be represented neither by the West-European "Y" nor by "ui", and which is pronounced exactly as in the Russian word b'il. The letter "i" is pronounced peculiarly full as in Slavic languages before a, u, o, and ui (1) and at the end of some

1. I use these two letters for the Russian И although they do not accurately reproduce it.

words; and for this there is no corresponding sound in the Germanic and Romance languages. The letters g, k, and h or really ch [German pronunciation] occur frequently in Gilyak words and are sharply accented by pressing the tongue against the soft palate, so that this language (like th Semitic tongues) has a peculiarly guttural sound. There ar so many consonants that it probably deserves to be called a hard and not a beautiful language. The language of the Goldi is softer. The t and tch, the k and ch [kh] often coincide and the y is sometimes pronounced almost like the sh and the French g.

197 The language of the Amur-Gilyak from the sea up to the village of Bogorodskoye resembles the Sakhalin language sufficiently so that the people can at least make themselves understood after a fashion. But it, too, already shows som deviations which even occur in neighboring villages. Thus the word "cough" is yeret in Kaka; in Vaida which lies on the shore about one and one-half German miles from it, the word is yaat. In Mikhil which is about 100 versts (about 14 German miles) up-stream, the deviations are more numerous. For instance, the word "friend" is there called napkhe; the word "heaven"; tle. In Vaida and Kaka these words are amgan and tly. In Mikhil the expression "good day" is designated by the Goldi word sarodé. Even in one and the same place many words are differently [252] pronounced; for example, ytyk ("father") is also pronounced styka. Other words change so much according to the way they are used that they are no longer recognizable. For instance "rufrokh" means "with the brother": ytyktokh,

197 "with the father", while ygryr means "with him", and nygryr: "with me". [F. S. Examples omitted]

193 Often the preposition is entirely omitted (see below). There are almost no grammatical forms. There are no declensions. The verbs sometimes change so much that they are hard to recognize, but these metamorphoses are not so constant that fixed rules could be derived from them. There are some conjugational forms, but they exist within such broad limits that there is room for arbitrariness, that is, one can use one or another form. [F. S.: Examples omitted]

[253] From these examples it may be seen 1) that the verbs are to a large extent modified, but 2) that it is difficult in these modifications to find a constant applying to a particular time, person, and number. It seems certain that up to the present time nothing of the kind exists. At least my Gilyak professors did not object when I used a certain verb in an indefinite form for all moods except the imperative, and for all persons and numbers. Only the imperative always seemed to end in "ya", with the accent on the last syllable. But many verbs are strongly abbreviated or changed; for instance "to sing" is lunyt; "sing" [imperative] is luya. [F. S: Other examples omitted]. The indefinite mood, with few exceptions, ends in "ty".

[254] There are no genders; "he" and "she" are the same. Singular and plural are also the same, only the pronouns are an exception.

The prepositions are usually placed after the word to which they refer; for example: "through the forest", pal (forest) shmy (through).

The adjectives have no comparative and superlative, instead the word lele (very) precedes them. For some things which can be large or small there are related expressions, of which the one referring to the larger object is a repetition of the one referring to the smaller object; for instance: a "small river" is la, "river" is pilala.

/247 cont./

580 weakly developed. Among the Gilyak there are very few
157 such outstanding, passionately devoted hunters as are to be
234 found among the Tungus. Nor do the Gilyak, especially
152 during the past half-century, possess the heroic emotions of
72 war. Indeed, what the Gilyak called wars in ancient times
614 were in fact nothing more than sporadic clan skirmishes
578 motivated by vengeance or, even more frequently, were over
463 women. The Gilyak have never known war as a profession,
as the favorite occupation of youth. It is natural that their
831 emotional energy should be principally directed toward
152 sexuality. The Gilyak begin their sexual life with the onset
of puberty and devote all their leisure, all their thoughts, to
women, the more so since by far not every Gilyak, as we
836 shall see, finds it possible to marry. The bachelor youth is
not content with the women to whom they have rights in their
own settlement; they do not stop with the circle of women to
whom they have rights by law. The only category of women
before which the Gilyak halts is the class of women prohibited
484 to him. Neither length of time nor immensity of distance will
836 deter the Gilyak from his romantic adventures, if he can but
find his fill of feminine society. The young man sets off most
eagerly of all, of course, for the village of his "fathers-in-
law" --akhmalik't but he is not averse to undertaking a journey
even to completely alien villages. During the time of my
[122] travels, young men frequently voluntarily joined me, offering
me their assistance without compensation for many weeks,
and this was done in the hope of finding occasion for romantic
adventures, since this was not so very difficult. Owing to
836 the Gilyak's traditional hospitality and eagerness for any news,
574 the doors of every home are wide open to each new arrival.
Thus, the Gilyak feels at home everywhere. A few hours
• [203] after his arrival in some settlement, he has already managed
to spend some time in every home, everywhere relate his
news, to which the men and women listen with equal avidity,
and has already managed to let his glance fall on some
woman who has caught his fancy. The rest is a matter of his
amatory experience and art.

/273 cont./

584 Even without invitations, however, there are always wit-
575 nesses, for the arrival of countrymen immediately becomes
known and the yurt is filled with outsiders. Repudiation of
[186] one's word is a serious matter, for which one is summoned to
court, and this results in a large fine.

584 But even if the matchmakers do not wish to or cannot con-
576 ceal the purpose of their coming, etiquette does not permit
them to come immediately to the point.

At first they speak about the most unrelated things, not giving any hint of the purpose of their coming. During the conversation, drinks are passed around. Having conversed enough concerning "news, events," they gradually come to the point, but they are obliged to approach it through circumlocutions and hints, attempting to discover how favorable the chances are. If the father of the bride disapproves from the start, he immediately cuts off the matchmakers with a categorical rejection. But this rarely happens, for no one goes to make a match without a chance for an agreement.
• [203] Usually they come, as the Gilyak say, as "equals to equals," for all the Gilyak, no matter how far they live from one another, know everything about one another, down to the minutest details, even who killed how many sables during the last season. The question is merely one of not assenting quickly, in order to bargain as much as possible. Etiquette requires the father to pretend for a long time that he does not know why the matchmakers have come, and, when it is no longer possible to pretend, he must think up all possible excuses and obstacles. Ordinarily he resorts to deprecatory opinions about his daughter, asserting that she is very ugly in appearance, understands nothing about the care of the house, that she is quarrelsome, etc. But the guests are quite prepared for these evasions and have answers prepared in advance. "We," they say, "are not chasing after loveliness; and as for the care of the house, she is still quite young, she will learn, and anyway we have enough women experts without her; as for her ill-temper, that is no misfortune, the years will teach her how to live with people." Or they interrupt

/274 cont./

584 At this stage the viscosity of the negotiations reaches
583 its apogee, and "tayoray" /spelled with Russian letters; see
below/ begins to play a quite exceptional role. I happened
to be present when in the settlement of Pil'vo on Sakhalin a
Gilyak whom I knew, a certain Isayka, betrothed his little
boy to the 15-year-old daughter of an old widow. The old
woman had no kin in the settlement, neither any of her own
nor any on the side of her deceased husband. At her request,
therefore, all the honorable persons of the settlement assembled. On the bridegroom's side there appeared, besides his
father, his clansman, Sofronka. At first, it seemed that the
business would quickly end, for the old woman was very
needy and had pushed forward her own proposal herself. But
when they came to a discussion of the bride price, Sofronka
argued with her the whole day. In vain did he employ all
his eloquence and ask those present to help him convince the
old woman of the acceptability of the conditions. She invariably reiterated one thing: "tajoraj /spelled with Latin
letters/!" Finally, after a whole day of tormenting negotiations, when the old woman found that she had sufficiently
maintained her character and completely fulfilled all the
demands of etiquette, she offered the conditions with which
the other side had been in agreement from the very beginning,
namely, that the bride price should be paid at once in its entirety.

[126] To indicate the character of the ceremony of negotiations,
I shall cite the introductory dialogue of a matchmaker with
the father of the bride that I wrote down /275/ on the Amur.
The matchmaker, the father of the groom, Pevn by name, is
asking for the daughter of Lakkan. Both are well-to-do men,
old acquaintances.

584 After the customary exchange of news, after drinking
583 some vodka, Pevn says (I translate literally): We both
539 have been for a long time as an elder brother with a younger
• [203] (like brothers), great friends have we been. Now I have
[576] come through need. It was necessary to come to thee. It is
a matter, a big matter, when the need came, so thou come
to my aid.

/362 cont./

514 Try entering into a conversation with anyone about their
[520] life, customs, and so forth -- the whole yurt gathers about you.
The adults listen and reply with serious interest. The children
will not tear their gaze from /363/ you. Their eyes glow with
the fire of intelligence and fascination. They answer you seriously
and conscientiously; only inspire trust in them. You will feel
yourself drawn toward these barbarians... And never, so to speak,
does life stagnate here, because each day brings some large or
small occurrence in the life of the settlement, each day brings,
finally, new guests with new subjects for conversation. In each
yurt you will find many such guests, who often stay for weeks,
and during all this time the hosts feed them and their dogs.

The Gilyak are very hospitable and love to pay visits and entertain guests. Not only do the clansmen and kinsmen of the wife pay visits, but also those outsiders who are simply friends. In the yurt there often live together people of different clans, on whom guests and clansmen from all parts of the Gilyak territory
• [203] call. Imagine how much news each winter day brings. Winter is the preferred season for visiting. This noble custom of hospitality has still another good side. In a bad year, when the Gilyak does not have enough food for either himself or his dogs and nothing to buy it with, he does not have to stretch out his hands to a benefactor; he quietly sets off to pay a visit, knowing full well that in time his host will do the same. One encounters many guests in the summer as well. At this time of year, too, the Gilyak rarely lives alone in his yurt; there are always one or two families
177 of his brothers or other clansmen with him. Despite their long subjection to the Siniczed Manchu, despite the destructive influence of the rascally population of the Amur region, the Gilyak, morally, preserve many of the virtues of primitive tribes. But the fate of their mode of life is irrevocably settled. One or two more generations, and the Gilyak of the mainland will become completely Russified and, together with the fruits of culture, will master all its vices. One must give his due to the Gilyak: he does not lightly abandon his ancestral traditions, but they involuntarily give way. At first they were indignant and perplexed, meeting

/558 cont./

411 same time, however, they did not show any particular timidity
107 or fear in front of the gun, whereas a pistol imbued them with a
152 great, almost superstitious fear. For example, when I often had
[123] to threaten them with the pistol for various acts of insubordination, they beseeched me not to make use of it, because this would bring misery to the entire house, even to the women and children in it. Could this fear simply be based upon the still great unfamiliarity with the use of this weapon, upon the awareness that it could be brought into action at short range suddenly and unperceived, or, as I am almost inclined to believe, on some other superstitious belief or association of ideas (1)?

123 1. At this point I cannot refrain from men-
152 tioning another and similar superstitious
• 203 fear on the part of the Gilyak, which at first seemed totally mysterious to me, and it was entirely by accident that I later obtained the key for an explanation of it. The case is also noteworthy because it is evidence of how profoundly certain impressions gained through unusual experiences persist in the mind and memory of a primitive people and how easily they spread, going from mouth to mouth, throughout their entire area. I owned one of those walking sticks from which a long fishing rod can be turned out, and I wanted to show it on one occasion to a Gilyak who was with me at the Nikolayev post, with the intention of delighting him, especially since the apparatus was used for fishing. I had scarcely pulled out the tip, however, when the man turned away in horror and implored me to put the thing away and not to cause any misfortune. Exactly

/558 cont./

123 1. (cont.)
& 152 the same thing was repeated several
times later with other Gilyak from the
• 203 various villages along the Amur and
Liman, so that I never once succeeded
in producing my stick in front of them,
and from then on gave it up completely,
trying in vain to think of a reason for
this strange, highly excited, and fearful behavior toward an object as harmless as a fishing rod. How great, therefore, was my surprise when, already in St. Petersburg after my return, I once happened to hear Mr. v. Middendorff, who had visited the Gilyak ten years before I had, and, to be sure, in their most remote dwelling sites along Ulban Bay in the Sea of Okhotsk, relate how he had once played the following joke on them. As he stood in their company
[241] in front of a white-tailed eagle which, chained, was perched on one of the fish-drying racks - a very common sight in their villages, which will be discussed further in the following -- in front of their eyes he cut off a thin willow switch, stuck its point, unnoticed, into a little bottle of prussic acid which he carried with him, and held it in front of the beak of the eagle. The animal immediately collapsed and died, but the Gilyak were seized with horror and fear and from then on regarded our traveler as a powerful sorcerer. To me there now remained no doubt obviously the news

/558 cont./

123 152 203 1. (cont.) of this event had spread from Ulban Bay to the Amur and Liman, and the Gilyak were afraid that I might have a similar magic wand.

41 17 [192] In my time the only shooting weapons of the Gilyak were the bow and arrow, which they used on occasion against large as well as small animals. The bow (Gilyak puntsch, on Sakhalin punt) is of the same nature as among the Tungus and other Siberian peoples. It is made of the wood of young ash trees or, lacking them, of good birch wood. In the Tymy Valley [824] [192] on Sakhalin the Gilyak designated to me the kind of wood called per by them, i.e., according to Schmidt and Glehn, Evonymus macropterus Rupr., /559/ as their "punt-tschchar" (bow wood) (1), as is also the case among the Aina (2).

1. Or, as they said as a rule, "punt-lytynt-tschchar," that is, bow-making wood.

[113] 2. Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin, Botanischer Theil /Travels in the Amur Region and on Sakhalin Island, Botanical Section/" (Mém. de l'Acad. Imp. des sc., seventh series, Vol. XII, No. 2, pp. 99, 213, 215).

41 230 53 In order to protect the wood from dampness and to retain its flexibility, the bow has fine birch bark pasted on it, or, as I have seen on especially fine specimens, for example, on the bow from Tebach shown on Plate XLIV /see p.1024/, Figs. 4 and 5, is covered with fine elk skin on the inside, i.e. on the side turned away from the marksman when shooting, but on the outer side turned toward the hunter, with whalebone (Gilyak asm) (3).

[104] 3. The s is soft here, like the French z.

000 Amoor line is closed up, the telegraph circuit around the globe will be complete.

206 The telegraph is operated on the Morse system with instruments of Prussian manufacture. Compared to our American instruments the Prussian ones are quite clumsy, though they did not appear so in the hands of the operators. The signal key was at least four times as large as ours, and could endure any amount of rough handling. The other machinery was on a corresponding scale.

574 A merchant who knew Mr. Borasdine invited us to his house, where he brought a lunch of bread, cheese, butter, and milk for our entertainment. Salted cucumbers were added, and the repast ended with tea. In the principal room there was a Connecticut clock in one corner and the windows were filled with flowers, among which were the morning glory, aster, and verbena. Several engravings adorned the walls, most of them printed at Berlin. We purchased a loaf of sugar, and were shown a bear-skin seven feet long without ears and tail. The original and first legitimate owner of the skin was killed within a mile of town.

346 In addition to his commerce and farming, this merchant was superintendent of a school where several Gilyak boys were educated. It was then vacation, and the boys were engaged in catching their winter supply of fish. At the merchant's invitation we visited the school buildings.

The study room was much like a backwoods schoolroom in America, having rude benches and desks, but with everything clean and well made. The copy-books exhibited fair specimens of penmanship. On a desk lay a well worn reading book containing a dozen of Æsop's fables translated into Russian and profusely illustrated. It corresponded to an American 'Second Reader.'

There was a dormitory containing eight beds, and there was a wash-room, a dining-room, and a kitchen, the latter separate from the main building. Close at hand was a forge where the boys learned to work in iron, and a carpenter shop with a full set of tools and a turning lathe. The superinten-

The meat of these sacrificial animals, however, is not eaten, but left on the place of the sacrifice and naturally becomes the booty of crows and also of the other hungry dogs of the village. (2 S.R.I, pp. 10-14.)

G 764 152 49. Goldi. In the village of Chongar (on the right bank of the Amur), while I was passing between two yurts that were some distance apart, I was startled by human wailing that came out of the grass, which was higher than a man's height. I investigated and saw a woman who sat there hunched together and wailing, staring at the sky. I watched her for a while and then inquired as to the reason for her mourning. She said in reply, bulke, that is, "dead," then stood up and explained to me that her husband had died in the next village and she was lamenting it. She did not seem to mind the interruption, and when I left, in order not to disturb her in her grief, she likewise went off (probably calmed by the interruption), giving up her lamentation, in the other direction toward the yurt (***). (I S.R. IV, p. 17.)

small points on the roof of the raff, as shown in the illustration Plate LXVIII /p. 1268/, Fig. 1) are called largha (the r pronounced with a burr). In the interior of the raff there is a small linen-covered or cloth-covered board, pierced in the center

G 211 and equipped with a peg, as a sign that a corpse is buried under the ground.

CHAPTER XII.

211 I HAD a curiosity to examine the ancient monuments at Tyr, opposite the mouth of the Amgoon river, but we passed them in the night without stopping. There are several traditions concerning their origin. The most authentic story gives them an age of six or seven hundred years. They are ascribed to an emperor of the Yuen dynasty who visited the mouth of the Amoor and commemorated his journey by building the 'Monastery of Eternal Repose.' The ruined walls of this monastery are visible, and the shape of the building can be easily traced. In some places the walls are eight or ten feet high.

211 137 Mr. Collins visited the spot in 1857 and made sketches of the monuments. He describes them situated on a cliff a hundred and fifty feet high, from which there is a magnificent view east and west of the Amoor and the mountains around it. Toward the south there are dark forests and mountain ridges, some of them rough and broken. To the north is the mouth of the Amgoon, with a delta of numerous islands covered with forest, while in the northwest the valley of the river is visible for a long distance. Back from the cliff is a table-land several miles in width.

This table-land is covered with oak, aspen, and fir trees, and has a rich undergrowth of grass and flowers. On a point of the cliff there are two monuments. A third is about four hundred yards away. One is a marble shaft on a granite pedestal; a second is entirely granite, and the third partly granite and partly porphyry. The first and third bear inscriptions in Chinese, Mongol, and Thibetan. One inscription

22: Knox T-2 (1866) 1870 Gilyak

211 announces that the emperor Yuen founded the Monastery of Eternal Repose, and the others record a prayer of the Thibetans. Archimandrate Avvakum, a learned Russian, who deciphered the inscriptions, says the Thibetan prayer *Om-mani-badme-khum* is given in three languages.*

The lowest of the monuments is five and the tallest eight feet in height. Near them are several flat stones with grooves in their surface, which lead to the supposition of their employment for sacrificial purposes. Mr. Chase told me at Nicolayevsk that he thought one of the monuments was used as an altar when the monastery flourished. There are no historical data regarding the ruins beyond those found on the stones.

Many of the Russians and Chinese believe the site was selected by Genghis Khan, and the monastery commemorated one of his triumphs. The natives look upon the spot with veneration, and frequently go there to practice their mysterious rites.

Before leaving Nicolayevsk I asked the captain of the Ingodah how fast his boat could steam. "Oh!" said he, "ten or twelve versts an hour." Accustomed to our habit of ex-

* Abbe Huc in his 'Recollections of a journey through Thibet and Tartary,' says:—

"The Thibetans are eminently religious. There exists at Lassa a touching custom which we are in some sort jealous of finding among infidels. In the evening as soon as the light declines, the Thibetans, men, women, and children, cease from all business and assemble in the principal parts of the city and in the public squares. When the groups are formed, every one sits down on the ground and begins slowly to chant his prayers in an undertone, and this religious concert produces an immense and solemn harmony throughout the city. The first time we heard it we could not help making a sorrowful comparison between this pagan town, where all prayed in common, with the cities of the civilized world, where people would blush to make the sign of the cross in public.

The prayer chanted in these evening meetings varies according to the season of the year; that which they recite to the rosary is always the same, and is only composed of six syllables, *om-mani-badme-khum*. This formula, called briefly the *mani*, is not only heard from every mouth, but is everywhere written in the streets, in the interior of the houses, on every flag and streamer floating over the buildings, printed in the Landzee, Tartar, and Thibetan characters. The Lamas assert that the doctrine contained in these words is immense, and that the whole life of man is not sufficient to measure its depth and extent."

Shternberg commenced a broader and a more systematic of the Gilyak in the first part of February, 1891, when the istration, having learned of his work with the Gilyak, com- ned him to make a family census of the northwestern Gilyak halin from the village of Arkyvo to Cape Marii.

/xiii/ During this trip Shternberg discovered group marriage classificatory system of kinship among the Gilyak. Parallel to e carefully studied the clan rules and religious views of the . It might be mentioned here that prior to his scientific re- he had not even had the opportunity to become familiar with sic works of that time on the ethnography of the Far East. what he writes in the preface to his "Materialy /Materials/": o the conditions of my stay on Sakhalin, even Schrenck's n the history and material culture of the Amur peoples re- d inaccessible to me for a long time... (1). From a careful

1. Materialy po izucheniiu giliatskogo yazyka i fol'klora /Materials on the Study of Gilyak Language and Folklore/, Vol. I, p. viii, St. Petersburg, 1908, publication of the Academy of Sciences.

s of Shternberg's literary heritage and of his first printed it is clear that at the time of his first trip to the Gilyak he t had the opportunity to acquaint himself with either ck's book, Ob inorodtsakh Amurskogo kraia /Concerning tives of the Amur Region/, or even Morgan's Ancient Society ee obshchestvo), Tylor's Pervobytnaia kul'tura /Primitive e/, or the other works on the history of primitive society. other hand, his prison acquaintance with Engels' classic as not wasted on him. There is no doubt but that it was to this study that he was able in such an astonishingly short to discover among the Gilyak group marriage and a catory system of kinship and, basically, to realize clearly l significance of this discovery. Thus, in a letter of the enth of May to his good friend and companion-in-arms in

/xiii cont. /

*114 121 127 [212] revolutionary activity, M. A. Krol', Shternberg writes (2):

2. I am indebted to the kindness of the widow of the deceased, S. A. Ratner-Shternberg, for acquainting me with the contents of this letter.

"I have discovered among them (the Gilyak) a kinship terminology and family-clan rights identical with those of the Iroquois and the famous punalua family (on the Sandwich Islands), in a word, the remains of that form of marriage on which Morgan based his theory and which served as a point of departure for Marx' and Engels' works on Der Ursprung der Familie, des Staates, u.s.w. /the origin of the family, of the state, etc./. The interesting clan organization of the Gilyak, however, rests on this kinship system. At first I was afraid to trust my own discovery, but, having let not a single family or a single yurt go by during the census without detailed questioning as to what different members of the clan and family call one another and who has what rights, I finally became convinced (3). /xiv/ Al-

[161] 3. Earlier in the same letter Shternberg mentioned that he had covered 1,040 Gilyak in his census.

though there are voluminous studies on the Gilyak, no one in the literature known to me has studied this aspect of the question."

*114 After his investigation of the Gilyak of the northwest coast, there followed a series of other trips which resulted in a full ethno- [125] graphic study of all Sakhalin. Thus, in June, 1891, he took the census of the Gilyak and the Orochi on the river Tym' and on the east coast of Sakhalin, and a partial one of the Tungus. In the winter of 1891 he encountered the Olcha who visited Sakhalin late in the fall for trading purposes. He spent the summer of 1892 [125] traveling on the river Poronai and around the entire southern part of Sakhalin as far as the settlement of Kosunaya, where, along with the Ainu and the Orok, he also studied and took a census of the Gilyak.

CONTINUED ON NEXT FICHE

33 boats. However, there are some to be found among them
who are considered singers; they are improvisors of a sort
who entertain the others with their song.

35 The dance does not exist among the Gilyak, unless one in-
01 cludes in this category the spontaneous leaps with which a
17 tipsy one occasionally cools off his exuberance. There is a
21 reason for the Gilyak's facial expression of which we spoke
above. It is neither sullen nor sad, but also not unhappy
or good natured; it is serious or indifferent. But I must
hasten to add that this immobility and indifference only
reaches to a certain point. The Gilyak's imagination and
his sense of humor are not immediately apparent, but in
reality he possesses both. The favorite pastime on winter
evenings is listening to a story teller, and his voice is
alternately interrupted by laughter and exclamations.

27 Holidays and festivals. There are no special rest days
87 which would, for instance, correspond to our Sundays.
83 The bear festival is the only one worthy of this name. It is
celebrated once a year during our January, it lasts two
weeks and is accompanied by various entertainments. Young
bears which, as we said, are brought up for this festival,
are taken direct from their caves or they are bought from
Sakhalin kinsmen. Occasionally 100 rubles are paid for a
one-year-old. Young bruin is put into a hollowed-out tree
trunk to which he is fastened with a chain, and thus he is
transported by sled. The yurts where this traveler halts are
considered particularly lucky. It has happened now and then
that the bear, because of negligence on the part of the people
transporting him, has crushed a child to death, but such
accidents are not mourned by the parents, who regard it as
a good omen.

27 The bear is kept in a special enclosure in his new home.
31 An old woman is appointed to feed him and give him water.
The latter is offered him in a long wooden spoon which is
inserted through a little opening. His chief food consists of
dried fish, sometimes he also gets millet and various
scraps. [236]

Not all villages have bears, therefore people from different
villages usually assemble for the festival, even from those
places that had their own bear festival and had already con-
sumed their bear. Often Sakhalin-Gilyak come to the main-
land at this time, although they themselves are well supplied
with bears.

27 Besides feasts, various amusements take place at the
41 festival; for instance, dog races. A track is cleared on the
37 ice and staked off, and the trained dogs run for wagers.

Playing a wooden percussion instrument.

The wooden religious sculpture was akin to that of the Orochi, Ul'chi and Nanay. The figurines of bears on dippers and spoons used in the bear festival were finely made and realistic in style. The bear dippers were often remarkable in their craftsmanship. Some of them were carved with pictographs, relating the history of the hunt or rearing of a given bear. The carvings on the dipper handles were also symbolic; they indicated by a variety of symbols whether the bear was killed in a hunt or reared in captivity, whether it was killed in the summer; and so forth. 532 322 [191]

The musical culture of the Nivkhi was very poor. They played a primitive one-string instrument (t'yngryng) and a lip jew's-harp (kkangga). During the bear festivals they used, instead of musical instruments, an ordinary log, which the women struck with sticks. 534 [196]

Education was entirely lacking among the Nivkhi before the Revolution. The Nivkhi-Nanay alphabet written in the 1880's by the missionary, Protod'yakonov, was not used by the Nivkhi. 871 [212]

In 1895 an elementary school was opened in the city of Mariinsk; two others were opened in 1899. By 1905 they were closed for lack of funds. Only a few individual Nivkhi attended Russian schools.

Contemporary Life of the Nivkhi

175
648

In 1918, soon after the establishment of the Soviet government in the Far East, this area, and especially the Amur Basin and Sakhalin, became the scene of civil war and intervention. Guerrilla units were organized to fight the White Guards and interventionists. The bitter fighting lasted several years.

Ch. Taksami, student at Leningrad University, at a student ball in the Kremlin palace.

Today the Nivkhi are served by an extensive network of diverse med institutions; in addition, specialist physicians visit the most ren collective-farm villages. One of the initial tasks of the Soviet governn was to bring the children into the schools and to liquidate illiteracy am the adults. Schools were opened in Sakhalin during the very first years a the establishment of the Soviet government there. A group of Nivkhi yo people were sent to school on the continent, and adults were taught at c ters for the liquidation of illiteracy.

A Nivkhi alphabet was created in 1931. In 1932, the first schoolbo were published. During the 1933-34 school year, some 300 children w already at school in the Sakhalinskaya Oblast, which meant 86% of all Ni children of school age. It was possible to assure daily attendance only a the establishment of dormitories. Today all children attend school. In village of Kal'ma there is an elementary seven-year school; in Nogliki th is a ten-year school. A part of the Nivkhi youth (boys) attend trade scho in Komosol'sk and factory schools in Komsomol'sk and Nikolayevsk-the-Amur.

9: Hawes--240 T-3 (1901) 1903 Gilyak
116, 173, 183, 212, 539

"The Gilyaks have no written language, but they have a legend to account for the want of it. I learnt it from one of their number, Imdin by name, the only Sakhalin Gilyak known to have been brought up and educated by the Russians. He is an intelligent youth, and had been sent to a school at Vladivostok, where I met him in the charge of a political exile, to whom he owed nearly everything.

'The legend current among my tribe,' he said, with a smile, 'tells how a Gilyak and a Chinaman were talking together one day on the shore. The former was showing his books and letters (characters) to the latter, when most unfortunately a great wind arose, and blew away all the letters save five; and to complete this great catastrophe, when the Gilyak's back was turned the Chinaman meanly made off with the small remnant.'

The Ainus have a not dissimilar legend, in which, according to one version, their letters and records were stolen by their guest from Japan, while they were yet recovering from after-dinner effects."

22

UEST--general statements dealing with several aspects of food gath-

/27 cont./ In

22 spring, with the seals and the first fish that travel in masses upstream to spawn, the koryushka, herring, the Gilyak is again revived, and in the course of the summer months in the expectation of the autumn catch he again begins to make visits and dolce far niente.

574 252 In speaking of guests I cannot fail to mention a peculiar festive dish and the favorite food item to which Gilyak guests are treated -- the so-called mos'. It is prepared from a sticky broth of fish skins, seal fat, berries, rice, sometimes with the addition of small pieces of yukola. All this is mixed together and cooled. Sometimes, to add color and flavor, a solution of white clay is added to the mixture. Without any fastidiousness, the boiled fish skins are squeezed out into a trough by the dirty hands of the Gilyak women, and for more flavor the small pieces of yukola are first ground with the teeth and spat out with the saliva into the dish...

342 354 352 [177] The exterior living conditions of the Gilyak are very simple. Only in some places closest to the Amur have the Gilyak adopted the Manchu type of winter dwellings, which, by the way, are also very primitive. In form they are large sheds /28/ built with poles and spars, in which large pipes made of stone or wood and smeared with clay, and connected at the openings with the stove, are laid on the floor along each wall. Laid out over the pipes are plank beds, which are always heated by the warmth of the pipes. The smoke of the stove goes out through an underground passage into a high, vertical pipe which rises straight up from the surface of the ground. The role of this pipe, which resembles those on our factories, is played by a hollow tree. In the middle of a yurt there is a high rectangular scaffold on which the packs of dogs are let out when they are to be fed. A more primitive yurt is a dugout, which is half in the ground and covered with poles and spars smeared with clay or covered with earth. The entrance from the passageway is through a low door along several steps. The hearth is in the middle of the yurt and is surrounded by passages between the plank [132] beds; over the hearth is the smoke opening. In winter, even in the yurts of the first type, it is sometimes so cold that the mercury in the thermometer freezes, and with the least wind the yurt becomes 352 516 full of smoke. One sleeps on the plank beds with the head toward the hearth and on skins or quilted bedding; under the head there are

/365 cont./

776 that they are killing seals; in such a case the boat is destroyed. But if, in reply, the Gilyak display a hare's tail, the devil goes on his way without further consideration.

776 782 The relationship between the Gilyak and all his gods -- nivukhi -- is quite clear. It is they who provide him with sables, 22 foxes, bears, fish, seals, and so forth. Sables and bears are just as much the property of Pal'-nivukh as fish and seals are the property of Toll'-nivukh, and as sled dogs are the property of the Gilyak. The gods specifically give a portion of their property to man. It is not an accident that the fish appear with such amazing regularity during the appropriate seasons, it is not an accident that sable is dressed in an expensive fur during the hunting season, it is not an accident that swans, geese, and ducks molt in the summer and become an easy catch for the Gilyak. All this is done by the 776 782 gods for man; he lives only by these gifts. It is clear that the Gilyak should not remain in debt to their benefactors. And so they give the gods a portion of everything that they avail themselves of: saranka, roots, tobacco, sugar, and so forth. When I once expressed a desire to take part in the sacrifice to Toll'-nivukh at the beginning of the seal season, they asked me: "But will you give the god bread, potatoes, etc.?" Sacrifices are the exchange of portions with the nivukhi. That is why the sacrifice may never consist of the same objects for which sacrifices are made; for example, among the dishes offered in thanks for the seal, this last does not figure, although it constitutes an indispensable dish of the Gilyak themselves on the evening of the sacrifice. Thus, the bear at the well-known festival is in no way a sacrifice, as some think, /366/ for not a single piece of its meat is apportioned to the god, and the Gilyak does not understand allegory: to sacrifice -- means giving the god something real. And actually, at this festival, the master of the bear, Pal'-nivukh, is given a sacrifice of saranka, "moss," yukola, and other viands. The [225] principle of exchange in sacrifices is not contradicted by the fact [226] that the Gilyak offer to the "master of the sea" fish bones and the head and eyes of seals. The explanation for this is very simple:

G1 T /383 cont./

342 dwellings of the successive peoples in this direction. One need 171 only compare the Gilyak summer-house, made of beams and resting on piles, with the dauro of the adjacent Tungusic peoples. Moreover, if the dauro of the Olcha, Negda, and Samagir, even though only made out of light /384/ materials, wooden poles, some of them perhaps of somewhat greater thickness, birch bark, etc., are nevertheless rather spacious and resemble a house on the outside, those of the Goldi shrink to small tents made of willow switches and birch bark and easily transported from place to place, and the dauro of the Orochi do not even go beyond the roof shape, the simplest of all tent forms. In the upper Amur region, among the nomadic Birar, Manegir, and Orochon, tents of conical form again appear, to be sure, but these are wholly adapted for a nomadic life, and often, for a temporary stay at a place, are limited to merely a few poles and a bark mat wrapped around them. Moreover the winter dwelling constructed on the Chinese pattern has not penetrated to these peoples or to the Orok on Sakhalin at the diametrically opposite end of the Amur region, though it has spread throughout the area in between and is customary among the Gilyak on the Sea of Okhotsk and on the northern tip of Sakhalin, and the tent with only a hide covering, in spite of the severe climate, is also their winter dwelling.

G G1 T In these housing conditions of the indigenous Amur peoples it is evident that there is a feature fundamentally different be-
361 tween the anciently sedentary, Paleo-Asiatic Gilyak and the
342 Tungusic peoples surrounding them, who wandered in later,
22 indeed, in part even at a time not very long ago, and remained inclined toward the wandering, nomadic life. The differences in dwellings discussed above are closely linked to the total way

G of life and subsistence of the peoples mentioned. The Gilyak are
361 predominantly fishermen and, along the seacoast, also seal
433 hunters; correspondingly, they are almost exclusively ichthyo-
226 phagous, as is their only domestic animal, the dog. Now, in
[231] order to support themselves and their many dogs, required both
[262] for making the many winter trips and trade journeys and for procuring the customary winter clothing, during the period when fish are scarce, they need a considerable supply of fish, and this is

G1 T /385 cont./

231 are, on the contrary, of such a type that they find all the more
361 abundant food with a nomadic life because of the change of grazing areas and therefore in a way give their owners an additional motive for the nomadic life.

/386/

Section 5

G 291 External Appearance: Clothing, Hair Style, Ornaments, Tattooing

The clothing of primitive peoples, even more than the dwelling, is intimately bound up with their total way of life and means of subsistence. For insofar as the materials required by them for clothing are not obtained through barter with a civilized people, they secure them from the same source as their food, whether this be fishing, hunting, or the raising of domestic animals used for food or for transport, and give them a style suitable to their life and activity, their crafts and occupations.

G As for the Gilyak, with whom we shall again begin our dis-
22 cussion, it must first of all be repeated that fishing and seal-
231 hunting are their chief occupations, whereas hunting takes only
175 second place among them; furthermore they keep only one
439 domestic animal, the dog, but this in large numbers as draft animals; and finally, as the oldest reports that the Russians had about them said (1), they maintain constant trade with the

1. See p. 203 above.

G Chinese. Accordingly, their principal materials for clothing, be-
291 sides cottons, which since ancient times they have obtained from
439 the Chinese and at the present time also from the Russians (Gilyak possj; Russian-Siberian, dabá), are the skins of dogs and seals and fish skins, while the furs of forest animals, fox, otter, sable, squirrel, etc., are used only for trimmings or for smaller articles of clothing, such as caps, gloves, scarves, etc., but otherwise

/638 cont./

586 material reasons, which are always decisive to a great extent among the Gilyak, each of the two parties avoids taking the initiative in the dissolution of the marriage.

462 For the most part similar utilitarian considerations lie at the root of the peaceful life shared by the husband and wife and the good treatment which the latter receives from the former. /639/ The Gilyak is much too practical and too intent on the preservation and increase of his possessions not to realize the great usefulness of his wife and to appreciate the tremendous amount of work she achieves through her industriousness, skill, patience, and experience. In the division of labor between husband and wife for their common household, the greater share by far falls to her. In 462 general, the man only has to attend to providing the most 22 important means of subsistence. Hunting, catching sturgeon and hausen, killing the seal and dolphin, and trade, and, in particular, the many trips and voyages required for it, [251] make up the field of action that is exclusively his. To be sure, he also does other fishing and, at the time of the mass migrations of the various species of salmon, even does this in a very energetic fashion, but in this the women are of great help to him, and the tiresome work of cleaning the tremendous amount of fish brought ashore, of cutting them up and hanging them on the racks to dry in the sun, falls entirely on them. They also collect, in part with the help of the children, all the winter supplies of vegetable foods insofar as they are part of the native flora, the various edible berries, 462 roots, herbs, moss, and the like. In addition, the wife has to tend to the entire household and everything pertaining to it. The single thing that the man does for it directly is to [313] cut the needed firewood in the nearby forest, split it, and bring it to the front of the house. To carry it into the house as needed, however, is again left to the women, just as they are obliged to fetch the water needed for drinking and cooking -- a task which in winter and in bad weather involves much toil and effort in the villages that lie high above the river. These are, as a rule, also the first tasks of the day,

225 of a small board equipped with a harpoon-tip, attached to a stick from 10 to 30 meters long. The lykh was lowered into the water; the hunter hid himself nearby in his boat or on the shore. When he caught sight of his quarry, the hunter carefully directed the lykh at it and quickly drove it into the animal.

324 As compared with its role among other Amur peoples, hunting played a 22 smaller part among the Nivkhi. The hunting season began in autumn, after [184] the end of the fish-runs. At this time bears come down to rivers to treat themselves to the delicacy of fish, and the Nivkhi awaited them with bows or guns. Sometimes they set crossbows for them. In winter, they hunted bears with spears. The bear season was followed by the sable-hunting season. Sable and certain other fur animals (otter, lynx and marten) played an important part in the Nivkhi economy. The Amur Nivkhi went out every autumn in their large, heavy boats made of boards, to hunt sable in Sakhalin, returning from there only in early spring. This was due to the abundance of sable on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees which served the sables as crossings.

324 The main weapon in hunting was the gun, which in the early 20th century [177] replaced the compound Nivkhi bow with its horn covering. However, the bow [198] was preserved in the bear festival and in children's games. Squirrel and foxes were hunted with dogs. Crossbows were set for both small and large animals.

241 Agriculture already began to appear among the Nivkhi in the middle of the 19th century, when they first learned to plant potatoes. Individual Nivkhi had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths in some of the villages, who reforged Japanese, Chinese, and later Russian metal articles for their own needs; they made knives, straight and curved, adapted to wood-carving; arrowheads, tips for harpoons, spears, and so forth. The smiths used double bellows, an anvil and hammer. Pieces of massive chains preserved from the past speak of the high skill of the old smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. The 887 old men wove ropes from bast and nettle, built sleds and made dog-harness.

Men's work included fishing, hunting, making the tools required in these 462 occupations, including tackle and means of transportation, the preparation and transportation of firewood, and blacksmithery. The women processed the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and ornamented clothing, made birchbark utensils, gathered plant products, did the housework and took care of the dogs.

179 By the time the Far East was Sovietized, commodity relations were quite 433 strongly developed among the continental Nivkhi. The old forms of collective production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked the necessary gear were compelled to hire out as lumberjacks and other hired laborers, transport goods, etc. The smallness of the income from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Amur Nivkhi. The catch of seal, white whale and sea lion went mainly to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. Workers were also hired, on a half-share basis. Some Nivkhi worked during the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in 22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola 262 took the place of bread. Meat was eaten rarely. Food was prepared with

Among the Sakhalin Nivkhi, who differed in their economy and material 177 culture from the above peoples, socialist reconstruction followed a some- 648 what different pattern. Many Nivkhi went to work in fishing and lumbering 474 enterprises. The first Primary Productive Organizations were organized among the Nivkhi in 1927. Subsequently, the Nivkhi began to socialize the instruments and means of production—nets, boats, dogs, etc., and went on to a more advanced form of social production—the agricultural cooperative. A part of the Nivkhi population joined Russian collective farms, situated near Nivkhi villages.

As they learned new methods of conducting their economic activities [241] and mastered new techniques of production in the collectives, the Nivkhi [231] began to develop new economic activities, formerly unknown to them; tillage, gardening and cattle-breeding. At first, the work of the Primary Productive Organizations, particularly on the eastern coast, where villages lie at considerable distances from one another, was seasonal in character. The Nivkhi gathered at the fishing camp from several nearby villages and fished cooperatively for 3-4 months, after which they dispersed. In winter, they engaged in carting, using dogs as draught animals. Later the cooperatives became permanent. As a rule a collective farm was first made up of the inhabitants of one village. But larger collectives also developed, such as the "Chir-Unvd" ("New Life") collective, which united the economies of three villages along the middle course of the Tym' River (Kirovskiy Rayon). An important role in the organization of collectives was played by the Nivkhi youth, particularly by members of the Komsomol.

The organization of collectives and their successful development were openly resisted by the rich Nivkhi and former elders. The greatest resist- [361] ance was to the building of new collective-farm villages and the resettlement of the members in new sites. The resettlement was necessitated by the need to enlarge the villages, which had often consisted of two or three houses, and to transfer them to more convenient places, nearer to good fishing areas. The Soviet government spent large sums on this. Most of the collective members left their old smoky dwellings and moved to new, bright homes.

At present, fishing occupies an important place in the Nivkhi economy. 177 The former primitive fishing methods have been abandoned. Along with 648 seines, the fishermen set up more efficient zayezdki; manually worked 226 scoops have given way to winches; fish is transported on Amur sailboats 474 (kungasy) and cutters; and Motor-Fishing Stations (MRS) provide extensive aid to the collective fishermen.

Many Nivkhi collective members participate today in fishing expeditions. To do so, they travel to Okhotsk and other districts. Expedition fishing [22] usually lasts from April to August. It is also carried on in Sakhalin, where the continental Nivkhi also come to work. In spring, the members of the fishing collectives hunt seal in the estuary and on Sakhalin. In winter, they hunt fur-animals.

Agriculture is a new branch of economic activity among the Sakhalin 177 Nivkhi. The first Nivkhi agricultural collective, "Chir-Unvd," was 648 organized in 1930 along the basin of the Tym' River in northern Sakhalin. 241 In 1937, the collective already consisted of some 50 households. Its 474 acreage under cultivation rose from 1.5 hectares in the first year of its existence to 61 hectares in 1937. The main crop was potatoes. The collective farm has its own skilled agricultural personnel—brigadiers and team leaders—although there was a time when the Nivkhi considered agriculture a great sin. As the old men used to say, "He who digs or plants will die."

/25 cont./

000 man was possible at a very remote time. As a matter of fact,
226 these fish that travel in masses upstream to spawn even now serve
262 as the basis of life for the Gilyak and his only domestic animals,
[231] the dogs. The fish, caught and dried in the sun by the tens of
[251] thousands, /26/ are stored in pile storehouses and, in the literal sense of the word, replace bread for the Gilyak during the long winter. The fresh local fish that he catches all year round are merely an addition to this daily bread of preserved salmon. The countless schools of the fish that travel in masses upstream to spawn provide food not only for the Gilyak. No smaller packs of all kinds of pinnipeds and cetaceans follow the schools of fish,
225 pursuing the abundant food. After the fish, the pinnipeds consti-
262 tute the second source of the food supply of the Gilyak. In early
[221] spring, at the first signs of the opening of the ice, the famished native comes out to hunt seals, which are happy for the opportunity to breathe the fresh air on the ice floes which are breaking up.

225 In favorable places these animals are hunted all through the
146 summer by means of a very long harpoon which is thrown from a boat. Besides their skins, which are quite indispensable in the Gilyak economy, seals also provide supplies of fat, which serves as a seasoning for the hard yukola, and also as an independent food product that is extremely important for the life of the Gilyak. The effect of the fat on the organism of the native is striking. Here it is the end of winter. The famished Gilyak, if he has not been brought down by scurvy, can hardly walk. But the seal need only appear, and he is momentarily transformed. He greedily throws himself on the melted fat, drinks it in all forms, with tea, with fish, and even just as it is, and in a few days he becomes unrecognizable: his cheeks become pink, his body gains weight, and vitality expresses itself in his every movement.

224 In autumn, after the end of the run of fish, an active and
[221] happy season of hunting begins. Bears in abundance come down to the banks of the streams to regale themselves on salmon, and the Gilyak lies in wait for them with gun and spear. Every bear killed is an occasion for communal festivities and celebrations. Before the season for fish and bear has come to an end, the sable has put on his dark coat, and it is time to hunt him. Now the setting up of snares at the crossing of rivers and the building of

/26 cont./

224 traps begin. This is perhaps the most interesting season in the manifold yearly activities of the Gilyak. He leaves his home for several weeks and betakes himself to his inherited sable stream to watch for the valuable little beasts. During the daytime he inspects his snares and traps, shooting birds and any kind of animal that he meets along the way; for the night he betakes himself to his little balagan. He must live through some difficult moments in this little balagan. Here, in the wild taiga, amidst the gloom of night, the silence of the wilderness, or the howl of a snowstorm, to the lonely savage, cooped up at his minuscule hearth or vainly trying to warm himself /27/ at the temperature of the freezing of mercury, each rustle, each strange sound, each snap of a tree, howl of the wind, moan of a night bird, and, finally, the hallucinations of his own frightened imagination depict in all their terrible reality all the horrors of the Gilyak demonology. The devils and ogres of all the elements in the imagry of the Gilyak appear to him, to cause his destruction. And the terrible exhaustion after his labors, the lack of food -- all this aggravates the horror of the situation, bringing sickness often even death. Sable hunting, however, promises more than just terrors and adversity. A successful catch, gay company, a triumphal return home with the catch, stories about experiences, all this fully rewards the hunter worn out with suffering. But, on the whole, the Gilyak is not a hunter. Hunting with dogs is unfamiliar to him, the risky pursuit of bears, of which the Tungus are so fond,
[262] does not attract the Gilyak. By and large he is an ichthyophagist, and someone has very correctly said about him that he lives by frutti di mare /the fruits of the sea/.

221 The winter months are the gayest ones in the year. The supplies of fish have not yet been exhausted. On the earnings from the catch, tea, tobacco, rice, and buda were stored up, and the
[574] Gilyak cares little about the future. Endless visiting begins, and
[796] listening to the storytellers at night, and, beginning in February,
[538] there are the bear festivals, the happiest days in the life of the
[261] Gilyak. In March, however, the results of the winter extravagance
[164] begin to tell, and there come the hard days of hunger and sometimes scurvy, which carries away dozens of flourishing lives. In
000

/29 cont./

493 person steering the sled sits astride it and keeps his feet, not on
492 the runners, but on ski which glide by the side of the sled. By moving his ski apart or by bringing them closer together, the Gilyak changes his center of gravity as required and thus gives stability to the sled. In places which are more or less steep so that the sled has to move obliquely, he holds it back by means of sticks with iron tips which are driven between the runners and the upper crosspiece. In rapid movement these same sticks serve as brakes. The dogs are led by their lead dog, usually a small, uncomely creature who obeys his own extraordinary senses as much as the commands of the driver. At a time of danger, in the middle of a raging snow storm, or in late spring in the midst of broken ice-floes on top of which water is already coming out, the driver can only depend on the remarkable instinct of his loyal
[435] friend and slave. A good lead dog costs from 30 to 50 rubles,
[556] ordinary draft dogs from three to eight rubles. Twelve to thirteen dogs are harnessed to the sled of a rich man; poor men are satisfied with three to five.

501 The native dugout of the Gilyak, a boat of poplar, is also built on the model of the sled. It is so light that a little boy of ten or twelve drags it by himself without difficulty a hundred steps or more to the bank. Its bottom has the same spherical and flattened surface as the dog sled, so that it does not sit deep and passes over the shallowest places. On encountering an obstacle in the form of a shoal or isthmus between the lagoons, the Gilyak easily carries it on his back and then lowers it into the water.

221 Means of transportation play an immense role in the life of our native. The Gilyak is in general a semisedentary person. In summer hs usually lives near a river or sea, while for the winter /30/ he migrates farther away to more protected places, to his warm, winter dwellings.

Even in summer, following the fish, he changes his place of residence along the course of the river two or three times. In addition to these regular changes of residence, the Gilyak has to resettle for a number of other reasons. At the end of winter, when his food runs out, he travels to distant places on his dog sled to

/30 cont./

221 purchase fish, while in many places (for example, on the Tym') the inhabitants set out in whole settlements to travel several hundred kilometers to the seashore for the spring seal-hunting, only to return half a year later for the fall run of fish in their native 574 517 places. The Gilyak likes to travel, however, even without [484] serious reasons for it. To make visits, receive guests, arrange celebrations, and live gregariously are the greatest pleasures of [157] the Gilyak. Gloomy and stern while alone, he is transformed in society and becomes playful, gay, and garrulous.

342 157 In the north, in winter, between 30 and 40 people live in the big yurts of the Manchu type. It is here that sociableness, which is inherent anyway in the conditions of the social frame- 128 work of the Gilyak, is cultivated. Now, however, we must leave the external aspect of the life of the Gilyak and pass to its internal structure, with whose unique peculiarities I intend mainly to acquaint my readers.

III.

601 171 174

Kinship System. Marriage Norms and Their Influence on the Family-Clan Structure.

Of all the peculiarities of the Gilyak way of life nothing so characteristically distinguishes them from the surrounding nationalities as their classificatory system of kinship and the rules that regulate their sexual relations and marriage. In this respect the Gilyak stand equally far from their southern neighbors, the Ainu, and from the Tungus tribes that surround them. The Ainu are the only nationality of the Priamur krai who have preserved features of [611] maternality /materniteta/. The Gilyak family and clan are purely [614] patriarchal institutions. As for the Tungus tribes, although the [595] classificatory system of kinship and certain characteristics of group marriage analogous to those discovered by me in 1891 among the Gilyak were discovered by me among them, a careful comparison of this institution among the Tungus tribes and among the Gilyak leads to the conclusion that they /31/ belong to quite different

/169 cont./

833 daytime the favorite place for "catching" one's an'g:ej is lo- * 835 cations where berries are gathered; in the evening -- anywhere outside of the settlement, near the well. In the winter, in the yurt: in the daytime, in the absence of strangers; at * 835 night, after all have gone to sleep. Finally, there are periods 221 when the group spouses are free from any restrictions. The married men go for several weeks into the taiga to their hunting territories, while in the summer and winter they continually travel about on visits or to festivals. At these times * 835 there is complete freedom for the group spouses. Only one [521] thing is most strictly demanded: neither the participants themselves nor any strangers who have chanced to be witnesses to the relations of group spouses have the right, under the penalty of sinning, to tell anyone, no matter who, and especially the persons concerned, about such relations publicly. But these demands of non-publicity, established in the interests of peace between group spouses, with the aim of preventing possible fits of jealousy, have in no way diminished the publicity of the institution of group marriage itself, the publicity of the conjugal rights themselves. These rights [671] have been nationally formulated in legal theses which have [867] come to be common property (the formulas themselves are given below in the chapter on the relations of brothers to their wives) -- theses which each father and each mother consider their obligation to impart to their children with religious solicitude from very earliest childhood. Publicly, the group spouses not only behave with unconstrained familiarity, but address each other with none other than the tender words "my [764] dear little husband," "my dear little wife." But the publicity of group relations /170/ is manifested best of all in the case of the death of a man who is not joined in an individual marriage. In such cases, before the burning of the body, one of the group wives (usually the wife of an older brother) steps out on the funeral platform and in the hearing of all mourns for * 835 him as for her beloved, as for her husband. It is curious to 832 note that during the negotiations between the pu and the 585 584

/202 cont./

* 174 As we have seen, the Gilyak were also furnished with 177 wives by the Chinese; they, just like the Ainu, furnished [221] them with slaves. Some influence was also exerted by [437] seasonal trade and hunting expeditions to the territory of [439] neighboring peoples. The Amur Gilyak often went into the Ainu territory for years on hunting expeditions or for purpos of trade and frequently brought Ainu women back to their [563] homeland. Conversely, representatives of the Tungus peop or Ainu settled among the Gilyak and entered into marital relations with them or carried off their women. And altho these cases might be isolated, nevertheless they could not be without influence.

* 174 A quite specific influence in the economic sphere has 177 been exerted by communication with cultured peoples. Ur 556 the encounters with the Chinese and the Russians there was stimulus for the accumulation of riches. Until then there were only objects of consumption. No one accumulated them, and the highest ambition of a more capable or succ [439] ful man was to share his acquisitions with others. Trade wi the Chinese created the stimulus for accumulation. There appeared new valuables which it was impossible to consum but which they began to value, which were profitable to accumulate. There appeared rich men, fortunate possesso of valuables, and others who did not have them and wished to possess them. In rich men there was born a consciousne of their wealth and their importance, and together with thi the ambition to become related to their equals. Among th [583] poor people there arose the temptation to make the marryi of their daughters a source of the acquisition of valuables. The old form of the obligatory marriage, where the woma was given without a bride price, became unprofitable, and with the slightest loophole everyone /203/ tried to circum [581] the old imperative. Finally, the phenomenon of the insti- tution of wealth strengthened the institution of individual marriage. The custom of brothers living together with on

them that the old people had told him that one part of the Gilyak came across the ocean, the other, from above, that is, from approximately there where the city of Blagoveshchensk lies. May we not understand this to mean that they crossed over from Sakhalin and that the first immigrants mingled with the Goldi who were already to be found on the Amur?

If one asks how intelligent the Gilyak are, it may be said that for savages they are rather intelligent. In the arts, however, they are very backward. They know how to draw or carve various animals. The figures are coarse, but nevertheless [246] recognizable. Music and poetry are absolutely embryonic, but at least they like to hear music. Their memory for places and persons is astonishing. If a Gilyak meets a stranger somewhere, he recognizes him instantly after many years, and at the same time recalls all kinds of minor circumstances accompanying the original meeting. In languages, too, their memory is not bad, at least many of them speak Russian, but the reverse is not true. It is, however, doubtful whether the Gilyak's memory would be adequate for systematic instruction. In instruction the different facts cannot be directly understood but must be interpreted from the words of another, and thus a certain imagination and judgment are needed. For a time there was a school in the village of Mikhaylovskoye where Gilyak children were taught to read and write. This they learned very well, but nothing else was taught. The Gilyak, of course, do not have their own writing.

Curiosity and a desire for knowledge are average. The former I judge in comparison with other uncultivated peoples whom I had the opportunity of observing, especially the Bashkir. The latter are so intrusive in their curiosity that they give the traveler no peace. Of course, the Gilyak also gather around a stranger who stops at their yurts, but not in great numbers; they keep at a certain distance and soon disperse. If they come into the house of a Russian, they look about them with curiosity but they do not immediately reach for everything that strikes them and do not ask for presents. In this, as in many other respects, they are decorous people.

If I must praise them in this connection, I must also say that their desire for knowledge is not sufficiently matured that they would be interested in the main springs of culture. It seldom occurs to them to ask a Russian about a machine, about economic questions, nature, institutions, religion,

G /534 cont./
227 consideration, repaired at the slightest damage, and dried in
[286] the sun after every fishing expedition. For this purpose they
are spread out over special racks taller than a man, and super-
[184] stition requires that if the drying nets are in a person's way he
must always go around them, never underneath them. And,
finally, not until the nets are completely dry may they be used
again. Treated in this fashion a net lasts for several years among
the Gilyak and rewards many times over the care and labor used
in making it.

G
Gi /535/ What has been said in the preceding about Gilyak
226 fishing may in general be applied to the Tungusic peoples of the
433 lower Amur region more or less neighboring them, although with
a few qualifications and modifications, which are determined in
part by the way of life and the character of these peoples and in
part by the distribution of those species of fish principally caught.
G
Gi First of all it must be emphasized that, with regard to fishing,
[262] all the Tungusic peoples of the lower Amur region differ from
the Gilyak, not so much by practicing it by means of any new
methods unknown to them as by the essential, crucial fact that
none of them is ichthyophagous to the extent that the Gilyak are
or is dependent on fishing for its entire economy like the Gilyak,
and therefore none of them practices fishing to the extent and
with as much constancy, care, and energy as the latter. Among
G
Gi all these peoples, and not excepting the Olcha, who are closest
Gi to the Gilyak in all their external behavior and way of life,
[224] hunting, as a means of directly and immediately satisfying
the urgent needs for food and clothing, plays a far more im-
portant role than among the Gilyak, and, to be sure, this is
more and more generally the case the farther one goes upstream
and into the side valleys of the Amur River. Consequently,
it must take up more time and labor, or rather must take this
away from fishing. In particular it cuts heavily into winter fish-
G
Gi ing. In no season of the year does the basic difference in
226 character between the Gilyak and the Tungusic peoples of the
221 lower Amur region appear more clearly than in winter, in that
the former remain the same sedentary fishermen, despite various

G /535 cont./
Gi kinds of eager and assiduous hunting of game, whereas the onset
226 of winter seems to awaken in the latter a passion not entirely sup-
221 pressed by the fishermen's life, which temporarily transforms them,
as it were, into hunting nomads. Nevertheless it should not be
thought that among the Amur peoples the Gilyak alone busy
ooo themselves in the winter with fishing (1). The Olcha likewise

G
[113]

1. As, for example, Arthur Nordmann ("Ueber den Fischfang und die Jagd der am Amur wohnenden Giljaken /On the Fishing and Hunting of the Gilyak Living on the Amur/." -- Bull. de la Soc. Imp. des Natural. de Moscou, Vol. XXXIV, Part 2, 1861, p. 230) says.

Gi
226 The Olcha likewise
practice it to a very considerable extent, and the Mariinski post
221 in the middle of their area was abundantly supplied with fresh
184 fish by them in the winters of 1855 and 1856. The Amur Goldi,
439 too, devote themselves to it, but it gradually decreases among
[262] them going upstream: as I myself experienced, the traveler
going in this direction in winter is more and more commonly
offered deer, elk, and wild-pig meat or fat instead of fresh
fish. Przewalski (2) said of the Ussuri dwellers that fishing

2. Putesh. v" Ussur. kraie /Journey to the Ussuri Region/, p. 98.

practically ceases among them in winter because all the able-
bodied men go hunting then and only the old men and the
women left behind engage in angling. Sitting for hours at the
holes in the ice, they continually move their tackle, equipped
with only a small piece of red cloth or a bit of fur instead of
bait, /536/ up and down, and, despite this simple procedure,
it is said that on good days they succeed in catching from two
to three pood of fish, chiefly carp (Cyprinus carpio) and salmon
ooo trout (Salmo fluviatilis Pall.). I found the Samagir along the

/544 cont./
225 Along the seacoast and in the Amur-Liman seal-hunting
184 takes place during every season of the year. In winter and in
general as long as there is an ice-cover, the Gilyak lie in wait
[192] for the seals at the places where they come to the surface of the
[221] ice to breathe, in order to kill them with the ordinary harpoon,
the tugngy (2) (Pl. XLII /p.1022/, Fig. 2), also used for spearing

2. This designation primarily refers to the iron point illustrated, but it is also used for the entire harpoon equipped with a pole for hurling it.

sturgeon and hausen, or, when they have crawled out on the ice
itself, to cut them off from the water /545/ and simply club them.
The latter can be done more often and to a greater extent in the
spring, because then the seals are said to enjoy coming out on
the surface of the ice to sun themselves. Both the Tschomi
[221] Gilyak whom I met in Poghobi and the inhabitants of Tägl on the
mainland coast of the Sea of Okhotsk told me that the month of
April, arkail-long, was the month in which more productive seal-
hunting begins along the seacoast and in the Liman. In the Amur,
on the other hand, seal-hunting is practiced only when the river
has no ice, and, to be sure, especially in August, the pilja-
tschrar-long, because then the seals go into the river in greater
numbers in order to feed on the masses of keta salmon (S. lago-
cephalus) going up it. There is a similar situation at the mouth
of the Tymy on Sakhalin, where not only the Gilyak and Orok
living there, but also the Gilyak coming from the upper course
of the Tymy to fish, engage in seal-hunting as well as fishing.
For the former and in open water everywhere, in the sea as well
[192] as in the Amur-Liman and the Amur River, the Gilyak some-
times use the ordinary harpoon (tugngy, Pl. XLII /p.1022/, Fig.
2), which is hurled from the boat, and sometimes, and most
often, another weapon intended especially for seal-hunting, which
is called lych among them. It consists of a board about a foot
long, which rises a little in front and runs out into a horizontal

G
Gi /586 cont./
224 the help of snares (1) in a manner similar to that of the Ainu,
439
Gi
[113]

1. Margaritov", Ob" Orochakh" Imperatorskoi gavani /Concerning the Orochi of Imperial Harbor/, St. Petersburg, 1888, p. 13, Pl. II, Fig. 2.

and from which they use the contents of the musk sacs in particu-
lar in trade with the Chinese. In converting their hunting booty
into profit, however, the Orochi, because of the great isolation
of their homeland, find themselves at a great disadvantage in
comparison with all the other peoples of the lower Amur region.
In the southern part of their territory, where, as so-called Ta-dse,
they live intermingled with the Chinese they do find, to be sure,
a ready market among the latter for all their hunting but, as a
rule, they are greatly exploited by them in connection with this
/587/ and not infrequently, through advance payments, are made
their lifelong debtors. Farther to the north, however, where the
Chinese element is missing, the Orochi, living almost exclusively
by hunting, rely on their neighbors, the Goldi and Olcha, to sell
their booty.

G
224 In concluding the above consideration of the way hunting
361 is practiced among the peoples of the lower Amur region and its
114 greater or lesser importance for the total pattern of their lives,
I cannot but make room for an observation which the traveler
who has ethnographic aims in mind is involuntarily forced to
make. Whereas winter is by far the most favorable season of the
year for ethnographic research among the Gilyak, and summer
the most unfavorable, this reverses itself more and more into the
exact opposite in an upstream direction along the Amur and its
right tributaries toward the Goldi and Orochi. During the summer
the Gilyak are wholly occupied with fishing and the preparation
of supplies of fish for the winter and even bring something nomadic
into their lives, inasmuch as many, in order to seek localities
more favorable for fishing, then change their place of residence
temporarily and often simply camp in tents scattered on the

Goldi RX3
Tungus RUS

G /587 cont./
22 islands of the river and along the tributaries. With the onset of
36 winter, however, all of them again assemble in the more com-
114 fortable and spacious winter dwellings, and there begins a long
period of a quieter and more settled life which, in its regular
routine with the hunting carried on only in the vicinity, the
sturgeon fishing on the ice, the trade and communication, the
manifold domestic tasks and handicraft, the peculiar and pro-
longed bear festivals, etc., offers the ethnographer a rich field
for observation and study. It is almost the same among the
Gi Olcha. Among them, however, and to an even greater extent
22 among the Goldi, life in summer assumes an even more nomadic
114 character as a result of the easily transportable tent dwellings
36 solely used then, and the farther upstream one goes, the more
the winter dwellings are deserted, because part of the men have
left to hunt in more or less remote regions. As we saw, among
the Ussuri Goldi only women, children, and aged people are to
be found in them in winter, because all the able-bodied men go
hunting, and, finally, the Orochi not infrequently take their wives
and children along into the wilderness on their hunting, which
takes up the entire winter. With respect to them, therefore,
summer, which calls them back from the forests and for fishing
and seal-hunting assembles them in the summer dwellings, which,
though likewise only tent-shaped, are located at definite points
along the seacoast and at the mouths of the rivers, offers the
traveler the best time, in fact, almost the only possible time,
for ethnographic research. Thus, all the living conditions of the
lower Amur tribes vary and change greatly, depending on whether
and to what extent fishing or hunting plays the principal role
among them.

T /588/ I cannot discuss in detail the hunting practices of the
224 peoples of the upper Amur region, the Birar, Manegir, and
114 Orochon, because I had only fleeting contact with them, and at
a time when, far from their hunting areas, they were still in
part occupied with fishing in the Amur River. With respect to

2: Schrenck--943 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

484 /601 cont./ The alertness, versatility, and enterprising spirit that
437 they lack as hunters, in comparison with the Tungusic tribes,
439 is theirs to a high degree as traders. Not satisfied that many a
[157] Negda, Tungus, and Gilyak from the Sea of Okhotsk, from the
Liman, and from Sakhalin come to them in order to get from
their supplies of Chinese and, more recently, Russian commodi-
ties, tobacco, liquor, cereals, clothing materials, and the like,
in exchange for furs, they themselves, provided with these for-
eign articles and with some of their own products, such as sturgeon
or hausen /602/ meat and the like, undertake trade voyages to
[221] the places named. This is done especially in winter when there
[492] is little fishing, and for this purpose they use the numerous dogs
which they are able to keep, thanks to the abundance of fish in
the Amur River. With their help they are almost constantly on
the move all winter in order to look after their trade interests.
Although the means of locomotion mentioned permits them to
take only a small quantity of commodities with them each time,
the frequency and common practice of such trading trips among
them on the whole brings about a considerable turnover of goods,
and since the main purpose of these trips is always the same,
the acquisition of the furs needed for trade with the Chinese,
they offer the persons undertaking them a rewarding substitute
for the time and effort spent on them instead of in hunting.
Here again experience proves that the producer of a commodity
always has a smaller profit than the middleman adroitly using it.

439 These trading trips of the Amur Gilyak for the purpose men-
439 tioned principally go in three directions: westward to the Negda
484 on the Amgunj /Amgun/ (Gilyak Hynk) and the Samagir on Lake
648 Udyl, northward to their own countrymen on the Sea of Okhotsk,
[487] and eastward to Sakhalin. The relations of the Gilyak with the
Negda are very ancient, as may be seen merely from the fact
that of all the Tungusic tribes of the Amur region the latter,
aside from the Olcha, has become most assimilated with the
Gilyak, or, so to speak, Gilyakized. For this reason alone,
they, like the Olcha, are more interested than other Tungusic
tribes in benefiting by trade, and, in view of the geographical
location of their habitation sites, they do not lack the opportunity.

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

225 of a small board equipped with a harpoon-tip, attached to a stick from 10 to
30 meters long. The lykh was lowered into the water; the hunter hid himself
nearby in his boat or on the shore. When he caught sight of his quarry, the
hunter carefully directed the lykh at it and quickly drove it into the animal.

224 As compared with its role among other Amur peoples, hunting played a
22 smaller part among the Nivkhi. The hunting season began in autumn, after
[184] the end of the fish-runs. At this time bears come down to rivers to treat
themselves to the delicacy of fish, and the Nivkhi awaited them with bows or
guns. Sometimes they set crossbows for them. In winter, they hunted bears
with spears. The bear season was followed by the sable-hunting season.
Sable and certain other fur animals (otter, lynx and marten) played an im-
portant part in the Nivkhi economy. The Amur Nivkhi went out every autumn
in their large, heavy boats made of boards, to hunt sable in Sakhalin, return-
ing from there only in early spring. This was due to the abundance of sable
on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees
which served the sables as crossings.

224 The main weapon in hunting was the gun, which in the early 20th century
[177] replaced the compound Nivkhi bow with its horn covering. However, the bow
[198] was preserved in the bear festival and in children's games. Squirrel and
foxes were hunted with dogs. Crossbows were set for both small and large
animals.

241 Agriculture already began to appear among the Nivkhi in the middle of
the 19th century, when they first learned to plant potatoes. Individual Nivkhi
had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths in
some of the villages, who reforged Japanese, Chinese, and later Russian
metal articles for their own needs; they made knives, straight and curved,
adapted to wood-carving; arrowheads, tips for harpoons, spears, and so
forth. The smiths used double bellows, an anvil and hammer. Pieces of
massive chains preserved from the past speak of the high skill of the old
smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. The
887 old men wove ropes from bast and nettle, built sleds and made dog-harness.

Men's work included fishing, hunting, making the tools required in these
462 occupations, including tackle and means of transportation, the preparation
and transportation of firewood, and blacksmithery. The women processed the
skins of fish, seal and dogs, prepared birchbark for various uses, sewed and
ornamented clothing, made birchbark utensils, gathered plant products, did
the housework and took care of the dogs.

By the time the Far East was Sovietized, commodity relations were quite
179 strongly developed among the continental Nivkhi. The old forms of collective
433 production and distribution had almost entirely disappeared under the impact
of the increasing property differentiation. Many fishermen and hunters who
lacked the necessary gear were compelled to hire out as lumberjacks and
other hired laborers, transport goods, etc. The smallness of the income
from fishing made the Nivkhi turn to agriculture. Fur-hunting played an in-
significant role among the Amur Nivkhi. The catch of seal, white whale and
sea lion went mainly to fill the needs of the hunters and their families. Fish-
ing was done by cooperative parties usually consisting of 3 to 7 persons.
Workers were also hired, on a half-share basis. Some Nivkhi worked during
the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in
22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola
262 took the place of bread. Meat was eaten rarely. Food was prepared with

19:Genest--3 0-2 (1884-85) 1887 Gilyak

161 It is as impossible to estimate with any certainty the number
of Gilyak, as it is the number of Goldi. Rittich estimates
their number to be about 3000. On the Amur Jakobsen found
quite a large number of villages; on Sakhalin Island, on the
other hand, there were far fewer villages.
439 I like their neighbors, the Gilyak are fishermen and hunter
433 only now and then do they engage in trading. For instance, i
221 case there is among them a scarcity of food--something whi
342 happens quite often--they import from the mainland fish and
flour for the inhabitants of Sakhalin. In accordance with thei
primary occupations they spend their summers on the river
banks while in winter they move into the mountains and roan
through the woods. I am unable to say with certainty whethe
they have summer and winter dwellings like the Goldi, but I
think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobse
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
171 winter houses of the Goldi. The typical, enormous clay-
brick ovens and the benches, warmed by the pipes, along th
342 walls are also to be found in these houses. On the other han
361 the traveller found in September 1884 above Nikolayevsk a
whole number of Gilyak villages that were at a considerable
distance from the river bank, while the summer settlements
of the Goldi by their nature as fishing villages used to be
situated right by the river. One might conclude from this,
perhaps, that these Gilyak villages were not simply fishing
villages for the summer, but served as dwellings for the
whole year; unless one wanted to assume that the Gilyak wer
forced to withdraw from the immediate neighborhood of the
river in summer because of the partically marshy and there
fore unhealthy river bank. In Sakhalin, moreover, there wa
not a trace of the larger houses of the Gilyak such as those
mentioned above; rather, the huts were only small and half
under-ground, so that they had a certain similarity to the
511 dwellings of the Eskimos in Labrador and in Alaska. They
515 offer a very unenviable abode for the European traveller,
for with their confined space one can hardly avoid close con-
tact with the inhabitants and the dangers connected with that,
in short, being tormented by a multitude of vermin. In addit
the atmosphere created by the crowd of people present, by
the presence of the dogs, by the manifold provisions hung up
for drying or smoking, and by the smoke which can only
511 escape with difficulty, is hardly bearable. The large houses
136 on the main land are in better condition, but they, too, have

/246 cont./

Among the Tlingit (the Koloshi) the institution is described
595 in more definite terms by Veniaminov, who plainly says that
197 "the second husband must always be either a brother or a very close kinsman" (2). Similar phenomena have been observed among the Central Eskimo by Ross. We shall not, however, deal with America, a country having the Ganowanian system, which is so close to the Turanian system. Our aim was to fill the hiatus which separates the native land of the Turanian system from the Ganowanian. After the survey we have made, we have the right to say that this hiatus has been filled.

2. Tvorenitsa Innokentiia /The Works of Innokentii/, Book 3, p. 619.

XI.

Sexual Life

157 The norms of group marriage, presenting the Gilyak with
224 such wide freedom of sexual intercourse, are in themselves
835 a propitious factor for the inordinate development of sexual
433 sensualism. The ordinary mode of life of the Gilyak, in turn,
could only aid in the extraordinary development of this factor.
[226] The principal Gilyak occupation -- fishing -- leaves him too much leisure. On the other hand, the only pursuit which could provide a significant outlet for the emotional vital energy, namely, hunting, plays a comparatively insignificant role in the life of the Gilyak. The Gilyak does not undertake
221 distant hunting expeditions. The seasonal hunting for sables, squirrels, foxes, and deer, and even the sporadic excursions after the local, rather /247/ timid bear, do not present any special dangers; the sport of hunting, therefore, is very weakly developed.

/333 cont./

224 are carried into the taiga, there they find a tree with a hollow
782 trunk, make an opening in the hollow trunk, feed the head, and throw all the bones and the head there.

The otter is fed and buried in exactly the same way as the sable. The remaining beasts are uigynd kauk (i.e., there is no taboo on them).

825 When a pair of reindeer horns from a mature specimen are
177 found lying side by side in the taiga, the possession of them gives the Gilyak luck.

224 During the hunting with nooses (pochakhir n'arkhund), a
784 woman must not sew anything new or give anything from her own house to another, even a member of her own clan, if that thing has spent a night in the house. One must not carry the fire outside. One must not allow any guest to spend the night. In the taiga, one may enter another's balagan, but not spend the night. If a sable is caught in a noose, an alien may not take it with his hands without the permission of the master, and in general during the hunting season the captured sable cannot be touched even by a person from the same clan if he is not a participant in the hunting party; even a killed hazel-grouse may not be touched. If
[626] any person commits an uigind -- sin, they do not let him fish or hunt on the stream, and they do not attend his bear festival.

224 /334/ Sables, when caught, should not be killed by dogs.

Catching a wolf. In Ilkhdam (northwestern Sakhalin) they place a tree with a forked branch and sharpened edges not far from the yurt. Yukola is hung between the forked branch and the trunk; the wolf jumps up to seize it, sticks in his paw, which becomes caught, and he cannot free it. It is a sin to shoot at wolves.

225 Seals are caught thus; a net is placed around a tos' (?), and the seals sleeping on the sand are driven together; then they fall into the net.

• 221 Mos' is made twice a year (in summer after the salmon,
[252] and in autumn before the sable). In winter one must unfailingly kill a great number of dogs oneself (a minimum of four), make plenty of mos', and in summer catch a great number of bears (this will be pal n'ivukh tkhusind). In general a great deal is done for the sake of tkhusind.

/348 cont./

174 With one's imagination it is not hard to recreate even the
166 form of the migration. Even at the present time the Amur Gilyak
167 are in the habit of setting out for Sakhalin in their heavy boats
• 22 each autumn to hunt for sable. Some travel to Agnevo, others
224 to Mauko, still others farther to the south. The sable in their
[136] homeland is incomparably better than the Sakhalin one, but he is so rare and those who hunt him are so many that the Gilyak prefer to leave their family hearths for as long as six months and to subject themselves to all the dangers of a thousand-verst sea voyage, striving toward those tempting areas where the population is sparse and sables may be killed by the hundreds. In early spring, loaded with their rich catch, they return to their distant hearths. These journeys to the south of Sakhalin are of a comparatively recent origin. As late as one hundred years ago the ancestors of the present-day sable hunters did not travel beyond Duf and the Tym' River, and at that time the Vaaz River was the northernmost point of their hunting. There is no doubt at all that in former times sable-hunting expeditions set out even farther
[648] to the north. There must have been some reason which compelled the Amur Gilyak to travel farther and farther away from their homeland and finally to transfer the center of their hunting activities to the very south of Sakhalin, where the sable is quite poor and where their ancestors had been forced to buy from the Ainu the hunting territories which they now use. /349/ The reason is to be found in the gradual settling of northern Sakhalin by Gilyak from the continental coast. Originally, the ancestors of the contemporary Sakhalin Gilyak, like the Amur Gilyak of the present day, traveled to Sakhalin in companies of kinsmen only in the season for sable hunting. Here they set their numerous traps on the banks of some stream and placed snares along the natural dams used by the sable for crossing from one side of the river to the other. It is not surprising that an annual pilgrimage to the same area for hunting ended in permanently settling on this island rich in sable.

/387 cont./

114 settlements the settlement of Mos'bvo
36 on the banks of the Tym' River, seven
103 versts from the settlement of Rykovskoye.
In connection with this settlement of
361 Mos'bvo, the author makes the following
221 comment: "It is inhabited only in autumn and winter. In spring and summer the inhabitants pass on to the western coast, mainly to the village of Arkyvo, where in the early spring they hunt seals and during the summer catch fish which are not to be found in the Tym' at this time of the year. At the beginning of August, before the Siberian salmon run, the population returns to their winter dwellings." Editors of the journal, Etnogr. Obozr."

000 with 109 yurts. The total population here is 703 persons (197
16 on the Tym' River, 506 on the Okhotsk coast), of whom 416 are male and 287, female; there are 169 families and 133 households, 483 adults, 175 married persons, 9 male polygamists, average fertility -- 3; 332 children survived birth; 169
422 died. Guns -- 64 (of these 30 are on the Okhotsk coast and
837 the remainder on the Tym'), 121 nets, 122 boats, 1,480 dogs.
471 During the last season 688 seals killed, 586 sables, 134 foxes,
433 43 otters, and 63 bears.

162 From this one can draw the following conclusions: here
592 there are, on the average, six persons per yurt, an average family has /388/ four to five members; there are 11 married males for one bachelor (1), one bigamist in 19 married men.

[589] 1. The word bachelor is applied only to older, so to speak, inveterate bachelors.

342 /357 cont./

342 yurt, between the piles, for protection against the rain, and the dogs, too, find a suitable abode under the same protective roof.

The above description also applies, apart from the
342 specific references to the pile-construction, to the summer dwell-
231 ings of the Gilyak put on level ground at certain places on Sakhalin and, as has already been mentioned, of very similar nature, and it will therefore suffice to add to it only the following remarks referring specifically to the latter. If the yurt is on level ground, the flat sill, space a, projecting along its front side is likewise on the ground. As long as it is still winter, this space is used for the erection of a shelter before the entrance to the yurt, even though only a crude one. For this purpose, on both sides and in front, where the dotted line is on the plan a few poles and boards are set up vertically and, with the exception of a passage, are bound together with plaited switches, and the spaces between them /358/ are filled with grass and brushwood, so that a sort of antehouse is produced. This is assigned to the dogs for their abode, where, posted at both sides of the entrance to the house, they make good sentinels for it.

25 Since the main occupation of the Gilyak during the
• [221] summer is fishing and preparing the supplies of fish for the winter,
[226] one always sees beside the summer dwellings several contrivances for this purpose. Thus, more or less numerous, open racks for
[417] hanging and drying the fish in the sun are never lacking, and not infrequently one finds a roof supported by piles, quite similar to the one on the summer yurts but much cruder, with crossposles under it, on which the fish, hung up in rows and protected against rain and sun, are dried in the continual air current (see
000 Pl. XIII) (1). For the storing of the supplies prepared in summer,

1. A more detailed description of the treatment of the fish before they are dried, as well as of the use of the individual parts and the like, will be given later at the appropriate place.

/427 cont./

000 campfire, will serve him very well. Jukola, by the way, is not
• 262 only eaten au naturel, but is also an important ingredient of many
[252] dishes, whose composition and preparation I shall come back to
[231] later. Finally, in addition to the chark, it is the principal food for
262 the dog. In view of the importance of jukola for the Gilyak, it is
• 221 understandable that, despite the indolence and carelessness more or
226 less characteristic of all primitive peoples, they are very intent on
252 preparing the largest possible supply of it and do not hesitate to make long trips and even temporary changes of residence for this purpose. Thus, for example, when those types of salmon come up into the rivers, some of the Liman Gilyak come to the Amur in order to take advantage of its surplus; others, such as some of the Tschomi Gilyak and the inhabitants of some places on the west coast of Sakhalin, move to the Tymy /Tym'/ River in the interior of the island, which is especially rich in fish, and do not return with the acquired supplies until winter. On the other hand, at the other times, for instance, when the kangi-tscho (Gadus wachnja Pall.) migrates in large numbers along the sea coast, some of the Tymy Gilyak, conversely, betake themselves to their countrymen on the west coast of Sakhalin in order to feast for a while on these fish.
[628] In this respect there seem /428/ to have developed in the course of time certain mutual agreements and relations based on reciprocity between the inhabitants of certain places, for example, between the Tschomi and the Tymy Gilyak, or between the latter and the Gilyak of Duf, Arkai, Tangi, and other places on the west coast of Sakhalin.

226 However plentiful the jukola supplies might be, however,
• 262 they would never suffice to make the life of the Gilyak secure if
36 there were not at every season of the year more or less, depending on the locality, many other kinds of fish, which the Gilyak eat fresh, besides those salmon. In this connection the most favorable locality in the Gilyak region is, of course, the mighty Amur River, and therefore along its banks, as discussed above, one also finds the largest concentration of the population and the richest development of the Gilyak individuality. The dwellers along the banks of the Amur seldom ever lack fresh fish to eat.

/429 cont./

226 Next to the Amur the Tymy River on Sakhalin is the Gilyak
locality richest in fish. It is therefore the vital artery of the en-
32 tire Gilyak northern half of the island, and especially along its
361 upper course, where it does not freeze even in winter, despite the
low air-temperatures dropping to below the freezing point of
mercury, small Gilyak villages lie more tightly packed than al-
most anywhere else in the Amur region. To be sure, the tastiest
224 and largest fish of the Amur River, the above-mentioned sturgeon,
is missing in the Tymy River, but it is especially rich in salmon,
and, to be sure, not only in those above-mentioned species gen-
erally widespread in the Amur region and, as a result of their
great quantity, principally used for the preparation of jukola, which
annually in the fall, as previously mentioned, also attract the
inhabitants of more distant localities to its banks (1), but also in

[13] various other species, such as the nem(a)lja, (Salmo coregonoides Pall.), the longr(sch) (S. callaris Pall.), njalych (probably S. sanguinolentus Pall.), loimang (a species of trout), etc. Indeed, there are even species there that are absent in the Amur River, such as choi-tscho (Salmo orientalis Pall.) and the tschawytscha of the Kamchadal, the largest and most prized salmon species of the shores of the Bering Sea and the Sea of Okhotsk (2). The

1. During the past few years even the Japanese have come to the mouth of the Tymy to fish there when the Salmo lagocephalus come up, and, as Mizzul (Ocherk" ostr. Sakhal. /Sketch of Sakhalin Island/, 1873, p. 120) and Poljakof (Putesh. na ostr. Sakhalin" v" 1881-1882 gg. /Journey to Sakhalin Island, 1881-1882/, pp. 70-80) reported in detail, they return home with a rich booty.

2. The Nyi Gilyak, among whom I saw two large specimens of choi-tscho in

/429 cont./

226 2. (cont.)
February, 1856, thought that it occurred only along the coast of Sakhalin, without going up into the rivers.

● 22/ The
226 mainland Gilyak, upon returning home from Sakhalin, not infre-
*262 quently bring some pieces of choi-tscho to the Amur as a special delicacy.

226 Finally, with regard to those Gilyak who have their habita-
*262 tion sites directly on the seacoast where there are no river deltas
[361] or only small, insignificant streams, although their situation is worse inasmuch as most of the above-named fish are lacking for them and they /430/ can prepare only small stores of fish, nevertheless even in winter the sea supplies them with fresh fish. Of greatest importance to them is a fish which is insignificant in itself and not very tasty, but which, at a time when their supplies are running short, appears in shoals directly under the ice in the vicinity of the shore and can be caught in quantity with the most primitive methods. It is the aforementioned kangi-tscho, Gadus wachnja Pall. In February and March, 1856, I saw the people and dogs living almost exclusively on this fish in Nyi on the east coast of Sakhalin and even more in Duĭ, Arkai, Tangi, and other
259 places on the west coast. It is only eaten raw and the treatment is
*262 always the same, in that first a thin slice with the three dorsal fins
[231] is cut out along the back and thrown away, and then the meat is cut from either side with one slice and is eaten; the remaining head with the backbone furnishes the kangi-chark, some of which, together with the rest of the scraps, is immediately cooked into a soup for the dogs and some is stored as food supplies for them, but, of course, it is far inferior to the laghi-chark and tengi-chark. Because of the importance of the kangi fish for the coastal Gilyak, more superstitions are connected with the preparation and eating
[264] of it than with the use of most other fish. Thus, it must be eaten
ooo without any accompaniments, placed on the sleeping bench of the yurt in only an open container, a bowl or a basket, etc. Moreover,

184 /430 cont./ Moreover,
252 with regard to these and similar views, there are many local dif-
114 ferences among the Gilyak. For instance, the Tro Gilyak did not object if the kangi fish intended for me was roasted on the spit in front of the hearth fire, while those of Arkai interpreted this as
[252] uitsch and permissible without harm only at a fire burning in the open air.

226 As on Sakhalin, the kangi fish also occurs along the conti-
● 221 nental coast of the Sea of Okhotsk, near Kuli, Tägl, Hisska (Petrofski Simowjo), etc. According to a statement by the Gilyak, it is absent in the Liman, and therefore, in order to catch it, the Tschomi Gilyak go every year to the west coast of Sakhalin along the northern part of the Sea of Japan, where in the winter of 1856 I met some of them. Presumably, however, this statement applies only to the southern, more closed-off part of the Liman, and not to the northern part, where at the broad outlet to the Sea of Okhotsk, the situation is quite similar to that in the latter.

*262 Next to fish, seals represent the principal foodstuff of the Gilyak, a foodstuff that is offered to them by Nature more or less abundantly at all the places in their habitation area, apart from certain localities farther from the sea, such as the Tymy Valley. For besides the seacoasts, along the Sea of Okhotsk, as well as along the northern part of the Sea of Japan, and the Liman, where this food source, of course, is supplied most abundantly, various species of seals, as I have set forth at another place (1), also come

1. See Vol. I, pp. 180 ff., of this work.

up the Amur through the entire Gilyak area and far into that of the Olcha. /431/ The Gilyak think the least of the seal meat itself
[114] as a food. Sperk is even of the opinion that they themselves do
[231] not even eat it, but only feed it to their dogs (1). This is indeed

[113] 1. Ed. Shperk", "Geografo-patolog. ocherki Vostochn. Sibiri /Geographical-pathological Sketches of Eastern Siberia/" (Mediko-

/438 cont./

*262 Compared with the animal food the vegetable food of the Gilyak is far behind. In the first rank here, because they are generally accessible and can be had for nothing, are the local, wild, natural products, many kinds of berries, small tree-fruits,
[252] tubers, herbs, algae, and seatang. All of these vegetable foods are eaten only as accompaniments to animal food or mixed with it and made into various kinds of dishes. The bilberry, Vaccinium
[137] vitis idaea L. (Gilyak myghr-als (7), or also /439/ simply called

[104] 7. The s is soft in pronunciation in this word, like the French z.

als, i.e., "berry") (1), in particular stands first among them with

[192] 1. The Gilyak from the Tymy and the east coast of Sakhalin call the bilberry itkt or paghla(n)-als, i.e., "red berry."

regard to both the quantity consumed and its manifold uses and
222 the tastiness that the Gilyak find in eating it. Every year in the
● 221 fall great stores of this berry are put up for the winter. For this purpose whole families, but in particular the women and children, go into the woods, especially up the small rivers emptying into the Amur or Liman. At a convenient place there a tent or merely a sloping protective roof supported by four poles is erected, in front of which a fire blazes, and the whole time is devoted to the gathering of berries. In the vicinity of the Nikolayev post, on the Kamr and Litsch Rivers, I repeatedly came across such
[251] families picking berries. The berries are poured into large, birch-bark bags and baskets and brought by boat to the house, where, covered with grass, they are stored for the winter in a frozen condition in the storage chambers. The Gilyak around Nikolayevsk had so many of them that, beyond taking care of their own needs throughout the winter, they also supplied the
252 Russians there. Bilberries, covered with fish oil or seal train-oil
*262 and stirred, represent the whole of the customary accompaniment for the fish, especially jukola, diet of the Gilyak. Moreover, they

/516/ Section 8

ooo Fishing, and in particular Sturgeon, Hausen, and Salmon.- Fishing. Fishing Equipment. Marine-animal Fishing: Seal, White Whale.

226 In the preceding chapters it has been repeatedly stressed
[171] that fishing plays a more or less important role among all the
[833] peoples of the Amur region, and that in particular its importance increases all the more the farther one goes downstream, until finally, in the region of the mouth of the Amur River, it becomes among the Gilyak the conditio sine qua non for their entire existence. The intermeshing of the various conditions and aspects of life made it necessary for us in the above descriptions of the housing, clothing, and locomotion of the Amur peoples to make many references to fishing itself or to the consequences of it. For example, one must consider the influence that fishing
[361] exerts upon the lesser or greater sedentariness of the various
● [227] peoples in the Amur region, in that, to be sure, in contrast to hunting, it gives them in general a more sedentary life, but even so requires a change of locality and dwelling twice a year, and commonly during the summer repeated moves along the water. Furthermore, the more or less predominant part that fishing has in the procurement of their food, clothing, and other necessities of life was discussed. In this connection the kinds of fish most important to the Amur peoples were named, and both the way they are eaten and the preparation of provisions out of them for the use of people and dogs were described in detail.
[121] And so, after all of that, there only remains for us to learn the way, how and by what means, fishing for at least the most important fish is carried on by the Amur peoples, as well as the times when it is done and some of the details connected with it.

/517/ As usual, we shall again start with the Gilyak, and, to be sure, with the Amur Gilyak, who are in every respect superior to their countrymen. To be sure, fishing in the Amur is also done in winter, but then it is relatively not very profitable and ceases completely toward spring when the ice becomes so

Gi /524 cont./
226 not appear in larger numbers in de Castries Bay until fall, that is, toward the end of August at the earliest and during September.
287 Farther to the north, in the Amur-Liman, I was told by
226 the Tschomi Gilyak, unfortunately without any reference to
114 dates, that both species, the tengi-tscho and the lyghi-tscho,
● 221 were to be found among them, but the latter in numbers in-
184 sufficient for their needs, so that, as has already been men-
184 tioned (4), when this fish migrates, they, like the Gilyak from

4. See p. 647 ff. above.

Tangi, Arkai, and other places along the west coast of Sakhalin, set out for the Tymy River on Sakhalin in order to provide themselves with larger quantities of winter supplies there.
G Some data for the southern coast of the Sea of Okhotsk,
114 to the northwest of the Amur-Liman, are found in Middendorff.
226 In the list given by him for the dates of the migrations of various fish and especially of the species of salmon at the mouths of the rivers of Siberia and northwestern America, June 22 is given as the arrival time of S. proteus at the mouth of the Udj, and July 9 as that for S. lagocephalus along the same coast (5).

5. Middendorff, Reise, Vol. IV, pp. 1226 and 1227. The statement contained in the same work (p. 1192, note 2), but not in the above-mentioned list and standing in contradiction to the data in it, that S. lagocephalus arrives at the mouths of the Ala and Uda (that is, Udj) fairly regularly about June 10, and 7-10 days later also at the mouth of the Tugur, does not seem trustworthy to me and, incidentally, is given with the reservation, "as is said." It is regrettable, as I must note here in passing, that the explanation of the abbreviations which are used for the sources

These people might with propriety be called an aquatic tribe. During the summer they live almost upon the water, paddling here and there in their lodbas with unusual skill. They live, likewise, both during summer and winter, they rely upon the sea for their food, likewise, both during summer and winter, they rely upon source nearly exclusively. While traveling they do in winter be accomplished with ; but this is very little, their preference being decidedly to lie and vegetate in their ty, smoky habitations during the cold weather, waiting for the advent of spring re renewing their out-of-door exercises.

These exercises, rowing and fishing principally, are only partial, benefiting merely muscles of the upper portion of the body. Owing to this fact, it is not unobservable no more strong physical and robust about the chest and arms, while their lower es are comparatively so small and puny as to convey the impression of deformity.

/134 cont./

The place where a distinction is made between the wives of younger and of older "brothers," this right was formulated for the 10 more honor, the younger brother is one and the same clan everything is permitted (gaed), the wife of an older (brother) is my wife all the same." The simplicity and primordial right of a man to the "wives" of his sons is intuitively more natural than the Chinese idea of memory up to the present time, with the sole limitation that we mentioned above, i.e., sexual intercourse should not take place before the eyes of the individual husband of the women and, as far as possible, not publicly. The right of the individual spouse, the right of a woman to complaint against her from his side fulfillment of her marital and economic obligations and that the husband often through /135/ any change of dwelling. He has a formally exclusive right to the children that the bears, but quite often a gilyak, if he has several children, consider it his duty to give away one of his infants to a childless tyon of his, if the latter lives in another settlement. He also the substitary right of a wife and her group husbands in the petion of his "brothers" to a particular tyon is not indisputable. It is true, the group spouses must look for a suitable opportunity in order, as a complete or substitute spouse (during his sleep or outside the homes), to enjoy their rights, but there are cases when sometimes through such opportunity, a man passes the greater part of his time away from home: either he is at the river catching fish, or he is away hunting for whole weeks at a time, or he is traveling, visiting. On the other hand, the husband also allows himself, whenever he wishes, days, going into the taiga for berries, roots, and, finally, intercourse is possible at night in the presence of the sleeping husband. In a word, the husband is not the right of group marriage but of group concubinage. The bachelor tyon more of all, only enjoy their rights. Matriarchal remnants of the Amur settlement usually only in case of some sort of particular passion for this or that group of the tyon, but outside of their settlement, when they happen to be away from their individual

The Sakhalin Gilyak (1)

1. The present article was published in Kunstkammera (Ethnographic Collection) 1899, No. 2. It was discussed at that time by F. Engels in an article in The New Zeit, Ed.

The Origin of the Gilyak and Features of Their Ethnical Life

Like the Ainu, in whose language the word "ainu" means "man," the Gilyak call themselves "nivkh" (nivkhgu, nivkhvu) which means: man, master, Gilyak (2). Their customary name,

2. The Amur Gilyak call themselves "Gilyak," was, in my opinion, formed from the distortion by mispeech of the word "nivkh," which means "Tungus" in the language of the Amur Gilyak, with whom nivkhvu first had contact. Such a distortion could very easily have occurred because the Gilyak of the lower reaches of the Amur speak the same language as the Tungus, who, according to their legends, form one "people" with the Gilyak, the Goldi, and the Orochon. It is also quite possible that the word nivkh, Tungus language of the Amur Gilyak and the Tungus, the Manchu, who formerly ruled the Amur region, visited the Gilyak and the Ainu, but outside of their settlement, when they happen to be away from their individual

/438 cont./

Compared with the animal food the vegetable food of the Gilyak is very limited. In the first rank here, because they are generally accessible and can be had for nothing, are the local, wild, annual or perennial, grasses, roots & rhizomes, small new-flower tubers, herbs, algae, and sedges. All of these vegetable foods are used by the Gilyak in the same way as the Chinese, or at least as they are used in and made into various kinds of dishes. The hilbery, Yacrinium uliginosum L. (Gilyak: nuyk-ai-ch (?), or also /439/ nuyk-ai-ch) flowers.

7. The h sch is pronunciation in this word, like the German ich.

Ab. i.e. "bery" (1), in particular stands first among them with

1. The Gilyak from the Tymy and the east coast of Sakhalin call the hilbery ibi or paghaiu-ab, i.e., "red bery."

regard to both the quantity and the variety of its manifold uses and the tastiness that the Gilyak find in eating it. Every year in the fall great stores of this bery are put up for the winter. For this purpose various fastidious, tasty, and nourishing dishes and chilled, go into the woods, especially up the small rivers emptying into the Amur, and there pick the berries and put them into the sinew sacks or merely a sloping protective roof supported by four poles is erected, in front of which a small fire is lit, where the sinew is dressed to the gathering of berries. In the vicinity of the Nikolayev post, on the Kerbe and Limch Rivers, I repeatedly came across such families picking berries. The berries are poured into large, hollow, sinew sacks. For such trips as the Gilyak do by the boats, where, covered with grass, they are stowed for the winter in a frozen condition in the storage chambers. The Gilyak around Nikolayevsk had so many of them that, beyond taking care of their own needs for the winter, they also supplied the Russian fleet. Hilberies, covered with fish oil or seal train-oil and stored, represent the whole of the customary accompaniment for the fish, especially pelaka, diet of the Gilyak. Moreover, they

/439 cont./

/439/ northern primeval forest, inaccessible in summer on account of the dense undergrowth and the swampy fields, half-rotted, and many trees, is accessible under certain conditions to foot-travelers and high dogs, stands to the deep layer of snow leveling out all the unevenness of the terrain. In the Ussuri, in China, it is a refuge of the far-bearing animals in their valuable winter coats. As a result, the Gilyak, hunting bears in the summer, or at most visited only here and there along its edges by women and children gathering berries and roots, become in winter a theater of action for the hunters. Through the impassable forest and mountain undercourtesies and mountain passes paths and trails which temporarily connect otherwise remote villages. Moreover, the ice of the Amur-Ussuri does away with the similar position of Sakhalin for months at a time, and finally and primarily the mouth-course of the Amur River provides for the Gilyak a main arery of communication from the Liman up to the Sungari, and, in the winter, the Gilyak, for this reason, much the Gilyak are for winter locomotion. With all the similarity, and, indeed, in spite of the similarity, between the two sides of other, complex they differ enough deviations and peculiarities. The great amount of snow in the Ussuri-Amur region makes it necessary for the Gilyak to use ski at every step. Even the bear is hunted on skis and chiselled, by means of a few steps off the trodden or traveled path, the bear, which has gone into a deep sleep, and then it runs on the wind and deeper. They are, of course, even more indispensable on longer trips through the forest, where the snow is especially deep and loose, or after snowstorms, when, driven by the wind, it accumulates in places, and especially along mountain slopes, in valleys and gages, in such colossal quantities that coming them without ski is impossible. For such trips as the Gilyak by the boats, make often enough to set up or inspect his animal traps and for other hunting purposes, or on journeys when snowstorm is against him, it is necessary, for easier and faster progress, that the ski not only prevent sinking into the snow as much as possible, but also permit gliding over it. In order to achieve this, the Gilyak apply the wax of the Gilyak ski: small ones -- iskh; and large ones -- ata.

the popular enjoyment of dog meat to Kuea (3) may perhaps be

traced back to Chinese influence.

Dogs are not the only animals which are fed that on mammals, and merely for the reason that they are not hunted very much on account of their domestic nature. Other animals are hunted much more difficult to catch. Whatever the Gilyak do catch, however, is consumed immediately, and, in the winter, when game is especially more easily caught make a somewhat larger contribution, though always a minor one, to their diet here and there. At several places, for instance, the promtsyes (Lagopus alba Gm., Gilyak: ipsiaiu; Sakhalin dialect: ipsiaiu-ch; Sakhalin: ipsiaiu) in large numbers by means of tangle-nets. Along the west coast of Sakhalin, from Tyk to Ch'ut, I saw, when traveling with great relish the Phalaris canarella Fall. (Gilyak: cochia-ngh), which easily falls prey to them in winter because they alight individually or in small flocks on the ice near open places in the sea and force to it. The meat of the sea eagle, which the Gilyak lift out of its nest, is also eaten with relish in order to utilize the hypnosis, or sorcerers by these means its most of death. Gilyak

/Text cont./

in fishing or net-hauling, a natural explanation is found in the circumstance already pointed out in the beginning, that among the Gilyak of prominent persons, thereby distinguishing them from the rest of ordinary people. Moreover, the Gilyak use eagle feathers in order to further their esteem and to make certain articles of symbolic significance for their little burial houses. In order to obtain the feathers of the eagle as amulets or ornaments, the Gilyak hunt for the young birds out of the nest, in connection with which they feel (at) most that are hard to climb and have seen in their age before the young can fly. The captured young eagles are kept chained to the fish-drying racks and fed with fish scrap until they are so full-feathered, whereupon they are killed, but their tail feathers are carefully spread out between sheets of birch bark and then dried for trading. The number of eagles annually caught and raised by the Gilyak must be very considerable, since one can scarcely enter a Gilyak village in which he does not see several of them on fish-drying racks. In particular, however, the southern coast of the Sea of Okhotsk is regarded as the eagle region proper, because there not only the mysle-tschum is captured, but also the redtailed-eagle, whose tail feathers are especially prized by the Japanese. Thus, it is not at all unusual for the Ainu and Limch Gilyak to go to the coast of the Sea of Okhotsk for a stay of several years in order to obtain eagles' tails there. Like the Gilyak, their closest and more distant neighbors, the Ainu, the Olcha and Goldi, also occupy themselves with raising young fishing eagles of the order species Haliaetus albicilla, Olcha: ambi, Goldi: Ilmachin, and, no be sure, are, at Mauch thinks (1), in order to show them religious veneration or to keep

1. Pueeh, an Amur", pp. 143, 170, 208.

other birds away from the fish hanging on the drying racks, but likewise only in order to use the feathers for adornment, which a dose either directly or through the Gilyak. Finally, the same is done by the Ainu and the Koriens, as has been

remember only two instances when Europeans were killed by natives, without having been the attackers.

The one case occurred in the year 1878 in broad daylight on the ice near present Nikolaiev. A port servant was gored by the tiger. The skull of this animal which was itself killed the next day now belongs to me. It measures seventeen and one-half vershoks (14 centimeters), the upper canines are as long as a finger!

himself takes the offensive, does the monster lose his instinctive fear of man, and becomes a dangerous and terrible natural qualities, to which belong an amazing toughness. Even with five or six rifle balls in its body it continues enormous leaps, and even in its death throes it can still overcome a man. The bullets because of the fur coat are supposed to aim at its chest, for only one bullet in the heart finishes it off. Thus an open battle with the tiger is so dangerous that bear hunting may be considered child's play in comparison, and the peasants and Cossacks should be glad in its dire necessity when the tiger breaks into their stables and cannot be got in any other way. In these cases 15-20 men with bayonets on their rifles and in closed ranks descend on the place where the animal was scented. But the regular method of capture is poisoning with strychnin or the setting up of rifles which go off when the tiger approaches the bait. The corpse of an animal that was killed by the tiger himself usually serves as bait, for the tiger returns to the laddabit habit of returning the day after his assault.

The world markets on the other hand, but rarely shows itself and does no harm. It is seldom shot.

223 Birds, especially ducks and geese, partridge and hazel grouse are now usually shot with rifles. Snares are also set for partridges on flat islands in the willow shrubbery. Hazel grouse are lured in spring with whistles, in winter they are gently hazed in a spruce thicket by the girls who live in the surrounding country are the chief purveyors of wild game for the Russian population.

462 We mentioned above the other occupations and embryonic handicraft and trades. Specialization [illegible] is not much more than a division of labor between men and women. The man hunts, does carpentry, makes weapons, sleds, etc.,

224 HUNTING AND TRAPPING—animals sought, hunting methods and techniques (e.g., stalking, collective drive), description and use of traps and snares; use of dogs; weapons (e.g., dogs, spears); social implications (e.g., trapping for the fur trade); hunting trips, economic importance of hunting, organization of labor and division of catch; use and ownership of game, hunting territories and taboos; regulations (e.g., game laws, game wardens, etc.); fur-bearing animals (e.g., fur trade); [illegible] of hunting; [illegible] of animal carcasses etc.; [illegible] weapons.

/95 cont./

224 was possible at a very remote time. As a matter of fact. These fish that travel in masses upstream to spawn even now serve the basis of life for the Gilyak. Not only do people catch them, the dogs. The fish, caught and dried in the sun by the ten of thousands. /96/ are stored in pile storehouses and. in the literal sense of the word, replace bread for the Gilyak during the long winter. The fresh local fish that he catches all year round are merely an addition to this daily bread of preserved salmon. The countless schools of the fish that travel in masses upstream to spawn provide food not only for the Gilyak. No smaller packs of all kinds of pinnipeds and cetaceans follow the schools of fish, pursuing the abundant food. After the fish, the pinnipeds constitute the second source of food for the Gilyak. Finally, the hallucinations of his own frightened imagination demonic beings which he invokes calling on the aid of the Gilyak demonology. The devils and ogres of all the elements in the imagery of the Gilyak appear to him. to cause his destruction. And the terrible monsters by means of a very long harpoon which is thrown from a boat. Besides their skins. which are quite indispensable in the Gilyak economy. seals also have been supplied. at first. serve as a seasoning for the hard /98/ and also as an independent food product that is extremely important for the life of the Gilyak. The effect of the bear on the Gilyak is very strong. Here it is the end of winter. The famished Gilyak, if he has not been brought down by the cold, starvation, or hard work, or has not yet appear, and he is momentarily transformed. He greedily throws himself on the melted fat. drinks it in all forms. with tea. with fish. and. and. and

/385 cont./

the evening of the day of arrival at the hunters' balagan, they make chuih-chugynd (a sacrifice) to Pal-u'ngyym, the master of the mountains, the master of the sea, "Ka'ngur'ldyd, ga'ldu'ldyd, mundyd" -- "there are no more pressents, make it so that I am not afraid, look after us all!" They also make chuih-bodyd (before a particular tree (cuig-chihar -- a taboood and forbidden tree); then they only feed the fire, saying: "Ungur ir'ch, hisian tugur mul, pal'ch pong ngrud" -- eat well, make the mountain people take pity on us!" The fire may not be made by an alien Ishkal. Only the master -- ya'ngr -- may clean the fire, nuyemmyr. /385/ The cleaning is done in the winter quarters in fall and in the summer quarters in spring: the rubbish is put in one place. Mor' for the fire is prepared also only by the Ishkals. In the winter quarters the sacrifice may be offered by anybody. On the first evening they make the sacrifice to Pal-u'ngyym: "Ungur ir'ch, pal'ch pomrgul mile ir'mash mungd" -- eat well, make the mountain take pity on me, make me a happy man!" Old tabaki (trees with tobacco-like leaves) are tied together, and one pipe is made. Near the balagan there is an ala-tashkar on which are bang tabiks, nonets, and so forth. The world cutter is: "Pal pomrgul mile ir'ch'ngyym mungd!" -- "mountain, take pity on me and make me successful in hunting the bear!"

Near the balagan is a pal-u'ngyym-tashkar to which sacrifices are thrown merely with spoons -- no chihlaui are made. They also hang bulmung ad'ch (a birch binding arm's behind) and tymyr'n mash.

Those who have arrived with the game hang it on the com-bun tashkar, where it hangs for several hours until it dries. Anyone from the same clan can take off the skin. The boiled head of a zaibe is decorated with mun, placed on sticks on the front part of the beach, near the nonang (the middle plank-bed), and dice, nushka, saraus, and mun are muffed through the opening in the back of its head and placed on the nonang; these are also eaten by anyone who wishes.

When the head and the bones of the animal have been put together in chumdyd, sacrificial chihlaui are prepared, and the bones are carried into the taiga, there they find a tree with a hollow trunk, make an opening in the hollow trunk, feed the head, and blow all the bones into the hollow trunk.

The otter is fed and buried in exactly the same way as the zaibe. The remaining beasts are signd hask (i.e., there is no taboo on chasing).

When a pair of reindeer horns from a mature specimen are put down in the right side by side in the taiga, the possessor of them gives the Gilyak luck.

During the hunting with snares (pochakhir o'ch'dondo), a woman must not see anything new or give anything from her own house to another, even a member of her own clan, if that thing has spent a night in the house. The hunter should not eat the bear's side. One must not allow any guest to spend the night. In the taiga, one may enter another's balagan, but must not take dogs. If a zaibe is caught in a noose, an alien may not take it with his hands without the permission of the master, and in general during the hunting season the master of the balagan is responsible, by a person from the same clan if he is not a participant in the hunt: otherwise the hunter's luck will go over to the master. In general any person commit an sigind -- sin, they do not let him fish or hunt on the stream, and they do not attend his bear festival.

/386/ Zaibe, when caught, should not be hit on the dog. Catching a wolf. In Ishkam (northwestern Sakhalin) they place a tree with a forked branch and hang a dog on it, after they cut off her braids, the was thrown into a funeral pyre.

Illness. Illness is sent either by Pal-u'ngyym or by Tol-u'ngyym, but each of them takes a milk not from his kingdom.

/387/ A milk can be of different shapes and often is red as blood and "as sharp as a knife, when he enters a person, he becomes lively, "as if he were walking."

A violently insane person is imprisoned in a cage (in summer and in fall, he stays in the house).

Ishkim'ind -- to be sick from not getting what one saw and wanted. Tiner -- the man who did the casing or his family becomes sick. Then it is imperative to get at least a small crumb of what one saw and to touch it, and the person gets well.

/387 cont./

Sakhalin's wife gave birth to twins; one of the twins was a bear.

A representation of twin -- tongch: -- is placed in a little storehouse. If one of the twins dies, they place one tongch, while if both die, then two joined together on the sides. Chuih-chugynd is given to them at the full moon and at the new moon. Kinsmen and strangers sacrifice down to the third generation.

When a twin die, he goes to his father, Pal-u'ngyym, who gave birth to him, appealing to his mother in a dream.

A dead twin is not cremated, but is seated in Turkish fashion in a specially built little tashkar, which is always kept in order to support him.

He is dressed in a white skirt and trousers and is surrounded with shavings -- kasu. The mother of twins is illewise not cremated after death, but is dressed in white and buried, also with kasu placed around. According to Pilsudski, the Yaut Gilyak are the northernmost point of their hunting. There is no doubt at all that in former times sable-hunting expeditions set out even further to the north, Yaut Gilyak have no reason which would lead them to believe that Gilyak ever ventured to travel farther and farther away from their homeland and finally to settle down there. Instead of hunting activities to the very south of Sakhalin, where the sable is quite poor and where their ancestors had been forced to buy from the Ainu hunting territories which they now own. /388/ The reason is to be found in the gradual settling of northern Sakhalin by Gilyak from the continental coast. Originally, the ancestors of the contemporary Sakhalin Gilyak, like the Amur Gilyak of the present day, traveled to Sakhalin in companies of kinsmen only in the season for sable hunting, then they set their sources ways down on the banks of some stream and placed snares along the natural trail used by the sable for movement from one side of the river to the other. It is not surprising that an annual pilgrimage to the same region for hunting ended in permanently settling on this island rich in sable.

/388 cont./

With one's imagination it is not hard to recreate even the form of the original migration. The sable at present time the Amur Gilyak are in the habit of setting out for Sakhalin in their heavy boats with sails, and then go to hunt for sable, often also going as far south as Mauko, still others farther to the south. The sable in their homeland is incomparably better than the Sakhalin one, but the skin is not rare and those who hunt him are no many that the Gilyak prefer to leave their family hearths for as long as six months and to subject themselves to all the dangers of a boisterous sea voyage, striving toward those tempting seaga where the population is sparse and satisfied with the sable, and where the hunting is easy, loaded with their rich catch, they return to their distant hearths. These journeys to the south of Sakhalin are of a comparatively recent origin. In the time of Sternberg's parents the ancestors of the present-day sable hunters did not travel beyond the Amur, and the Gilyak of the Amur River and the Yaut Gilyak are the northernmost point of their hunting. There is no doubt at all that in former times sable-hunting expeditions set out even further to the north, Yaut Gilyak have no reason which would lead them to believe that Gilyak ever ventured to travel farther and farther away from their homeland and finally to settle down there. Instead of hunting activities to the very south of Sakhalin, where the sable is quite poor and where their ancestors had been forced to buy from the Ainu hunting territories which they now own. /389/ The reason is to be found in the gradual settling of northern Sakhalin by Gilyak from the continental coast. Originally, the ancestors of the contemporary Sakhalin Gilyak, like the Amur Gilyak of the present day, traveled to Sakhalin in companies of kinsmen only in the season for sable hunting, then they set their sources ways down on the banks of some stream and placed snares along the natural trail used by the sable for movement from one side of the river to the other. It is not surprising that an annual pilgrimage to the same region for hunting ended in permanently settling on this island rich in sable.

/389 cont./

The members of the clan are bound together by common sacrifices and festivals. The "festival of the bear," known to everybody, is held, not by an individual settlement, but by the Tilm, every member of the clan, wherever he may be, participates in this part. The bear is bought by someone in the clan, but all the ceremonies connected with the sacrifice and the festival are carried by the clansmen. These expenses often reach a sum of several hundred rubles. Clansmen assemble from all directions, as well as great numbers of specially invited guests from other clans, who have to be entertained and fed for many days, and not only they, but their numerous dogs as well. Among a great number of Gilyak during the festival. The opinion that the bear festival has a religious character or that the bear is considered to be divine or a spirit by the Gilyak is erroneous. Nevertheless, the festival is purely a clan festival. Naturally, there were times when a successful attack on a bear, an event considered to have been the greatest, by the whole clan, was a real triumph for the clan, which devoured the huge beast at a common feast. Since the attack on the bear was most successful when it was made by several clans, the bear was captured in his lair, the custom of celebrating this holiday in some way amalgamated the clans and established a festival ritual for the festival, which, like everything old, assumes in the eyes of the barbarian the character of something sacred and inviolable. The bear is considered to be a relative of the Gilyak, but not, like the dog, to the god of the taiga, the master of the bear -- "Pal'-uiuish." It also understandable that the bear itself has acquired a position of honor. In meat cannot be thrown to the dogs, it cannot be eaten with seasonings, etc. "Pal'-uiuish" himself will exact punishment for such offenses, outgoing other bears to bite especially hard. To sum up, the bear festival is a clan festival, and, on the other hand, as the nonparticipant clansmen, women of the clan, are not present at the killing of the bear, although they participate in the eating of it. The fire in the stove in which the meat of the bear is roasted is started only by the clan elder. A touching custom among the Gilyak is

/378 cont./

inheritance. Only with relation to the daughter does the father enjoy a despotic authority, regarding them as commodities to be disposed of as he pleases. Although this way, we do possess boats, and other movable property. Thus, the sons who live with their fathers, and the daughters who live in their future independence or for the purchase of a wife with their own means. Such independent property of unseparated sons is either obtained by the father, or, if the father, supposing the sons to be of full success in hunting through the efforts of the children or as the reward for the hunting of the Gilyak at the present time, is no longer the meat goes for general use, but the skins. If he sells his fox and sable, he will purchase various articles for the family, but the money is not considered to belong to the family, the money is one of his wages. But never will the son reserve for himself a special share of his catch of fish, rather he sets aside the skins of one individual plays no role. These same economic relations of present times, the father is-law and son-in-law who maintain a joint household (the son-in-law and his children (144 persons on Viskva (116), Nyx (103), Arkyrex (87), Tal'vutgrra and Temyl (64 each), Ulkhuvo and Ulkhuvo Gilyak. This is the smallest settlements are Yamy (4 persons), Vaax (8), Nokyr (8) in the summer the most densely populated settlement is T'anlyv (1,026; tables included in the settlements nearest to the Aleksandrovsk, 258 E. /380/ Sternberg's Gilyak population is:

1. The number of fur animals and so forth killed during the last season was obtained from reports of the Gilyak themselves. These figures are most probably somewhat below the actual ones. The natives in the village of Kalinino, for instance, deliberately tried to persuade his people not to tell the truth about the number of sables, martens and otters, would come and take away the booty ...

/385 cont./

many of his children had died between the beginning of his marriage and the time of his death, and he, in his will, entained an exact number of the children in a given family, living and dead. Hence, it was easy to calculate the rate of mortality.

fertility rate -- 2.76, although this figure is below the actual one, it is not so low because children who have died, on the one hand, children for whom their parents had bought child wives, and, on the other hand, adults who were married to child wives (the wives of children who died young). Among the Gilyak there are a number of yurts with several dozens of inhabitants. For example, one yurt in the settlement of Ivyalno accommodated 42 persons of the same clan.

As to the size of the winter settlements, the largest of them is Ulkhuvo (144 persons) and Lakyrex (144 persons on Viskva (116), Nyx (103), Arkyrex (87), Tal'vutgrra and Temyl (64 each), Ulkhuvo and Ulkhuvo Gilyak. This is the smallest settlements are Yamy (4 persons), Vaax (8), Nokyr (8) in the summer the most densely populated settlement is T'anlyv (1,026; tables included in the settlements nearest to the Aleksandrovsk, 258 E. /386/ Sternberg's Gilyak population is:

[The western Coast]

166 /386 cont./ 115 individuals, i.e., one-sixth of the adult population, make
433 the trip to Nikolayevsk. The settlements richest in seals and
433 dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is
[294] also richer in sables than the others. Potatoes are raised by the
[294] Gilyak in Khoe and Tangi. In the settlement of Tyki, the
224 Gilyak have made a request concerning the settlement among
[433] them of at least one Russian with whose help they could raise
[648] potatoes. The settlement of Tyki should be mentioned for several other reasons. In the first place, starting from this point the Gilyak are ceasing to hunt sables because of the overwhelming competition from the Tungus who have killed off the sables in the vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyak were very successful in hunting wild deer and sables. In the second place, beginning at this settlement one notices a progressive improvement in the construction of the winter yurts. In Tyki the dugout rises
[348] little above the ground, it has windows made of fish skin, and
[348] in one yurt even of glass; in the middle of the yurt, instead
[348] of a smoking hearth, one finds a chimney like those with a pipe. Farther on, beginning with the settlement of Tengi, one encounters enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and stretch along the wall under the plank beds serve mainly to heat these latter; the smoke goes through a subterranean passage into a high vertical pipe which is made of a hollow tree trunk especially adapted for this purpose. A similar system of heating is used by
[184] the Amur Gilyak and in the fanza /house/ of the Manchu, from
[191] whom it may have been borrowed.

As to the character of the region, the maritime sections of the western coast are mostly tundra-like, with sparse vegetation. The road runs partly along the sea, partly through the taiga, and occasionally enters the mountains. Near the settlement of Pomr the coast becomes more elevated, and, beginning at the summer settlement of Mur'vo, it strikingly

/109 cont./

1. (cont.)
located on the seacoast and perhaps also to a brook of the same name. Here, therefore, there is to be understood either the passage from the Amur to Lake Tchchja and from there to Kuli, or from the Kamr River, which empties into the Amur immediately above Nikolayevsk, to the Hliska Brook down this to the sea only slightly east of Kuli. Both routes are still used by the Gilyak in order to go from the lower Amur to the seacoast or vice versa. Under no circumstances, however, can the "Giljanskja perewoloka" mentioned by Müller refer to the portage at the Ulakyt -- from the Nemlien to the Tugur -- as Middendorff (Reise, etc., Vol IV, p. 198) has presumed, because there neither the localities nor the designation "Giljak towpath" would fit. The towpath mentioned in Stockenberg (Hydrogr. des Run. Reichen, Vol. II, p. 774) is the same as the one in Müller.

175 come across Ulban Bay and Stegneka Peninsula to the mouth
131 of the Tugur. The same route was advantageous for them for
[184] another reason: they had to go across Ulban Bay to Stegneka Peninsula and along the latter northward, if, on their coastal voyages, they wanted to reach the Shantar Islands without getting too far from land.

There is still no mention of these islands in the reports
175 cited above, though Pojarkof and Nagiba must have sighted
131 them on their return trip from the Amur. In the reports
[184] concerning them, which go back to 1709 and are based upon
[224] accounts by Cossacks stationed in Udskoi Ostrog and Tungus "there, it is said that the Shantar Islands have no permanent inhabitants and are only visited by the Gilyak for hunting

/109 cont./
purposes (2). Müller thought that their name was of Gilyak

175 2. Müller, Samml. Rus. Gesch.,
131 Vol. III, p. 97.

175
131
[184]
103

origin, since "schantar" means "island" in Gilyak (3), which,

[113] 3. Op. cit., p. 96. Also in Büsching's Magaz. für die neue Hist. und Geogr., Part 2, second ed., p. 510.

however, it certainly not the case (4). When the Russians

[192] 4. In Gilyak "island" is pólio-mif, a compound word in which mif means "earth" or "land", e.g., Sa-mif, Ka-mif -- the Amur region, Laer-mif -- Sakhalin, Chagi-mif --part of the Amur-Liman, etc. I do not know the meaning of pólio. According to Middendorff (Reise, etc., Vol. IV, p. 108), the name "Schantar" first occurs on the handwritten map of the extreme eastern part of Siberia drawn up in 1720 and based on the works of the two surveyors, Jewreinof and Luhin, and, to be sure, on it the more southerly of the two easternmost islands of this group bears the name, "Schandanskij." When the Russians
175 under the Cossack Semjon Anabara first came to the Shantar
131 Islands in the summer of 1718, they found them uninhabited;
[184] on only one of the three islands visited by them, on which there were ample forests and good hunting and on which they spent the winter (5), did they meet a woman, whose language

5. According to Middendorff (op. cit.,

175 /384 cont./
131 most surely and best obtained by trade, permanent residence in a
[224] place known to be favorable by experience, be it on a river rich
[224] in fish, like the Amur, or on the seacoast. Hunting comes into
[224] consideration among the Gilyak only insofar as it provides them
[224] with the precious pelts so necessary for trade with the Chinese
[224] and Japanese, and in exchange for which fabrics needed for
clothing, tobacco, liquor, and other luxury items are obtained.

The situation is different among the Tungusic tribes surrounding the Gilyak. Among them hunting is a necessity, indeed essential means of subsistence and existence, and the more so the farther upstream and the deeper inland one goes. Moreover, in view of the more limited talents for trading of these peoples in comparison with the Gilyak and their less frequent and less extensive winter trips and journeys, the number of dogs to be fed, and consequently the need for large supplies of fish, is reduced. Also, with the distance from the mouth of the Amur and with that slot in tributaries, fishing becomes less rewarding, whereas the abundance of game, increasing in the same proportions, makes hunting /385/ all the more tempting. The more that fishing recedes into the background and hunting, requiring a frequent change of locality, comes to the fore, however, the life of the people becomes more unsettled. It has been repeatedly pointed out above that the Orochi living in the forest and mountain wilderness along the left tributaries of the Amur and Usuri are already more hunters than fishermen. And this is far more the case for the peoples of the upper Amur region, the nomadic Birar, Manegir, and Orochon. Among them, completely in contrast to the Gilyak, hunting is the fare and foremost source of subsistence, whereas fishing comes into consideration only to a subordinate degree, in that they leave their hunting grounds only temporarily in summer and move to the Amur, the Dieja, or the Bureja to fish. Also, they do not need any supply of fish for their domestic animals, since they use the dog at most for hunting, and not as a draft animal, as is possible only among sedentary peoples. Their domestic animals, in particular riding and draft animals, the horse and the reindeer,

/432 cont./
*262 preserved in memory by tradition, may have given rise to the fear
[136] and abhorrence of the enjoyment, indeed even of the presence,
[165] of snake meat and blubber in their yurts. Moreover, the Gilyak do not stand alone in this abhorrence, for the Koreans (9), /433/

[113] 9. Wimen, Noord en Oost Tartarye /North and East Tartary/, 1705, p. 47.

for example, and the Koljuschen /Kolosh/ (1), with the sole

exception of those from Yakutat, likewise eat no whale meat and no whale blubber or oil.

224 Since the Gilyak are not a hunting people and only pursue
*262 fur-bearing animals as an occupation in order to trade the pelts,
the land mammals provide only a small part of their food in comparison with fish and seals. Yet whenever one of them occasionally falls into their hands, not excepting even beasts of prey, such as
*262 the fox, wolf, wolverine, etc., it is eaten. Only one animal is
[136] steadfastly detested by them, although it could be taken close at hand and without much trouble: it is the rat (Mus decumanus Pall.,
Gilyak nizgtsch), which is present in such extraordinary numbers in
[191] their yurts. This is all the more surprising because, without doubt, the rat in the Amur region is a gift from China (2) and, as is well

2. See Vol. I, p. 128, of this work.

known, is not at all scorned as food by the Chinese, who otherwise are so authoritative for the Amur peoples (3). Translated from

[113] 3. Davis, La Chine, etc., translated from

484 /473/ northern primeval forest, inaccessible in summer on account
*262 of its underbrush and the many fallen, half-rotted, and mossy
[286] trees, is accessible under certain conditions to foot-travelers and
[184] light sleds, thanks to the deep layer of snow leveling out all the unevenness of the ground, precisely at the time when it shelters
[224] the Gilyak and reveals their valuable winter coats. As a result,
[222] the forest, empty of human beings in the summer, or at most visited only here and there along its edges by women and children gathering berries and roots, becomes in winter a theater of action for the hunters. Through the impassable forest and mountain wilderness hunters and merchants make paths and trails which temporarily connect otherwise remote villages. Moreover, the use of the snowshoe and sled has made the similar position of Sakhalin for months at a time, and finally and primarily the smooth ice-cover of the Amur River provides for the Gilyak a main artery of communication from the Liman up to the Sungari.

Let us now survey in greater detail the means which the Gilyak use for winter locomotion. With all the similarity, and, indeed, in part even identity, with those of other northern peoples, they offer enough deviations and peculiarities. The great amount of snow in the lower Amur region makes it necessary for the Gilyak to use ski at every step. Even for only a short walk from the house, indeed, for merely a few steps off the trodden or traveled path, ski are required if one does not wish to sink into the snow up to the waist and deeper. They are, of course, even more indispensable on longer trips through the forest, where the snow is especially deep and loose, or after snowstorms, when, driven by the wind, it accumulates in gorges, and, in addition, along mountain slopes, in valleys and gorges, in such colossal quantities that crossing them without ski is unthinkable. For such trips as the Gilyak has to make often enough to set up or inspect his animal traps and for other hunting purposes, or on journeys when snowstorms surprise him, it is necessary, for easier and faster progress, that the ski not only prevent sinking into the snow as much as possible, but also permit gliding over it. In order to satisfy these various needs the Gilyak have two types of ski: small ones -- lakk; and large ones -- [illegible]

/534 cont./
[286] consideration, repaired at the slightest damage, and dried in
[286] the sun after every fishing expedition. For this purpose they
[184] are spread out over special racks taller than a man, and superstition requires that if the drying nets are in a person's way he must always go around them, never underneath them. And, finally, not until the nets are completely dry may they be used again. Treated in this fashion a net lasts for several years among the Gilyak and rewards many times over the care and labor used in making it.

/535/ What has been said in the preceding about Gilyak
[184] fishing may in general be applied to the Tungusic peoples of the lower Amur region more or less neighboring them, although with a few qualifications and modifications, which are determined in part by the way of life and the character of these peoples and in part by the distribution of those species of fish principally caught. First of all it must be emphasized that, with regard to fishing,
[262] all the Tungusic peoples of the lower Amur region differ from the Gilyak, not so much by practicing it by means of any new methods unknown to them as by the essential, crucial fact that none of them is ichthyophagous to the extent that the Gilyak are or is dependent on fishing for their existence. Among the Gilyak, and therefore none of them practices fishing to the extent and with as much constancy, care, and energy as the latter. Among all these peoples, and not excepting the Olcha, who are closest to the Gilyak in all their extensive travels and way of life, hunting, as a means of directly and immediately satisfying the urgent needs for food and clothing, plays a far more important role than among the Gilyak, and, to be sure, this is more and more generally the case the farther one goes upstream and into the side valleys of the Amur River. Consequently, it must take up more time and labor, or rather must take this away from fishing. In particular it cuts heavily into winter fishing. In no season of the year does the basic difference in
[222] character between the Gilyak and the Tungusic peoples of the lower Amur region appear more clearly than in winter, in that the former remain the same sedentary fishermen, despite various

/849 cont./ [illegible] strongly enough; the custom of sticking
[286] the skulls of slain white whales on a tree or, lacking one of them,
[286] on vertical piles driven into the ground prevails among some
[286] of them, as Pallas (1), for instance, reports for the Samoyed and

Ontyak along the Obj River.

/550/

Section 9

Hunting the Animals of the Forest. Hunting Equipment. Iron Hunting-weapons and Other Iron Weapons and their Manufacture. Protective Armor and Arms of Honor.

224 As we now turn to the second main source of subsistence
[191] of the Amur peoples, hunting the animals of the forest, I must
[191] first point out, recapitulating briefly and summarily the remarks
[191] frequently made above, that it, in direct contrast to fishing,
[191] increases the more in immediate importance and significance
[191] the farther upstream one goes from the mouth of the Amur and
[191] into its tributaries, and, finally, in the upper Amur region,
[191] just like fishing in the lower one, becomes the primary and
[191] most essential condition for the existence of its peoples.

The Gilyak, with whom we again begin our observations, are accordingly, as the most sedentary, the most
[191] ichthyophagous, and in general the most pronounced fishing
[191] people of the Amur region, the least devoted of all its peoples
[191] to hunting the animals of the forest. Whereas for them catching fish, seals, and white whales serves for the immediate
[191] satisfaction of their needs in clothing and in food for themselves and their dogs, hunting by and large serves these ends

/313 cont./

morning it is necessary to take back the ski and so forth quietly and stealthily. These things are placed so that the Tly-n'ivukh descend the tree, and by these objects they find out the nature of the Tly-n'ivukh and "if he has a good heart," if he will give a "risk" /fart/ or not. "After all, five of us go, one caught something while another goes on and on pursuing but gets nothing. What is the reason for this?"

During a takh -- smallpox epidemic -- in Tyr all the Gilyak assemble, make a sacrifice -- bow, present rice, roots, and berries. First the 120-year-old man Zyavkayu from the village of Dyl'myu sacrifices. They pray before the tree chédzigr. This old man remembers four big takh.

Pal likes a tree with different peculiarities, and on solemn occasions such objects are selected. A sacrifice is always made to one's clan Pal-yz' (the master of the mountains), but they are not made to Pila-yz' (the great master). He is most frequently seen on a knoll. One must not shout to him. There is a conversation going on on the other side -- that is Pal-yz'. Pal -- mountain master -- likes a black dog; Tol -- sea master -- a white one. Each large house has two fires, Pal-tuur and Tol-tuur. If a person has one stove, it is only Tol-tuur, and if he must boil bear meat, he goes to a clansman of that khala who has two stoves.

Tol-takhej -- a takhej of larch; a hammer, chong-chtás', is hung on it. Near it is a halynyr (bench /labaz/) on which are placed the carcasses of dolphins, kaluga, and reindeer. And here they invariably boil the dolphins, here the bones are left to lie, except the skulls and heads, which are carried away to k:khork n'angof, i.e., a place where they put skulls. During the fynyndz: only two dishes are placed on the halynyr -- mos' and muvi (kissel/ a jelly-like dish/). It is also from here, in the presence of the entire khala, that they throw a little of everything into the Amur, but say nothing -- otherwise another misfortune will occur. -- Then on the takhej they hang tobacco, ag:a (akhydz') -- a bunch, yukola -- pys' and announce that everyone should come out and feed it. This is the main office of Tol. People are sent

Amur

/313 cont./

778 782 224 225 to shout: "Yrk-lu? -- Is it enough?" -- "Yrkrá! -- It is enough!" Everyone approaches by houses and feeds it, and each says his own: "Send the dolphin! Send the little fish!" After this everybody must return together at the same time, for otherwise it would be a heavy sin if they were to meet each other.

778 688 The customary takhej of a hunter is the individual uig. Anybody who touches it gives a dog. If a member of another clan has insulted a lezing (the place for the bear festival), the vopund kymlydz: assembles, and they judge him; they demand a bear or 782 a luk -- a shaggy dog. Pyl-yz' -- the spirit of the master is fed each month. If they have caught a tasty fish, /314/ they cut themselves a piece and him a piece, and when his pieces have stood for half an hour, they eat them themselves.

796 346 782 When they build a pila uigryf (house in which the bear festival is celebrated), it is imperative to celebrate a bear festival. If there is nowhere to buy a bear, they must kill a luk: -- a shaggy black dog ("it is just like molk," i.e., like a bear). If the house is simple, they kill only dogs, two to four in number, without regard to kind. If a post falls on a lezing, they kill two black dogs. It is not at all necessary that a man be killed by a bear for a pila uigryf. After a bear festival, when the members of other clans are leaving for (their own) homes, the bear bones are tied together with a thong and their dogs are killed at a special chédzigr.

It is not permissible for a single clan in a single village to make two lezing, but there can be several uigryf. Any house where a bear festival takes place is an uigryf.

/550 cont./

224 439 only indirectly inasmuch as it furnishes them with those article
by means of which they can acquire through trade with the neig
boring civilized peoples the foreign clothing, food, and stimu-
lants which have become necessities for them. Hence, among
them hunting is principally directed toward those animals for
whose furs there is a sure and good market among their principa
trade-lords, the Chinese, and since, merely in order to preserv
the pelts as intact as possible, it is practiced for the most part
means of various kinds of traps, snares, poison pellets, etc., or
can designate it, in accordance with its greatly predominant
purpose and character, as the catching of fur-bearing animals.

224 /551/ Obviously, the Gilyak engage in hunting only in
the winter, for they are then occupied with fishing only a little
have enough time for it, and, on the other hand, the animals
are in their full, valuable winter-fur. In addition, the deep
snow then covering the dense underbrush in the forest facilitate
to a great extent movement through it, so that, as experience
has taught, the Gilyak, too, know without any doubt that the
heavier the snow is in winter, the more rewarding and successfu
[171] the hunting will be. Nevertheless the Gilyak do not devote
themselves to hunting in winter nearly as much as their Tungus
neighbors do. Whereas the latter, as we shall see, frequently
move then from their own habitation area into distant forest an
mountain wildernesses, in order to live there for weeks entirely
by hunting, the Gilyak content themselves with practicing it
only in their own territory in a certain area, larger or smaller
cording to the locality, around their winter dwellings. For this
purpose the latter are often erected separately, and sometimes
quite far from the summer dwellings, at such places which hav
an especially favorable location for hunting.

The most important fur-bearing animals for the Gilyak,
because they are generally highly valued in trade and are prese
in great numbers in the Amur region, are the sable (Gilyak
lunr, among the Tymy and Tro Gilyak oghrob and myghr-nga,
i.e., brown animal), the otter (Gilyak ngy, among the Tymy
Tro Gilyak pchyik), and the fox (Gilyak käkch, among the Ty

d Tro Gilyak paghlant and paghlantsch, i.e., the red one) in different color variations (1).

1. Concerning the designations for these color variations of the fox among the Gilyak and the other Amur peoples, as well as the kinds and the geographic distribution of both the mammals named and those still to be named in the following, one should read my pertinent discussion of the first volume of this work.

The Gilyak for the most part catch the sable, unquestionbly standing first in importance, with traps. The one most ommonly used is the so-called ha, a pinch-trap /Quetschfalle/, hich is set up in the following manner. In the trunk of a tree, a height of about three or four feet above the ground, a hollow made, and in it the end of a beam of corresponding thickness stuck and supported by a little stick resting upon another little ooden stick or plate, which starts at the bait at the bottom of the ollow. As soon as the animal lured by the bait, a piece of fish ukola) or seal blubber, nibbles at it, the little supporting stick ides off its base and lets the beam fall. But in order that the atter pinch the animal more firmly and securely, the edge of the ollow lying under it is framed by a small wooden crosspiece. The a is naturally set up at places which the sable likes to visit, in articular in the bottoms of valleys, on the banks of small rivers, which case the pinch-beam is laid across the brook, because ables like to use fallen tree trunks as bridges in order to cross ver from one slope of a valley to the other (2). Thus,

2. Przewalski (op. cit., p. 101) even maintains, having often observed it, he says, in the tracks of this animal, that the sable never goes around a fallen

224

2. (cont.)
tree-trunk, but always runs over it lengthways.

/552/ in the small side valleys of the upper Tymy River on Sakhalin I repeatedly came across either sable traps of this kind still set up or traces of them remaining on the trees. To the chagrin of the Gilyak, however, other small and more or less worthless animals often get caught in the ha instead of sables, such as squirrels (Gilyak lakr and lakrs, in the interior and along the east coast of Sakhalin lafkor), ermine (Gilyak tymr and tymrsch, in the interior and along the east coast of Sakhalin tchymr), and on the mainland especially frequently the Mustela sibirica (Gilyak zongrsk), which is so much like the sable in its way of life and is absent on Sakhalin, and, indeed, in the village of Warki on the Liman, the Gilyak even brought me a jay (Garrulus glandarius) which had been found in a ha and bore the marks of the pinching on its neck. This sable trap of the Gilyak, by the way, is not at all original, since, apart from the Amur Tungus, it recurs with the same or quite similar construction among a number of Siberian peoples, for example, among the sedentary Koryak on Penshinsker /Penzhina/ Bay, in the northern Kamchatka (1), among the Russian Tungus in the Stanovoi

1. Kennan, Tent-Life in Siberia, London, 1871, p. 108.

Mountains (2), and others, and in general rests on the same

principle that the traps used for catching polar fox, hares, etc. throughout the polar north of Siberia are based on (3).

3. A detailed description and an illustration of this last trap is to be found, among

224

3. (cont.)
others, in Middendorff (Sibir. Reise /Siberian Journey/, Vol. IV, p. 1387).

The same can be said of a second device used among th Gilyak for catching sable, a clamp-trap /Klemmfalle/ constructed with a bow. This trap, distributed throughout Siberi has already been described and illustrated many times by tra (4), and I could therefore pass over it quickly if it did not se

4. Recently, for instance, by Bush (Reindeer, dogs and Snowshoes, London, 1872, p. 316) and by Middendorff (Sibir. Reise, Vol. IV, p. 1388).

to me of interest to point out, besides its in part peculiar us among the Gilyak, the designations customary among them its individual components in comparison with those, in part identical, for another apparatus to be discussed immediately below, which can be done much more briefly and clearly wi the help of illustrations. Among the Gilyak the clamp-trap question, shown on Plate XLIII /see p.1023/, Fig. 4, bears name klai and is made as follows: a simple wooden bow (Gi puntsch, a of the illustration) is set into appropriate lateral n in two sticks (Gilyak assj, b of the illustration) put together form of a fork and joined at the top. Above the crossboard (Gilyak lyms) connecting them at some distance from their lo pointed ends, they are provided with longitudinal cutouts, i which the lower part, consisting of another such crossboard, the wooden piece c, connected at the top with the bowstring is stuck and can move up and down depending on the tautnes the bow. Curiously enough, the wooden piece c is simply c ku, that is "arrow," by the Gilyak -- a striking /553/ gener ization such as is not often found among them otherwise, an correspondingly, an upper crosspiece (e) connecting the two staffs with each other and provided with a cutout for the mov ments of the ku is called kurscho(gr)tsch (1). A small stick

1. The letters in parentheses are only

/553 cont./

224 192 [104]

1. (cont.)

barely pronounced, like a faint growl.

Gilyak tschymrch), fastened to the side staffs as well as to the bowstring, serves for stretching the bow, and another (h, Gilyak ksull), which is connected with the former by a cord (g, ksull-puks), holds it taut, which is possible only as long as it is itself supported at its lower end on a thin stick (i, Gilyak taghr-tschissj) inserted into the cutouts in the side staffs between ku and lyms. The slightest pressure on it is sufficient to make the little stick h fly off, whereupon the taut bowstring is released and shoots the ku down to the lyms, tightly clamping anything found in between. In order to set up the klai, the Gilyak first make a hollow in a tree trunk directly above the snow, into which they put some jukola or seal blubber as bait, and then stick the trap under discussion in the snow in front of it in such a way that the animal can only reach the bait by way of the wooden step i and thus inevitably must be caught. In the klai, also, aside from sable, the above-mentioned, worthless small animals are all too often caught. According to the Gilyak, they sometimes also use this trap in their dwellings in order to catch in them the very numerous and annoying rats (Mus decumanus, Gilyak njagrsch), which, by the way, are not used in any way among them.

224 [136]

Taking advantage of the above-mentioned fondness of the sable to run the length of tree trunks felled across a brook, the Gilyak set up snares on them to catch the little animal. For this purpose, in about the middle of the trunk, a cross row of upright sticks more or less hidden by the tree branches is set up and only a single opening just large enough for the sable to slip through is left between them. Not far from there an upright flexible tree branch is stuck in the bottom of the stream, and the tip of it is bent down to the horizontal trunk by means of a string ending in a noose and is fastened in the opening left for the sable between the cross-sticks, in which the noose, too, is found, with the help of a little hook. The latter, since the opening is small, must inevitably fly off when the sable enters it, whereupon the bent branch jerks upward and the noose tightens around the

/553 cont./

224 animal and lifts it off the beam so that it hangs in the air above the brook and in this position is kept safe from beasts of prey. The hunter, therefore, even in case of a delayed inspection of the traps set by him, does not lose his catch. As customary as this method of catching sable, which is also used by other Amur and Siberian peoples, may be among the Gilyak, I never happened to come across it and am unable to give their name for it.

[171]

Furthermore the Gilyak pursue both the previously named, especially precious animals and some others by means of an apparatus which /554/ has much in common with the above-described clamp-trap and, though likewise known throughout Siberia, must be discussed here in greater detail for the reasons already stated. It is the so-called self-firer /Selbstschuss/ (Russian ssamostrel) (1), a bow which at the slightest touch shoots

[171]

1. It is very indicative of the common principle of these two devices that the clamp-trap, which is generally called tscherkan in Russian, is also called ssamostrel in the Orenburg Gouvernement, according to Tscherkassof (Zapiski okhotnika Vostochnoi Sibiri /Notes of a Hunter in Eastern Siberia/, St. Petersburg, 1867, p. 336).

[192]

(z)

224 192 off an arrow. Among the Gilyak it is called ngarchotsch and has the following nature. A simple wooden bow, as in the case of the clamp-trap, is fastened at its center to a wooden crosspiece (Pl. XLIII /see p.1023/, Fig. 1, c, Gilyak ksull) (2), on which

2. The identification in the naming of this piece with the small wooden piece h in the klai is most striking; we would rather expect such a one with the fork sticks (assj) of the klai.

/554 cont./

224 the arrow to be shot (d) lies. By means of a looped cord put in
192 its upper part and a little stick f (Gilyak nchimech) bent in a
right angle (cut from a branch) and likewise fastened to it, the
bow is stretched and through that the upper end of the arrow lying
in front of the stretched bowstring is pressed so strongly against
its support that it cannot slip off even if the whole apparatus
were inclined. Finally, when the bow is stretched, a small piece
of wood (Gilyak wettych), g and Fig. 2, ibid., natural size) (3),

3. In this figure, it is shown in a reversed position, the upper side turned downward.

equipped with a long and as fine a cord as possible, is inserted
by its upper, flatly pointed, and polished end at the upper end
of the tension stick and the looped cord. A slight pull on the
cord of this little piece of wood (h, Gilyak tchoch) is sufficient
to make it fly off, whereupon the looped cord also slips off the
tension stick, and, as a result, the arrow is shot. The self-firing
bow is set up on a tree trunk, or on a special pole (Gilyak kizp)
stuck in the snow for the purpose, in a more or less inclined
position, and the above-mentioned thin cord, in a taut state,
is drawn across the place where there is an animal trail or where
one expects an animal to pass. The main thing is to get into
the proper inclination so that the arrow will not shoot beyond the
animal or into the ground in front of it or underneath it. The
inclination naturally varier in accordance with the kind of animal
expected and according to the distance at which the self-firer is
set up from its probable path. For each type of animal, special
aim must be taken in setting up the self-firer and adjusting the
arrow, and for this the Gilyak use a special target-stick, their
so called nchiraff (ibid., Fig. 3), which they know to be accurate
by experience. In setting up the self-firer, it is put at the
point where the animal is to be killed, and the arrow is aimed
at one of the transverse stripes marked on it, according to the

/554 cont./

224 kind of animal expected. I have seen only the target-stick used
192 for the three most important fur-bearing animals, sable, otter,
and fox, as well as for hares (Gilyak chuf and chuft), along the
east coast and in the interior of Sakhalin onyk and kanak, i.e.,
the white one). /555/ On it three stripes or bands, each between
224 two transverse lines, are marked off: if a fox is expected, the
arrow is aimed at the uppermost stripe, point a of the illustration;
if the shot is readied for a hare, one aims at the second stripe,
point b; for sable one aims the arrow at the third stripe,
point c, and, finally, for the otter, toward the base of the
target-stick, point d. The height of these transverse lines and
stripes above the base of the target-stick is the following:

Height of transverse line of above the base (m)	. . 245	mm.
	target height for fox	
" " " ab	. . . 240	"
Average target-height for fox, point a	. . . 242 1/2	"
Height of transverse line ik above the base	. . . 188	"
	target-height for hare	
" " " lm	. . . 180	"
Average target-height for hare, point b	. . . 184	"
Height of transverse line no above the base	. . . 112	"
	target-height for sable	
" " " pq	. . . 112	"
Average target-height for sable, point c	. . . 115	"
The length or height of the whole target-stick amounts to	. . . 260	

224 The arrow (Gilyak kor) used with the self-firer for the ani-
192 mals mentioned has, in comparison with ordinary arrows, a very
peculiar iron point which consists of two prongs equipped on their
inner sides with one barb each (1). So that the animal struck by

1. It is noteworthy that whereas the

/555 cont.

224 1. (cont.)
192 downward-shooting wooden piece on the
khai, in no way resembling an arrow in
its form, is designated in a generalizing
fashion only as ku, "arrow," this proper
arrow, distinguished only by the form of
its point, has a special designation among
the Gilyak.

the arrow, but possibly not fatally and only wounded, will not
escape, the arrow is fastened by a loosely hanging cord (Gilyak
yoghi-pulu) to the pole on which the self-firer rests.

224 The high value of sable, fox, and otter furs makes the use
135 of the self-firer in the form described very general among the
Gilyak, and in the forests surrounding their dwellings one can
easily run into an apparatus of this kind set up, which makes
caution necessary when roaming in them. It is surprising that on
the above-described target-stick the worthless hare has been
given consideration along with the three most highly prized fur-
bearing animals. This perhaps may be explained by the fact that
it is very common in the entire lower Amur region and on Sakhalin
and, in the absence of other animal trails, often provides booty
for the self-firers, whereby a good piece of meat and a fur for
his own needs may fall to the hunter.

/556/ On the other hand, I have never heard it said that the
Gilyak use the self-firer for killing other, more or less valuable,
fur-target animals, such as the lynx, wolf, alpine wolf, musk
deer, reindeer, and elk. There may be various reasons for this.
[191] In general, the Gilyak are not hunters enough and are not enough
interested in hunting animals other than those with precious furs
to undertake long and strenuous hunting trips over a wide territory,
224 to lay out barricades, and to set up self-firers with arrows aimed
horizontally in their passageways, as is customary, for example,
among the Tungusic peoples and is discussed at length by
[191]

/556 cont./

224 Middendorff and others (1). Thus, larger animals are usually
191 killed

1. Sibir. Reise, Vol. IV, pp. 1382 ff., and the woodcut.

only killed by chance with the weapons to be described later.
224 Some of the animals mentioned above, such as the lynx, the
825 wolf, and the alpine wolf, conventionally offer such highly
prized skins that one would expect regular pursuit of them by
the Gilyak, and yet, as far as I know, they do not set up any
self-firers for them. Undoubtedly superstitious beliefs are in
part the reason for this. With regard to the lynx (Gilyak
nchlghi), it has already been pointed out above (2) that the

2. See p. 583 ff. above.

Gilyak see in it an image, as it were, of the tiger, of which
they have such a panicky fear that they hardly dare name it or
talk about it aloud (3). This awe alone may prevent them from

3. See Vol. I, p. 94, of this work.

hurting it in a premeditated fashion and with the same devices
as other animals, and only permits them to go after the carcass
adorned with precious fur in case of an accidental meeting and,
so to speak, in self-defense. The situation is similar with regard
to the alpine wolf (Canis alpinus, Gilyak tcheramatlach, on
Sakhalin tschodamatlach), which the Gilyak do not hunt at all
out of superstitious fear, and which, in addition, only stays in
remote mountain wilderness, into which, with their slight
[191] inclination for hunting, they may come but rarely. Finally, with
224 regard to the ordinary wolf (Gilyak lugr, along the east coast
and in the interior of Sakhalin antk), it is pursued by the Gilyak
[191] [192] [193] [194] [195] [196] [197] [198] [199] [200] [201] [202] [203] [204] [205] [206] [207] [208] [209] [210] [211] [212] [213] [214] [215] [216] [217] [218] [219] [220] [221] [222] [223] [224] [225] [226] [227] [228] [229] [230] [231] [232] [233] [234] [235] [236] [237] [238] [239] [240] [241] [242] [243] [244] [245] [246] [247] [248] [249] [250] [251] [252] [253] [254] [255] [256] [257] [258] [259] [260] [261] [262] [263] [264] [265] [266] [267] [268] [269] [270] [271] [272] [273] [274] [275] [276] [277] [278] [279] [280] [281] [282] [283] [284] [285] [286] [287] [288] [289] [290] [291] [292] [293] [294] [295] [296] [297] [298] [299] [300] [301] [302] [303] [304] [305] [306] [307] [308] [309] [310] [311] [312] [313] [314] [315] [316] [317] [318] [319] [320] [321] [322] [323] [324] [325] [326] [327] [328] [329] [330] [331] [332] [333] [334] [335] [336] [337] [338] [339] [340] [341] [342] [343] [344] [345] [346] [347] [348] [349] [350] [351] [352] [353] [354] [355] [356] [357] [358] [359] [360] [361] [362] [363] [364] [365] [366] [367] [368] [369] [370] [371] [372] [373] [374] [375] [376] [377] [378] [379] [380] [381] [382] [383] [384] [385] [386] [387] [388] [389] [390] [391] [392] [393] [394] [395] [396] [397] [398] [399] [400] [401] [402] [403] [404] [405] [406] [407] [408] [409] [410] [411] [412] [413] [414] [415] [416] [417] [418] [419] [420] [421] [422] [423] [424] [425] [426] [427] [428] [429] [430] [431] [432] [433] [434] [435] [436] [437] [438] [439] [440] [441] [442] [443] [444] [445] [446] [447] [448] [449] [450] [451] [452] [453] [454] [455] [456] [457] [458] [459] [460] [461] [462] [463] [464] [465] [466] [467] [468] [469] [470] [471] [472] [473] [474] [475] [476] [477] [478] [479] [480] [481] [482] [483] [484] [485] [486] [487] [488] [489] [490] [491] [492] [493] [494] [495] [496] [497] [498] [499] [500] [501] [502] [503] [504] [505] [506] [507] [508] [509] [510] [511] [512] [513] [514] [515] [516] [517] [518] [519] [520] [521] [522] [523] [524] [525] [526] [527] [528] [529] [530] [531] [532] [533] [534] [535] [536] [537] [538] [539] [540] [541] [542] [543] [544] [545] [546] [547] [548] [549] [550] [551] [552] [553] [554] [555] [556] [557] [558] [559] [560] [561] [562] [563] [564] [565] [566] [567] [568] [569] [570] [571] [572] [573] [574] [575] [576] [577] [578] [579] [580] [581] [582] [583] [584] [585] [586] [587] [588] [589] [590] [591] [592] [593] [594] [595] [596] [597] [598] [599] [600] [601] [602] [603] [604] [605] [606] [607] [608] [609] [610] [611] [612] [613] [614] [615] [616] [617] [618] [619] [620] [621] [622] [623] [624] [625] [626] [627] [628] [629] [630] [631] [632] [633] [634] [635] [636] [637] [638] [639] [640] [641] [642] [643] [644] [645] [646] [647] [648] [649] [650] [651] [652] [653] [654] [655] [656] [657] [658] [659] [660] [661] [662] [663] [664] [665] [666] [667] [668] [669] [670] [671] [672] [673] [674] [675] [676] [677] [678] [679] [680] [681] [682] [683] [684] [685] [686] [687] [688] [689] [690] [691] [692] [693] [694] [695] [696] [697] [698] [699] [700] [701] [702] [703] [704] [705] [706] [707] [708] [709] [710] [711] [712] [713] [714] [715] [716] [717] [718] [719] [720] [721] [722] [723] [724] [725] [726] [727] [728] [729] [730] [731] [732] [733] [734] [735] [736] [737] [738] [739] [740] [741] [742] [743] [744] [745] [746] [747] [748] [749] [750] [751] [752] [753] [754] [755] [756] [757] [758] [759] [760] [761] [762] [763] [764] [765] [766] [767] [768] [769] [770] [771] [772] [773] [774] [775] [776] [777] [778] [779] [780] [781] [782] [783] [784] [785] [786] [787] [788] [789] [790] [791] [792] [793] [794] [795] [796] [797] [798] [799] [800] [801] [802] [803] [804] [805] [806] [807] [808] [809] [810] [811] [812] [813] [814] [815] [816] [817] [818] [819] [820] [821] [822] [823] [824] [825] [826] [827] [828] [829] [830] [831] [832] [833] [834] [835] [836] [837] [838] [839] [840] [841] [842] [843] [844] [845] [846] [847] [848] [849] [850] [851] [852] [853] [854] [855] [856] [857] [858] [859] [860] [861] [862] [863] [864] [865] [866] [867] [868] [869] [870] [871] [872] [873] [874] [875] [876] [877] [878] [879] [880] [881] [882] [883] [884] [885] [886] [887] [888] [889] [890] [891] [892] [893] [894] [895] [896] [897] [898] [899] [900] [901] [902] [903] [904] [905] [906] [907] [908] [909] [910] [911] [912] [913] [914] [915] [916] [917] [918] [919] [920] [921] [922] [923] [924] [925] [926] [927] [928] [929] [930] [931] [932] [933] [934] [935] [936] [937] [938] [939] [940] [941] [942] [943] [944] [945] [946] [947] [948] [949] [950] [951] [952] [953] [954] [955] [956] [957] [958] [959] [960] [961] [962] [963] [964] [965] [966] [967] [968] [969] [970] [971] [972] [973] [974] [975] [976] [977] [978] [979] [980] [981] [982] [983] [984] [985] [986] [987] [988] [989] [990] [991] [992] [993] [994] [995] [996] [997] [998] [999] [1000]

224 of the native tribes, Tungus, Yakut, Ostyak, Samoyed, and by
191 the Russians for slaying all the animals possible, from the largest,
such as bear and elk, down to the sable and squirrel, is used
much less among the Gilyak and is limited to only the most im-
portant fur-bearing animals -- a circumstance which is likewise
evidence of their slight inclination for hunting and, at the same
time, their predominant and decitive interest in trade.

The great benefit that the Gilyak derive from fox fur both
in trade and for their own use induces them to hunt this animal,
not only with the self-firer, but also in other ways. For example,
they likewise use for catching it a clamp-trap, which constructed
in the same way and only somewhat larger, /557/ is also used for
224 the wolves. This is their so-called kasma (1). It consists of a peg
192 [1000]

1. The s is pronounced softly, like the French z.

stuck into the ground and running up into a two-pronged fork at
the top. The two prongs, only very gradually diverging from
each other from their common base, are of unequal lengths. The
shorter one (called an ichlak) is sharpened on its inner side,
side, the longer one rounded off. On the latter, not far from
its tip, there is a cross-stick (Gilyak tabs-tignch) (2), on which

2. The s again pronounced softly. Tignch means "wood" in general.

the bait, a piece of nioto or meat, a dead crow, or the like, is
224 put. The fox or wolf jumps against the peg in order to reach the
bait with its paw, whereby its foot slides off the cross-stick and
remains clamped between the two prongs. The height of the
kasma is different for the fox and the wolf; for the former it must
[1000] be no more than one and a half feet above the snow, for the latter,
four and a half feet.

/557 cont./

224 Finally, the Gilyak also set out poisoned pellets in order to
192 catch fox and wolves, and the poison seems to be strychnine,
which they buy for the purpose from the Chinese for a high price
and, in accordance with the use that they make of it, call
kakch-ocht, i.e. fox poison (3).

3. Among the Gilyak ocht means "substance" in general -- a meaning which we shall encounter on several occasions in the following. But also "medicine" and in the present case probably "poison" -- a naïve-instinctive identification of curative and deadly agents, medicine and poison!

When I was among the Gilyak, firearms were not used at all,
but they were acquainted with them, and, to be sure, from two
directions: in the first place by way of their northern and western
neighbors, the Russian Tungus, Biegda, and Samagir, among
whom, thanks to Yakut traders, one of the well-known, small-
caliber, Russian-Siberian rifles (a so-called pea-shooter (4) is

4. Accordingly, among the Samagir on the Gotin, the powder also had a name borrowed from the Russian (potash), pórokc.

occasionally found, and, on the other hand, by way of their
southern neighbor, the Olcha and Goldi, to whom, though like
wise only rarely, one of those often-described, long and clumsy
224 Chinese matchlock penetrated (5). The Gilyak also have their

411 such specimens, however,
566 are not used as a rule, but rather, carefully wrapped in birch
bark, are stored away by their owner as symbols of great wealth.

Bear pikes and lances are the weapons most commonly
224 used by the Gilyak against elk, reindeer, bears, and the like.
During the first period of my stay at the Nikolayev post, when
it contained only a few log houses erected at the edge of the
still completely uncleared forest, it happened almost in front
of my eyes that an elk came running out of the forest toward
the river, and, when it came upon a group of Gilyak camping
there, tried to keep on going by swimming; but the Gilyak
immediately pursued it in their boat and stabbed it in the water
with their lances, whereupon I received the skin of the animal.
In winter when the all too deep snow greatly impedes movement
for the elk and reindeer, the Gilyak pursue them on ski in order
to kill them eventually with their pikes and lances. They get
at the reindeer, which is especially common on the unforested
plains of northern Sakhalin and sets out in small herds on the
ice of the Liman, in still other ways. When in early spring,
under the influence of the midday sun and the nightly frosts, a
thin crust of ice has formed on the snow and is strong enough
to support the dogs, but breaks under the reindeer, they pursue
it on a light sled harnessed to dogs until they can attack it with
their pikes and lances.

Most frequently, however, they use these weapons against
the bear. Aside from the tiger, almost only mythical because
[829] of its rarity, and the /562/ less unfamiliar Japanese bear,
which, out of superstitious fear, the Gilyak scarcely dare mention
by name (1), the bear is the largest and most powerful beast of

1. I have already discussed this at great length in the first volume of this work (pp. 90-96) in speaking of the occurrence and distribution of these animals in the Amur region. I shall return in the following to the tiger and leopard idols alluded to there.

/562 cont./

224 prey in their region and at the same time the animal that most
pleases their palates and that, because of the festivities con-
nected with eating it, also plays an especially important role
in their social life. Driving, above all, to capture the animal
alive, they eagerly search in the fallen snow for where a bear
might have its winter quarters. When this has been discovered,
a number of courageous and strong men band together, in order,
equipped with the required paraphernalia of ropes, chains, pikes,
etc., to surprise the sleeper in its lair, disturb its rest, fetter it,
and lead it into captivity. Needless to say, this cannot be done
[579] without a fight, and however skilled the usually experienced
bear-catchers may be, more or less serious wounds are infre-
quently result, which, however, are borne more easily than
others by the Gilyak, because they are regarded as especially
honorable and lend the one concerned an aura of manly fortitude.
224 Nevertheless, the frequency of the bears kept in captivity among
223 the Gilyak indicates that the outcome of the battle is usually
or often successful: there is scarcely a village of any size in
which on a trip through the region, one would not see one or
several such animals. If the place where the bear was lifted
from its lair and fettered is not far from the village to which its
captors belong, it is simply taken to it in its fetters by ropes and
put in the prison kept ready for it. For greater distances, how-
ever, the sleds on which the hunters came also serve to take their
booty home. The fettered bear is put on one or, if the route
permits, even on two sleds put side by side and tied together,
and is brought to its new domicile in a triumphal procession amid
the loud cheers of the sled drivers and the barking of the many,
passionately excited dogs. The nature of the bear's prison and
the treatment of the captured animal will be discussed later in
224 speaking of the bear festivals of the Gilyak, but at the moment
it is primarily only a question of its capture. The battle with a
bear disturbed from its rest does not always end in its being fettere
It often defends itself so tenaciously and vigorously and is so
dangerous for its adversaries that they find it necessary to put an
end to it with their pikes and lances. In fact, the latter happens

/562 cont./

are a rule when an old she-bear with its one or two-year-old cubs is found in the lair. In this case, the all too dangerous battle to capture the old animal is usually not even undertaken, but rather it is enough to stab it at once, and only the cubs are fettered and led into captivity. The bears killed in the wilderness in this or some other way are, to be sure, likewise eaten by the Gilyak, /563/ but, as far as I know, without special festivities, and this is not merely because the procesisaij, so very essential in this connection, which are conducted with the imprisoned bears, must naturally be omitted, but rather perhaps also because the slain bear does not in fact have the tastiness for a Gilyak palate and does not have the thick layer of fat of the animal kept imprisoned for some length of time and fattened on a fish diet. Footnote on the Cost of the Sea of Okhotsk Mildendorff (1)

1. Reise, etc., Vol. IV, p. 1381.

learned of another method of the Gilyak for capturing bears alive, which, however, could scarcely occur in the Amur region and on Sakhalin, with different natural conditions. It consists in putting, at places where deeply cut game-trails lead down from the heights of the steep coast to the sea and between two even standing close to each other, on the latter large strap-noses, in which the bear, since it does not find another path either to the right or left, must inevitably be caught. I do not know of any such localities in the Amur region, and, accordingly, I have never heard of such a method of catching bears there.

Many superstitious beliefs and customs are certainly associated with the hunting of bears among the Gilyak, and their observance is considered necessary in order to undergo the dangers of the fight with it successfully and to master the mighty animal unharmed, but to be able to escape the revenge of its manes in case of its death. But I cannot agree at all with the statement that by Nordmann that "lovely songs" are first delivered by a few shamans to the bear tracked down in its lair, which are supposed to induce

/563 cont./

it to come out from its hiding place (?). For the shamans among

2. Arth. Nordmann, "Ueber den Fischfang und die Jagd der am Amur wohnenden Gilyaken /On the Fishing and Hunting of the Gilyak Living on the Amur/ (Bull. de la Soc. Imp. des Natur. de Moscou, 1861, Vol. XXXIV, Sec. Part, p. 251).

the Gilyak, quite apart from the character ascribed here to their songs, which in reality never at any time belonged to them, have nothing whatever to do with hunting, either for bears or for other animals. They never interfere in the hunting, fishing, practical life, fishing, hunting, trading, of this superstition, to be sure, but vigorous and enterprising people, and, on the contrary, as we shall see in the following, practice their arts on entirely different occasions. The Gilyak, by the way, do not regard the capture of a bear as an offense perpetrated against it, because through this it is introduced to a life with abundant food, a good home, and many marks of honor. The spirits of revenge can be aroused only by its death and being eaten, and therefore the bear festivals, leading to this outcome, are surrounded by a number of rules of behavior dictated by superstition, whose observance is supposed to ward off misfortune. The other animals are given less consideration, but even with regard to them there are many rules that are not to be neglected without causing future mishaps in connection with the hunting concerned, and, along with this, depending on the kind of animal involved, more or less grievous injury to the profits. /564/ For example, I by accident came across the following superstition concerning the hunting of sables. When I entered the yurt of Miawach on the lower Tymy on Sakhalin, I saw a sable hanging from the wall beam, which was still completely intact and evidently had just been brought in from a trap. As I was looking at the animal, the wife of the absent owner entered; obviously distressed because I had seen the

/564 cont./

animal, she reached for a fur cap and hung it over it and then, after a while, she took it from the wall, wrapped it in birch bark, and put it with other pieces of skin in the yurt. My efforts to buy it were entirely in vain, despite the high price that I offered; I was told categorically that it was already "ulbuch" (unlucky) that I, a stranger, had seen the animal unblessed, but the consequences for sable-hunting in the future would be even worse if she were to sell it to me in an intact state (1). The Gilyak in all probability behave in the same

1. This superstition, which I also found among the Goldi, is no less prevalent among the Siberian Tungus and was transmitted by them to the hunters in Siberia. Gmelin (Reise durch Sibirien /Journey through Siberia/, Göttingen, 1752, Vol. II, p. 278) for example, wrote of the Russian hunters from Kirenskoi Ostrog setting out in troops to hunt sable: "as soon as a sable is caught, it must be put away properly without anyone's having seen it, for they believe that if anything good or bad is said about the captured sable the rest of the catch will be spoiled."

way toward the other precious fur-bearing animals, in connection with which they are evidently governed by the same superstitious belief which I have already discussed above (p. 85). In speaking about seal-hunting, The utilitarian standpoint with regard to this superstition is also evident in the fact that it does not extend to worthless animals whose capture means nothing to the Gilyak, for fresh specimens of squirrels and Mustela sibirica just taken from the trap were relinquished to me by the Gilyak without further ado. If, on the whole, the traveler comes across far fewer Gilyak superstitions concerning hunting and the individual animals hunted than is the case with regard

/564 cont./

to fishing or seal-hunting, a natural explanation is found in the circumstance already pointed out in the beginning, that among them hunting does not by far stand in the foreground of life to the degree that fishing and seal-catching do.

Delineating the various kinds of arrows used by the Gilyak, the hunting of wild fowl was also considered above in passing. A few pertinent remarks might be added in addition follow here. By far the greatest number of ducks, geese, and other waterfowl are not killed by the aforementioned knob-shaped arrows, which on the whole are used very little, but are caught in nets during the molting season and simply beaten to death. Only incidentally, but not infrequently, I have seen that geese that get their heads dividing into the water and become entangled in the nets. Among these they pay special attention to the divers. Colymbus septentrionalis L. and C. arcticus L. (Gilyak ugn), which however, is eaten not for profit, but as a delicacy, but out of superstition, about which I shall speak later when discussing their methods of burial. The hazel grouse (Gilyak hang) and white grouse (Gilyak pank), along the Tymy on Sakhalin tschkeala-ngaj, with which the Gilyak /565/ amply supplied the Nikolayev post during the winters of 1855-1857, are caught by them in snares (Gilyak kun). With regard to the white grouse, I also found superstitious notions and amulets among the Gilyak. Although in a completely unrecognizable, only symbolic fashion, it likewise noted among them the above-mentioned superstition relating to the head of the animal, in that in selling this bird they giving the head first to the buyer.

For the Gilyak the most important of all the birds are the fishing eagles: Haliaëtos pelagicus Pall. (Gilyak tschamgaltschamp and H. albicilla Brin. (Gilyak mygir-tschamp, in the interior of Sakhalin ach-tschamp). The former, however, occurs only rarely in their territory and chiefly along the seacoast, but the latter, on the other hand, is common and occurs throughout the region, and, in fact, there is hardly any place where the eagle (tschamp (eagle) is mentioned. The benefit that the Gilyak derive from it consists in the fact that their feathers are an important

/576 cont./

In contrast to the hunting practiced by the Gilyak as described above, that of the other peoples of the lower Amur region shown many characteristic differences in details, as well as in regard to its scope and its importance for their life as a whole.

It almost goes without saying that the greatest correspondence in hunting practices prevails between the two Paleo-Asiatic peoples directly neighboring each other on Sakhalin, the Gilyak and the Ainu. Even in Matilda Rimš's travel account (1) one finds

1. "Tŭ-tan kiko" (Siebold, Nippon, VII, p. 185).

briefly mentioned for the "Kraftöer," or Ainu of Sakhalin, almost all the methods of catching animals that we have become acquainted with in detail in connection with the hunting practices of the Gilyak; for instance, the snares set on a tree trunk put across a brook like a bridge in order to trap sables and river otters; the clamp-forks (Gilyak kasma) designed for foxes and wolves, the bows which shoot an arrow automatically when a taut string is struck, etc. Concerning the latter, the Japanese traveler reports that the Ainu also use them for the killing of sea otters, with a fish as bait — a statement that is somewhat doubtful in itself and in any case can only be of historical interest today since the sea otter (Enhydris marina Schreb., Ainu rakko), according to information collected by me and later travelers (2),

2. See the first volume of this work, p. 44. Also Nikol'skii, Ostrov "Sakhalin" i ego fauna pozvonoch. zhivotn. /Sakhalin Island and Its Fauna of Vertebrate Animals/ (supplement to Vol. LX of Zap. Imp. Akad. Nauk", No. 5, p. 147).

now hardly appears anymore along the shores of Sakhalin and is known to the inhabitants of it only by name. More trustworthy

/576 cont./ More Trustworthy

and of greater interest with respect to the hunting practices of the Ainu is the statement by the same traveler that they set up traps similar to those used by the Gilyak, in the river otter and sable also for the musk deer (Ainu likun-kamui), and, to be sure, in accordance with its habitat, in the mountain gorges. Accordingly, I am inclined to conjecture that this animal is also caught in a similar manner by the Gilyak, though I have found nothing about it among them. The Ainu method of hunting larger animals, such as reindeer and bear, is likewise the same as among the Gilyak, except that they also use poisoned arrows, which, as /577/ was mentioned above, are not found among the latter. The bear pikes, spears, and lances required for hunting are supplied to them, however, since the complete decline of their own forging skill, through the Gilyak living in the forest, in whose elegant lances with inlaid silver, copper, and brass figures are regarded as Manchurian — a view which may be maintained and encouraged by the Gilyak out of self-interest. All in all, however, the Ainu are known to have been in no less an extent to the above-mentioned kinds of red deer, big game, wild boar, and, to be sure, they are not merely slain and utilized on occasion, as happens among the Gilyak, but are pursued regularly and zealously, because they are used directly and very essentially for their clothing and food. This has already been pointed out above in the discussion of these two points. With regard to food, however, all the more significance must be ascribed to hunting among the Gilyak, because, for it takes up much more of their time than among the Gilyak, and the farther upstream and inland, the more, and the more exclusively, it takes up the entire winter and part of the fall and spring.

Hand in hand with the longer period of hunting among the Tungusic Amur peoples also goes its extension over a far larger area. Whereas the Gilyak contents himself with a relatively small sphere for hunting, set up his traps and self-fixers in the localities that he knows to be favorable from experience and at the spots suggested by animal tracks in the snow, visits them from time to time, and at night always returns again to his

/578 cont./

it must have gained far greater scope among all the Tungusic peoples of the lower Amur region and must be of more essential significance for their entire lives than is the case among the Gilyak.

Among the Tungusic peoples of the lower Amur region, too, just as among the Gilyak, the catching of precious fur-bearing animals, such as sable, river otter, and the fox, comes first, simply because by trading them they obtain not only clothing materials and foodstuffs, but also the universally popular luxury articles, tobacco, which has become indispensable to them. It is also practiced in the same ways and with the same means, but over a greater area and with more adroitness and skill and, therefore, with more success.

But whereas the Gilyak hunting is limited almost solely to the catching of fur-bearing animals and thus wholly in the interests of trade, among the Tungusic Amur /579/ people it also extends to no less an extent to the above-mentioned kinds of red deer, big game, wild boar, and, to be sure, they are not merely slain and utilized on occasion, as happens among the Gilyak, but are pursued regularly and zealously, because they are used directly and very essentially for their clothing and food. This has already been pointed out above in the discussion of these two points. With regard to food, however, all the more significance must be ascribed to hunting among the Gilyak, because, for it takes up much more of their time than among the Gilyak, and the farther upstream and inland, the more, and the more exclusively, it takes up the entire winter and part of the fall and spring.

Hand in hand with the longer period of hunting among the Tungusic Amur peoples also goes its extension over a far larger area. Whereas the Gilyak contents himself with a relatively small sphere for hunting, set up his traps and self-fixers in the localities that he knows to be favorable from experience and at the spots suggested by animal tracks in the snow, visits them from time to time, and at night always returns again to his

/579 cont./

permanent winter-dwelling along the river or on the seacoast, the Amur Tungus not infrequently undertake long hunting expeditions which may last months, and, in addition, they most significantly express their predominant hunting nature, in contrast to the Gilyak. Although on the whole they have likewise become sedentary fishermen, their original inclination for the nomadic hunting life has not been entirely suppressed and breaks through from time to time triumphantly and irresistibly. In small parties of two to five men, they go on sids to the hunt grounds (hunting-grounds) and, along with them on light sledges, transported to a few dogs the necessary hunting equipment, a few of the most needed utensils, such as small cooking pots, etc., and some food supplies for the initial period. Having arrived at the place, they set up a hunting-hut in the forest a hunting-hut of the kind described above, a so-called alko, which serves them as a common dwelling and from which they make their further hunting expeditions in various directions in a closer or wider sphere. Beyond the hunting-hut they set up traps and self-fixers, the traps and self-fixers set by him, and toward evening the small company appears in the tent around a blazing fire, to eat a meal prepared from the parts of the captured animals. If, however, a hunter has been diverted too far by following an alluring trail or is delayed too long by some special occurrence or adverse while hunting to be able to return in time, he prepares for himself, either a small hut, either a small archer's tent of fir branches, a so-called homors, which I have likewise described above, or a simple resting-place in the snow, in order to have his meal and the night's rest there beside a small fire.

If it is required in the interests of the hunting, the fixed quarters are moved and the hunting carried on over other, less frequent and more productive terrain, and, finally, when enough game has been collected and the pelages for hunting has sufficiently cooled, the return trip to the kin who remained behind in the winter dwellings, to wife and child, is begun, on which /580/ the hunters in part proceed on the sleds laden with the hunting equipment and make a stopover for them and in part will along with the dogs.

/588 cont./

them, therefore, I can only refer to the descriptions by Maack (1),

1. Putesh. na Amur", pp. 49, 75, and 76.

Gerstfeldt (2), Ussolzef (3), and others. The picture of the hunting

2. "O pribrezhn. zhit. Amur /Concerning the Population of the Amur Coast/" (Vlestn. Imp. Russk. Geogr. Obshch., Part 20, 1857, Sec. on Res. and Mat., p. 307).

3. "Putesh. po dolinie r. Nerchi /Journey along the Valley of the Nercha River/" (op. cit., pp. 77 ff.).

practices of these peoples that they give shows the greatest similarity with that presented by their neighbors to the north and to the west, the Russo-Siberian Tungus, who are likewise not at all sharply demarcated from them geographically. On the other hand, how very greatly the upper Amur peoples contrast in this direction, as hunters and hunting nomads, from the more or less sedentary fishing peoples of the lower Amur region has already been noted several times in connection with phenomena discussed above, their dwelling, clothing, food locomotion, and especially their fishing.

To conclude these observations on the hunting of the Amur peoples, as a supplement, so to speak, the contrast that can be observed between the inhabitants of the upper and lower Amur region with regard to the animal species representing the principal objects of their hunting might be pointed out here. Whereas in the lower Amur region, and especially among the most typical and ichthyophagous of its peoples, the Gilyak, hunting is directed primarily and particularly against the precious fur-bearing animals, so that, in accordance with its principal aim and character, one can designate it as fur-bearing-animal hunting, or, on the

/588 cont./

basis of the most numerous and generally most popular of these animals, simply as sable hunting, among the peoples of the upper Amur region, who rely on hunting almost entirely for their food and in large part for their clothing, the meat animals, elk, red deer, roe deer, and wild pig, stand in first place as the objects hunted. Also contributing to this is the fact that the two large animals named first are also used for tributary payments to the Manchu officials (4), and the young and still soft deer antlers are

4. I again draw attention to the fact that my descriptions apply to the 50's, that is, a time when almost the entire Amur region was still under Chinese rule.

an important trade item. To be sure, the precious fur-bearing animals, and especially the sable, are regarded as most desirable booty, and, accordingly, zealously hunted, by the upper Amur peoples, too, but their number has so greatly declined in the course of time, both because of the constant and strenuous hunting and because of the frequent and extensive forest fires, in part caused by negligence and in part intentional, that, in addition to them, other animals formerly regarded as worthless and ignored have acquired value. In particular, as the sable gradually disappeared, the squirrels serving as food for it became so much more common and numerous that along the upper Amur and its /589/ tributaries on both sides they have already become the principal objects of attention for the hunters, and, though of little value individually, they repay their labor and expense because of their great numbers. The Schilka and Argunj Cossacks, who annually in the fall and organized in small companies (artels) undertake long hunting expeditions lasting for weeks and months in the Orochon and Manegir territories, therefore simply call this hunting of theirs, in accordance with its chief purpose, "belkowjo" (1), i.e., squirrel pursuit. Thus, another

1. Accordingly, the verb "belkowatj," i.e., to pursue squirrel-hunting.

/589 cont./ Thus another

characteristic difference between the hunting conditions of the lower and of the upper Amur regions is presented by the sable hunting of the one side and the squirrel pursuit of the other.

Contributing very essentially to the change from the former to the latter in the upper Amur region, however, in addition to the causes given above, are the handy firearms, the small-caliber, Russo-Siberian rifles, which came from Siberia and whose importation and adoption are growing more and more in the course of time. Whereas in the lower Amur region at the time of my stay in it there were no guns at all, with a few minor exceptions (2), these rifles were already in general use among the

2. See p. 868 above.

Orochon, thanks to their immediate proximity to and long association with the Russians, and among the Manegir, too, they were already gradually pushing out the long and unwieldy Chinese matchlock guns, which were not very serviceable for hunting. Since the occupation and colonization of the entire Amur region by the Russians, the spread of good or at least serviceable firearms has made rapid advances in the lower part, which, in combination with the growing number of hunters must lead to a heavy decline in its wealth of sables and other animals in the future. How disastrous the consequences of this will be for the indigenous population of the region living on this wealth is easily grasped and can be judged in greater detail on the basis of the following discussion.

/600 cont./

1/2 ja, a whole fur-coat of squirrel skins 7 ja), whereas the Gilyak with their great wealth of precious furs, pay no attention to these worthless, trifling materials. In further contrast to the Gilyak, limiting themselves almost solely to catching fur-bearing animals and fur trading, the Goldi also bring the hides and skins of the deer-like animals eagerly hunted by them to trade with the Chinese (a roe-deer hide, for example, costs 1/2 ja among them, a red deer or elk hide, untanned, 1 ja, tanned 2 ja). Like the furs, the principal products from fishing also have a higher price among the Goldi than among the Gilyak (a large sturgeon, for example, costs 10 ja among the former), on the one hand because the fish supply in the Amur River decreases upstream, and on the other hand because they are nowhere near as productive in this respect as the Gilyak, who are devoted exclusively to fishing. Cereals and vegetables (beans of various kinds), however, seem to be cheaper for them than for the latter, both on account of their greater proximity to the agricultural Chinese and because they themselves cultivate some vegetables. Finally, the same is quite decidedly also the case for tobacco, in that one "string" of it, equal to three hundred bundles, is valued by them at 20 ja (2).

2. At 30 ja by the Gilyak, according to the above table /see p. 935/.

Incidentally, immediately after the arrival of the Russians, the value of the Chinese (Manchurian) tobacco rapidly sank in the eyes of the Gilyak, since the far stronger Russian (Circassian) tobacco is much more to their taste.

Since principal commodity of the Amur peoples in trading with the Chinese consists of animal skins, and in particular sable, fox, and otter skins, and the Gilyak, as we saw above, are, on the whole, only /601/ clumsy and not very industrious hunters, they must, above all, in order to be able to carry on this trade on a large scale, think of procuring this commodity in the largest quantities possible, not only by hunting, but in another way better suited to their nature. To this end they trade with their

/669/

423 Finally, they also embrace the communistic principle in
224 that they have no limitations or restrictions on fishing and hunt-
226 ing, except for the places on the river where they have their
619 salmon weirs and those spots in the forest where their traps and self-shooters are set up. Thus they tolerate it, wholly without limitation, when the Liman Gilyak go to the Amur River to fish, and the Tschomi Gilyak go far downstream on the Tymy River for salmon fishing, and the latter, in turn, move to the sea-coast to catch kangi. It is true, the Tschomi and the Tymy Gilyak have ties of hospitality with each other. Also, in the
[648] vast forest the Gilyak permit even Olcha and Samagir to pene-trate into their territory without molesting them.

685 Like the communism, the inviolability of property is also
[421] based upon the national principle. I have seen even old and
[123] dignified Gilyak men who could not resist a small theft, for example, a piece of butter or the like, quite apart from the young people, who go so far as to cut open and pillage travel bags, etc., as happened to me in the village of My in the Amur-
[186] Liman. I was repeatedly warned by the Amur Gilyak about the inhabitants of the village of Langr, located at the entrance to
685 the latter. The opposite, however, that the Russians steal from
648 the Gilyak, happens much more frequently, and the temptation to remove a makeshift door or a fish net hanging in front in order to enter a storehouse and to pillage it is indeed much greater. Even the small burial houses were not safe for their contents, though they did not contain anything but a few articles of symbolic significance. Thus it came about that I became acquainted
[192] with the principal international relationship between the two peoples from the Gilyakized Russian term for "to steal" (ukradntsch, Russ. ukrastj), and the Gilyak word (enngarsitsch) did not become known to me until much later. But it hardly ever happens that one Gilyak will steal anything from another. Indeed, I met
685 persons, such as Judin in Tebach, Mradamn in Ssabach, etc.,
123 whom I could fully trust even from an international standpoint. The former, for instance, after a few days, returned to me a cigar case which I had left in his yurt, and there was not one

770 Peoples of Northern Siberia and the Far East

225 of a small board equipped with a harpoon-tip, attached to a stick from 10 to 30 meters long. The lykh was lowered into the water; the hunter hid himself nearby in his boat or on the shore. When he caught sight of his quarry, the hunter carefully directed the lykh at it and quickly drove it into the animal.

224 As compared with its role among other Amur peoples, hunting played a
324 smaller part among the Nivkhi. The hunting season began in autumn, after
22 the end of the fish-runs. At this time bears come down to rivers to treat
[184] themselves to the delicacy of fish, and the Nivkhi awaited them with bows or guns. Sometimes they set crossbows for them. In winter, they hunted bears with spears. The bear season was followed by the sable-hunting season. Sable and certain other fur animals (otter, lynx and marten) played an important part in the Nivkhi economy. The Amur Nivkhi went out every autumn in their large, heavy boats made of boards, to hunt sable in Sakhalin, returning from there only in early spring. This was due to the abundance of sable on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees which served the sables as crossings.

224 The main weapon in hunting was the gun, which in the early 20th century
[197] replaced the compound Nivkhi bow with its horn covering. However, the bow
[198] was preserved in the bear festival and in children's games. Squirrel and foxes were hunted with dogs. Crossbows were set for both small and large animals.

241 Agriculture already began to appear among the Nivkhi in the middle of the 19th century, when they first learned to plant potatoes. Individual Nivkhi had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths in some of the villages, who reforged Japanese, Chinese, and later Russian metal articles for their own needs; they made knives, straight and curved, adapted to wood-carving; arrowheads, tips for harpoons, spears, and so forth. The smiths used double bellows, an anvil and hammer. Pieces of massive chains preserved from the past speak of the high skill of the old smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. The
887 old men wove ropes from bast and nettle, built sleds and made dog-harness.

Men's work included fishing, hunting, making the tools required in these
462 occupations, including tackle and means of transportation, the preparation and transportation of firewood, and blacksmithery. The women processed the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and ornamented clothing, made birchbark utensils, gathered plant products, did the housework and took care of the dogs.

By the time the Far East was Sovietized, commodity relations were quite
179 strongly developed among the continental Nivkhi. The old forms of collective
433 production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked the necessary gear were compelled to hire out as lumberjacks and other hired laborers, transport goods, etc. The smallness of the income from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Amur Nivkhi. The catch of seal, white whale and sea lion went mainly to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. Workers were also hired, on a half-share basis. Some Nivkhi worked during the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in
22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola
262 took the place of bread. Meat was eaten rarely. Food was prepared with

116, 224, 776, 782, 825

"Gazing carelessly at the bank, I espied a head peeping out of the long grass, and called to my interpreter and the natives in a low voice, 'Malenkiy medvyet! ' (A little bear!). Seeing nothing, they smiled; but on my reiterating and pointing, Vanka caught sight of it, and called to me, 'Nyet stryelyay! Gilyakskiy sabaka' (Don't shoot; it is a Gilyak dog). Now, occasionally we had seen a native dog sitting alone at a distance from a village, fishing or waiting for his master, and we therefore hesitated; but before we had realized the mistake the animal had got up and trotted off, disappearing into the tall rushes and grass, giving us, however, one clear view of a beautiful coal-black fox with a white tip to his great brush. Even as he disappeared, Vanka was calling to us, 'Nyet stryelyay! Nyet stryelyay! Pal ni vookh budet serditiy' (Don't shoot! Don't shoot! The god of the mountains will be angry), and much more as to the fate the lord of this region would have in store for us should we cross his will. I [180] went ashore, but it was hopeless to expect to come up with the animal.

According to Vanka, if we had killed it, its brethren would have been informed, and when we set out for the winter's hunt they would have banded together to kill us. If Vanka was really sincere, I think it far more likely that he feared lest his winter's hunt should suffer, because, by killing thus in a haphazard fashion, it had not been inaugurated with the usual ceremonies. To seize of the provision of the great Pal ni vookh (he is lord of the forest and all therein) before acknowledging in due form his sovereignty and bounty, was to risk bringing down his wrath upon our heads."

remember only two instances when Europeans were assaulted by it without having been the attackers. The one case occurred in the year 1878 in broad daylight on the ice near a post station. A post servant was gored by the tiger. The skull of this animal which was itself killed the next day now belongs to me. It measures seven and one-half vershok (33 centimeters), the upper canines are as long as a finger.

himself takes the offensive, does the monster lose his instinctive fear of him, and then suddenly shows all its terrible natural qualities, to which belong an amazing toughness. Even with five or six rifle balls inside it, it still takes enormous leaps, and even in its death throes it can still overcome a man. The bullets bounce off its skull, and one is supposed to aim at its chest, for only one bullet in the heart finishes it off. Thus an open battle with the tiger is so dangerous that bear hunting may be considered child's play in comparison, and the peasants and Cossacks decide on it in dire necessity when the tiger breaks into their stables and cannot be got in any other way. In that case 15-20 men with bayonets on their rifles and in closed ranks descend on the place where the animal was scented. But the regular method of capture is poisoning with strychnin or the setting up of rifles which go off when the tiger approaches the bait. The corpse of an animal that was killed by the tiger himself usually serves as bait, for the tiger has the laudable habit of returning the day after his assault.

The wolf exists on the lower Amur, but rarely shows itself and does no harm. It is seldom shot.

223 Birds, especially ducks and geese, partridges and hazel grouse are now usually shot with rifles. Snares are also set for partridges on flat islands in the willow shrubbery. Hazel grouse are lured in spring with whistles, in winter they are openly hunted in spruce thickets. The Gilyak who live in the surrounding country are the chief purveyors of wild game for Nikolayevsk-na-Amure.

462 We mentioned above the other occupations and embryonic handicraft and trades. Specialization [124] consists in not much more than a division of labor between men and women. The man hunts, does carpentry, makes weapons, sleds, etc.,

225

225 MARINE HUNTING--animals sought (e.g., whale, alligator, seal, dugong, turtle); methods and techniques employed; special elaborations (e.g., whaling and sealing); organization of labor and division of catch; associated beliefs and practices; regulation; etc. See also:

000 man was possible at a very remote time. As a matter of fact,
226 these fish that travel in masses upstream to spawn even now serve
262 as the basis of life for the Gilyak and his only domestic animals,
[231] the dogs. The fish, caught and dried in the sun by the tens of
[251] thousands, /26/ are stored in pile storehouses and, in the literal sense of the word, replace bread for the Gilyak during the long winter. The fresh local fish that he catches all year round are merely an addition to this daily bread of preserved salmon. The countless schools of the fish that travel in masses upstream to spawn provide food not only for the Gilyak. No smaller packs of all kinds of pinnipeds and cetaceans follow the schools of fish,
225 pursuing the abundant food. After the fish, the pinnipeds consti-
262 tute the second source of the food supply of the Gilyak. In early
[221] spring, at the first signs of the opening of the ice, the famished native comes out to hunt seals, which are happy for the opportunity to breathe the fresh air on the ice floes which are breaking up.

225 In favorable places these animals are hunted all through the
146 summer by means of a very long harpoon which is thrown from a boat. Besides their skins, which are quite indispensable in the Gilyak economy, seals also provide supplies of fat, which serves as a seasoning for the hard yukola, and also as an independent food product that is extremely important for the life of the Gilyak. The effect of the fat on the organism of the native is striking. Here it is the end of winter. The famished Gilyak, if he has not been brought down by scurvy, can hardly walk. But the seal need only appear, and he is momentarily transformed. He greedily throws himself on the melted fat, drinks it in all forms, with tea, with fish, and even just as it is, and in a few days he becomes unrecognizable: his cheeks become pink, his body gains weight, and vitality expresses itself in his every movement.

224 In autumn, after the end of the run of fish, an active and
[221] happy season of hunting begins. Bears in abundance come down to the banks of the streams to regale themselves on salmon, and the Gilyak lies in wait for them with gun and spear. Every bear killed is an occasion for communal festivities and celebrations. Before the season for fish and bear has come to an end, the sable has put on his dark coat, and it is time to hunt him. Now the setting up of snares at the crossing of rivers and the building of

/53 cont./

825 run on the harpoon of the Gilyak. Woe to the animal who falls to his teeth; he tears the great eared seal in half. The most awful sight, however, is kosatki hunting a whale. "Sighting him, the school of kosatki divides into parties. The younger ones set out on the flanks, trying to contain the whale, while the older ones remain in the rear. Having thus stationed themselves for a battue (cautiously without noise so as not to frighten the whale), they suddenly appear on the surface of the water when they calculate that the catch should be in the middle of the circle they have formed. They then throw themselves savagely upon the whale and begin to tear his body into large chunks and greedily swallow them. They all vie in particular to try to get his tongue. The whale thereupon raises a soul-rending roar which can be heard for many versts. Hearing such a roar, I always knew that somewhere close by kosatki were hunting a whale." Thus the zoologist Voznesenski described this terrible sight in the Aleutian Sea, and I happened to see the same sight many times in the waters of the territory of the Gilyak.

And yet this same monster before whom quake the titans of the sea, this tyrannus balaenarum (tyrant of whales), as he was called by Fabritsius, an ancient specialist on whales, not only never touches the boats of the Gilyak, but is his true benefactor, driving nammals and fish to him!

● [225] /54/ For hours on end the Gilyak waits in his fragile little boat for the appearance of the head of a seal on the surface of the water in order to throw his long harpoon into him. But the cautious seals prefer not to appear at all, or show themselves from under the water only to dodge in a most crafty way the blow directed at them. Then, quite unexpectedly, as if specially sent by someone, seals, eared seals, and beluga begin to run onto the harpoon of the Gilyak... The kosatka has appeared, forcing the inhabitants of the sea to throw themselves in all directions without a backward glance! -- How, after this, could the Gilyak not consider this mighty creature, who does not spare anyone but him and, in addition, is his bread winner, sending all sorts of sea animals, his god-benefactor? And he calls this animal none other than yz' -- "master."

476 615 885 591 796 615 476 /122 cont./

blood flows equally /123/ in the veins of both of the newlyweds, the children of brother and sister. Standing in close connection with this rite is the previously described moment in the bear festival, when, before the shooting at the mark, the master of the bear (the akhmal'k) and his ymgi each sets beside himself an ax and a kettle, which are also called nich and which are also mutually exchanged. If the first rite symbolizes mutual sustenance, the second symbolizes reciprocal co-operation in hunting, which, as we shall soon see, has a quite real basis.

615 * 614 476 574 [606] [431] The principle of "sustenance" is not limited to periodic visits to the relatives of the wife, although they have some economic significance, since the akhmal'k'i each time, in addition to the hospitality shown, give a valuable present to their ymgi, especially on the first visit after the marriage, when the son-in-law /zyat'/ is customarily given, depending on the resources, one or several pairs of smart garments for men. Cases of actual need are much more important. There

* 614 731 476 574 606 615 are times when one's own clan is powerless to aid its clansman, because misfortune, having overtaken one, has overtaken all. Let something happen during the season of the fish run to turn them from their accustomed path, and general disaster is at hand. At such a time there is a simple way out. A man gathers up his family, his dogs, and all his movable goods and chattels in general and emigrates for the whole season to the settlement of his father-in-law.

Here he is met with outstretched arms, and from the first minute he feels himself at home, where they give him food and drink and share everything with him. The son-in-law /zyat'/, of course, is not a do-nothing; he helps in one way or another, but this is far from making up for the expenses involved in the long and unexpected visit of a whole family, often at a time when the supplies of fish have already been prepared and it is impossible to increase them.

615 224 Similar fraternal relations between akhmal'k'i and ymgi are manifested in sea hunting and land undertakings.

● 225 476 * 614 The most important of these require the participation of several persons: hunting bear in summer and winter (taking it

* 614 615 224 ● 225 476 /123 cont./

from its lair), sable hunting, and especially the hunting of sea animals in boats. And it is noteworthy that in these instances the Gilyak most frequently invites the participatio not of his clansmen, but of the ymgi, and not necessarily those married to his sister or daughter, but ymgi in general, i.e., the young men from that clan which takes its wives from him. The Gilyak feels more at ease with them than h does with his own /124/ clansmen; he can freely converse and joke with them, while he may not do this, as we know, with all of his clansmen. In turn, in their akhmal'k clan th ymgi feel like a fish in water; all the women of their gener tion are their an'gej (wives) -- all future wives and at any r women to whom at any time they have conjugal rights in th broadest sense of the term. As concerns the local young ma population, they find their revenge in the clan of their akhmal'k'i, where they meet the same reception from their

* 614 615 608 [601] "fathers-in-law" and among their numerous "wives." Betwe the male youth of both clans ("navkh'i") (1), as a result of

1. Let us recall that ymgi and the "brothers" of their "wives" mutually call themselves navkh'i.

frequent meetings, not to mention relationship by marriage, the most touching relations are established. It is in these su roundings that friendships flower most of all. Among the Gilyak the practice of ceremonial brotherhood is very much vogue. Ordinarily it manifests itself in the periodic exchan of presents, mutual aid in misfortune, and other such servic But the most touching instances of ceremonial brotherhood n be found among the navkh'i. Here is one such example, es cially surprising to me, which I chanced to observe in the settlement of Ngambevo on the eastern shore of Sakhalin. B friends, "navkh'i," lived in one yurt; they had everything i common, went about together like lovers, almost never separated -- a modern Orestes and Pylades. They were both

225 The seal (1) is caught in several ways. On the island of
411

1. On the Amur it is found only way down at the mouth.

Sakhalin a lance about two to two and one-half fathoms long which is thicker at its lower end is laid into a wooden trough; on the thick end of the lance a 20-30 fathom long strap is fastened. In spring when the ice breaks up, the seal climbs onto land and the Gilyak pursues it, often at the risk of his life, on a boat or over floating ice fields. As soon as he is near enough to it he places the trough which somewhat represents the barrel of a gun, with the lance inside it on the ground, aims and throws the lance while holding the end of the strap with his left hand, so that the animal cannot get too far away.

225 Another method which is practiced, for instance, in the village of Charbakh, below Nikolayevsk-na-Amure is done in the following way: near a place where there are big stones lying on the shore, two stakes are driven into the bottom of the river and between these is spread a sort of sail, behind which the hunter conceals himself. The seal, all unsuspecting, climbs on a stone in order to sun himself and is hit by the lance which is attached to the boat by a long strap.

Finally the seal, when he is sunning himself on a rock, is sometimes killed by means of an endlessly long lance, the lower end of which lies on the shore.

The sea lion frequently is found on the coast of Sakhalin and it is the simplest thing in the world to kill it. The animal is stupid and at the same time inquisitive and lets the hunter come so near that he can beat it to death with a club.

224 The otter is frequently seen on the rivers of the country
225 and its pelt is very much prized. It is shot, sometimes even killed with sticks. Cross-bows are also sometimes set up for it, as for the sable.

224 Of land mammals the bear, the elk, the reindeer, the fox,
554 the musk deer and particularly the sable are hunted.

The bravest men conduct a hand-to-hand fight with the bear and thrust their lance into his breast when he stands up on his hind legs. The scars which a man carries away from such a battle bring him great honor and songs of praise. Most of the men do not attempt this single combat and go after the animal in pairs, and [121] armed with rifles; sometimes the bow and arrow are also used; in any case, it is a dangerous hunt.

ct almost instantaneous, is the
, strychnine, which Russian fox
Gilyak seldom get hold of. But

224 even this hunt is not as easy as one might think. First of
278 all, the preparation of the bait requires great caution;
439 furthermore, the hunting ground where the bait is left lying about must be frequently visited on snow shoes, for countless crows are usually on the look-out and as soon as the fox succumbs, they pounce on him and his pelt can soon become eaten away.

224 Sometimes cross-bows are set up to catch the fox, but these are not as effective for this animal as for the sable.

Up to now the sable has been one of the most important sources of income for the Gilyak, although the Amur sable is less valuable than that which comes from the Okhotsk and Kamchatka. The sable is hunted in fall and winter. In fall numerous snares are laid; for instance, horse hair among willow shrubs along the rivers. Or a snare is set up in a certain calculated manner. For, the sable, when it wants to cross a small stream never fails to use a log that has fallen across it, if he can find one. Now, such logs are purposely prepared for him, and snares as well.

With the first snow fall he is pursued by dogs and killed with buck shot; the pelt is thus little damaged, for two or three grains of shot suffice to kill the animal.

A method commonly used and one that can be applied all winter long, consists of setting up cross-bows, the mechanism of which is cunningly devised. The shaft stands on a stake; behind the arrow there is a sort of cock made of a knee-shaped piece of wood; on the latter is a trigger from which a long thread leads diagonally forward and down and is fastened somewhere on the ground. As soon as the sable in passing touches the thread, the shot is fired.

136 The tiger is known to the Gilyak and they have a word for
224 it in their language, but it is not hunted, because it occurs
825 only rarely in the Gilyak country, and not at all on Sakhalin, and because they regard it as something more than a wild animal. This fear has probably [123] been passed on to them by the Manchurians and the Goldi. The tiger of the Amur-Ussuri country is of the mightiest and most powerful of its kind, as well as extremely cunning; but for humans, especially for Europeans, it is not nearly as dangerous as it is in India, because it finds more food. (1) Only when man

604 This formula has preserved its ritual significance even
605 today. One is supposed to send spiritual help to the ten-law
606 gods of children and a share of every catch. Moreover, the
607 hunting gods of the category *jinga* during the course of some
608 months out of the year are entailing guests in the settlement
609 of their fathers-in-law and are indispensable participants in
610 the more important hunting expeditions.

In particular, this relation is clearly attested to at the
611 time of distant sea excursions for the hunting of sea animals.
612 The master of the boat — he is the head of the expedition —
613 in such cases especially summons his *yrugi* to take part in
614 the hunt (I).

1. We find an analogous phenomenon among the Haida Indians, a purely matriarchal tribe. Here, so respectable a chief, one must not shoot in him. There is a contest going on on the other side — that is Pai-yu'-ut, a mountain master — likes a black dog. Tol — sea master — a white one. Each large house has two fires, Pai-ruu and Tol-ruu. If a person has one move, it is enough for Tol-ruu; and if he has bad luck, he blames the gods to a classman of that Shala who has two sources.

615 All this time the *yrugi* are not only fed for nothing, but
616 when they leave they carry away with them an equal share
617 of the catch and various *Pilsi* gifts besides. Only relations
618 with these young men are often much more tender than with
619 one's own children. And this is entirely understandable. For
620 a man's *yrugi* are the sons of his sisters or daughters, his
621 tribesmen, who under a maternal system must live with him,
622 while his own sons and grandsons will move to the settlement
623 of their wives and will be completely estranged from him.

624 This obligation for the "nourishment" of the tribesmen
625 through the female line, however, is a customary institution
626 in matriarchy. Among several peoples, as, for example,
627 among the Polynesians, the right of tribesmen to the property
628 of their uncle on the mother's side has taken on completely
629 improbable forms, where a tribesman has the right to revolt
630 with impunity the possessions of his uncle. This right is

Pilsi comes.

631 morning it is necessary to take back the sti and so forth quietly
632 and healthily. These things are placed so that the Tly-o'lvish
633 can see them and, by these signs, see what they had on the nature
634 of the Tly-o'lvish and "if he has a good or bad gift." Tly-o'lvish
635 "rain" *Pilsi* or not. "After all, five of us go, one caught some-
636 thing, one caught nothing, and one pursued bad gut and nothing.
637 What is the reason for this?"

During a talk — smallpox epidemic — in Tyr all the
638 Gilyak *nanaghik*, make a sacrifice — bow, present rice, roots,
639 and berries. First the 118-year-old man Zyavkaya from the vil-
640 lage of Pal'mun's sacrificed. They play bone dice for the dead.
641 This old man remembers four big *tabi*.

642 Pal'mun's tree with distinctive peculiarities, and on winter
643 occasions such objects are selected. A sacrifice is always made
644 to one's own Pal-yu' (the master of the mountain), but they are
645 not made to Pilsi-yu' (the master of the sea), because, as regards
646 seen on a bushi. One must not shoot in him. There is a con-
647 test taken going on on the other side — that is Pal-yu'-ut, a mo-
648 untain master — likes a black dog. Tol — sea master — a
649 white one. Each large house has two fires, Pal-ruu and Tol-ruu.
650 If a person has one move, it is enough for Tol-ruu; and if he has bad
651 luck, he blames the gods to a classman of that Shala who has two
652 sources.

653 Tol-tabkhip — a tabkhi of lands; a hammer, chong-shok'-
654 ch hung on it. Near it is a halgyep (bench) Fabar-pun which are
655 placed the corners of the house, and the Tly-o'lvish sacrifice. At
656 they invariably boil the dolphin, here the bones are left to lie,
657 and the shells and fins, which are placed in a kabuch
658 *Ranghi*, i.e., a place where they put shells. During the Tymmdo
659 only two dishes are placed on the halgyep — mos' and mos
660 (jelly-like dish). It is also from here, in the presence
661 of the entire Shala, that they throw a little of everything into the
662 Amur, but say nothing — otherwise another misfortune will
663 occur. — Then on the tabkhi they hang tobacco, *ngok* (*Abbyde*) —
664 a bush, *yuhala* — *pyr*, and announce that everyone should come
665 out and feed it. In the main office of the Tymmdo, they feed
666 with impunity the possessions of his uncle. This right

667 /313 cont.
668 to dunar; "Tra-ka?" — Is it enough?" — "Tra-ka!" — Is it enough?
669 Everyone approaches by honors and feeds it, and each says his
670 own: "Send the blessings to me, Tly-o'lvish, and so that every-
671 body must return together at the same time, for otherwise it would
672 be a heavy sin if they were to come back separately."

The customary tabkhi of a hunter is the individual sig. Any-
673 body who touches it gives a dog. If a member of another clan has
674 smelled a bear's skin (the place for the bear festival), he appeal
675 *kumlaghi*: assumes, and they judge him; they demand a bear or
676 *Ish* — a shaggy dog. Pal-yu' — the master of the mountain is for
677 each month. If they have caught a tasty fish, *Fish*; they cut
678 the bones in a piece and him a piece, and when his pieces have
679 stood for half an hour, they are thrown away.

When they build a pile *sigrgi* (house in which the bear festival
680 is celebrated), they do not forget to celebrate a bear festival.
681 Here is nowhere to buy a bear, they must kill a *Ish* — a shaggy
682 dog (Pal is just like *mish*, "i.e., like a bear). If the house
683 is simple, they kill only dogs, two or four in number, without re-
684 gard to kind. If a pest falls on a *Ishgi*, bear festival, a
685 dog pestilence, and the bear festival is not celebrated, the
686 bear festival, be given to the classman of that Shala who has two
687 sources.

688 Tol-tabkhip — a tabkhi of lands; a hammer, chong-shok'-
689 ch hung on it. Near it is a halgyep (bench) Fabar-pun which are
690 placed the corners of the house, and the Tly-o'lvish sacrifice. At
691 they invariably boil the dolphin, here the bones are left to lie,
692 and the shells and fins, which are placed in a kabuch
693 *Ranghi*, i.e., a place where they put shells. During the Tymmdo
694 only two dishes are placed on the halgyep — mos' and mos
695 (jelly-like dish). It is also from here, in the presence
696 of the entire Shala, that they throw a little of everything into the
697 Amur, but say nothing — otherwise another misfortune will
698 occur. — Then on the tabkhi they hang tobacco, *ngok* (*Abbyde*) —
699 a bush, *yuhala* — *pyr*, and announce that everyone should come
700 out and feed it. In the main office of the Tymmdo, they feed
701 with impunity the possessions of his uncle. This right

702 /313 cont.
703 are placed into the taiga, there they find a tree with a hollow
704 trunk, make an opening in the hollow trunk, feed the head, and
705 place the head and horns there.

The other is fed and buried in exactly the same way as the
706 table. The remaining bears are stigmd kaub (i.e., there is so
707 many bears, so many).

When a pair of reindeer horns from a mature specimen are
708 found lying side by side in the taiga, the possession of them gives
709 the Gilyak luck.

During the hunting with nooses (*gochashp d'arkhosh*), a
710 woman cries because anything new is dragged from her own
711 house to another, even a member of her own clan, if that thing
712 has been a pipe and the house. One must cover the fire out-
713 side. One must not allow any guest to spend the night. In the
714 taiga, one may enter another's balagan, but not spend the night.
715 It cable is lost, the Gilyak must go to the house, and if he does not
716 hands without the permission of the master, and in general during
717 the hunting season the captured sable cannot be touched even by
718 a person from the same clan if he is not a participant in the hunt-
719 ing party; even a killed hazel grouse may not be touched. If
720 it is not at all separately, it is enough for the hunter to take a
721 month on the stream, and they do not attend his bear festival.

722 /*Shal* (*Pilsi*) — sable, weasel, ermine, should not be killed by dogs.
723 Catching a wolf. In Dikhem (northwestern Sakhalin) they place
724 it near a bent or forked branch and dispersed edges not far from that
725 *yurt*. Yahola is not allowed to approach the place. Sakhalin and
726 the wolf jumps up to seize it, sticks in his paw, which becomes
727 caught, and he cannot free it. It is a sin to shoot it wolves.

Seals are caught thus: a net is placed around a *ngr* (?), and
728 the seals sleeping on the sand are driven together; then they kill
729 them with the net.

Mos is made twice a year (in summer after the salmon,
730 and in winter, before the sables. In winter of the dog year Gilyak
731 kill a great number of dogs onscoil (a maximum of four), make
732 jelly of *mos*, and in summer catch a great number of bears (this
733 will be the Tymmdo Shlamdo). In general a great deal is done for
734 the sake of Shlamdo.

735 /313 cont.
736 are closed with this nest. When a clan is divided and part of it
737 emigrates to another place, the elder in the clan (*khal*—*gorchan*)
738 takes with him a piece of the nest and hands it over to the elder among
739 the departing clansmen. The nest is the sacred place of the clan, and
740 light the fire on a new hearth at the bear festival, and it will be
741 sacred to the clan and will be used for the same purpose. Hence the ex-
742 pression "to break the fire" came to signify the separation of the
743 clan. This custom reminds us of Dravidian, where those leaving
744 their native land to found new colonies used to take with them
745 the sacred fire of the home altar.

746 Bear festivals are celebrated in bad in the spring before the hunting
747 of the seal. On this occasion, too, the expenses of the refresh-
748 ment are borne by the Gilyak. The bear is the approach of ever-
749 ing, when the moon rises, the entire male population of the vil-
750 (again the women are excluded) goes to the seashore. There, in
751 the presence of the bear, they all bow deeply to him, and a specially
752 prepared, bad bears left untouched for the moment of the sacrifice.
753 Then all bow present squat down and each throws into the sea a
754 handful fresh catch rough as a sacrifice to the deity, pronouncing
755 the customary formula of prayer: "Our tengo-shka" ("God,
756 Lord"), after which they place a bear in one pit, where the re-
757 freshments begin, in which the women take part.

758 The "Gilyak" clan, which, as we have seen, is not in each of its
759 members from encroachment on him by the individuals of
760 another shal'. The means a clan vengeance.

761 Blood vengeance, as everywhere, is a tribal, it is true, has
762 assumed considerably the efficacy of this institution, but has
763 not destroyed it. Every murder, intentional or unintentional,
764 calls for clan vengeance. The closest clansman of the murdered
765 man — his father, son, or brother, and in their absence his
766 other clansmen — must, in the figurative expression of the
767 Gilyak, "raise up the sindred bones" (um'ny yuyuadoh), i.e.,
768 kill the murderer or at least some person of the main sex of his
769 shal'. And the wrath of vengeance is so great that not even new-
770 born children are spared. I have heard that the unhappy mother
771 of such children, out of fear of the avenger, have resorted to

772 /365 cont.
773 that they are killing seals; in such a case the boat is destroyed.
774 But if, in reply, the Gilyak display a hare's tail, the devil goes
775 away, and they continue their hunting.

The relationship between the Gilyak and all his gods —
776 *ginnaki* — is quite clear. It is the same as between people
777 foxes, bears, fish, seals, and so forth. Sables and with sables,
778 the relation of the spiritual world of Pal'-ninvish all fish and seals are the prop-
779 erty of "Tly'-ninvish, and so and dogs are the property of the
780 Gilyak. The gods specifically give a portion of their property to
781 man. It is not an exchange in the sense of a commercial deal
782 regularity during the appropriate seasons, it is not an accident that
783 sable is dressed in an expensive fur during the hunting season, it is
784 not an accident that weasel, ermine, and sable are in the hunting season
785 and become an easy catch for the Gilyak. All this is done by the
786 gods for man. In return, the Gilyak must give to the gods what
787 Gilyak should not remain in debt to their benefactors. And so
788 they give the gods a portion of everything that they avail them-
789 selves of, namely, "food, tobacco, bows, tobacco, sugar, and so forth. When
790 once expressed a desire to take part in the sacrifice to Tol'-
791 ninvish at the beginning of the bear festival, they said to me: "But
792 will you give the god bread, potatoes, etc.?" Sacrifices are the
793 exchange of portions with the nimshin. That is why the sacrifice
794 of bears took place in the winter, when the hunting season was
795 made; for example, among the dishes offered in thanks for the
796 bear, the last one not lapin. Although in certain cases indispen-
797 ble dish of the Gilyak themselves on the evening of the sacrifice.
798 Then, the bear at the well-known festival is no way a sacrifice,
799 as some think. *Pilsi* for not a single piece of its meat is appor-
800 tioned to the god, and the Gilyak does not understand allegory to
801 sacrifice — means giving the god something real. And actually,
802 at this festival, the master of the bear, Pal'-ninvish, is given a
803 sacrifice of tasmny, "nuts," yukola, and other stands. The
804 idea of exchange is so strong in the Gilyak that it has
805 that the Gilyak offer to the "master of the sea" fish bones and the
806 to demonstrate "mercy to a Gilyak. For him, it religiously
807 *Ninvish*, he does not understand religious feeling.

808 /338 cont.
809 correct, or those sacred treasures which hypocritically lie un-
810 touched in the storehouse of their possessor. The creditor lays
811 is considerably relieved by the natural mechanism of the tether
812 to his children. The considerable independence of the sons is
813 determined by the force of acquiring the means of existence.
814 For fishing with the small nets used by the Gilyak, the co-operation
815 of only two men is required; consequently, in this respect the
816 existence of large family households is not caused by necessity.
817 Likewise, the hunting of the Gilyak at the present time does not
818 require the cooperation of many people, because the hunting of
819 hunting the Gilyak join in temporary strife, whose composition is
820 completely accidental. Thus, the necessity for the existence of
821 work undoubtedly has assisted in the dissolution of the large
822 family, although among the Gilyak, as among our own peasantry,
823 the employment for one or another family, for example, in the hunting of wash
824 and dolphins, when the Gilyak gather for this purpose, several
825 men to a boat, the social relationship of kinship among the partici-
826 pants. The master of the boat gets the same share as the youth
827 who sits /*Ninl*/ at the oars. Even the craft of the metalworker who
828 inhabit the Amur, or who does not possess the craft, is not so
829 cially in northern Sakhalin. Evidently it is of very recent origin.
830 In the same way, the Gilyak, Gilyak, Orochi, Goldi, and Orochon than
831 an equal share of the catch is not the manner of the bear, but the
832 one who performed the troublesome chores on the way, such as
833 carrying the bear from the place of the sacrifice to the Amur. In
834 joint fishing the master of the boat and the net obtains the same
835 share as his have-not companions ("*nanghi*"). True, I have seen
836 an instance where the master of the boat and net obtained 2/3
837 of the catch, while his have-not contrade — only 1/3, but to
838 question my informant, he said that "everything I received he re-
839 plied: "And why should he have more? He is a bachelor, alone,
840 and I have a family and many mouths." I encountered a relationship
841 to any degree that of a workman only two or three times, but
842 even in these rare cases the status of the worker does not remind
843 one of a hired worker. The master will help his worker gain
844 a wife and will make him a sharer in the inheritance after his
845 death.

846 /385 cont.
847 many of his children had died between
848 the beginning of the hunting and the
849 date of the census. In this way, we ob-
850 tained an exact number of the children
851 in a given family, living and dead.
852 Hence, it was easy to calculate the rate
853 of

854 fertility rate — 7.2%, although this figure is below the actual

not only all the Olcha, who are regarded as Gilyak by the ordinary Russian along the Amur as a rule and hence unfortunately very often by Russian travelers (see above, p. 215 ff and elsewhere), but also the Orochi of the seacoast from de Castries Bay to Kaisenhafen. How strange it must seem to one to find at the very beginning of an article supposedly dealing specifically with the Gilyak such a confusion of them with their neighboring tribes who are completely different linguistically and to some extent in their ways of life!

55 / 164 / 164 / 36 / 121

count of the native population, a rather accurate yardstick for an approximate estimate of their strength might be found in the number of their winter dwellings, if this could be learned with certainty. One may easily convince himself of the correctness of this assertion with a more exact knowledge of how the dwellings are made among the Amur peoples. Let us now proceed to a consideration of this situation among the individual Amur peoples.

Gen / 36 / 121

fraction of their needs with regard to food, clothing, etc. almost exclusively by fishing and seal-catching, understandably settle along the higher bodies of water with the most fish in their territory and as close as possible to the water. Hence, all the Gilyak villages lie directly on the Amur River and the Liman, along the seacoast or along the Tymy River, the main artery of the northern half of Sakhalin; one would seek them in vain in the mountains or /320/ at any distance from the waters named. A more or less favorable locality is always chosen as a place to live — along the seacoasts, a small bay or inlet protected by a rock ledge against the prevailing gales; along the river, a dry bank investing above the high-water level, but with sufficiently deep water for landing the boats, with high woods or dense brush for protection against the wintry snowstorms, etc. Wherever the locality is favorable in

Sea of Japan, likewise occurs throughout the habitation area of the Gilyak and goes up the Amur River just as far as the seal (3). I learned this much about it, that though, like the latter, it, too, is used by the Gilyak as food for people and dogs (4), nevertheless

3. See Vol. I, p. 191, of the present work.

4. According to Steller (Beschr. von dem Lande Kamtschatka, p. 106), the fat of the beluga whale is used for lighting the tents and the meat, too, has quite a good taste.

it comes after the seal, because hunting it, which will be discussed later, is much more difficult and dangerous and can be done for only a shorter period in the year, only as long as the river is open, and furthermore because it is not nearly as useful as the seal, which, besides food, also yields valuable clothing materials. Nevertheless, the numerous white-whale hunts, which one sees hanging on trees and branches at many places along the banks of the Amur River indicate that /432/ the white whale is not infrequently hunted by the Gilyak and, in conformity with its significance, is treated in traditional, superstitious ways.

The Gilyak behave quite differently toward another cetacean, /433/ the sea-lion (Eumetopias jubatus Schreb.), which in our territory and as close as possible to the water. Hence, all the Gilyak villages lie directly on the Amur River and the Liman, along the seacoast or along the Tymy River, the main artery of the northern half of Sakhalin; one would seek them in vain in the mountains or /320/ at any distance from the waters named. A more or less favorable locality is always chosen as a place to live — along the seacoasts, a small bay or inlet protected by a rock ledge against the prevailing gales; along the river, a dry bank investing above the high-water level, but with sufficiently deep water for landing the boats, with high woods or dense brush for protection against the wintry snowstorms, etc. Wherever the locality is favorable in

/533 cont./

Wound in this manner, the kilio, like a shuttle, moves from one side to the other and back again, providing the material for the net and at the same time, tightening its meshes. For in no way make the latter and at the same time give them a certain uniform size, the kiwu is used, a rectangular little board, straight and horizontal at the top and bottom and indented at the sides, with two, approximately triangular cutouts, which, however, seem to be three only for stringing these boards on a cord, like a bunch of keys, and thus making it easier to store them.

The three meshes of a net are to be, the larger must be the instruments used in making it, the kilio and the kiwu. The net used for salmon (pach-hekhe) and for seal-hunting, also for seals — Gilyak pach-kil — has the largest meshes and, therefore, it can be made out of the thickest cord. Therefore to make it the largest instruments are used: the nutmu-needle, Fig. 4, called pach-kil-hilte by the Gilyak (also tollen-hilte and kewaqhilte), and the corresponding mesh-board, pach-kil-kiwu, Fig. 6 on the plate cited. Then, according to size, the equipment used for the knotting of the sturgeon net, Gilyak tukhi-kil, follows: tukhi-kil-hilte (also jaghan-kil-hilte), Fig. 3, and tukhi-kil-kiwu, Fig. 5 of the plate named. The next smaller, third netting-needle, Fig. 2, called anga-kil-hilte or also nohnal-hilte, is used for making the nets with which, in Gilyak, the pilengat (Cyprinus carpio), mimh (Hypophthalmichthys dybowskii), hich, etc. are caught. A fourth, even smaller netting-needle, Fig. 1, called pach-kil-hilte, is used for the seal-net, pach-kil-kiwu, that is, as the needle which serves for making the bag net (mytch-kil) used in the above-mentioned salmon weirs. They added, however, that nets knotted with this needle were also used for catching the tangi, S. grotesus. /534/ From this one may conclude that the bag nets of the salmon weirs used chiefly, or indeed, as far as I could see, exclusively, for catching S. lagocephalus are relatively fine-meshed, for even fish much smaller than S. lagocephalus, as S. grotesus in particular, do not get into these finer nets. And that is probably the result of learning by experience that with larger meshes in a bag net the fish entering it in

/543 cont./

Just as in the case of fishing, so also in these two branches of work the Gilyak stand fare among all the peoples of the Amur region. One can see with enough from the above descriptions how great and manifold the direct use of the seal is among them for food and clothing, for feeding their dogs, in preparing means of locomotion, and for other needs of daily life. Next to fishing, hunting seals is therefore their chief occupation, which, thanks to the geographic location of their habitation area, they can pursue everywhere: along the coast of the Sea of Okhotsk, on the mainland as well as on the island of Sakhalin, along the Amur-Liman, and on the Amur River, in which, as we already pointed out, the seals migrate as far as the Olcha territory. In fact, among the coastal Gilyak, they hunt the seal not only on land and in the sea, but also often even comes before fishing. It can be seen merely from the clothing of these Gilyak, consisting to a great extent, indeed, of the skins of seals, that hunting seals plays a far more important role than among the Amur Gilyak. It should also be noted in this connection that on the Amur-Liman there are two places that bear the name of "Tangi-wo," or "Tangi" for short, and "Tangi," that is, seal village, perhaps because they are especially favorably located for seal-hunting or perhaps because their inhabitants prefer to hunt seals and traditional skill and success. I cannot say anything further about one of these places, Tangi, located on the west coast of Sakhalin, which, according to Glehn (fig. 1, merely the

1. See p. 467 above.

common village of the Gilyak of Tymy, /544/ The other one, however, Tangi, located on a small island in the entrance to the Amur-Liman from the Sea of Okhotsk, which I have visited myself, seems fully to justify its name and its correspondence with it. It is one of the largest Gilyak villages on the Amur-Liman, and its inhabitants carry on a lively trade with the Amur-Gilyak, using in particular his products of fur seal-hunting, such as skins, such as sealskin and fur and seal oil as means for bartering with them.

/544 cont./

Along with them, Tschonsi plays the same role in the southern part of the Amur-Liman that Tangi does in the north. In particular the small group of the Hagimif Islands is one of the localities more frequently visited for hunting seals by all the mainland Gilyak living adjacent to it. In order to hunt seals, however, the enterprising Tschonsi Gilyak also go south of the Amur-Liman into the Manzia-Kuo Strait and to the northern end of the Sea of Japan, as well as to the opposite coast of Sakhalin, where I saw them staying, for example, in Pogholti, for this purpose. Nearly less than of the inhabitants of the Amur-Liman, seal-hunting is also practiced immediately at the mouth of the Amur River, at Tschchabach, Igale-wo, and Pronge, where in particular the small island of Ko-ni is especially favorable spot for it.

Of the seals found in the Gilyak, all the species of seals of the Amur-Liman also enter the Amur River, with the sole exception of the "ahch," Phoca equestris Pall., but the Gilyak do not actually go only a short distance from the mouth, whereas the younger ones go up farther. In any case, Ph. nummularis Schleg., which in the adult state is called pghli-lungr by the Gilyak, gilachna by the Olcha, goes farthest upstream. It is therefore the most important species of seal for the Amur Gilyak. One sees its more or less densely spotted fur everywhere among them and used in all kinds of ways, for clothing, for bags and decorations in detail above, ski, bags, small pouches, etc. Scarcely less important for them, however, is the hightsch, the Ph. barbata Nilss., which is less common in the river and whose thicker skin, with the hair removed, is used for making the foot part and the soles on their boots, the dog harness, and the straps needed everywhere. The seals are said to be about 60 versts upstream in the two largest rivers of Sakhalin, the Tymy and Poro-Tymy (1), but as yet nothing is known about

1. Schrenk, Gilyaks' von Sakhal. Sketch of Sakhalin Island, St. Petersburg, 1892, p. 48.

the habits of the individual species.

/544 cont./

Along the seacoast and in the Amur-Liman seal-hunting takes place during every season of the year. In winter and in spring as long as there is an ice-cover, the Gilyak lie in wait for the seals at the places where they come to the surface of the ice to breathe, in order to kill them with the ordinary harpoon, the tungu (2) (Pl. XIII /p-1025/, Fig. 2), also used for spearing

2. This designation primarily refers to the iron point illustrated, but it is also used for the entire harpoon equipped with a pole for hurling it.

sturgeon and hausen, or, when they have crawled out on the ice itself, to cut them off from the water /545/ and simply club them. The latter can be done more often and to a greater extent in the spring, because then the seals are said to enjoy coming out on the surface of the ice to sun themselves. Both the Tschonsi Gilyak whom I met in Pogholti and the inhabitants of Tagi on the mainland coast of the Sea of Okhotsk told me that the month of April, called Ang, was the month in which more productive seal-hunting begins along the seacoast and in the Liman. In the Amur, on the other hand, seal-hunting is practiced only when the river has no ice, and, to be sure, especially in August, the pghli-lungr-time, because then the seals go into the river in greater numbers in order to feed on the mangs of kera salmon (S. lagocephalus) going up it. There is a similar situation at the mouth of the Tymy on Sakhalin, where not only the Gilyak and Orok living there, but also the Gilyak coming from the upper course of the Tymy to fish, engage in seal-hunting, the dog harness, and the straps needed everywhere. The seals are said to be about 60 versts upstream in the two largest rivers of Sakhalin, the Tymy and Poro-Tymy (1), but as yet nothing is known about

1. Schrenk, Gilyaks' von Sakhal. Sketch of Sakhalin Island, St. Petersburg, 1892, p. 48.

the habits of the individual species.

CONTINUED ON NEXT FICHE

/546/

Needless to say, there are a number of superstitions connected with seal-hunting among the Gilyak. Thus, the lych, like the above-mentioned odn-tschongr (1), always bears on its

1. See p. 808 above.

Use of the lych for seal-hunting among the Gilyak.

upper side, near the point, a crudely carved face, whose presence is regarded as essential for the successful use of the weapon. Furthermore, superstition requires that, first of all, and before any use is made of a slain seal, its eyes be gouged out with a knife, whereupon the eye fluid, caught in the hollow of the hand, is thrown into the water, and, furthermore, the snout, or, to achieve both things at the same time, the whole head, is chopped off and put into the water. The guiding thought in this is to leave the slain animal in ignorance about its murderer and thus to prevent any possible revenge by its manes causing ill-luck in seal-hunting in the future. The same conception is evidently the basis for the above-mentioned similar procedure of the Manegir with their slain sturgeon and hausen. The Gilyak, however, prize these fish too much to sacrifice the heads each time and may therefore come to terms with this superstition in another and less costly way. Perhaps they content themselves with gouging out the eyes, though I did not see this myself. Their above-described procedure with the

/546 cont./

225 825 seals was very inconvenient for me inasmuch as, because of it, I was unable to obtain perfectly whole and intact skins of the seals of the Amur region.

A 225 Just as among the Gilyak, seal-hunting also plays an important role among the Ainu living on both coasts of Sakhalin and is practiced by them in quite similar ways. Thus, according to Mizul's information (2), the above-described, long-handled

2. Op. cit., p. 130.

harpoon, the Gilyak lych, is also used among them, and even Mamia Rinsô mentions /547/ that they put in the water small wooden floats onto which the seals crawl and are then killed with javelins (1).

1. Mamia Rinsô, "To-tats kiko" (Siebold, Nippon, VII, p. 185).

G1 225 Among the Tungusic peoples of the Amur region it is possible for only a few, because of the location of their habitation area, to turn to seal-hunting among other sources of subsistence, or to practice it at all. The former is the case in particular among the Orochi of the coast, who do not practice [439] seal-hunting merely to satisfy their own needs for seal furs, skins, and oil, but also get from it important articles to barter in trade with their western neighbors, the Goldi. Nevertheless, even among the Orochi seal-hunting falls far behind the preferred [361] hunting of forest animals. The Olcha, too, though to a lesser extent, have an opportunity to devote themselves to seal-hunting within their own borders, thanks, on the one hand, to their dwelling sites on de Castries Bay and, on the other hand, to the ascent of the seals in the Amur River far into their territory. [191] [197] There can be no doubt but that they practice it in exactly the same manner as the Gilyak, who here again are their teachers. G1 225 221 361 Finally, the Negda, though living at a distance from the sea, annually travel in some number from the Amguni, and especially from their northeastern dwelling sites on Lake Orell and

G1 225 221 361 /547 cont./

Lake Tschlja, across the mountains to the Sea of Okhotsk, in order to occupy themselves there for a time with seal-hunting (2).

2. According to Boschnjak and Schmidt, see pp. 26 and 63 above.

G1 225 191 For the other Tungusic peoples of the Amur region nothing can be said about seal-hunting.

G 225 136 Catching the white whale comes into consideration for the Amur region within even narrower limits than seal-hunting. The distribution of the white whale (Delphinapterus leucas Pall., Gilyak pomi-tscho, Olcha malta) in the Amur region approximately coincides with the habitation area of the Gilyak; only along the east coast of Sakhalin and in the Amur River does it go somewhat beyond it to the south, whereas on the west coast G 136 of the island it falls back to the north behind it. An inhabitant of the arctic seas, among which the Sea of Okhotsk also belongs in view of its general character, the white whale goes down along the east coast of Sakhalin to its southern end and occurs in particular in great numbers in the Bay of Patience and at the mouth of the Poronai (3). On the other hand it remains far from

G [113]

3. Poliakov", Putesh. na ostr. Sakhalin" /Journey to Sakhalin Island/ (supplement to Vol. XIX of Izv. Imp. Russk. Geogr. Obshch., pp. 107, 111). The same, Otchet" ob" izslied. na ostr. Sakhalinie, v" Iuzhno-Ussurisk. krae i v" Iaponii /Summary of the Research on Sakhalin Island, in the Southern Ussuri Region, and in Japan/ (supplement to Vol. XLVIII of Zap. Imp. Akad. Nauk", No. 6, pp. 5-7). At the latter place, Poljakof reports that the white whale appears in large schools in front of the mouth of the Poro-nai even before the river has shed its cover

/548 cont./

225 191 In view of this distribution of the white whale in the Amur region, the Gilyak are practically the only one of its peoples that occupies itself with catching it. To be sure, the Ainu along the east coast of Sakhalin would have the opportunity for it, but there is no mention of such an occupation by any of the travelers who became acquainted with them. Little inclined toward bolder hunting ventures, they presumably are satisfied, so far as the white whale is concerned, to capture the individuals stranded on the shore, just as they do in the case of the larger 225 true whales. With regard to the latter the Gilyak do no differently, but they pursue the white whale with weapons, and, to be sure, for this they use a harpoon intended specifically for this purpose, their so-called parr (Pl. XLII /see p.1022/, Figs. 3 and 4). This consists of a thick and short bone tube into which a dagger-shaped, double-edged and pointed iron lamella provided with a barb on either side in the back is inserted. This piece is mounted on a wooden shaft (Gilyak werl) for hurling it and, in addition, is equipped with a long, stout strap by which the wounded animal is pulled in, either to the boat or directly on land, depending on where the hunter may be, in order finally to be beaten to death. Here, too, as in seal-hunting, super- [825] stition, and presumably as the result of a similar idea, demands that, first of all, the head of the slain animal be cut off; it is not thrown into the water, however, but hung on a tree standing on the bank, after all the muscle meat and the like have first been removed from it. At various places along the right bank of the Amur I saw such trees with many skulls of white whales hanging in them, which at the same time showed the success [191] of the Gilyak in hunting /549/ the white whale. I cannot say whether the Olcha, in whose territory the white whale is much rarer, likewise hunt them, but, if this should be the case, only the Gilyak could have been their teachers. Thus, the hunting of the white whale is a characteristic feature in the way of life of the Gilyak in contrast to the other Amur peoples and brings them closer, in view of the arctic nature of this animal, to the ooo polar peoples. And, strangely enough, the custom of sticking

/549 cont./ And, strangely enough, the custom of sticking

225 191 825 the skulls of slain white-whales on a tree or, lacking one of them on vertical piles driven into the ground prevails among some of them, as Pallas (1), for instance, reports for the Samoyed and

Hunting the Animals of the Forest. Hunting Equipment. Iron Hunting-weapons and Other Iron Weapons and their Manufacture. Protective Armor and Arms of Honor.

224 191 As we now turn to the second main source of subsistence of the Amur peoples, hunting the animals of the forest, I must first point out, recapitulating briefly and summarily the remarks frequently made above, that it, in direct contrast to fishing, increases the more in immediate importance and significance the farther upstream one goes from the mouth of the Amur and into its tributaries, and, finally, in the upper Amur region, just like fishing in the lower one, becomes the primary and most essential condition for the existence of its peoples.

224 The Gilyak, with whom we again begin our observations, are accordingly, as the most sedentary, the most ichthyophagous, and in general the most pronounced fishing people of the Amur region, the least devoted of all its peoples [439] to hunting the animals of the forest. Whereas for them catching fish, seals, and white whales serves for the immediate satisfaction of their needs in clothing and in food for themselves and their dogs, hunting by and large serves these ends

Economy and Everyday Life

226 [433] The Nivkhi's basic occupations were fishing and sea hunting. The most important fishing activities involved runs of the salmon species—Siberian salmon and humpback salmon. These were caught in "xyyezdki," nets and seines. A "xayezdok" was an L-shaped barrier of thick stakes and twigs, set at right angles to the shore with the transverse bar along the current. On this bar, the Nivkhi set up a drawnet, near which they kept watch in a boat. The fish, going in a solid mass along the shore, hit the wall of the trap and turned and swam into the net. When they saw the movement of the signal ropes, the fisherment lifted the net and emptied it into the boat. By this [433] method, several days' fishing produced 4000–5000 fish, which quite filled the [446] needs of the fishermen. The "zayezdok" was usually built jointly by several families.

The seines, fairly small in size, were formerly made of nettle fiber. 225 They were pulled by two or three fishermen, one of whom walked along the 288 shore, while the other two were in a boat. Later, the Nivkhi learned from [199] the Russians to sew together large seines. Beluga and sturgeon were caught with harpoons and hook-tackle—the hooks at the end of short cords, attached to a long rope stretched in the water.

Very important to the Nivkhi was fishing for (single-net fish), carried on throughout the year. These were caught with fishing rods, fixed nets (winter and summer), floating nets (summer) and seines (during the spring and autumn seasons).

● 225 The Nivkhi living in Sakhalin and in the estuary did a good deal of sea hunting. They hunted sea lions and seal. The former were caught in large fixed nets. Seal were hunted in early spring, at the first sign of breaking ice. They were killed with harpoons and clubs as they climbed up to warm themselves on the ice floes. Seal-hunting continued into the summer as well, in open waters, they were hunted with a floating harpoon (lykh). This consisted

286 516

Sewing together a seine.

● 225 of a small board equipped with a harpoon-tip, attached to a stick from 10 to 30 meters long. The lykh was lowered into the water; the hunter hid himself nearby in his boat or on the shore. When he caught sight of his quarry, the hunter carefully directed the lykh at it and quickly drove it into the animal.

224 As compared with its role among other Amur peoples, hunting played a 82 smaller part among the Nivkhi. The hunting season began in autumn, after [184] the end of the fish-runs. At this time bears come down to rivers to treat themselves to the delicacy of fish, and the Nivkhi awaited them with bows or guns. Sometimes they set crossbows for them. In winter, they hunted bears with spears. The bear season was followed by the sable-hunting season. Sable and certain other fur animals (otter, lynx and marten) played an important part in the Nivkhi economy. The Amur Nivkhi went out every autumn in their large, heavy boats made of boards, to hunt sable in Sakhalin, returning from there only in early spring. This was due to the abundance of sable on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees which served the sables as crossings.

224 The main weapon in hunting was the gun, which in the early 20th century [177] replaced the compound Nivkhi bow with its horn covering. However, the bow [198] was preserved in the bear festival and in children's games. Squirrel and foxes were hunted with dogs. Crossbows were set for both small and large animals.

241 Agriculture already began to appear among the Nivkhi in the middle of the 19th century, when they first learned to plant potatoes. Individual Nivkhi had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths in some of the villages, who reforged Japanese, Chinese, and later Russian metal articles for their own needs; they made knives, straight and curved, adapted to wood-carving; arrowheads, tips for harpoons, spears, and so forth. The smiths used double bellows, an anvil and hammer. Pieces of massive chains preserved from the past speak of the high skill of the old smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. The 887 old men wove ropes from bast and nettle, built sleds and made dog-harness.

Men's work included fishing, hunting, making the tools required in these 462 occupations, including tackle and means of transportation, the preparation and transportation of firewood, and blacksmithery. The women processed the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and ornamented clothing, made birchbark utensils, gathered plant products, did the housework and took care of the dogs.

By the time the Far East was Sovietized, commodity relations were quite 199 strongly developed among the continental Nivkhi. The old forms of collective 433 production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked the necessary gear were compelled to hire out as lumberjacks and other hired laborers, transport goods, etc. The smallness of the income from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Amur Nivkhi. The catch of seal, white whale and sea lion went mainly to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. Workers were also hired, on a half-share basis. Some Nivkhi worked during the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in 22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola 262 took the place of bread. Meat was eaten rarely. Food was prepared with

501

411 225

493

492

226 501

Means of transportation and hunting:
1—river boat made of boards; 2—old dogsled; 3—club for killing seal; 4—brake poles used in steering sled; 5—old dog-harness; 6—fishing with seines.

Food was prepared with 262 fish-oil or seal-fat. A favorite delicacy was mos', prepared with fishskins, 252 seal-fat, berries, rice, and sometimes crumbled yukola. Another favorite dish was talkk—a salad of raw fish, garnished with wild garlic. The Nivkhi 129 became acquainted with rice, millet and tea from the time when they traded 262

● 225 [108] Hunting of the Beluga by the Gilyaks of the Village Puir
476
433 As L. Schrenk (1) rightly points out, hunting of the beluga

1. L. Schrenk, Ob Inorodtsakh Amurskovo Kraia, v. II, [Concerning the Natives of the Amur Region)

(white dolphin) does not play an important part in the economy of the Gilyaks which is based on fishing and, to a lesser extent, on seal hunting. Nevertheless, hunting of the beluga, which is now of an accidental rather than systematic nature, contains some features which merit description. These features are:

1) The primitive Communist character of the distribution of the catch. The hunters as well as the other village folk share the beluga. Not so in seal hunting, where the quarry is shared by the hunters only. (2)

2. E. A. Kreĭnovĭch, Morskoĭ Promysel Gilĭakov Derevnĭ Kul', [Fishing Industry of the Gilyaks of the village Kul), Sovetskaia Etnografiia, 1934, no. 5.

2) The religious ceremony held by the Gilyaks on the occasion of a successful hunt.

124 We did our best to authenticate the facts we are about to
225 report by writing them down in the Gilyak language under the
115 dictation of the informant. Besides writing down texts, we collected maps, plans of summer and winter settlements, plans indicating the location of landed property, drawings, etc.

In the present article we publish drawings by the Gilyak Mytka which depict all the important phases of a hunt of the beluga and two accounts of the hunt; one told by the author of these drawings, the other--by the Gilyak Khor.

115 Mytka lives in the village Puir. He is about 35 years old. He is one of the most outstanding and talented Gilyaks I have met. He has a tremendous thirst for knowledge. When I went to see him for the first time, he was lying on his plank-bed and reading Goroda i Gody [Towns and Years] by K. Fedin, a book that he took out from the library at his place of work. Mytka is very much interested in problems of technology. The model of the airplane that I brought to the anthropological and ethnographical museum was made by him for his son. Mytka likes to draw, but, unfortunately

[225 184 192] prong (Pl. XLII /p.1022/, Fig. 1), on which the ordinary harpoon-point (tugngy), equipped with a long strap, is set. At its rear end, on the other hand, where a deep groove is carved, the board is joined to a pole (Gilyak tla) 10-13 fathoms long and made up of several pieces (1). Thanks to such a length of the handle, an

1. On the island of Uĭsut, from which much seal-hunting is carried on, I saw such a pole lying flat, which was 40 paces long.

attack on the shy and cautious animals can be made with this weapon from a considerable distance. For this purpose, the whole weapon is lowered to the water and pushed along, slowly and carefully with its tip toward the seal resting on a stone or otherwise in view, by the hunter lying hidden as much as possible in the boat or on the bank, until it is close enough so that a sudden forceful thrust suffices to drive it into the animal's body, which then, by means of the long strap attached to the harpoon, is pulled toward the boat or onto the shore and clubbed. At places frequently visited by seals the Amur Gilyak also customarily fasten one or more floating beams to a post driven into the river bed at an appropriate distance from the shore in order to lure the seals out of the water and then kill them from hiding with the lych held in readiness (2).

[128 126]

2. The drawings for the woodcut on the following page and for those presented on pp. 751, 763, 780, 791, and 825 were made by the curator of our Anthropological-Ethnographic Museum, Mr. Mr. Russow, in part from the original sketches made on the spot by my travel companion, Mr. Poliwanof, or contained in my diary of the journey, and in part from the pertinent objects in our museum. I therefore take this opportunity to express my sincere gratitude to him.

115 his drawings have not been preserved. He is unable to go to Leningrad to study for he cannot leave his family and his old father.

225 Mytka made the sketches of the beluga hunt at my request.
124 Three of these are rough sketches which [109] I was fortunate enough to find at Mytka's. They are considerably better than the final sketches in which Mytka partly imitates the style of sketches he had seen in Russian books. (1)

1. On publication we were forced for technical reasons to substitute slanting lines for Mytka's shading.

Description of the sketches:

Sketch 1. The Gilyaks, having sighted a beluga, depart on the hunt.

Sketch 2. The Gilyaks have driven the beluga to a shallow. The Gilyak at the prow is about to throw the harpoon.

Sketch 3. A detail relating to the second sketch.

Sketch 4. Flight of the harpoon aimed at the beluga; the harpoon is supposed to hit the beluga at the moment when it emerges from the water.

Sketch 5. The beluga drags the float behind it. When the harpoon hits the beluga, the tip of the harpoon which is tied to a long strap, remains in the body of the beluga. The movements of the beluga are hindered by the float attached to the other end of the strap.

Sketch 6. The Gilyaks have caught the float and are getting ready to thrust the second harpoon at the beluga.

Sketch 7. The Gilyaks haul the beluga to the side of the boat and are about to kill it with a blow of a lance in the area of the respiratory orifice.

Sketch 8. The Gilyaks take the beluga which is fastened to the side of the boat to the village. An old woman sits on the shore and beats on a board using two sticks. This peculiar music stands for a welcome for the killed beluga.

Sketch 9. The hunters have brought the beluga to the village. The inhabitants of the village have come out to meet them and are about to haul the beluga ashore. The old woman continues to play on the board.

Sketch 10. The Gilyaks haul the beluga ashore.

Sketch 11. A Gilyak cuts up the beluga.

Sketch 12. The Gilyaks depart, each with his share of the beluga.

Sketch 13 & 14. The head of the beluga on a birch (From photographs).

225 The sketches do not include all the details of the beluga hunt. Mytka's account, dictated to me on June 29, 1931, in the village Puir, supplements the sketches. We give here a faithful translation of his account.

"During the ebb tide the belugas head inshore. After the tide receded, he gathered his friends (and said): 'Let us go after it (in the sea).' We went in pursuit. When the beluga headed out to the fairway we chased it back to a shallow. When it could not go any further the man at the prow who held a harpoon got ready and waited for it (the beluga) to appear (to come up). When it broke the surface, he lanced it. Then he threw the float. We let the beluga drag the float. When it got tired we approached it and lanced it a second time. Then we came close to it and hauled it to the side of the boat. We hooked the beluga and hauled it (out of the water). Then he hit it with a lance (that is, pierced it) (2)

2. The Gilyaks kill the beluga by lancing it in the area of the respiratory orifice.

When we killed it we tied a rope to it and hauled it ashore.
225 While we were hauling it, the old woman came down to the
533 shore and began striking the board with a stick. (3) When we
824
182

3. Only in Puir do they welcome the caught beluga by such music. I have not observed this custom in any other village.

brought it (to the shore), we came up to the shore prow first. (4) Having untied the beluga, we hauled it to the shore

4. Usually the Gilyaks come up to the shore stern first, but when they bring a beluga, they come prow first.

[112] and pulled it out. We put the board on which the woman was beating under the head of the dolphin. The old men sent the youths to gather dozgon grass and piskər plant. (1) Then we

1. The Amur Gilyaks "feed" the plant piskər to all captured sea-animals such as sea-lions, seals, and belugas. They put this plant in the mouth of the killed animal (cf. our article "Morskoĭ Promysel

We went to the "Cape Facing the Sea." (Tol-nun-iv-Kn=k)(2)

2. It is of interest to note that the Gilyaks sometimes name places according to their economic usage. This cape is named Tol-nun-iv-kn=k because from this place the Gilyaks watch the sea waiting for the sea animals which swim past the cape.

When we arrived at the "Cape Facing the Sea" no animal came up to the shore. We went back. We descended to our place. We had tea. We finished drinking our tea and loaded our things. We went to Otvax. From there we headed out to the open sea. When we were going down by boat to (the place) across Vaspn, the belugas came in behind us. The mother had a young one. (3) So they swam. When they passed by

3. He means the female beluga with a young.

us, I got up and wanted to shoot. As I was about to shoot, my friend (said): "It is too far." He did not want me to shoot. Then I said: "All right, I will fire, we will see." When I got up, the young one broke the surface. I let it emerge and fired. Then I fired (that is, I hit it). The young one plunged beneath the surface. I thought for a long time that it was lost. "Ah! There it swam away, it came up." Then we rowed and followed it. We caught up with it. We hurled the harpoon. Then we got up and lanced it a second time. Then we pulled the strap and hauled the beluga to the side of the boat, we fastened it, pierced it with a lance, and killed it. We took it in tow. Our children were happy. Then we came ashore and hauled the beluga ashore. I went up the hill to gather pisk=r. I came back, shoved the grass in the respiratory opening of the beluga, and fed it. Then we cut off the strap, cut up the meat, dragged it away, ate some of it, and covered up the rest. We went to sleep. We slept. When we got up in the morning, the animal did not come up to the shore. We ate and loaded our things. Then we went by boat to Otvax. When we came to the upper side of Otvax (Otvax k'eqr-ksef hertox), the seals crawled out of the water at the tip of the cape. We went to the tip of the cape and untied the harpoons. At that time the animals swam up to the shore. We let them come up, we aimed and missed. Then the animals fled. Then we came up (the mountain) and went down to our boat. Afterwards, we went by boat and

225 landed at P'arqaiv. We slept. Afterwards, when we got up, the seals were on a stone sticking out of the water, on the other side of P'arquaiv. (4)Then the two of us went by

4. Near the shore of P'arquaiv there are stones on which the seals rest. These stones are called norpax.

boat and fired our (Berdan) rifles. We let them thrash in agony. We went into the water, hit them with a harpoon and dragged them ashore. Striking the heads of the seals with a stick, we killed them. We dragged them to our place, skinned them, cooked and ate them. Then we slept. Then we got up, we ate, and when we turned back to the Big Cape (Pila-kp), the belugas swam up to the shore. We let them swim up to the shore and, taking the harpoons, we went up to the cape "Facing the Sea." We went down to the end of the stone Norpax. There they were, one on each stone. We untied the harpoons. Then we let the belugas approach us. We aimed, but missed. I was picking out a strap when, suddenly, a beluga came near us. My friend aimed, hit and threw a float. Then the beluga swam out to sea. We went up (the hill) to our boat. Following the beluga, we headed out to sea. [115] We went by boat and caught the float. Pulling out the strap we dragged the beluga and flung (the harpoon) a second time. Our beluga towed us between and past steamboats. I took the (Berdan) rifle, aimed at the respiratory opening and killed the beluga. We quickly attached it to the stern. We went down. We rowed and came to (stopped at) our place. Here we could not drag it out (we lacked the strength). We waited for the ebb and got ashore. Then we gathered some pisk=r, came down, shoved it in the respiratory opening and fed the beluga. Then we cut it up. When we finished, we quickly put the straps in the boat. We also put our things in the boat. Then we took off and went to the end of the cape having a sledge [Mys imeyuschi nartu] (T'u ift kr x). There was a storm there, the water came overboard, and we turned back to our places. We arrived. We took out all our things and dried them. We put part of the straps in the boat. We left our two children; the two of us went up in our boat to Hivzu. When we arrived, there were people there. We took out our things and, towing our own boat, we went down in another one. When we came down, we took the meat, our things and our friends. Then we went back. We landed at Hivzu. There we slept. Next

225 morning we returned to our village. We took everything out
and put it on the dock. Then we slept. Next day we got up
225 in the morning and called the people. We took off the head,
252 cut it up, fed the head to the people raw, (1) and cooked the
782

1. The Gilyaks call all raw food talq. The Gilyaks eat certain kinds of fish such as Siberian salmon and certain parts of seals and belugas raw.

parts designed for cooking as well as the jaws. After we cooked it, we took it out. Some ate the meat; others took off the meat from the jaws and ate it. Then we went to gather Hapzas. Then we brought it, cooked it, ground it and made muvi. Then we got some rowan shavings and shoved them (in the nose of the beluga). Then we took the head; we took it to throw it out. Here we cut off a young tree. We cut off a forked aldern tree. We spread muvi over the shavings stuck in the nose of the beluga; we spread muvi on the holy bones. We stuck the tree through the ear-ring holes of the beluga, lifted it and hung it up here. Then we lifted the holy bones (jugular vertebrae) and tied them to the tree. We put down the jaws and pressed them with a stick."

182

225 fed the head of the dolphin. Then we came down (to the
476 shore) and the old men cut up the dolphin. [113] When they cut it up, we called all the people (ordered them to come), spoke to them, and made each one of them take (let them take) his share. We gave less to the "sitting" men (that is, those who did not participate in the hunt). (1) We gave more

1. The Gilyak Shurman, from the village Lyangr, told me that they divide the beluga into equal parts. Only when they kill two--three belugas do they give somewhat greater shares to the hunters.

to those who went to sea. After they had taken away their
225 shares, we cut up the head (literally, broke it up). After we
782 cut up the head, in the evening, we sent the young men to cut
778 some birch wood; we sent them to cut some rowan-trees. Then we got some rowan shavings and put them in the respiratory opening. We cooked some cereal and put it in the sea-dish [Russian, Morskoye blyudo] We prepared some berries and put it in the sea-dish. Then we sent the children to bury the head. When they were ready to go, an old man went with them. They put the head down on the place where offerings to the sea are made. (2) They took the eyes

2. Near each village, there is a separate place from which offerings are brought to the sea.

out of the head and, having dug a hole in the ground, they put the eyes in the center (of the hole). (3) After they buried

5. That is, they spread rice and berries on the head of the beluga.

and went down again. Then we got a young man to take a white stone and put it in the sea-dish. Then we returned and went home. When we came home we put the stone in the fire place." (6)

6. The stone which they put in the fire place is a payment to the master of fire for the successful outcome of the hunt (cf. our article "Morskoi Promysel Giliakov Derevni Kul', [Sea fishing among the Gilyaks of the village Kul]).

182 The methods of beluga hunting as described by the Gilyak
225 Mytka in his account and pictured in his sketches are characteristic of the village Puir and partly of the village Lyangr. The hunt proceeds differently in other places. [114]

The account of the Gilyak Khor (from the village Chomi(? telling of a beluga hunt undertaken by him and his friend in 1930 supplies us with enough information to enable us to distinguish between the methods used by the Khor and those described above.(Khor's account was written down by me in the fisheries of Dzhaori in 1931) [For Mytka's account, see category 225, pp. 111-113; for Kor's account, pp. 114-116--Analyst.]

225 We present a translation of the account, striving to com-
103 municate the spirit of the briginal.

"During a run of herring, the four of us, two adults and two children, went in a boat to the Big Cape (Pila-kr-) to hunt for belugas. When we approached the whirlpool (Polx), we came ashore and took out our things. The animal (that is, a seal, a beluga) was swimming up (1) to the shore. The

1. Literally: "rose up to the shore."

children heated tea, and we took the harpoons and went up.

Рис. 11

Рис. 12

the boat; just as in the Siberian salmon fishing season they unite in a collective which centers around the seine or the zayezdka.

When the hunting season opens, the owner of such a boat starts collecting his companions. If the owner happens to have a son-in-law (ore) in the village, he asks him to join him in the hunt. In general, however, the owner of the boat selects hunters regardless of clan membership.

Thus, for instance, the boat owner, Gilyak Norp of the clan Tf nu , was accompanied by hunters from the following clans: Otaq from clan Hutevi , Potaq from clan Neo afi , t from clan a ramla , Onkan from clan Lez ran and Tesk from clan Tf nu .

A similar situation existed in collectives of hunters who went hunting in 1931.

The hunter collective centering around a boat is sometimes named after the owner of the boat. For instance, 1 tun-munim ('one boat of Gylkhtyun') Xitkun-mu-nim (one boat of Xitkun).

The owner of the boat is the organizer and leader of the collective of hunters grouped around him. Those who travel with him are his subordinates. The leader of such a collective of hunters is called pila ('bolshak') (2) (from pila-d--'to

2. This is the name of the oldest in the clan and generally of any foreman in industry.

be big, - suffix used in forming verbal nouns.)

The duties of pila are many. A pila is supposed:

1. To look over the boat, the rowlocks and, if need be, to effect repairs.

2. To prepare and to take along a strap, harpoon tips (tamra), harpoons shafts (ve l), his gun and the guns of his fellow-hunters, a kettle and a tea-pot (the hunters are obliged to take only cups with them), a tent, a sail, a tripod for the tea-pot and the kettle, and a compass. (3) Most of these items

3. Earlier they used to take to sea afq-va ("friend-stone" or "friendly stone"). See the remark in the supplement to "Seal Hunting."

are the property of the pila.

3. To perform a number of religious-magical ceremonies before setting out for the hunt as well as during the hunt. In this capacity the pila exposes the boat to smoke, performs mu-zi d and t aj; ceremonies to be described in detail below.

225 the division of the quarry. Why this ceremony should have
422 stopped at the pilaŋ appropriating the first sivuch rather
476 than asserting his full title to it on top of his share of the quarry is hard to tell. It seems to us that this can be explained by the essential preservation of the primitive Communist method of distribution of the quarry among the Gilyaks of the village Kul which do not permit a single individual to assert his title to an entire extra sivuch.

225 [89] I gave here a few examples which I have recorded
476 of the distribution of the quarry among the Gilyak hunters on their return home to the village Kul on August 2, 1931. These examples demonstrate clearly the primitive Communist character of the distribution.

The quarry of ʼəlʼtun's collective consisted of 18 sivuchs 9 pəγi, 11 qoma and 1 alχ. They sold 3 sivuchs, 5 qoma and the fat of two seals on Cape Litke at the branch of the Rybaksoyuz [A, B Fisherman's Union]. They distributed the money obtained and the remainder of the quarry into equal shares. (1)

1. Unfortunately I did not write down how they distributed the money.

ʼəl tun.....received 2 sivuchs 2 pəγi
Jotkun.....received 2 sivuchs 1 pəγi 1 qoma 1 strap (2)

281 2. The hide of a young sivuch navəŋa is cut into three pieces and that of an older one - into four. Out of each piece the Gilyaks cut one thin long strap which is immediately spread out to dry.

225	Nərp (a shot)...	received	1	sivuch	1	p i	1	qoma	3	straps

		15 sivuchs	8 qoma	12 straps 3 sivuch	
On straps....	3				
Sold.....	8		4		
Total.....	26 Sivuchs	12 qoma	1 pəγi		

[90] The fact that Norp received an extra qoma does n
prove that he received more than the other hunters. The
is not a valuable seal and it is really of no account whethe
does or does not get an extra qoma. What is important is

ne. 13

Fig. 14

121 In 1931 I was sent to the Amur Gilyaks for the purpose of studying their dialect and of collecting materials for an ABC book. I was able to devote some of my time to the study of problems in the field of ethnography, such as: the history of the Gilyak clans, land property of the clans, interclan relations, the fishing industry, etc. In the following survey I put before the reader the material gathered in the course of this work and pertaining to the fishing industry of the Gilyaks in the village of Kul.

225 At the first signs of spring, beginning with the month of
782 qar-lo (crow month') (1), the Gilyaks of Kul go seal-hunting.

1. Corresponds approximately to the end of February-beginning of March.

They get out hooks and replace the old strings on them with new ones. Then they perform a religious-magical ceremony which consists in exposing the hooks to the smoke of spruce and of a plant locally known as (t'ɘkr) bogulnik and set out on sleighs pulled by dogs to the tremendous ice fields of the sea of Okhotsk. On arrival, the Gilyak hunter lets a kuti-ŋəŋ-gan
225 (a dog seeking holes') search for seal air-holes. The Gilyak
411 lowers his hooks into each of the holes found by the dog. The hooks are fastened to a stick put across the air-hole. When the seal wants to breathe, it sticks out its head. The hooks in the air-hole hinder the seal, and when the seal wants to submerge, one or two hooks are thrust into its body. The hooks of the tackle kitə (2) which go into the implements for hunting

2. Tackle for seal-hunting in the summer. The main part of this tackle is a large number of sharp hooks.

seals in air-holes are so sharp that they pierce the body at the slightest resistance. On the following day the Gilyak returns to the same place. He looks to see if a seal caught
225 on his hooks. The Gilyak first pulls the captured seal through
11 the air-hole and then kills it by hitting it over the head with a
31 striker specially made for the killing of seals. This striker called tonr-tas (from tonr 'head', za-d 'hit', a suffix pertaining to the implement used in the action), is made of a bough of some strong tree. The bough is cut off together with a piece of stem at its base which is then rounded. At the lower end of the handle of this peculiar hammer is a carving which represents the snout of a seal.

For some time after the seal-hunt at the air-holes, when
e broken ice recedes from the shore, the Gilyaks get out in
ats and "feed the sea" out of muurs ('scoops for scooping
ater of the boat'), pieces of jelly called [79] mos, (1) porridge

1. Jelly is prepared by grinding a mixture of boiled skins of Siberian salmon, seal fat and water. As soon as the grinding is done, a lot of berries are added to the jelly and it is then left on the outside to cool.

d a dried plant aγs, called puchka by the local Russians.
metimes the feeding is followed by a seal-hunt on nearby
es.

After the first "feeding", pilgur tol-fond (major feeding of
e sea,' literally, 'major throwing into the water') is arranged
ly after this "feeding" do the hunters put out to sea on a hunt.
For the "major feeding" women prepare two kinds of jelly-
os and muvi --cook rice or millet porridge, prepare dried
rana, peas, berries, tobacco, and dried stalks of puchka
s). The Gilyaks believe that if the food for the dogs is not
oked--and they must be fed before daybreak-- the dogs will
t the sea offering and the latter will not reach its place of
stination. To prevent this from happening, the Gilyaks
ecially feed the dogs of the sea spirits (according to the
liefs of the Gilyaks, spirits are human beings like them-
lves and have their own dogs.) For this purpose they wind
chka on fish-tail bones (mamγe) which they then throw into
e sea before offering to the spirits. The Gilyaks believe that
e dogs of the spirits will eat the fish bones and, having had
eir fill, will not touch the refreshments meant for their
asters.

When all gifts are ready, a hunter carries them to the sea.
omen are not present at sea offerings. On reaching the shore
e Gilyak sticks two small twigs in one place, at the very
ge of the water; one twig is a keγla-ŋaks twig and the other
a qosk ŋaks ('rowen twig'). A small distance away from
ese he sticks another pair of small twigs at the edge of the
ter. These peculiar gates are called taγr. The offering is
own into the sea through the taγr. First to be emptied are
e uiγ-ŋir, (2) that is, troughs from which drowned men are

2. Uiγ-ŋir is made in memory of a man drowned in the sea. The first uiγ-ŋir "should be lost" quickly as the Gilyaks put it. Then they make a second one which

they keep for a long time. When some one is drowned the Gilyaks arrange a boat race, fight, and run. In this connection I wish to note that in the valleys Chayvo, on the Okhotsk shore of the Sakhalin peninsula, where I studied the cult of drowned men in great detail, no felicitations are allowed when a man is drowned.

ed. (Mos for these troughs is prepared by men). Next, mos s emptied out of the tol-ʔir ('sea troughs') for which it is prepared, as in all other cases, by women. The offering completed, the troughs are turned around so that their "eyes" are directed to the houses instead of to the sea. (3) Next,

3. The troughs are in the form of animals. As I observed in the village of Chayvo, drops of mos meant to be "eyes" are put on one end of a tol-ʔir, which apparently no longer has animal form.

pebbles, picked up from the shore are put into the troughs. At home these pebbles are thrown into the fireplace.

The Gilyaks regale their kinsmen with whatever is left over from the offering and also eat themselves. Mos from the ti - ir is eaten only by old people. Women, children, and young hunters must not taste this mos.

It is imperative that the "feeding of the sea" be completed before the departure of the hunters. Once the hunters put out to sea, "feeding of the sea" is not allowed. At present this custom is not strictly observed, and if someone happens to be late, he "feeds the sea" late in the evening when it is reasonable to assume that the hunters at sea have gone ashore; although they sometimes spend the night on floes.

After the offering the Gilyaks begin preparations for putting out to sea on a hunt.

The essential prerequisite for seal-hunting at sea is a large spacious, many-oared boat. Not every Gilyak is the owner of 80] such a boat, suitable for long voyages. In the village Kul here are no more than ten such boats. (1) In the seal-hunting

1. Unfortunately, it did not occur to me to count the number of these boats during my stay in the village Kul.

reason the hunters unite in a collective which centers around

ring the hunt one must use the tinder box or the matches
the pilaŋ to light a campfire. No hunter has the right to
ght a camp fire using his own implements for this purpose;
has to use the implements of the pilaŋ instead.
4. To tend the rudder and to observe the wind and ice-
es. Young hunters with no experience in sea-faring rely
this respect completely on the pilaŋ. One Gilyak told me:
f the pilaŋ observes the wind and the floes, the young hunters
e not worried."
5. To distribute the quarry among the hunters.
As can be seen, the pilaŋ performs the most responsible
nctions of a leader. I was told by the Gilyaks that if any-
ng goes wrong during the hunt the pilaŋ is held responsible.
In the collective of hunters there must be not only organ-
ers but also good oarsmen and a good shot.
[81] Everything in the boat is organized from the beginning
the conclusion of the hunt. Each of the hunters occupies a
signated position at the oars. Each of the positions has its
me.
The position at the first pair of oars, starting from the
rn, is called ŋ̊tivd, the second - taŋpuf, the third - alx-
, the fourth - mɔ̊yerq-ŋid ('sitting at the bow'), the fifth -
em-ŋid ('placed at the very bow'). There are boats with
and even seven pairs of oars.
Starting from the stern, the first position, ŋ̊tivd, is oc-
pied by the oldest and strongest oarsman in the boat. At the
t pair of oars is a younger hunter. The position at the
s at the bow is occupied by the youngest of the hunters in
boat.
When the ice fields are reached and the hunt begins, the
ition at the bow is occupied by the very best shot. Until
t time he rows just like the others. As long as there are
eals in sight he rows like the others, occupying the position
he bow. Since he is the oldest of the hunters the pilaŋ often
s out to be a better shot than the young hunters. In such
es he turns the rudder over to someone in the boat and sits
he bow to fire at the seals. Thus, for instance, the Gilyak
ŋ̊ Norp sat during the hunt at the bow and fired at the seals.
he same time Gilak st tended the rudder which the pilaŋ
turned over to him. The Gilyak pilaŋ Tavjun was at the
during the hunt. According to his information he had killed
imself twenty seals and missed two. We do not wish to
y that of the whole collective of hunters only one person
ots at the seals. Two, three or four hunters do the shooting

225 mu-ziv̊d on the boat supports the assumption that at one
789 time or another the Gilyaks, it seems, regarded a boat as
774 a living thing. Mu-ziv̊d on the boat serves, it seems, as a
751 means of guarding the boat against and protecting it from
misfortunes.
782 Aside from mu-ziv̊d, taj is performed on the boat. Taj
778 means 'image', 'figure,' 'picture.' With shavings (inaŋ) of
532 a branch of rowan (qosk-ɔ-ks) the pilaŋ makes two figurines.
225 One of the figurines is placed at the prow of the boat and the
789 other - at the stern. I once saw such a figurine on the neck of
a representation of the bird ugʲ, placed by the Gilyaks at the
bow of the boat. The figurine placed at the bow has its face
turned to the sea. We shall come back to these taj elsewhere.
782 There is one other ceremony performed on the boat. Before
789 setting out on a hunt the Gilyaks expose the boat to smoke.
225 They light fires of spruce and bogulnik on both sides of the
375 boat and fan, they tie to build the fires so that the smoke hit the
all sits at the stern. It happens that the pilaŋ is younger than
the extra man in the boat. In that case the pilaŋ tends the
rudder and the extra man sits at the stern. I personally know
of such a case. Pilaŋ Norp took along with him in the boat
old man Onan who sat at the stern and did nothing while
Norp tended the rudder. When Norp was at the bow shooting
at the seals and st, to whom Norp had turned over the steering
oar, tended the rudder, Onkan again sat at the stern. Jesting
about his work Onkan said to me: "I was simply sitting with-
out doing a thing, but I got my share." I found out from others
that during the hunt he helped build the campfire and prepare
food. He also seems to have helped with some other things;
which is why he was taken along. Unfortunately, I was unable
to clarify this point to any great extent. I simply had no time
in which to do that. It seems that Onkan performed a number
of functions which did not tax his strength and, in this manner,
he made the rather heavy work of the hunters easier.
Incidentally, the facts given above illustrate with a sufficient
degree of clarity the role of older people among the Gilyaks.
225 [82] As mentioned above the pilaŋ performs mu-ziv̊d
789 and taj.
774 Mu-ziv̊d is performed at the stern of the boat. Two short
751 sticks, the thickness of a match are driven into the stern
board. The distance between them is approximately two fin-
gers. Then they tie a thin thread made of nettle fibres
around the sticks. The Gilyaks usually perform ziv̊d on hands
of children. They believe that a thread made of hair of a dog
and nettle fibre and tied around a child's hand protects the
child from illness. The fact that the Gilyaks perform

225 throws them into the sea. Each of the hunters has with him
823 similar gifts which the pilaŋ throws into the sea together
766 with his own gifts. If the hunters go past Ui,-kr, then they
782 throw their offerings into the sea from the first floe at which
they stop. The Gilyaks believe that on every cape (krʲ) there
lives a tik- an old woman. These old women must also be
given something at the time of the sea voyage. It is believed
that tɯx-tik, 'the old woman of the mouth of the river,' who
lives in the mouth of the river Kul helps during the hunt.
225 [83] In the past the Gilyaks would go as far as T'uurf
(Bay of Tugursk) during a seal hunt. They would sometimes
spend the winter there and engage in fox hunting. The Gilyaks
told me that their ancestors apparently did not go to kɯvr-
mif (Shantar Islands). (1) At present they do not go beyond

1. According to the account of Schrenk, the Gilyaks did not hunt on the Shanter Islands (On the natives of the Amur region), v. II, p. 288.

Lo-ri. In former times the Gilyaks would put out to sea when the ice began to break. They would hunt at sea until the end of the summer and then they would return to the village to fish salmon. When the ice was gone and, consequently, seal hunting on floes ceased, they would hunt seals by means of tola-k'e, 'a heavy drag net.'

At present the Gilyaks put out to sea for short periods not exceeding one or two months. Thus, for instance, they put out to sea with the hunters on July 8 and returned from the hunt on August 2. In 1930 two boats of hunters hunted seals off cape Litke and stayed there for two months.

411 The Gilyaks of today also hunt by means of a drag-net,
225 tola-k'e. (2) Tola-k'e is made of heavy rope called locally
283

2. Of the very old seal-hunting implements in the village Kul, a very large floating harpoon tla is completely out of use. It was made out of a few long sticks turned of the trunk of a larch. I got acquainted with its structure and I observed how it is being used in the village Chayvo. This harpoon is sometimes 18 ruchnykh sagenes long.

matauza. The rope is 45 ruchnykh (makhovykh) sagenes long. Each of the meshes is large enough for the head of a sivuch. Tola-k'e is set not far from the shore. The upper cord of the tola-k'e is called ɔski 'back.' The shore-end of the net is

411 called ɔmɯus and the sea-end is called ɔz-bax-puks
225 'master's stone tie.' To this end, which is lowered into the
283 sea, is tied ɔz-bax 'master's stone' or 'master stone,'
which, according to the Gilyaks, weighs two poods. This
stone, the Gilyaks explained to me, forms the anchor of the
seine. In place of plummets, stones are attached to the bottom
of the seine. They are called tatr-pax. Large wooden floats
(vaŋ) are fastened to the upper cord of the seine. When the
head of a sivuch gets caught in the net, the sivuch starts to
flounder; at times so violently that it throws the lower edge of
the seine together with the plummets over the upper cord and
finds itself literally in a sack. Sometimes dolphins fall into
the seine. The seals pɔyi are shrewd and are seldom caught
in the net.
In the past as well as at the present time the Gilyaks of
the village Kul set the tola-k'e at Kivf-ŋalu, Kɛ-ŋalu, Vilk,
Lo-ri, and ɔt.
414 According to old man Virp, some clans in the village Kul
225 owned seal hunting places in the past.
423 Thus clan Qavjuŋ owned: 1. Lulvɔz-pər, 2. ŋ̊ayqej,
524 3. ɔt.
471 Lulvɔz-pər and ŋ̊ayreqej are names of rocks sticking out
of the water. Seals crawl out of the water onto these rocks.
ɔt is a small island close to which there is another such rock (β)

3. In a fog the hunters come alongside of the shore or of the small island ɔt. Then the young hunters amuse themselves and play. There are onɔt two laqr-pax stones for a game: "who can lift it and who cannot." Close to the rocks there is a flat place where the Gilyaks compete. The competition consists in jumping on one foot (tɛ̊ɔt ferd).

Clan Tɯaunuŋ owned: 1. Mat-lo-ri, 2. Tɔ-ri-γrɔ, 3. Zomi-
vɔr.
The first two places form parts of the shore and are resting places for seals. The third is a rock.
Clan Kezoŋ owned the shore off Vilk, a resting place for seals and Hapɔz-vɔr a stone.
225 [84] Once at sea, the hunters take a number of measures
552 to ensure a successful hunt. Thus, in conversation, they
198 substitute prearranged names for the usual names of certain
825 objects. This prearranged language is an echo of a distant
789 past when hunters used it to keep their plans from animals

225 assumed to understand human speech. (1)
552
198 1. For details see the paper of D. K. Zelenin-'Tabu
825 slov u narodov Vostochnoĭ Ĭevropy i severnoĭ Azii'
789 [Taboos pertaining to Names as found among the Nations of Eastern Europe and Northern Asia]. Sbornik Muzeia Antropologii i Etnografii v. VII; 1929. The work is interesting and contains an abundance of facts.

198 Thus, during the hunt instead of
225 Vo, 'village', the hunters say hiulaf.
mif, 'Land', they say ɔtx 'excrements.' If they are far
from land, they say tevl-ɔtxta, if near - knemla-ɔtxta.
mu 'boat' they say ɔrq.
ke 'sun' they say am.
la-urd 'good weather' - literally 'good wind,' they say am
sodra.
tulu 'fog' they say verq.
umgu 'woman' they say hiulɛd.
qan 'dog' they say aim.
to 'fish' they tomr leaf.'
loq 'flounder' they say pna-domr.
lo-r 'trout' they say manm.
nemla 'link' they say naɔ-tomr.
va-s 'lake salmon' they say wɔtik.
al-o 'kunzha' they say doɔti. (2)

177 2. The Gilyaks say that they borrowed the words
manm and doɔti from Tungus.

198 ti-r 'fire wood' they say ops; tuin ops-ket fuyr-arguda
225 'having taken fire wood here, we will feed the fire.'
la-r 'seal' they say vaad; mor-vaad 'two seals,' ɔor vaad
'three seals.'
la-r pud 'the seal came to the surface' they say ɔrɔ.
i-d 'to kill' they say ɔazd.
pɔt 'tomorrow' they say mandɔa.
e-r vida 'let us return' they say pɔtkuda.
aaru-mu 'full boat' they say ulvata-mu.
kɔr-ɔqod 'hungry,' 'I want to eat' they say tava-ɔ̊od 'tava
hurts.'
krɛzd 'I, you, etc.) have had my fill' they say mat-toqn-
tanɔgad 'the little finger sticks out (?) or tot-ɔ̊od 'the hand
hurts.'

198 urla-dus 'good meat' they say amra-elvla-dus 'amra bad
225 meat.'
ǝkila-dus 'bad meat' they say amra-urla-dus 'amra good meat.'
etc.
225 Apart from taboos pertaining to names the hunters must
784 also observe other taboos during the hunt. Thus, for instance one must not pour water out of the boat onto floe where seals had been killed. Xitkun, who told me about it, said that he all but lost his sight as a result of pouring water out of the boat onto floe with killed seals on it.

It is forbidden to stick a knife in the ground during the hunt.

It is forbidden to spit in the blood of a seal, etc.

[85] Not only the hunter is supposed to observe a number of taboos; the same holds for those who remain home and, especially for women.

Thus, those who remain home must not do any laundrying in the house of the owner of the boat. They must not pass any objects to one another across the fire, for, in that case, the seal at the seine would swim through it.

They must not cut leather for shoes (kivid), otherwise the tola-ke might tear.

They must not cook hearts of seals until after the hunt.

A pregnant woman must not approach the sea shore, otherwise all ice might be carried off to sea and the hunters would not be able to hunt seals.

115 In this connection I quote from my Sakhalin diary one of my conversations with the Gilyaks. This conversation took place in the village Khoi on the western shore of Sakhalin (50 versts from the town of Aleksandrovsk on June fifth, 1928. I was sitting in Gilyak Roygin's yurt. Present were, besides Roygin and myself, the Gilyaks Kavzgun, Chulkin, Furaga and the late old man Pletunka, as well as one of my friends and the interpreter L. IA. Shternberg.

225 Roygin said: "When you go seal hunting in the spring you
825 know all that is going on at home. The seal will tell all. The
787 seal will not tell the good things, but he will invariably tell the
626 bad things that are going on at home. If, say, the woman at
784 home starts scratching her head, the seal on the floe will scratch his head with his paw. If they are fighting at home, the seals will start fighting. If the woman wash something at home and hang it out, the hunter is bound to miss the seal even if it were not more than five steps away from him. We say that all the hunter can do is hit the linen. Obviously, the 'god' Kas

225 hung something in front of the seal. The seals will also
825 tell of a theft in the village. If the wife at home has sexual
787 relations with another man while her husband is away on a
626 hunt, the seals on the floe will likewise engage in sexual inter-
784 course. When they witness some such thing at sea, some of our Gilyaks will, after returning home, beat up their wives and later on find out from neighbors in the village what had really happened. Now, suppose you cook seal meat, eat it and pick your teeth with a little stick, then the seal in the sea will show how you picked your teeth with the little stick.

During the spring seal-hunt the Gilyaks do not allow any jump from floe to floe close to shore and kill seals with harpoons, those at home must not break any objects - say, plates or bowls, for otherwise the floe will break and the hunter, say, the father, brother or son, may drown. Therefore those at home must be very careful.

On the day when something goes wrong at home, the hunter will not get his seal. Then he returns home angry and tries to find out what deprived him and his friends of their quarry.
776 Roygin told me all this in order to prove to me the existence
825 of kas, 'god'; a point on which I did not want to agree with him.
225 "How can a seal, 20 versts from home, know what is going on at home? " he told me. "Surely kas must be telling him about it. That is why we say that kas exists."
225 Incidentally, after my conversation with Roygin, Pletunka
784 told me that the mrolv-nivgv, 'ancient Gilyaks' observed the
57 following ui-nd "taboo." "sin" during a seal hunt: the guest must not touch the handle of a kettle or teapot. Only the master of the house (in the past as well as at the present time) could pour out tea or any other liquid food for the guests. If, even by mistake, the guest touched the handle of a kettle or teapot, he was obliged to tear a strip of material off his sleeve and put it in the (hearth). (1)

1. This word in my diary is illegible. As far as I can remember, Pletunka spoke of a hearth.

225 [86] During the spring hunt the Gilyaks of the village Kul
552 hunt different types of seals. They also catch an occasional
825 dolphin. They distinguish the following varieties and ages of seals:

Pila-la-r 'Sivuch'

1. Nav-na 'present-time animal', i.e. a sivuch born in the given year.
2. Tje-na literally: 'last year's animal', i.e. a two year old sivuch or one born in the previous year.

225 3. Pila-lanr 'sivuch', literally: 'a big seal.'
552
825 Pa-yi

Among the seals of this kind the Gilyaks distinguish a few age groups; a seal belonging to a particular age group is named accordingly. For instance:

1. Qr-or is the youngest of all pa-yi.
2. Mat-na-ga-l is the next to the youngest pa-yi. For the time being this name is conditional. Its etymology can be given as follows: mat-'nasal-k-id; mat - 'smal,' ga-ski 'back,' kid 'long,' 'little long-back.'
3. Tje-n-ga-l last year's pa-ga-yi.
4. ...at next in age to tje-n-ga-l.
5. Siusui- a next in age to qat, i.e. the oldest pa-yi.

Qoma.

1. Heqr-motk - the youngest qoma.
2. Ta-a-a - next in age to heqrmotk.
3. Ar-fk - next in age to ta-ar-a, i.e. the oldest qoma.

Alx.

Here the Gilyaks distinguish the olvarak - multicolored al and dalr - grey Alx.

225 The sivuch is considered by the Gilyaks to be the most
237 valuable of all seals listed above. The toughest straps, dog harness and shoes (vamps and soles; tops are made out of the skin of other varieties of seals) are made out of sivuch skin.

If the quarry is big, the hunters prefer to take with them the extra hides with the fat and the heads of the seals, leaving the meat on the ice. They separate the head together with two jugular vertebrae (mǫxt) and two upper ribs.
225 When the Gilyaks kill a seal or a dolphin at sea, they first
782 "feed" it the root of the plant piskǿr. (1) If not enough of this

1. In villages further South they feed the root of the plant "orqoit."

plant has grown, they feed the grass muǫxk. When setting out on a hunt, the Gilyaks take along with them a sufficient supply of these plants. Having killed a seal, they open its mouth and through it they put the root of this plant in the nasal cavity. Gilyaks put the stalk of the plant next to the seal on the ice and leave the seal there. They also leave par 'gall' of the seal on the ice and next to it they put piskǿr.

225 After they have killed a sivuch, they wash its head and its
782 snout with water. During the washing they use a special scoop
-a-ain-du-muurs, literally, 'the animal face washing scoop,' i.e. the scoop used in washing the face of the animal.

The beads with piskǿr stuck in them are taken home.

225 After the first sivuch has been killed the pila performs
782 the ceremony of feeding the figurines t'aǫ. (Regardless of the
425 number of killed seals belonging to other varieties, this
778 ceremony is performed only after the killing of the first sivuch.) The pila cuts the breast of the sivuch and smears the mouth of the figurines with blood taken from the heart of the sivuch. [87] The Gilyaks say that if one were to smear all of the face of a figurine, the latter could not "see." After the completion of this ceremony the sivuch is regarded as belonging to the pila. However, as far as the distribution of the quarry is concerned, this sivuch is regarded as being not different from the other sivuchs. This will become apparent from the facts given below. True - as I was informed by a Gilyak - this holds only if few sivuchs have been killed. Without drawing final conclusions as to the possibility of the pila asserting his title to an extra sivuch on top of his share of the quarry - for this we do not have sufficient data - we wish to emphasize at this junction two incontestable circumstances. First - the pila appropriates the first sivuch killed during the hunt; second - this appropriation is effected under the guise of a religious ceremony.

784 This latter circumstance clarified for me the essence of a
225 number of taboos among the Gilyaks.
183 Thus, for instance, young hunters (as well as women) are
626 supposed to observe a number of taboos in connection with the
262 meat of a bear. At the same time old hunters need not observe those taboos. This is not the place for the enumeration of the tabooed parts of the animal which the young hunters (as well as women) are not supposed to eat. We shall only point to the explanations given by the Gilyaks concerning some of the interdictions. Thus, for instance, the young hunter must not eat the heart of a bear, otherwise he will sustain a heart affliction as soon as he comes on a track of a bear. And one cannot go hunting bears with a heart so afflicted. The young hunter must not eat the tongue of a bear, otherwise the bear will beat him to death during an encounter. "Therefore tongue old men only can eat." These instances illustrate the manner in which the Gilyaks rationalize their taboos.

It would be ridiculous to look for special meaning in all these taboos and their explanations. The meaning of these taboos and their interpretation is simple--the taboos serve to keep

784 from young hunters and women the fact that the old hunters
183 who play a leading part in the hunt appropriate the tastiest
626 parts of the quarry under the guise of religious interdictions.
262 Taboos regulate the relations between the old and young
784 hunters as well as the relations between the male and female
462 parts of the clan.

Thus, in the very same year of 1931, in the village Carvax (Charbakh), the old Gilyak Kozin and Qiak (Agiska) informed
625 me of interesting taboos pertaining to a number of objects used by children in their games.

A boy must not play with a yoke or with a board used by women in cutting leather and cloth (tana-kalmr). Also, a child must not play with a woman's cutting knife (tan-dagǿ).

"When I was little Kozin told me, old men would not permit to put a yoke on a boy's shoulders. That was Uit ('taboo,' 'sin'). If a boy hit the legs of another boy with a yoke or a cutting board, then when he grew up and went hunting in the taiga, he might not be able to walk well." Agiska told me that he will have no luck in hunting.

Agiska told me that a girl should not play with arrow, bow, or spear, for these implements will not bring luck (in local Russian - fartz). If a woman or a girl were to step inadvertantly over a spear or arrow, the arrow will not go deep into the body of the bear and will not stick. That is why girls are not supposed to play with those implements.

These taboos indicate that already at an early age children are prepared for definite tasks; that boys must not - if only in play - have anything to do with implements used by women in their tasks and that, conversely, girls must not use implements used in their tasks by men. These taboos are seen to legitimize for both men and woman, virtually from the time of birth, the distribution of labor existing among the Gilyaks.
462 [88] The women of a clan perform the most onerous work which
614 from the point of view of men, is least respectable. Until recently it was the slaves who did this work for the Gilyak rich. The women must carry water, chop wood, feed the dogs, row (notwithstanding his wife's advanced stage of pregnancy, the husband tends the rudder; the man is supposed to tend the rudder and the woman to row; the opposite would be disreputable and inadmissible for a Gilyak hunter), prepare food, make clothes, shoes and perform a number of other onerous tasks some of which are regarded as detrimental to the dignity of a hunter.

The males of a Gilyak clan are hunters, providers of food. They procure food for the whole clan. They procure fish, bear

452 and seals. They distribute the quarry. They play the leading
614 part in the economic, social and religious life of the clan and in no one of these areas do they permit women to play
614 a part equal to their own. Women play a subordinate part in
552 the productive activity of the clan; they collect plants, roots and berries. Woman cannot play any part in the social life of the clan for they do not belong to the clan from the very time they are born, and when they grow up they are given away, in fact sold, by the hunters to some other clan. The clan that takes the woman in marriage is called ga-ya-ain (ga-ya) becomes dependent upon the clan of the father-in-law (apak). Also, women play no part in the religious life of the clan.
527 Women are not permitted to be present during more im-
562 portant moments of the "bear holiday", for the bear hunt is
784 a matter for men-hunters and not for women. Not once in the life are women permitted to eat the better cuts of bear meat. They are only allowed to eat some meat of the poorer cuts. Women must not be present at offerings to the spirits of the woods and of the sea which help the hunters, for hunting is a man's job. As mentioned above, a pregnant woman must not come to the sea shore while the men are hunting seals, otherwise the ice would disappear and the hunters would return home empty handed, etc., etc.
784 The taboos mentioned above are a religious-magical super-
472 structure on the labor distribution according to sex. One
626 should look for explanations of these taboos in the relations
183 among different groups of people in primitive society rather than in religion.

In legitimatizing this distribution of labor, the taboos turn the female part of the clan into slaves of the male part - the men-hunters.

Without further dwelling on these problems we merely indicate that there is no mystical element behind the taboos. The mystical content is often added in order to befuddle and enslave people and to keep from them the essence of germinating exploitative relations among men. This is illustrated by the example of the t'aǫ where the pila attempts to assert his title to a sivuch is made covertly rather than openly, under the guise of a magical-religious ceremony.

However, we now revert to our topic.

225 Having killed a sufficient number of seals, the hunters,
422 loaded with their quarry, return to the village. On arrival
476 the pila distributes the quarry. At this point it becomes apparent that the sivuch, which is the pila's legal property and whose blood he used in feeding the t'aǫ, is included in

225 distribution of the sivuchs . The number of sivuchs he re-
476 ceived was the same as that received by the others. If at all it is Nitgin who received a tiny bit more than the others; he received one extra strap but did not get a qoma and so he
225 really got no more than the others. My report of my obser-
476 vation in the year 1931 of the primitive Communist method of
461 the distribution of the quarry in the village Kul can be appropriately concluded with the following passage from L. IA. Shternberg's work "Sakhalínskiĭe Gilíakī" (The Sakhaline Gilyaks), mentioned by F. Engels and published in "Etnograficheskoĭe Obozreniĭe" in 1893, i.e. 40 years ago. "During the common hunt, for instance, during a seal or dolphin hunt, when a group of Gilyaks banded together for this purpose set out in a single boat, the quarry is shared equally by the participants. The owner of the boat receives a share equal to that of the young man sitting na grebkakh. The skill of the maker of spears and arrows is not specially rewarded. Moreover, during a long expedition, i.e. from Amur to the South of Sakhalin, it is not the owner of the boat who receives more than his share of the quarry, but rather the man who, on the voyage, performs the bothersome duties connected with the preparation of food and the collection of firewood." Apparently, it is for this kind of work that old man Onkan received not only a participant's share but an extra p=-i.

476 I find it necessary to give one more example of the
225 distribution of the quarry in the collective of Xitkun, for in it we come across an entirely new phenomenon.

The quarry of Xitkun's collective consisted of 14 sivuchs. They cut the hides of two sivuchs on straps. They cut the hide of the youngest sivuch nav-ŋa into three straps, and the hide of the tje-ŋa into four straps. There were seven straps in all. There remained 12 sivuchs. Of the remaining sivuchs Xitkun gave one and a half sivuch to each of the seven members of the collective. This made a total of ten and a half sivuchs. The fat of the remaining one and a half sivuch was divided (unfortunately, I did not find out how) and as for the hides, the hunters decided to let them dry and then make ki (vamps and soles for shoes) of them. Including Xitkun there were six men in the boat and they divided the quarry into seven parts. It turned out that the seventh share was mu-ar, the share of the boat (or as the Gilyaks say pay), that is, what they were supposed to pay to the Gilyak Arban from whom they rented the boat for the hunt. Xitkun and the other hunters

476 were forced to take the boat from him for not one of them had
225 a boat suitable for sea voyages.

In the previous examples of the distribution of the quarry
427 we saw that the share of the owner of the boat who also
476 happened to the pilar was precisely the same as that of the
225 other hunters and that he was not specially rewarded for supplying the boat and for his work in connection with organizing and leading the collective.

The last quoted example illustrates the exploitation that arises out of ownership of the tools of labor. The Exploitation is effected under the guise of the particular form of leasing tools. Here the owner of the boat does not participate in the hunt. He rents the boat to others and still gets a share of the quarry which he would get had he participated in the hunt.

471 Going from Kul - which is at the present time the northern-
225 most Gilyak village on the continent - in the direction of the
476 town of Nikolayevsk -na -Amur, until recently the center of
427 capitalist influence on the Gilyaks, we note an interesting
178 phenomenon. In the villages located in the proximity of the town of Nikolayevsk-na-Amur and, consequently, exposed most pronouncedly to its influence, the owner of the boat until recently claimed two shares: one - as a participant in the hunt and the other - as owner of the boat. This represents another forward step in the development [91] of the exploitative relations whose rise we noted in the fishing industry of the Gilyaks of the village Kul. On top of that, the owner of the boat claims shares for his wife and children who take no part whatever in the hunt.

226 The tendency to claim for oneself extra shares of the quarry
439 can be explained by the fact that some time after the founding
177 of the town of Nikolayevsk-na-Amur the commercial value of
427 fish increased. The lower reaches of Amur, one of the world's
476 richest Siberian salmon areas, attracted many people from the fishing industry as well as merchants, who brought up Siberian salmon from the Gilyaks. The Gilyaks of the lower reaches of the Amur, who formerly traded with the Chinese and Japanese began selling Siberian salmon to the Russians; an item of no importance in their trade with the Chinese and Japanese. Owners of zayezdki and seins turned into entrepreneurs supplying whole-sale fish-dealers, Luri, Viderman and others. They began to increase zayezdki and to hire labor from among Russians, Koreans and, especially, Gilyaks who come to them from Sakhalin and from the villages located North of Nikolayevsk-na-Amur. "With a zayezdok as a source of income, the Gilyak turned into a rentier who was always idle and drunk throughout the summer, "says the ardent colonizer

52 Then she pressed tubers of dry sarana into the openings for
the eyes and nose of the sivuch and put the head into the
kettle.

63 When the heads were cooked, Xitkun, his son and other
77 hunters started to eat. They were served meat on flat
58 wooden dishes. At the same time they were given a small
14 bottle with salt and a tiny cup containing finely cut cheremsha
While one may eat cooked meat with salt, one must not
cook meat or fish with salt. In former times the Gilyaks
had no salt. They learned the use of salt from the Chinese.
In 1926 I was told in the village Chayvo that the ancient
Gilyaks used a solution of ashes instead of salt. I was told
the same thing in 1931, in the village Kul. According to my
informants the ancient Gilyaks burned boughs and stems of
trees thrown up by the sea. They dissolved the ashes of
those trees, saturated with the salts contained in the sea,
in water taken from a well or river. When the ashes settled
at the bottom there remained, as the Gilyaks of Chayvo put
it, "water as clear as alcohol." It is this water which they
used instead of salt. I brought from the village Kul to the
Muzeĭa Antropologii i Etnografii a wooden plate of the an-
15 cient Gilyaks, black with age. This plate, which was sold
263 to me by old man Tujun, was specially made for seal meat.
In the sides of this "plate" were carved two tiny cups which
as Tujun informed me, would be filled with salt water for
dipping pieces of meat in it.

52 On the following day, after the meat was taken off the
82 heads, the Gilyaks prepared them for throwing in the sea.
25 The heads are dumped in the sea by women and not by men-
hunters. As we shall see, it is also the women who bring
pay to the fire. Xitkun prepared tiny white, thin shavings
of qosk-γəks 'rowan.' These shavings are called iugrusps.
He handed the shavings to his wife Hemanγ. The old woman
stuck the shavings in the nasal openings in the heads of the
two sivuchs and smeared them with cowberry juice. Then
she tied the lower jaws to the heads of the sivuchs using
stalks of burdock-pəs. In a row with the skulls lay jugular
vertebrae (maʒt) and bone splinters from the broken skulls.
The heads were placed on a board. The other wife of Xitkun
took the board with the heads and the mug containing the
eyes and went towards the sea. I followed her. Standing at
[95] the very edge of the water she threw the heads of the
sivuch into the sea as far away from the shore as possible.
next she threw the contents of the mug into the sea as far
as possible and then she threw into the sea the skull

the bow and one was at the stern. Then we went down, pushed the boat off and went. "Row, ice is there. Use more strength, we shall go more quickly." We came to the ice, we pulled the boat out onto the ice. "Throw into the sea." After throwing (the offerings) into the sea, we stalked the seals. Then one comrade, carrying a gun, went towards the seal, stalking the seal. He went stalking the seal, he fired, killed it. "Fellows, go to your comrade, bring the seal." Four went. We dragged a big seal (sivuch). We hauled it to the boat. "Skin the seal. After skinning the seal, we shall cook and eat." We skinned it, then: "Go quickly, a seal is there again. Many seals, go quickly." Three went together, going towards the seal they stalked it, they shot, the shot another one, they killed two. The pilan said: "Those in the boat, go to your comrades." Two more went to their comrades. Only the pilan was in the boat. Then dragging we hauled a seal. Three dragged one, two dragged another. "Haul it to the boat." We hauled it to the boat. The pilan said: "skin it." We skinned it next. "It is already dark. We shall cook meat and eat. We shall cook meat, eat and go to sleep." It got dark. "Let us sleep." [96] We slept and got up in the morning. When we got up in the morning it was dark, a fog. The pilan: "It is dark. How shall we go. We won't go. We shall wait on the ice. We shall dip the companion (1) we shall see if we go soon or not.

1. ŋafq-vax 'companion stone' or 'companionable stone.' In olden times the Gilyaks used to take along to sea a small stone with a string tied around it. Using this stone the Gilyaks measured the depth of the sea, determining in this way the distance from the shore. Sometimes they take a stone of this type along with them even today.

We shall dip the big companion and we shall see." When we dipped our companion: "We won't go soon. We will wait till dawn." When we were staying it was dark. Then it dawned a bit. Then the pilan: "When it dawns we will go." We lighted a fire, put up the kettle and ate. We ate and when we finished the mountain could be seen. "When it is quite light we will go. It dawned, the whole mountain could be seen. "It is far. That is bad. We will go toward the land." We went. While we were travelling it got dark, we kept on going during the night. While we were travelling at night, it began to dawn. When it dawned the land was near. "We shall travel toward the land." We went. We put in to shore, pulled out the boat. "We will eat."

nd proponent of a policy of oppression of "foreigners," I. V. Slyunin. (1) It is of interest to note that the new

xploitative relations evolved among the Gilyaks on the basis f ownership of the tools of labor did not produce new forms f distribution. Distribution persisted, as of old, in the form f the hunter's ancient way of dividing the quarry into shares. was only new claimants of shares who appeared. A new ontent was given to the old form. The owner of the tools of abor, striving to receive a greater part of the quarry, began o claim shares for members of his family who did not articipate at all in the process of production such as wives nd children. (2) He would also claim shares for the renting

2. I was told of cases where, on the island of Langer the owner of the seine sometimes included into the artel his young son who was capable only of performing minor tasks. Still, the father would obtain a full share, locally pay, of the quarry for him.

f the tools of labor such as the boat and the seine and even or the use of the bench in the boat (mlət) and of the stick ver the door of the house (mγamr-tis).

We give here illustrations of the above.

According to the Gilyak ;argun (?) now living in the village γarva: (Charbakh), back in 1917 or 1918 he and three other ilyaks from the village Kal'ma as well as fourth one from e village Təlmə went to the lower reaches of the Amur and orked there during the run of Siberian salmon on the island anger for the Gilyak Armən who was an inhabitant of the land. I often saw Armən in 1931. Armən's brother worked ith him. In all there were seven men working. When the shing season was over, Armən divided the quarry. He and s brother got six shares, while the remaining Gilyaks re- ived five shares, one share per man. The six shares ob- ined by Armən were accounted for as follows: one share for rmən, one share for his brother, one share for the use of e boat, one share for the use of the seine, and finally, one are each for his wife and his old mother, neither of whom ok part in the fishing.. The Gilyak workers got no shares

225 for their families.

171 I observed analogous facts on the very same island in
127 1927 and in 1931.

In the village Vaz-vo (cape Vasin) from which the Gilyaks were driven out in 1914 or 1915, the system of exploitation on the basis of ownership of the instruments of labor was, it seems, even more cruel. According to the expert on Gilyak life, the inquisitive Gilyak ə̄ʃisk, an owner of a zayesdok claimed one share for himself, one share for the boat, one share for the plank-bench in the boat (mlət) and one share for the nγəmr-ṭis - the shelf over the door in the entrance-hall. I failed to find the reason for the claim to an extra share in connection with the nγəmr-ṭis. I am inclined to think that no such reason exists and that nγəmr-ṭis is used by the owner of the tools of labor [92] solely as a pretext for getting an extra share for himself.

The Gilyak Miskin, inhabitant of the village Puir, told me of an incident that sounds like an anecdote. The incident took place in that village in 1931. An old Gilyak, called for one reason or another Tetkin, asked the young Gilyaks Pnadainu, Lakhtaku and Kondinu (?) to come with him to hunt (AB: fish?) kaluga. On return Tetkin took for himself four shares: one for himself, one, for some other obscure reasons, for some Russian acquaintance of his in the village Makarevka, one for a daughter in the village Langer and one for a daughter in the village Charbakh. As for his companions, he gave a single share to each. I later talked about this incident the Pnadainu. Pnadainu confirmed Miskin's story and further clarified it. Unfortunately, I wrote down Pnadainu's information on a separate piece of paper and, it seems, lost it.

My lengthy discussion is meant as a very general introduction to this problem. It is meant to show how, among the Gilyaks, the owner of the tools of work, as still found in the village Kul, could under the influence of Russian capitalism turn into a kulak-exploiter. This discussion is also meant to show how he utilized the old forms of the distribution of the quarry into shares for the purposes of exploitation. This interesting process deserves careful study.

281 After the distribution of the quarry the hunters and their
462 wives at once start to work. There is a lot of work to do. The suet has to be separated from the hides. The hides have to be stretched on special frames used in drying seal hides. Some hides have to be cut into straps and those have to be stretched to dry, for one cannot make dry hides into straps

2 fragments. Finally she threw into the water grass muzŋisŋar.
2 Soon the sea closed quietly over the remains of the sivuch
5 thrown into it.

Now Xitkun's wife bent and picked up as many pebbles as
2 there were sivuch heads. At home she threw them into the
2 fireplace. These pebbles are called uskis 'pay' (j-uski-d
5 'to pay,' s - suffix of the implement of action).

There arises the question why this pebble is called pay and why the Gilyaks pay for the hunt to the master of fire?

Of some help in answering this question may be the following opinion of the Gilyaks of which I was told on Sakhalin in 1927 by the Gilyak Murmur of the village Chayvo. Murmur informed me that while the hunter is still asleep the master of the fire hunts seals for him. If the master of the fire fails to kill a single seal, then the hunter will fare no better. "We sleep, fire first kill seal. Fire seal not kill, we also not kill."

The ceremony of throwing the heads into the sea concludes the seal hunt.

A seal hunt. (1) Supplement

5

1. This is a translation from the Gilyak language. The text was taken down in the village Hiski, 40 versts from Kul, on July 10, 1931, and was told by old man Jajpan.

5 In the spring we came to a summer village, we were suffering hunger, we caught only fish, catching bullheads on hooks, only ate. Then the sea ice moved. The pilaŋ said: "Let's hunt seals. How many will go? Six gathered to go. "Women make mos, make muvi." Then we slept. In the morning we got up and ate."Prepare your things, harpoon tips, harpoon shafts, oars, small benches, and put everything in the boat." Then we brought out things to the boat and put them down. All got down into (entered) the boat. Then we pushed off the shore. Five rowed. Then, rowing, we got to sea. After we got to sea, we came alongside the shore. When we came alongside the shore, we pulled out the boat and lighted a fire. The fellows said: "Big man (2) make

2. I. e. pilaŋ

tŋaj." The big man made tŋaj. He made two tŋaj; one was at

We were almost falling asleep; it is bad: we did not sleep one night. The pilaŋ said: "Well, fellows: It is hard. We'll sleep here." Then we slept. Then we got up. We killed few seals."Fellows, shall we go back and hunt seals again." The fellows: "We'll hunt seals again." Again we went to the ice fields. We got there. As we got there, we saw seals. We sneaked up in the boat (literally: using the boat only). One at the bow did the shooting. Another was next to him. Both were shooting and killing. We went and kept on shooting, killing. Then we went again and kept on shooting, killing. The boat was almost full. We already killed fifteen sivuch. The boat was full. "Now we'll go toward shore." While we were travelling it got dark. We travelled during the night. When it dawned we reached the shore. We lighted a fire, ate. "Fellows, we'll eat and return home." We went. After a long trip we got to the mouth of the river. From there we went to the village. All the women got (to the shore). The children came. The women: "Our comrades got seals. Fine. Nice." The men dragged out the seals. We dragged them all ashore. We pulled the boat and lifted it (ashore). We divided the seals. We made six shares. The pilaŋ made the shares. After that: "Take your shares." We dragged them away. Then the woman cooked the heads. Then we ate. The women skinned the seal. Then they put them in the kettle. The men stretched the skins and dried them.

G Gi T 342 171 /383 cont./
dwellings of the successive peoples in this direction. One need only compare the Gilyak summer-house, made of beams and resting on piles, with the dauro of the adjacent Tungusic peoples. Moreover, if the dauro of the Olcha, Negda, and Samagir, even though only made out of light /384/ materials, wooden poles, some of them perhaps of somewhat greater thickness, birch bark, etc., are nevertheless rather spacious and resemble a house on the outside, those of the Goldi shrink to small tents made of willow switches and birch bark and easily transported from place to place, and the dauro of the Orochi do not even go beyond the roof shape, the simplest of all tent forms. In the upper Amur region, among the nomadic Birar, Manegir, and Orochon, tents of conical form again appear, to be sure, but these are wholly adapted for a nomadic life, and often, for a temporary stay at a place, are limited to merely a few poles and a bark mat wrapped around them. Moreover the winter dwelling constructed on the Chinese pattern has not penetrated to these peoples or to the Orok on Sakhalin at the diametrically opposite end of the Amur region, though it has spread throughout the area in between and is customary among the Gilyak on the Sea of Okhotsk and on the northern tip of Sakhalin, and the tent with only a hide covering, in spite of the severe climate, is also their winter dwelling.

G Gi T 361 342 22 In these housing conditions of the indigenous Amur peoples it is evident that there is a feature fundamentally different between the anciently sedentary, Paleo-Asiatic Gilyak and the Tungusic peoples surrounding them, who wandered in later, indeed, in part even at a time not very long ago, and remained inclined toward the wandering, nomadic life. The differences in dwellings discussed above are closely linked to the total way of life and subsistence of the peoples mentioned. The Gilyak are

G 361 433 226 [231] [262] predominantly fishermen and, along the seacoast, also seal hunters; correspondingly, they are almost exclusively ichthyophagous, as is their only domestic animal, the dog. Now, in order to support themselves and their many dogs, required both for making the many winter trips and trade journeys and for procuring the customary winter clothing, during the period when fish are scarce, they need a considerable supply of fish, and this is

G 361 433 [224] [224] [439] /384 cont./
most surely and best obtained by stable, permanent residence in a place known to be favorable by experience, be it on a river rich in fish, like the Amur, or on the seacoast. Hunting comes into consideration among the Gilyak only insofar as it provides them with the precious pelts so necessary for trade with the Chinese and Japanese, and in exchange for which fabrics needed for clothing, tobacco, liquor, and other luxury items are obtained.

G Gi T 224 226 231 433 361 The situation is different among the Tungusic tribes surrounding the Gilyak. Among them hunting is a necessary, indeed essential means of subsistence and existence, and the more so the farther upstream and the deeper inland one goes. Moreover, in view of the more limited talents for trading of these peoples in comparison with the Gilyak and their less frequent and less extensive winter trips and journeys, the number of dogs to be fed, and consequently the need for large supplies of fish, is reduced. Also, with the distance from the main river to the mountains that skirt its tributaries, fishing becomes less rewarding, whereas the abundance of game, increasing in the same proportions, makes hunting /385/ all the more tempting. The more that fishing recedes into the background and hunting, requiring a frequent change of locality, comes to the fore, however, the life of the people becomes more unsettled. It has been repeatedly pointed out above that the Orochi living in the forest and mountain wildernesses along the left tributaries of the Amur and Ussuri are already more hunters than fishermen. And this is far more the case for the peoples of the upper Amur region, the nomadic Birar, Manegir, and Orochon. Among them, completely in contrast to the Gilyak, hunting is the first and foremost source of subsistence, whereas fishing comes into consideration only to a subordinate degree, in that they leave their hunting grounds only temporarily in summer and move to the Amur, the Dseja, or the Bureja to fish. Also, they do not need any supply of fish for their domestic animals, since they use the dog at most for hunting, and not as a draft animal, as is

G Gi T 231 361 possible only among sedentary peoples. Their domestic animals, in particular riding and draft animals, the horse and the reindeer,

SS 262 171 /425 cont./
in that they more or less provide merely a kind of accompaniment, and to be sure, they are either the wild, natural products of the country, which are simply gathered, some cereals and vegetables obtained by trade from the adjacent civilized peoples, the Chinese,

SS [184] Japanese, and, more recently, Russians. The individual peoples of the Amur region primarily differ from one another as far as food is concerned only in that fish among some or meat among others is the principal food, each according to their principal occupation, and furthermore the proportion of plant food to animal food differs for each one according to their greater or lesser communication and trade relation with the Chinese or Japanese.

G *262 G [231] Among all the peoples of the Amur region the Gilyak are the most pronounced ichthyophagi. One cannot imagine their life without fish; it is the conditio sine qua non of their own existence as well as that of their only domestic animal, the dog, which provides them with food as well as transportation and clothing. There is hardly a fish in their country that the Gilyak

G *262 226 251 would not, if necessary, use as food. But standing in the first rank, of course, are those fish that, because of their seasonal appearance in great numbers, make it possible to prepare the large supply needed to last through the long winter when fish are scarce, hence the species of salmon coming up the rivers from the sea, among which, in turn, Salmo lagocephalus Pall. (Gilyak lyghi-tscho, or on Sakhalin laghi-tscho) and Salmo proteus Pall. (Gilyak /426/ tengi-tscho) play the principal role (1).

G [104] 1. In all of eastern Siberia to Kamchatka and northwestern America, the Russian terms for these two species of salmon are keta and gorbuscha; hence in the following I shall refer to them occasionally as keta and gorbuscha salmon.

At the time when these fish come up into the lower Amur and its tributaries, which falls in June for S. proteus, in August for S. lagocephalus, an active life prevails among the Gilyak, for everyone is busy with preparing supplies of fish for the winter.

/426 cont./

*262 While the men land enormous quantities of these salmon, espe-
251 cially the latter species, in nets and boats, the women occupy
252 themselves with skinning them and cutting them up: a longitudi-
[462] nal cut is made from the head to the tail near the spine on either
[412] side and on the belly side with the tschomauwa, a knife with a
[226] long and narrow blade (Pl. XXXI, Fig. 6, and Pl. XXXII, Fig. 1),[1]
and then a transverse cut from top to bottom just behind the head;
then the skin is pulled off from the side with one jerk each, the
meat is removed from each of them in one piece, and each of them
is cut into two long strips, each of which has a cut made in its upper
end, whereupon the strips of flesh are strung on a cord and hung on
[192] the above-mentioned drying racks near the summer yurts. This is
the jukola (2), chiefly intended for the people and only in small

2. As is well known, jukola is the term, probably originally stemming from Kamchatka, customary among the Russians throughout Siberia for cut-up and dried fish.

part for the dogs, the ma of the Gilyak, the makoré of the Olcha and Goldi. The head with the backbone and the flesh remaining on it, which is provided with transverse cuts along the latter for drying it more readily, furnishes the jukola used exclusively as food for the dogs, the chark of the Gilyak, the dalong of the Olcha and
[258] Goldi. Oil is boiled out of the especially fatty belly pieces, which provides a most important foodstuff and is stored in seal bladders and stomachs. The entrails and the milt, rejected with horror by the Gilyak on principle, are given to the dogs, but the roe is eaten and is used with various foods, though it is not especially
*262 prized. Apart from the two kinds of salmon mentioned, jukola
252 is also made out of other fish, for example, Salmo lycaodon Pall.
825 (Gilyak well), which comes up the Amur somewhat before the
[226] keta salmon), Salmo callaris Pall. (Gilyak longr[sch]), Salmo leucomaenis Pall. (Gilyak ssawong), etc. The jukola made out
[1] [See Category 116, pp. 1011-1012 respectively—Analyst]

/427 cont./

000 campfire, will serve him very well. Jukola, by the way, is not
*262 only eaten au naturel, but is also an important ingredient of many
[252] dishes, whose composition and preparation I shall come back to
[231] later. Finally, in addition to the chark, it is the principal food for
262 the dog. In view of the importance of jukola for the Gilyak, it is
221 understandable that, despite the indolence and carelessness more or
226 less characteristic of all primitive peoples, they are very intent on
252 preparing the largest possible supply of it and do not hesitate to make long trips and even temporary changes of residence for this purpose. Thus, for example, when those types of salmon come up into the rivers, some of the Liman Gilyak come to the Amur in order to take advantage of its surplus; others, such as some of the Tschomi Gilyak and the inhabitants of some places on the west coast of Sakhalin, move to the Tymy /Tym'/ River in the interior of the island, which is especially rich in fish, and do not return with the acquired supplies until winter. On the other hand, at the other times, for instance, when the kangi-tscho (Gadus wachnja Pall.) migrates in large numbers along the sea coast, some of the Tymy Gilyak, conversely, betake themselves to their countrymen on the west coast of Sakhalin in order to feast for a while on these fish.
[628] In this respect there seem /428/ to have developed in the course of time certain mutual agreements and relations based on reciprocity between the inhabitants of certain places, for example, between the Tschomi and the Tymy Gilyak, or between the latter and the Gilyak of Duĭ, Arkai, Tangi, and other places on the west coast of Sakhalin.

226 However plentiful the jukola supplies might be, however,
*262 they would never suffice to make the life of the Gilyak secure if
361 there were not at every season of the year more or less, depending on the locality, many other kinds of fish, which the Gilyak eat fresh, besides those salmon. In this connection the most favorable locality in the Gilyak region is, of course, the mighty Amur River, and therefore along its banks, as discussed above, one also finds the largest concentration of the population and the richest development of the Gilyak individuality. The dwellers along the banks of
The Amur scarcely ever lack fresh fish to eat.

/428 cont./

226 the Amur scarcely ever lack fresh fish to eat. Needless to say,
*262 the above-mentioned species of salmon used for jukola by the Gilyak are also eaten fresh and even constitute their principal food when they come upstream in great numbers. In addition, however, the river also offers them an abundance of fresh food in its more or less permanent species of fish, such as sheatfish (Silurus asotus L., Gilyak mub), eelpout (Lota vulgaris Cuv., Gilyak mad[r]sch), pike (Esox lucius L., Gilyak iwys), and espe cially many cyprinoids, among which the pilengat (Cyprinus carpio L.) plays the principal role (1). But more important and

[113] 1. Incidentally, on the basis of the findings of Herzenstein and Warpachowski ("Notizen über die Fischfauna des Amur-Beckens /Notes on the Fish Fauna of the Amur Basin/," in Trudy S. Peterb. Obshch. Estestvoisp. po otd. Zool., Vol. XVIII, 1887), we shall name here a number of the permanent Amur fish, the larger of which are generally used for food by the Gilyak, the smaller only when necessary and if nothing else is available. Thus, the following: lering (Carassius vulgaris Nilss.) uk or uk-tscho (Barbus labeo Pall.), koll (Pseudas pius leptocephalus Pall.), kunung (Parabramis bramula Val.), mimk (Hypophtalmichth dybowskii Herz.), wa (Culter erythropterus Basil.), mykyk (Idus waleckii Dyb.), isn-ngoch (Pseudogobia amurensis Dyb.), markram (Gasterosteus pungitius L.), and others.

more precious to the Gilyak than all these fish are the two specie of Acipenser that occur in the Amur and sometimes reach tremen proportions, the tukki-tscho (Acipenser schrenckii Brandt), the Amur sturgeon, and the patch-tscho (Acipenser orientalis Pall), 000 the Amur hausen (2). On March 6/18, 1856, when, returning fr

[113] 2. Cf. J. Fr. Brandt, "Einige Worte über die

without any kind of bait on it is lowered into a crack or a hole drilled into the ice and is as a rule immediately pulled up with one or more fish attached to it. [119]

Sturgeon are caught with hooks. Large iron hooks are fastened to pieces of either wood or cork by means of a rope which in turn is held in place by heavy stones deep in the water, that is, not much above the bottom. The sturgeon which goes down deep is, curiously enough, attracted by the moving pieces of wood, he "plays" with them, as the natives say, and thus gets caught by one or another hook. In winter this fish is also caught in strong nets, for at this time it is supposed to be weaker.

The greatest activity occurs at the time of the salmon run. The results of it influences the lives of these people for the rest of the year, therefore whole swarms of Gilyak are to be found on the Amur. The fish are caught by means of enclosures (1); near the shore a row of posts are driven into the

1. Called sayesdka by the Russian fishermen.

river bed; in general the enclosure has this shape ⊓, the open side of it is turned toward the mouth of the river from which the fish comes. The fish bumps against the wall, turns sideways, and is caught in the bag which is lowered from the boat on the inner sides of the enclosure. At the height of the salmon run there are such masses of fish that the bags are filled almost as soon as they are lowered. The fish weighs 8 to 12 or even 20 pounds and costs three to five Kopeck.

The women also take part in this catch. There is no particular organization in the matter of assigning the fishing places but care is taken that every head of a family fishes where his father and grandfather did before him; this place in the river is then practically his property.

Dolphins are harpooned, but this is considered a difficult hunt. The animal is cautious and does not let the hunter come very near; and should this happen, the wounded animal can easily upset the boat. The harpoon consists of a long hook which has points and barbs at one end and at the other, a rope about 15 fathoms long with a blown-up bladder fastened to it. As is the case in whale fishing, the bladder must show the place where the wounded dolphin went under. When the animal reappears, he is given the finishing blow with harpoons or lances. [120]

225 The seal (1) is caught in several ways. On the island of
411

1. On the Amur it is found only way down at the mouth.

Sakhalin a lance about two to two and one-half fathoms long which is thicker at its lower end is laid into a wooden trough; on the thick end of the lance a 20-30 fathom long strap is fastened. In spring when the ice breaks up, the seal climbs onto land and the Gilyak pursues it, often at the risk of his life, on a boat or over floating ice fields. As soon as he is near enough to it he places the trough which somewhat represents the barrel of a gun, with the lance inside it on the ground, aims and throws the lance while holding the end of the strap with his left hand, so that the animal cannot get too far away.

225 Another method which is practiced, for instance, in the village of Charbakh, below Nikolayevsk-na-Amure is done in the following way: near a place where there are big stones lying on the shore, two stakes are driven into the bottom of the river and between these is spread a sort of sail, behind which the hunter conceals himself. The seal, all unsuspecting, climbs on a stone in order to sun himself and is hit by the lance which is attached to the boat by a long strap.

Finally the seal, when he is sunning himself on a rock, is sometimes killed by means of an endlessly long lance, the lower end of which lies on the shore.

The sea lion frequently is found on the coast of Sakhalin and it is the simplest thing in the world to kill it. The animal is stupid and at the same time inquisitive and lets the hunter come so near that he can beat it to death with a club.

224 The otter is frequently seen on the rivers of the country
225 and its pelt is very much prized. It is shot, sometimes even killed with sticks. Cross-bows are also sometimes set up for it, as for the sable.

224 Of land mammals the bear, the elk, the reindeer, the fox,
554 the musk deer and particularly the sable are hunted.

The bravest men conduct a hand-to-hand fight with the bear and thrust their lance into his breast when he stands up on his hind legs. The scars which a man carries away from such a battle bring him great honor and songs of praise. Most of the men do not attempt this single combat and go after the animal in pairs, and [121] armed with rifles; sometimes the bow and arrow are also used; in any case, it is a dangerous hunt.

226

157 for whom the outward severity is only a mask concealing a nature
that is acquainted with passions.

291 /25/ The winter clothing of the Gilyak, of both men and
women, consists of a fur coat of dog skins, the fur outward, and
fur leg coverings and boots of sealskin in the Chinese fashion.
Besides this, the men wear skirts of sealskin descending from the
belt to the knees, not for the sake of adornment, but to protect
the fur coat from wear and damage while sitting on the ice, in
the snow, etc. The winter costume is very imposing. In a black
coat of dog fur fitted at the waist, against whose dark background
the pale-gray skirt made of the skins of young seals stands out in
gentle contrast, in finely sewed boots with narrow toes, in a hat
of fox paws and with earlaps, in fur gloves covering the sleeves --
the Gilyak makes a fine, dashing impression.

[178] In summer the national costume of the Gilyak (now falling
completely out of use) consists of a peasant's cloth coat, armyak,
made out of fish skins and trimmed on the edges with designs. In
recent times a summer garment of colored daba or American drei'
has come into style. The women's summer garment is much more
imposing: light and flowing dresses made of colored imported
materials, mostly red in color, with beautiful decorations along
the edges, cockle shells sewed on, and all sorts of rattles which
sound at the least movement. Only the large boots completely
disproportionate to the length and size of the legs and tightly
stuffed with hay, which replaces stockings, spoil the lightness of
the figure of the woman, giving her a heavy, awkward look.

136 Now a few words about the material conditions of life of the
[133] Gilyak. A remarkable affair. The very condition that has such a
fatal influence on the nature of Sakhalin, namely, the cold
northern current, this ruinous condition has made human existence
[226] possible in this rugged country. It is this that in certain seasons
and with astronomical precision brings masses of salmon and other
fish that travel in masses upstream to spawn, filling the rivers and
streams to such a degree that one can obtain the fish in any amount
by means of a simple, sharpened stick, a method to which I
myself resorted during hungry intervals in my travels. This
[172] abundance of fish and the ease of obtaining them explains the
strange fact that -- as the marks of the excavations made eloquently show -- in this rugged country the existence of primitive man was possible at a very remote time.

/25 cont./

080 man was possible at a very remote time. As a matter of fact,
226 these fish that travel in masses upstream to spawn even now serve
269 as the basis of life for the Gilyak and his only domestic animals,
[231] the dogs. The fish, caught and dried in the sun by the tens of
[251] thousands, /26/ are stored in pile storehouses and, in the literal
sense of the word, replace bread for the Gilyak during the long
winter. The fresh local fish that he catches all year round are
merely an addition to this daily bread of preserved salmon. The
countless schools of the fish that travel in masses upstream to
spawn provide food not only for the Gilyak. No smaller packs of
all kinds of pinnipeds and cetaceans follow the schools of fish,
225 pursuing the abundant food. After the fish, the pinnipeds consti-
269 tute the second source of the food supply of the Gilyak. In early
[221] spring, at the first signs of the opening of the ice, the famished
native comes out to hunt seals, which are happy for the opportunity
to breathe the fresh air on the ice floes which are breaking up.

205 In favorable places these animals are hunted all through the
146 summer by means of a very long harpoon which is thrown from a
boat. Besides their skins, which are quite indispensable in the
Gilyak economy, seals also provide supplies of fat, which serves
as a seasoning for the hard yukola, and also as an independent food
product that is extremely important for the life of the Gilyak.
The effect of the fat on the organism of the native is striking. Here
it is the end of winter. The famished Gilyak, if he has not been
brought down by scurvy, can hardly walk. But the seal need only
appear, and he is momentarily transformed. He greedily throws
himself on the melted fat, drinks it in all forms, with tea, with
fish, and even just as it is, and in a few days he becomes un-
recognizable: his cheeks become pink, his body gains weight, and
vitality expresses itself in his every movement.

224 In autumn, after the end of the run of fish, an active and
[221] happy season of hunting begins. Bears in abundance come down
to the banks of the streams to regale themselves on salmon, and
the Gilyak lies in wait for them with gun and spear. Every bear
killed is an occasion for communal festivities and celebrations.
Before the season for fish and bear has come to an end, the sable
has put on his dark coat, and it is time to hunt him. Now the
setting up of snares at the crossing of rivers and the building of

/246 cont./

595 Among the Tlingit (the Kolosh) the institution is described
171 in more definite terms by Veniaminov, who plainly says that
"the second husband must always be either a brother or a
very close kinsman" (2). Similar phenomena have been ob-

2. Tvoreniia Innokentiia /The Works of Innokentii/, Book 3, p. 619.

served among the Central Eskimo by Ross. We shall not, however, deal with America, a country having the Ganowanian system, which is so close to the Turanian system. Our aim was to fill the hiatus which separates the native land of the Turanian system from the Ganowanian. After the survey we have made, we have the right to say that this hiatus has been filled.

XI.

Sexual Life

157 The norms of group marriage, presenting the Gilyak with
224 such wide freedom of sexual intercourse, are in themselves
831 a propitious factor for the inordinate development of sexual
433 sensualism. The ordinary mode of life of the Gilyak, in turn,
could only aid in the extraordinary development of this factor.
[226] The principal Gilyak occupation -- fishing -- leaves him too
much leisure. On the other hand, the only pursuit which
could provide a significant outlet for the emotional vital
energy, namely, hunting, plays a comparatively insignificant
role in the life of the Gilyak. The Gilyak does not undertake
[221] distant hunting expeditions. The seasonal hunting for sables,
squirrels, foxes, and deer, and even the sporadic excursions
after the local, rather /247/ timid bear, do not present any
special dangers; the sport of hunting, therefore, is very
weakly developed.

/365 cont./

776 that they are killing seals; in such a case the boat is destroyed.
But if, in reply, the Gilyak display a hare's tail, the devil goes
on his way without further consideration.

776 The relationship between the Gilyak and all his gods --
782 nivukhi -- is quite clear. It is they who provide him with sables,
22 foxes, bears, fish, seals, and so forth. Sables and bears are just
as much the property of Pal'-nivukh as fish and seals are the prop-
erty of Toll'-nivukh, and as sled dogs are the property of the
Gilyak. The gods specifically give a portion of their property to
man. It is not an accident that the fish appear with such amazing
regularity during the appropriate seasons, it is not an accident that
sable is dressed in an expensive fur during the hunting season, it is
not an accident that swans, geese, and ducks molt in the summer
and become an easy catch for the Gilyak. All this is done by the
776 gods for man; he lives only by these gifts. It is clear that the
782 Gilyak should not remain in debt to their benefactors. And so
they give the gods a portion of everything that they avail them-
selves of: saranka, roots, tobacco, sugar, and so forth. When I
once expressed a desire to take part in the sacrifice to Toll'-
nivukh at the beginning of the seal season, they asked me: "But
will you give the god bread, potatoes, etc.?" Sacrifices are the
exchange of portions with the nivukhi. That is why the sacrifice
may never consist of the same objects for which sacrifices are
made; for example, among the dishes offered to thank for fish in their
seal, this last does not figure, although it constitutes an indispensa-
ble dish of the Gilyak themselves on the evening of the sacrifice.
Thus, the bear at the well-known festival is in no way a sacrifice,
as some think, /366/ for not a single piece of its meat is appor-
tioned to the god, and the Gilyak does not understand allegory: to
sacrifice -- means giving the god something real. And actually,
at this festival, the master of the bear, Pal'-nivukh, is given a
sacrifice of saranka, "mosa," yukola, and other viands. The
principle of exchange in sacrifices is not contradicted by the fact
225 that the Gilyak offer to the "master of the sea" fish bones and the
226 head and eyes of seals. The explanation for this is very simple:

/366 cont./

776 the god gives meat to man, and the bones are returned as the
782 creative element for future fish and seals. For the same reason
224 the Gilyak carefully buries the eyes in the sand of the shore, and
225 any undeveloped fetus found in the uterus of a seal. To the Gilyak
a sacrifice is not a ritual or a routine matter, but serious business
on which his welfare depends. In addition to the solemn sacrifices
offered at the opening of the seal season, the Gilyak with special
solemnity gives presents to his god at the beginning of the sable
season. He offers this sacrifice at his yurt. In the taiga, at the
342 side of the same small balagan which serves as a night shelter the
whole time he watches over his snares and traps. Besides his usual
gifts, he sometimes sacrifices a dog for this occasion. After
striking the sacrificial animal in the heart, he gives its blood to
the god, but eats the meat at a solemn feast with his kinsmen.
He usually gives frequent gifts to his gods, although just a little
at a time, believing that a hundred fish more or less is little to a god
as a handful of rice or saranka means to a Gilyak. Offerings made
during a journey can be touching. I remember that once during a
journey to northern Sakhalin we came to the crest of a mountain ridge
unexpectedly, and suddenly there unfolded the magical panorama
of the mountains. The "Head of the earth" towered majestically
before us. My Gilyak companions were deeply moved. One of
them took from his sled his cherished little sack with saranka,
tobacco, sweet roots, and so forth, and, moving off about 30 steps
to the right, he squatted down, buried a handful of each in the
snow, and repeated his prayer for a long time. When he got up,
he moved the same number of steps to the left and did the same.
Then, his face suffused with emotion, he returned to us and dis-
tributed the remains of his sacrifice. He had prayed that we be granted
a happy journey. Later, he was able to boast that his prayers had
771 been heard... There is a tremendous difference between the re-
ligious feeling of a Gilyak and the religious feeling of not only a
Christian, Jew, or Moslem, but even of a Buddhist. "Contrition,"
the striving of the soul toward the deity, in our meaning, all seem
to be incomprehensible things to a Gilyak. For him, in religion
everything is simple /367/ and clear; there are no doubts and no
781 suffering. He does not understand religious ecstasy.

/376 cont./

593 inheritance. Only with relation to the daughters does the father
594 enjoy a despotic authority, regarding them as commodities to be
disposed of as dearly as possible, although in practice this authority
is considerably relaxed by the natural attachment of the father
593 to his children. The considerable independence of the sons is
594 determined by the forms of acquiring the means of existence.
176 For fishing with the small nets used by the Gilyak, the co-operation
176 of only two men is required; consequently, in this respect the
168 existence of large family households is not caused by necessity.
224 Likewise, the hunting of the Gilyak at the present time does not
225 require collectivism, while for the spring and fall seasons of seal
hunting the Gilyak join in temporary artels, whose composition is
594 completely accidental. The practice of going to Nikolayevsk for
593 work undoubtedly has assisted in the dissolution of the large
178 family, although among the Gilyak, as among our own peasantry,
167 such employment for one of them is frequently one of the kinds of
division of labor within the family. Those who go away for such
work are either bachelors or members of a large family, leaving
their father and brothers at home to prepare fish for the winter. In
594 any case, the separation of adult, married sons from the family
594 of the father is far from being a predominant phenomenon, espe-
178 cially in northern Sakhalin. Evidently it is of very recent origin.
168 But at the same time the separation of the adult brothers after the
death of the father is a customary phenomenon, although we
should not think of this phenomenon in our sense. The brothers
continue to live in one yurt, they frequently use the same equip-
ment, but they eat apart; frequently this is the only sign of the
division of the household.

593 We shall say more later concerning the economic relations
of the members of a family.

It is pertinent to point out that in many respects mutual
aid, as well as the feeling of kinship and attachment between mem-
bers of a family in general, is more extensive and constant among
these barbarians than in a civilized family.

/378 cont./

482 And, conversely, it happens that in large families, keeping house
422 together and eating together, individual members, such as, for
594 example, the unseparated sons, are independent owners of dogs,
boats, and other movable property. Thus, the sons who live with
their father obtain in good time property for their future inde-
pendence or for the purchase of a wife with their own means.
[133] Such independent property of unseparated sons is either obtained
[224] as a present /379/ from the father, augmented by the fruits of
[165] success in hunting through the efforts of the children or as the re-
sult of employment in towns. If an unseparated son kills a bear,
[224] the meat goes for general use, but he gets the skin. If he sells his
[225] fox and sable, he will purchase various articles for the family, but
he will certainly obtain something especially for himself. The
[165] same is true of his wages. But never will the son reserve for him-
[226] self a special share of his catch of fish, where ordinarily the skill
of one individual plays no role. These same economic relations
422 prevail between the father-in-law and son-in-law who maintain
606 a joint household (furs and wages constitute individual acquisi-
422 tions). There is a category of articles sui generis which constitute
556 the exclusive individual property of the Gilyak. This is his
[151] "wealth." The Sakhalin Gilyak, at least, does not treasure and
does not store up money. On the other hand, he stores up valuable
fur coats, fox and sable, pieces of costly Chinese silk, spears with
silver fretwork, silk gowns, Japanese sabers, etc. These riches
pass from generation to generation, from father to son, and only
at extremely important moments of life are they taken out of the
storehouse. When it is necessary to purchase a wife for his son,
when the need arises to provide presents for his daughter, depart-
ing for the clan of her husband, when the clan through its com-
mon efforts concludes a peace with the clan of the avenger, when
he himself dies, or some other person who is dear to him and
whom he wishes to see upon the funeral pyre in all the splendor of
sable fur coats and Chinese silks -- then the treasured objects are
556 brought out of the storehouse. The attitude of the Gilyak toward
rich men is interesting. The Gilyak regards his wealthy brother

/380 cont./

426 contract, are those sacred treasures which customarily lie un-
touched in the storehouse of their possessor. The creditor lays
hands on these objects in those rare cases when he is compelled
to recover his debt by force. The public or secret unharnessing
of the dogs from the sled of the debtor is also one of the methods
of collecting a debt. But what is most curious, what speaks in
favor of the uprightness of the Gilyak and is most important at the
trials of their lawsuits, is the fact that not a single debtor will
ever repudiate his debt, no matter how ancient and unpleasant it
may be to him. The Gilyak is greatly astonished when you ask
him whether he has any evidence for the debt. "Ask him (the
debtor)" replies the puzzled creditor.

Speaking of their economic and juridical relations, one
433 cannot fail to mention the role of labor in these relations. Capital,
46 as the basis for reward, hardly plays any role among them as yet.
[225] In their communal hunting, for example, in the hunting of seals
422 and dolphins, when the Gilyak gather for this purpose, several
606 men to a boat, the catch is divided equally among the partici-
pants. The master of this boat gets the same share as the youth
who sits /381/ at the oars. Even the craft of the metalworker who
makes the spear or the arrow does not constitute a basis for spe-
cial reward. Moreover, on distant expeditions, for example,
from the Amur to south Sakhalin, the one who obtains more than
an equal share of the catch is not the master of the boat, but the
one who performed the troublesome chores on the way, such as
226 the preparation of the food and the collection of firewood. In
165 joint fishing the master of the boat and the net obtains the same
433 share as his have-not companion ("navikh"). True, I have seen
an instance where the master of the boat and net obtained 2/3
of the catch, while his have-not comrade -- only 1/3, but to
my question as to the reason for this inequality I received the re-
ply: "And why should he have more? He is a bachelor, alone;
554 he does not need any more." I encountered a status resembling
176 to any degree that of a workman only two or three times, but
426 even in these rare cases the status of the worker does not remind
one of our practices. The master will help his worker purchase
a wife and will make him a sharer in the inheritance after his
death.

G- /319 cont./

161 3. (cont.)
114 not only all the Olcha, who are regarded as
161 Gilyak by the ordinary Russian along the Amur
as a rule and hence unfortunately very often by
Russian travelers (see above, p. 213 ff and
elsewhere), but also the Orochi of the seacoast
from de Castries Bay to Kaiserhafen. How strange
it must seem to one to find at the very beginning
of an article supposedly dealing specifically with
the Gilyak such a convincing mixture with their
neighboring tribes who are completely different
linguistically and to some extent in their ways
of life!

SS
161 count of the native population, a rather accurate yardstick for an
114 approximate estimate of their strength might be found is the num-
361 ber of their winter dwellings, if this could be learned with cer-
tainty. One may easily convince himself of the correctness of
SS this assertion with a more exact knowledge of how the dwellings
[121] are made among the Amur peoples. Let us now proceed to a
consideration of this situation among the individual Amur peoples.

G- A people such as the Gilyak, who provide for the direct satis-
361 faction of their needs with regard to food, clothing, etc. almost
226 exclusively by fishing and seal-catching, understandably settle
225 along the banks and estuaries of water with the most fish in their teri-
tory and as close as possible to the water. Hence, all the Gilyak
villages lie directly on the Amur River and the Liman, along the
seacoast or along the Tymy River, the main artery of the northern
half of Sakhalin; one would seek them in vain in the mountains
or /320/ at any distance from the waters named. A more or less
favorable locality is always chosen as a place to live -- along the
seacoast, a small bay or inlet protected by a rock ledge against
the prevailing gales; along the river, a dry bank towering above
the high-water level, but with sufficiently deep water for landing
the boats, with high woods or dense brush for protection against
the wintry snowstorms, etc. Wherever the locality is favorable in

/357 cont./

342 yurt, between the piles, for protection against the rain, and the
dogs, too, find a suitable abode under the same protective roof.
The above description also applies, apart from the
342 specific references to the pile-construction, to the summer dwel-
231 lings of the Gilyak put on level ground at certain places on
Sakhalin and, as has already been mentioned, of very similar
nature, and it will therefore suffice to add to it only the follow-
ing remarks referring specifically to the latter. If the yurt is
on level ground, the flat sill, space a, projecting along its front
side is likewise on the ground level. As in the pile-yurt, this
space is used for the erection of a shelter before the entrance to
the yurt, even though only a crude one. For this purpose, on
both sides and in front, where the dotted line is on the plan a
few poles and boards are set up vertically and, with the excep-
tion of a passage, are bound together with plaited switches, and
the spaces between them /358/ are filled with grass and brush-
wood, so that a sort of mattehouse is produced. This is assigned
to the dogs for their abode, where, protected at both sides of the
entrance to the house, they make good sentinels for it.

251 Since the main occupation of the Gilyak during the
[231] summer is fishing and preparing the supplies of fish for the winte
226 one always sees beside the summer dwellings several contrivance
225 for this purpose. Thus, more or less numerous, open racks for
[417] hanging and drying the fish in the sun are never lacking, and
not infrequently one finds a roof supported by piles, quite simila
to the one on the summer yurts but much cruder, with crosspoles
under it, on which the fish, hung up in rows and protected
against rain and sun, are dried in the continual air current (see
000 Pl. XIII) (1). For the storing of the supplies prepared in summer

1. A more detailed description of the
treatment of the fish before they are dried,
as well as of the use of the individual parts
and the like, will be given later at the
appropriate place.

europäisch-asiatischen Störarten /A Few Words about the Sturgeon Species of Europe and Asia/" (Bull. de l'Acad. Imp. des sc. de St. Pétersb., Vol. XIV, pp. 171 ff.

March 6/18, 1856, when, returning from
halin, I reached the village of Tschcharbach at the mouth of
Amur, the Gilyak there were near the end of their fish sup-
es and impatiently awaited the thawing of the river, for then the
geon would immediately collect in great numbers in order to
end the river. But farther up the Amur some are caught at
ctically every season of the year and even throughout the
ter. In 1855 and 1856 the Gilyak supplied the Nikolayev post
amply with sturgeon meat and caviar, especially from the
ki-tscho which, it seems, is more common in the lower Amur,
t this was our principal and almost daily food in the winter,
9/ and, despite its initial tastiness, we became very tired of it
ime. They especially liked to sell their caviar in particular,
e the Russians paid them a good price for it, whereas they
mselves, although they likewise use it as food, do not prize it
y much. The meat of sturgeon and hausen, however, which
y always eat raw in the manner indicated above, is regarded
ong them as one of the tastiest of foods. Enormous quantities
turgeon and hausen are consumed especially during the bear
ivals, which take place in the winter. On such occasions I saw
le rows of the mighty great animals lying on the floor of the
t decorated for the celebration, though they are not on the
u of the actual feasts at the bear festival and are only eaten
etween them or on the days preceding or following the festival.
e the human beings, the dogs, too, get their share of these
, in that a soup is cooked for them out of the discarded, less
rable pieces and especially out of the gristly skeleton with the
t clinging to it, but the gristle itself is fished out of the kettle
rder to be sold, cleaned and dried, to the Chinese.

/429 cont./

226 Next to the Amur the Tymy River on Sakhalin is the Gilyak locality richest in fish. It is therefore the vital artery of the entire Gilyak northern half of the island, and especially along its upper course, where it does not freeze even in winter, despite the low air-temperatures dropping to below the freezing point of mercury, small Gilyak villages lie more tightly packed than almost anywhere else in the Amur region. To be sure, the tastiest and largest fish of the Amur River, the above-mentioned sturgeon, is missing in the Tymy River, but it is especially rich in salmon, and, to be sure, not only in those above-mentioned species generally widespread in the Amur region and, as a result of their great quantity, principally used for the preparation of jukola, which annually in the fall, as previously mentioned, also attract the inhabitants of more distant localities to its banks (1), but also in

[132] [361] [221]

[113]

1. During the past few years even the Japanese have come to the mouth of the Tymy to fish there when the Salmo lagocephalus come up, and, as Mizzul (Ocherk" ostr. Sakhal. /Sketch of Sakhalin Island/, 1873, p. 120) and Poljakof (Putesh. na ostr. Sakhalin" v" 1881-1882 gg. /Journey to Sakhalin Island, 1881-1882/, pp. 70-80) reported in detail, they return home with a rich booty.

various other species, such as the nem(a)lja, (Salmo coregonoides Pall.), the longr(sch) (S. callaris Pall.), njalych (probably S. sanguinolentus Pall.), loimang (a species of trout), etc. Indeed, there are even species there that are absent in the Amur River, such as choi-tscho (Salmo orientalis Pall.) and the tschawytscha of the Kamchadal, the largest and most prized salmon species of the shores of the Bering Sea and the Sea of Okhotsk (2). The

2. The Nyi Gilyak, among whom I saw two large specimens of choi-tscho in

/429 cont./

2. (cont.)
February, 1856, thought that it occurred only along the coast of Sakhalin, without going up into the rivers.

The mainland Gilyak, upon returning home from Sakhalin, not infrequently bring some pieces of choi-tscho to the Amur as a special delicacy.

Finally, with regard to those Gilyak who have their habitation sites directly on the seacoast where there are no river deltas or only small, insignificant streams, although their situation is worse inasmuch as most of the above-named fish are lacking for them and they /430/ can prepare only small stores of fish, nevertheless even in winter the sea supplies them with fresh fish. Of greatest importance to them is a fish which is insignificant in itself and not very tasty, but which, at a time when their supplies are running short, appears in shoals directly under the ice in the vicinity of the shore and can be caught in quantity with the most primitive methods. It is the aforementioned kangi-tscho, Gadus wachnja Pall. In February and March, 1856, I saw the people and dogs living almost exclusively on this fish in Nyi on the east coast of Sakhalin and even more in Dul', Arkai, Tangi, and other places on the west coast. It is only eaten raw and the treatment is always the same, in that first a thin slice with the three dorsal fins is cut out along the back and thrown away, and then the meat is cut from either side with one slice and is eaten; the remaining head with the backbone furnishes the kangi-chark, some of which, together with the rest of the scraps, is immediately cooked into a soup for the dogs and some is stored as food supplies for them, but, of course, it is far inferior to the laghi-chark and tengi-chark. Because of the importance of the kangi fish for the coastal Gilyak, more superstitions are connected with the preparation and eating of it than with the use of most other fish. Thus, it must be eaten without any accompaniments, placed on the sleeping bench of the yurt in only an open container, a bowl or a basket, etc. Moreover,

/430 cont./ Moreover, with regard to these and similar views, there are many local differences among the Gilyak. For instance, the Tro Gilyak did not object if the kangi fish intended for me was roasted on the spit in front of the hearth fire, while those of Arkai interpreted this as uitsch and permissible without harm only at a fire burning in the open air.

As on Sakhalin, the kangi fish also occurs along the continental coast of the Sea of Okhotsk, near Kulj, Tägl, Hisska (Petrofski Simowjo), etc. According to a statement by the Gilyak, it is absent in the Liman, and therefore, in order to catch it, the Tschomi Gilyak go every year to the west coast of Sakhalin along the northern part of the Sea of Japan, where in the winter of 1856 I met some of them. Presumably, however, this statement applies only to the southern, more closed-off part of the Liman, and not to the northern part, where at the broad outlet to the Sea of Okhotsk, the situation is quite similar to that in the latter.

Next to fish, seals represent the principal foodstuff of the Gilyak, a foodstuff that is offered to them by Nature more or less abundantly at all the places in their habitation area, apart from certain localities farther from the sea, such as the Tymy Valley. For besides the seacoasts, along the Sea of Okhotsk, as well as along the northern part of the Sea of Japan, and the Liman, where this food source, of course, is supplied most abundantly, various species of seals, as I have set forth at another place (1), also come

1. See Vol. I, pp. 180 ff., of this work.

up the Amur through the entire Gilyak area and far into that of the Olcha. /431/ The Gilyak think the least of the seal meat itself as a food. Sperk is even of the opinion that they themselves do not even eat it, but only feed it to their dogs (1). This is indeed

basis of tales told by the Hollanders who had been prisoners in Korea in the middle of the seventeenth century, that in winter there one binds small boards under the feet in order to be able to walk over the snow without sinking into it.

G G1 484 171

Of the greatest importance for the economy and the whole life of primitive peoples is the manner in which they undertake their greater moves from place to place by land, and in this respect we find in the Amur region very different, and for the individual peoples characteristic, phenomena.

G 492 231

Of all the peoples of the Amur region the Gilyak are the ones who use the dog for traveling to the greatest extent and among whom the dog plays more important role in the economy and whole life than among any other of these peoples. For, aside from its principal purpose as draft animal, it furnishes the Gilyak, as we have seen, with the generally most popular and most used fur for clothing, and even serves them as food, which, aside from the Ainu, does not occur among any other people in the Amur region. Nowhere is the keeping of dogs for winter travel required by natural conditions and by the way of life and needs of the people to such an extent as among the Gilyak. If the dog is to serve as a draft animal, it must, because of its little strength, be kept in large numbers, and for that, in view of its predatory nature, large, never-failing stores of animal food are required, such as, not the roaming hunters, but fishermen settled along a river rich in fish or along the seacoast are in a position to provide for them.

G 226 484 492

These requisites, as discussed above (3), are best met among the

3. See pp. 645 ff. above.

Gilyak, who occupy the part of the Amur region richest in fish and are the most sedentary of its peoples and the one most devoted to fishing, and who, in addition, are impelled by their lively commercial spirit to undertake winter trips and voyages more than the others.

of Sakhalin, in that on the former, among the Orochon and Reindeer Tungus, the reindeer serves only as a riding and pack animal, but on the latter, among the Orok, it serves also as a harness animal, and in this its use joins that of the dog.

SS 501 184 484

As dwellers on a great river and its tributaries or the sea and its coastal rivers, all the peoples of the Amur region are more or less oriented toward moving and traveling from place to place by water for the purposes of fishing, hunting, trade, and communication. The diverse nature of the waters on which they dwell, however, makes necessary a multiplicity of vessels for staying or moving on them. In comparison with the dog sleds, always built after one and the same pattern, the boats used by the Amur peoples are very different in form and nature; but it must be stated at the outset that the actual forms adapted to the character of the waters are repeated with minor variations among all these peoples and only a few of them bear a peculiar national stamp.

G 501 484 [226]

None of the Amur peoples spends as much time on the water as the Gilyak, who for the most part live by fishing and who are inclined by their genius for trading to undertake long river and sea voyages. Nevertheless, in spite of the fact that in large part they live along the sea and obtain their food from it, they are by no means bold and skillful mariners and hunters of marine animals, who in small, easily maneuverable vessels, like, say, the Aleut in their bidarkas, /501/ would be inclined or able to battle the high ocean waves. Principally concentrated around the lower course of the Amur River, which offers them, in addition to an extraordinary abundance of fish, a natural and easy route of communication with their close and more distant neighbors as far as the Manchu-Chinese along the Sungari, and, on the other hand, favored by the nearness of a large island stretching immediately in front of the Amur mouth, which cuts them off from the open sea and, with its long meridional expanse, gives them a bridge, so to speak, to Japan, the Gilyak, on the contrary, in their over-all pursuits

G [361] [181]

50 Fishing, and in particular Sturgeon, Hausen, and Salmon. Fishing. Fishing Equipment. Marine-animal Fishing: Seal, White Whale.

226 In the preceding chapters it has been repeatedly stressed
171 that fishing plays a more or less important role among all the
335 peoples of the Amur region, and that in particular its importance increases all the more the farther one goes downstream, until finally, in the region of the mouth of the Amur River, it becomes among the Gilyak the conditio sine qua non for their entire existence. The intermeshing of the various conditions and aspects of life made it necessary for us in the above descriptions of the housing, clothing, and locomotion of the Amur peoples to make many references to fishing itself or to the consequences of it. For example, one must consider the influence that fishing
[1] exerts upon the lesser or greater sedentariness of the various
[2] peoples in the Amur region, in that, to be sure, in contrast to hunting, it gives them in general a more sedentary life, but even so requires a change of locality and dwelling twice a year, and commonly during the summer repeated moves along the water. Furthermore, the more or less predominant part that fishing has in the procurement of their food, clothing, and other necessities of life was discussed. In this connection the kinds of fish most important to the Amur peoples were named, and both the way they are eaten and the preparation of provisions out of them for the use of people and dogs were described in detail.
[1] And so, after all of that, there only remains for us to learn the way, how and by what means, fishing for at least the most important fish is carried on by the Amur peoples, as well as the times when it is done and some of the details connected with it.

/517/ As usual, we shall again start with the Gilyak, and, to be sure, with the Amur Gilyak, who are in every respect superior to their countrymen. To be sure, fishing in the Amur is also done in winter, but then it is relatively not very profitable and ceases completely toward spring when the ice becomes so

226 spongy that it is dangerous to step on it, or is covered with water -- this ushers in the most meager and difficult period for the river-dwellers, since human beings and dogs live on only the scanty remains of the winter supplies. Moreover, all communication between the villages on the Amur ceases at this time. The Gilyak therefore waits impatiently for the opening of the river, when it becomes lively anew and fishing and traffic on it are again possible. The opening up of the Amur River is therefore always a joyful and important event in the lives of the Gilyak and is appropriately hailed by them. As
796 soon as the river is entirely free of ice, a boat manned by as
226 many oarsmen as possible sets out from every village of any size
782 in order to offer it, on a swift journey and amid loud shouts of
114 joy, the customary sacrifices, that is, to toss pieces of jukola, berries, millet, tobacco, and the like into the water. On May 14/26, 1856, shortly after beginning my upstream return trip from Nikolayevsk, I had the good fortune to meet, between the villages of Wair and Magho, such a boat on its sacrificial voyage (see Pl. XXXIX /see p.1008/). It was a long boat with
[50] one steersman and 13 oarsmen. The latter, each with two oars, sat in a row up to the prow of the boat. Above them rose three light racks, each consisting of two upright rods connected at the top by a crosspiece. The oarsmen rowed in perfect time and with full force, and the steersman for his part helped at each stroke of the oars with a powerful stroke of the steering-oar. Thus, amid the wild shrieks of its occupants, the boat shot past us like an arrow. It is therefore not impossible that some of its equipment escaped me. For instance, I saw nothing hanging down from its racks, and yet they must have the purpose of carrying something, even though, in view of their very weak nature, it could only be quite light objects. And so this
[192] automatically leads me to the conjecture that they are intended
[194] to carry the so-called zach, i.e., long, thin, curled wood-shavings, such as are customary in connection with all the events in Gilyak life that are bound up with superstitious ideas, the bear festivals, funeral ceremonies, and the like (1).

1. See p. 662 ff. above.

796 Presumably only loosely hung over the racks upon departure,
226 they could only too easily have fallen off during the rapid
782 and wild voyage and could have been carried into the river by the wind. Indeed, the latter may even have been the precise intention of the sacrificers, for the entire sacrificial voyage is supposed to serve to gain the favor of the river or the river spirit through the gifts mentioned, and through that to secure good luck and success in fishing and during all river travel in the coming /518/ summer and fall. My opinion concerning the zach in connection with the sacrificial voyage on the Amur was confirmed by the fact that in the fall, as soon as a new covering of ice has formed on the river, another celebration with sacrifices and zach takes place. The Gilyak then go out on the ice in front of their village: here a hole is cut in the covering of ice, and beside it a pole decorated with zach is erected. Now the above-mentioned gifts are thrown into the river by means of this hole, obviously to obtain its favor for the winter fishing and perhaps also for the traffic on the ice covering.

226 Immediately after the Amur is open, there comes up it from the sea the best and largest fish that it has to exhibit: the Amur sturgeon (Acipenser schrenckii, Gilyak tukki-tscho) and the even larger Amur hausen (Ac. orientalis, Gilyak patch-tscho). Both go far up the Amur and its major tributaries, the Ussuri, Sungari, etc., and, indeed, of the latter, the kaluga of the Russians, it was reported as early as Pallas that it also occurs in the source rivers of the Amur, in the Schilka /Shilka/ and in the Argunj /Argun/ (1). It has already been pointed out

1. (cont.)

Ac. dauricus, as Brandt also does in turn (Bull. de l'Acad. Imp. des sc. de St. Pétersb., Vol. XIV, p. 172. Among the source rivers of the Schilka, the Onon has it especially abundantly, whereas the Ingoda, as Georgi noted (Bemerk. einer Reise im Russ. Reich im J. 1772 /Notes on a Journey in the Russian Empire in 1772/, Vol. I, p. 353), and recently Maack (Putesh. na Amur" /A Journey to the Amur/, p. 27), is too shallow and stony for it. When in other older as well as more recent reports on Dauria, chiefly Russian ones, reference is made simply to hausen (bieluga) and sturgeon (osetr") in connection with the kinds of fish occurring in its rivers, as, for instance, in Hedenström (Otryvki o Sibiri /Siberian Fragments/, 1830, p. 146), Parschin (Poiezdka v" Zabaikal'skii krai /Journey to the Transbaikalia Region/, Moscow, 1844, p. 117), Hagemeister (Statist. obozr. Sibiri /Statistical Survey of Sibiria/, St. Petersburg, 1854, Vol. I, p. 351), Kaschin ("Nieskol'ko slov" ob" Arguni /A Few Words about the Argun/." -- Zap. Sib. Otd. Imp. Russk. Geogr. Obshch., Book VI, Irkutsk, 1863, p. 103), Middendorff (Reise, etc., Vol. IV, p. 1567), and others, undoubtedly the two Acipenser species named, which go from the Amur up its source rivers, are to be understood.

226 above how greatly the Gilyak prize sturgeon and hausen. The
226 situation is the same among the other Amur peoples. There is
171 eager pursuit of them everywhere, and the methods of fishing are

226 in general the same everywhere. But the individual peoples
[197] prefer one or another method of fishing, according to their nature and the local conditions in their part of the river. The Gilyak chiefly catch them with nets, which are knotted with large meshes and very strong twine so as not to be torn by the resistance of the large animals. The shape of these nets and the way they are handled differ, however, and in this the season of the year in particular is also a definite factor, for it depends, for example, on whether the fish are present in larger or smaller quantities, whether they stay closer to the surface or at greater depths, whether the river is open or covered with ice, and so forth.

Toward the end of May and in June, when the sturgeon and hausen coming from the sea are most abundant around the mouth of the river and stay near the surface, especially in calm weather, the Gilyak get along with a simple, longish-quadrangular net, on the upper edge of which are fastened a few wooden floats and on the lower edge occasional small stones. In two boats the Gilyak go out in the channel of the /519/ river with this net, cast it across it, and, holding the upper ends of the net, let themselves be driven downstream by the current against the ascending fish. If the surface of the river is calm, they recognize with a sharp and practiced eye the approach of a large fish from afar, by a gentle swirling of the water, etc., and guide their boats with the net between them toward the fish. When it has reached the net and has
[192] become entangled in it, the wooden float affected gives notice of it, and now both boats go to the spot where the fish is, the net is lifted, and the fish entangled in it is pulled into the boat by means of an iron hook attached to a pole (Gilyak schab-tschamrch, Pl. XI /see p.1020/, Fig. 2) and killed by a blow on the head with a club. If the fish is very large and the boat small, it is towed by means of a hook and a stout rope and
[411] taken to land to be killed there. The proper club for this is made out of a branched tree-root and equipped with an end piece of stone -- a circumstance which undoubtedly shows the

226 ancient use of this weapon from the Stone Age (1).
[411]

1. I myself did not see it among the Gilyak, but received a picture of it through one of my friends in Nikolayevsk, as well as one of a similar instrument used for smashing the bear skull, which are to be shown on a later plate.

When the water is more agitated and the sturgeon or hausen stay at greater depths, the net, especially at its lower ends, is weighted with larger stones so that it will sink deeper, and at the same time an arrangement is made so that from each of the two lower ends of the net a string runs through several rings plaited out of willow bast on the side edges of the net to the hands of the fishermen. Since, in addition, with more agitated water the entry of a large fish into the net would not be indicated as noticeably by the wooden floats, there are attached to the rear wall of it several thin strings (Gilyak umysij), the ends of which are likewise in the hands of the fishermen, and which by their subsequent jerky tension, reveal the presence of the fish in the net. As soon as this is recognized, the net is raised by pulling on the aforementioned two strings, and thus withdrawal from it is cut off for the fish, whereupon it is killed in the previously described manner.

Finally, the Gilyak also use a bag net for catching sturgeon and hausen. It is likewise equipped with stones at the lower edge of its opening and with wooden floats at the upper one. At each of the places where the ones end and the others begin, there are a ring plaited out of willow bast and a few strings which serve for holding or fastening the net. Fishing with this bag net is done in the same manner as with the above-mentioned net, in that the fishermen go out in two boats, cast the net, and, holding it in between at the sides, go downstream toward the ascending fish. As soon as the movement of one of the wooden floats or the jerky tension of one of the signal lines

/519 cont./

226 (umyssj) running from the walls of the bag betray the entrance /520/ of the fish, the net is drawn together, and the fish is caught. Sometimes this bag net is set permanently in the river, for which two posts are driven as firmly as possible into the river bed at a per pendicular to the bag opening, and the net is fastened to them by means of the rings and cords on its edges on either side. A Gilyak sitting in a boat takes up his station at one of the posts and holds the signal stringers in his hand so that, as soon as a fish has entered the net, he either catches it definitively and recovers it himself or he procures the help needed to do it.

The two last-mentioned nets are also used for fishing in winter, but the ice cover of the river then makes necessary a few other devices and manipulations. First of all, for each net, two holes must be made at a distance corresponding to its length, or, in the case of the bag net, to the diameter of its
226 opening. To scoop out the detached pieces of ice floating in
192 the holes the Gilyak use the hand net (Gilyak chuntulk) (1)

(227) 1. The net stretched in the hoop is called assj in Gilyak, the crosspiece in the lower part of the hoop -- lott, the long and crude handle-stick, with which the new ice that perhaps arose in the hole is sometimes broken up -- kip.

illustrated on Plate XL /see p.1020/, Fig. 3. A special instru-
(229) ment is used for setting up the net under the ice: it is a long,
(532) flat, wooden staff curved slightly toward the tip, the so-called odn, which on the end runs out into an approximately triangular plate with two points directed toward the rear and with two eyes carved in it in a primitive manner, which bears the name odn-tschongr, i.e., odn head (see Pl. XL, Fig. 4).
226 One reaches into one of the holes in the ice with this staff and shoves it forward, close under the ice, until the tip, the odn-tschongr, comes out at the other hole. Here one of the two

/520 cont./

226 upper corners of the net, or, in the case of the bag net, one of the sections of the bag opening equipped with the rings and cords, is hooked onto the prongs of the odn-tschongr, while the other corner of the net, or the place on the bag opening diametrically opposite the first one, is fastened to a pole placed across the hole, and the rest of the net, weighted with stones at the lower edge, is let down into the water. Now the odn is withdrawn, and the corner of the net coming out with it at the other hole is fastened, like the first one, to a pole. In this fashion the net is set up, like a wall directly under the ice, between the two holes. From these also emerge the cords by which it can be raised, and, finally, to one of them run the signal cords from the wall of the net or bag, so that the presence of fish in the net must be watched for here. From the foregoing it is to be seen that the length of the odn, determined by the size of the net and the distance of the holes in the ice from each other, is very considerable. It may therefore consist of several pieces.

(532) The representation of a face on the odn-tschongr is always necessary, however, according to Gilyak belief, and very essential for success in catching sturgeon or hausen. In this connection another /521/ Gilyak superstition should be considered, one specifically referring to the catching of sturgeon
(845) and hausen with nets. It is that a cuckoo feather attached to the net will make the fishing successful -- a superstition to which I shall return later with regard to its consequences.

226 Another way of catching sturgeon and hausen among the
171 Gilyak, though far less common, is to set out fishhooks. This is the same method of fishing that is known in Siberia as siamolowy (automatic fishing) and has been described by Pallas in the various modifications with which it is practiced along the lower Obj, on the Irtysch, Jaik, and along the Volga (1).

1. Pallas, Reise durch versch. Prov. des Russ. Reichs, Vol. II, pp. 339, 444; Vol. III, p. 88.

/521 cont./

226 Among the Gilyak this fishing is done in the following way. An
192 anchor (Gilyak tschabchy consisting of a branched tree-root, or of three wooden pegs connected with one another in the manner shown on Plate XLI /see p.1021/, Fig. 10, and fastened to a stone between them, is lowered into the deep channel of the river by a rope (Gilyak tyk) (2) plaited out of willow bast and

2. Perhaps tyk merely means "rope" in general.

many fathoms long. Extending from this thick rope at certain intervals are thinner and shorter bast cords, and at the end of each one there is fastened a wooden clog (Gilyak kita, ibid., Fig. 9) equipped with a pointed and sharply ground iron hook. From the upper end of each of these clogs a thin string runs to the surface of the water where it bears a wooden or bark float. At certain intervals stones are tied to the main rope so that it will remain lying on the river bed, while the clogs with their iron hooks float some distance above it and, thanks to the floats, assume a more or less vertical or slanting position. Finally, at the very end of the main rope, which is lowered into the water last as the apparatus is being set up, a heavy wooden block is attached as a float, which makes the end of the rope easy to find at any time. The fish going up the river run into the clogs, push past them or even play with them, injure themselves in doing so, thrash about, and only remain ever more firmly hung on the hooks, as is revealed by the movements of the corresponding wooden floats. As soon as the Gilyak notice this, they come along in the boats, wind up the rope from the floating wooden block, and lift the fish into the boat by means of the hooks described above.

226 In fishing for sturgeon and hausen, the Gilyak use the
411 harpoon, though again less frequently than the net, simply because, as was said above, they move on the water with great caution and not too easily and boldly. The fish-harpoons customarily used among them are of two kinds: one consists of a simple iron point equipped with a couple of barbs, which

/521 cont./

226 is also used for seal-hunting and is to be described in the fol-
411 lowing in discussing this; the other is a trident (Gilyak tschak, Pl. XLI /see p.1021/, Fig. 8), with barbs put on each prong. The one as well as the other is /522/ put on the tip of a wooden pole for hurling and, in addition, is tied to the end of a long strap remaining in the hand of the fisherman, by means of which the fish hit is pulled in and out of the water. The former weapon is more common among the Gilyak than the latter and bears the name tugngy.

226 Finally, it not infrequently happens that sturgeon and
411 hausen get into the nets set up for salmon and are caught together with the latter, or, and especially in midsummer with receding water, as I myself have seen, they are stranded in the shallows and then merely need be simply clubbed.

Soon after the opening of the river, the ascent of the species of salmon in the Amur and its tributaries begins, which, all together, lasts throughout the summer and early fall until into October, in fact, even after a new ice cover has formed, not counting the completely stationary species go upstream singly or in small parties, others in mighty processions repeated at intervals, and in particular there are two species of the greatest importance to the Gilyak on account of the great
(136) numbers in which they appear. These are the tengi or tengi-tscho, Salmo proteus, and even more the lyghi-tscho, or on Sakhalin lughi-tscho, S. lagocephalus. How essential and indispensable they are for the diet and the total economy of the Gilyak has already been discussed in detail above. We shall therefore have to go into somewhat more detail on the catching of these fish, and especially the latter. First, however, space might be found here for a few remarks about their seasons of migration both in the Amur and along the adjacent seacoasts to the north and south.

/522 cont./

226 Salmo proteus, the gorbuscha of the Russians (1), is not

1. i.e., the same as saying hunchbacked fish or hunchbacked salmon. As is well known, it is called this because of the bulge that develops on the back of the spawning fish.

only one of the most abundant, but is also one of the earliest species of salmon entering the rivers along the southern coast of the Sea of Okhotsk, northwest of the Amur-Liman, and along the northern coasts of the Sea of Japan south of it. Here it always precedes Salmo lagocephalus (the Russian keta) by a few weeks. According to Mizul, it appears on the west coast of Sakhalin in June and goes up all of its rivers and streams indiscriminately and in great quantities (2). the keta, however,

2. Mitsul', Ocherk" ostr. Sakhalina v" sel'sko-khozyaistv. otnosh. /Sketch of Sakhalin Island from the Standpoint of Agriculture/, St. Petersburg, 1873, p. 46.

appears in them somewhat later and in smaller numbers (3).

3. Mizul /Mitsul'/, op. cit., p. 49.

The situation seems to be similar along the opposite coast of the mainland (4), with the difference, however, that there the keta,

4. In the Ssuifun, according to Barabasch ("Sungar. Eksp. /Sungari Expedition/," -- Voen. Sborn., 1874, No. 1, p. 167), the gorbuscha is caught chiefly and is sold by the Chinese fishermen to the gold-washers in the interior of the country, and in part even as far as Nitguta.

/522 cont./

226 too, appears in great quantities, at least at the mouths of the
6 large rivers. For one spot along this coast, Kaiserhafen at the mouth of the Hadshi River, there are detailed reports concerning the date of the appearance of the two species of salmon named, which here, too, play the principal roles. Margaritof, 226 who, for the /523/ purpose of ethnographic research, spent a
[114] whole summer among the Orochi in Kaiserhafen, reports that there the gorbuscha (okô among the Orochi), as well as the keta (dawâ among the Orochi), have three migration periods each, during which they enter the bay and the rivers emptying into it in greater quantities and alternate with each other in intervals of half a month each, in that the gorbuscha comes there during the first halves of the three summer months, but the keta during the second halves. With regard to the keta, he says in greater detail that their first migration begins around the middle of June and lasts until the first days of July, whereupon a pause of about ten days occurs, after which, about the 20th of July (the statements follow the old style /calendar/), they appear anew and continue to come until the beginning of August; then there is another interruption of a couple of weeks, after which, toward the end of August, the third migration period begins, which lasts far into September. The first of these migration periods, however, for the one species as well as for the other, scarcely deserves the name as such: the fish only appear in small numbers and do not go up the rivers but appear only at their mouths as far as the tide reaches in them. During the second period of migration they advance upstream in shoals, and, finally, in the third, they reach their maximum number, whereupon, however, as a result of exhaustion and the process proceeding in their organisms and, as is well known, manifesting itself by external changes, their goodness decreases in the same proportion, so that the jukola supplies made during the third migration period are the easiest to procure, to be sure, but at the same time are the most
6 inferior in quality. Incidentally, the Orochi are said to
226 prefer the gorbuscha generally for making their supplies of
251

/524 cont./

226 not appear in larger numbers in de Castries Bay until fall, that
6 is, toward the end of August at the earliest and during September.

Farther to the north, in the Amur-Liman, I was told by
226 the Tschorki and Ulchi, unfortunately without any reference to
114 dates, that both species, the tengi-tscho and the lyghi-tscho,
223 were to be found among them, but the latter in numbers in-
187 sufficient for their needs, so that, as has already been men-
480 tioned (4), when this fish migrates, they, like the Gilyak from

4. See p. 647 ff. above.

Tangi, Arkai, and other places along the west coast of Sakhalin, set out for the Tymy River on Sakhalin in order to provide themselves with larger quantities of winter supplies there.

6 Some date for the southern coast of the Sea of Okhotsk,
114 to the northwest of the Amur-Liman, are found in Middendorff.
226 In the list given by him for the dates of the migrations of various fish and especially of the species of salmon at the mouths of the rivers of Siberia and northwestern America, June 22 is given as the arrival time of S. proteus at the mouth of the Udj, and July 9 as that for S. lagocephalus along the same coast (5).

5. Middendorff, Reise, Vol. IV, pp. 1226 and 1227. The statement contained in the same work (p. 1192, note 2), but not in the above-mentioned list and standing in contradiction to the data in it, that S. lagocephalus arrives at the mouths of the Ala and Uda (that is, Udj) fairly regularly about June 10, and 7-10 days later also at the mouth of the Tugur, does not seem trustworthy to me and, incidentally, it gives with the reservation, "as is said." The regrettable, as I must note here in passing, that the explanation of the abbreviations which are used for the sources

utilized for the above-mentioned list of the migration dates of the fish (op. cit., p. 1228) is limited to only a part of them and many remain completely incomprehensible.

Moreover, /525/ the statement that S. lagocephalus does not seem to occur in the waters of Great Schantar Island, whereas S. proteus is caught there (1), is of interest for our purposes.

1. Middendorff, op. cit., p. 1261

226 Finally, so far as the mouth of the Amur is concerned, S. proteus enters it as early as May, soon after the ice goes. But it appears then only in small numbers, only as the vanguard so to speak, of a second, large migration which takes place in June. During the latter month it is eagerly caught by the Gilyak for use in the preparation of supplies of jukola and also goes up the first major Amur tributary, the Amgunj /Amgun/, where it, together with S. lagocephalus, is the mainstay of the economy of the Negda (2). In July, finally, some straggle

2. Middendorff, op. cit., p. 1524.

appear around the mouth of the Amur, but they are scarcely worth mentioning. It would therefore be an exaggeration to speak of three migration periods for S. proteus into the Amur; it is more correct to assume an initial weak migration in May a second strong or principal migration in June. Salmo lagocephalus does not appear in the Amur mouth until August and, in fact, except for a few forerunners, its actual great ascent into the river in shoals begins around the middle of August, reaches its peak toward the end of this month and the beginning of September, and then lasts with waning energy all through this latter month and continues into October, until

/529 cont./

thin cord, initially single, but very soon divided into three strings which are attached by their ends, at about half the length of the net, to its opposite wall. When the net is to be set up, its lower end is drawn together into a bag by means of a strap, it is weighted with stones above at the lower edge of the bag opening, and, by means of the cords on it, it is fastened to the above-mentioned myr piles, whereby the side of the net equipped with the slit in its upper part is turned toward the middle of the river, and the opposite one toward the bank. In order to give the net more support and also in order to pull it out later, a long, thick cord runs from the opening of the bag to the bank and is fastened there to a pile. /530/ Once the net is set up, a Gilyak stations himself in a boat at its exterior point of attachment at the end of the second row of piles and holds the signal cord in his hand, putting each part of it between two fingers. The salmon ascending along the bank and now coming upon the willow plaiting built out crosswise to them find no way through it and, in order to get around it, crowd along the plaiting running downstream and thereby get into the net. This is made known to the Gilyak

A salmon-weir (Gilyak myr) in the Amur River.

on guard by a pulling and tugging on the signal cords, and, as soon as he can assume from the repeated and strong tension on them that the net is

/530 cont./

226 full of fish, he lets the signal cord fall and draws together the opening of the bag, whereupon it is dragged ashore with the booty. Needless to say, besides the salmon going upstream at the time, other fish, sometimes even sturgeon and hausen, are caught in these bag nets. Since some labor and trouble is connected with making a myr, the Gilyak usually erect them only to catch the species of salmon most important to them and at the same time ascending in the greatest multitudes, the lyghi-tscho. They cannot have enough of this fish, and therefore at the time of its ascent the myr are not infrequently seen throughout the Gilyak area of the Amur River.

The Gilyak pursue salmon fishing in the Tymy River on Sakhalin in the same manner and with no less zeal. But this is less suitable for the erection of myr on account of its smaller size and, in places, its shallowness. They are nevertheless in use in its lower course and at the point where it empties into Nyi Bay. It is here that at the time of the migration of S. lagocephalus, 226 in addition to the Gilyak, the Orok, too, zealously engage in 191 fishing and the preparation of fish supplies. Indeed, during the 648 last decades, the Japanese, too, after they have applied themselves, with the help of the Ainu, to the herring fishing on the coasts of southern Sakhalin and the catching of S. proteus at the mouth of the Poronai, generally appear at the mouth of the Tymy at the time of the migration of S. lagocephalus and engage in catching it with great energy and ruthlessness. Poljakof, who met them there at this occupation in August, 1881, reports, among other things (1), that they had first erected a weir of the

1. Op. cit., pp. 70-79 and p. 99.

kind described above reaching across the entire river and opened one-twelfth of the width of the river only as a result of his threatening demand, but then immediately above the first erected a second weir blocking no less than nine-tenths of the river. Under these circumstances it is understandable that they annually take large quantities of this species of salmon out of the

/530 cont./

226 Tymy River: no less understandable, however, is the harm that 191 they do through this to the Orok and especially to the Gilyak of 648 the entire Tymy Valley who rely on the abundance of fish of their river.

Nothing special is to be said about the catching of the fish living permanently in the Amur, such as carp, eelpout, sheatfish, pike, etc. for it is carried on with ordinary nets during the /531/ periods when there is no more important fishing, therefore especially in winter, under the ice, in the same way as sturgeon is then caught. In the calm, lake-like wide places with a muddy bottom, of which there are many along the banks of the Amur River, and which are always connected with it by a more or less swampy branch of the river or a small water-course, I have seen the Gilyak set up bag-shaped nets on poles in order to catch crucians and similar fish, which are abundant in these small basins.

One type of fishing must be given special consideration, both on account of its great importance for some of the Gilyak, and also on account of the characteristic, original way in which it is carried out. This is the kangi fishing along the west and east 136 coasts of Sakhalin. The importance of the kangi fish (Gadus wachnia Pall.) for the Gilyak and the way it is used have been discussed above (p. 653 ff.). The vast quantities in which they appear directly under the ice of the sea permits the Gilyak to 192 employ the simplest means to catch them in abundance. All as a rule, done by the men. On April 18/30, 1855, I witnessed the preparation of the thread in the village of Kulk. With the help of a smooth, wooden knife /Falzmesser/ pointed at the end, called chukka in Gilyak, the dried stems are pressed flat, split lengthwise, and broken on one place, whereupon the skin is stripped off and stroked until it is completely reduced to fibers and all the woody parts removed. With the help of hand-spindles this fiber is spun into a fine thread, part of which is allotted to the women themselves for their sewing work, but the other and larger portion is used for making cord of varying thickness (Gilyak pukij) for the nets. Mr. Maximowicz had an opportunity to watch

/531 cont./

226 stuck in the snow behind him and leaned against a sled turned sidewise served as protection from the wind. There were several other fishermen sitting on the ice in this manner at some distance from one another. As soon as a considerable quantity of fish had been caught, they were carried away on the sled. It is bound to be surprising that the Gilyak do not use a more appropriate method for catching this fish; even a simple net would undoubtedly be far more successful. It seems, however, that the many superstitions associated with the kangi fish, as mentioned above, among them, for example, the one that they may not be put in a bag, makes them persist in the ancient and traditional way of catching them.

In conclusion, it remains for me to say a few words about 285 the making of fish nets by the Gilyak. The material for them is 286 provided by a nettle, Urtica dioica L. (Gilyak chisk, Olcha and 324 Goldi pikta), growing luxuriantly, along with artemisia as tall as a man and other plants common to rubbish heaps, around their dwellings on soil fertilized by refuse of all sorts. Their stems are cut in the fall and soaked in water; in winter they are dried and tied into bundles, and the preparation of thread and twine begins early in the spring, as does the plaiting and repairing of the nets, for which there is a great need in summer. The first 462 part of this work, the preliminary readying of the nettle stems and the preparation of the thread, falls to the women: the twisting of the /532/ string, however, and the knotting of the nets are, 114 as a rule, done by the men. On April 18/30, 1855, I witnessed the preparation of the thread in the village of Kulk. With the help of a smooth, wooden knife /Falzmesser/ pointed at the end, called chukka in Gilyak, the dried stems are pressed flat, split lengthwise, and broken on one place, whereupon the skin is stripped off and stroked until it is completely reduced to fibers and all the woody parts removed. With the help of hand-spindles this fiber is spun into a fine thread, part of which is allotted to the women themselves for their sewing work, but the other and larger portion is used for making cord of varying thickness (Gilyak pukij) for the nets. Mr. Maximowicz had an opportunity to watch

/533 cont./

286 Wound in this manner, the kilks, like a shuttle, moves from one 192 side to the other and back again, providing the material for the net and at the same time, knotting its meshes. But in order to make the latter and at the same time give them a certain uniform size, the kiwu is used, a rectangular little board, straight and horizontal at the top and bottom and indented at the sides, with two, approximately triangular cutouts, which, however, seem to be there only for stringing these boards on a cord, like a bunch of keys, and thus making it easier to store them.

286 The larger the meshes of a net are to be, the larger must 192 be the instruments used in making it, the kilks and the kiwu. 286 The net used for catching hausen (patch-tcho) and occasionally 192 also for seals -- Gilyak patch-kā -- has the largest meshes and, 223 correspondingly, it is the out of the thickest cord. Therefore to make it the largest instruments are used: the netting needle, Fig. 4, called patch-kā-kilks by the Gilyak (also tolles-kilks and kerwagn-kā-kilks), and the corresponding mesh-board, patch-kā-kiwu, Fig. 6 on the plate cited. Then, according to size, the equipment used for the knotting of the sturgeon net, Gilyak tukki-kā, follows: tukki-kā-kilks (also jaghin-kā-kilks), Fig. 3, and tukki-kā-kiwu, Fig. 5 of the plate named. The next smaller, third netting-needle, Fig. 2, called anga-kā-kilks or also nokn-kā-kilks, is used for making the nets with which such fish as pilengat (Cyprinus carpio), mimk (Hypophthalmichthys dybowskii), kych, etc. are caught. A fourth, even smaller netting-needle, Fig. 1, was designated for me by the Gilyak as mych-kā-kilks, that is, as the needle which serves for making the bag net (mych-kā) used in the above-mentioned salmon weirs. They added, 287 however, that nets knotted with this needle were also used for 227 catching the tengi, S. proteus. /534/ From this one may conclude that the bag nets of the salmon weirs used chiefly, or indeed, as far as I could see, exclusively, for catching S. lagocephalus are relatively fine-meshed, for even fish much smaller than S. lagocephalus, such as S. proteus in particular, do not require finer nets. And that is probably the result of learning by experience that with larger meshes in a bag net the fish entering it in

/534 cont./

226 great multitudes and heavily crowding one another could easily 286 slip through, which would considerably reduce or even bring to naught the mass catch of the most important of all fish aimed at by erecting the myr. Furthermore, this bag net need not be made out of a very thick cord, because, when filled, it is immediately dragged to the not very distant bank. I did not see the mesh-board which go with the latter two netting-needles, and which of course, are likewise of correspondingly smaller size in comparison with those mentioned earlier. Since the Gilyak have even finer nets than the mych-kā, such as, for example, the bag nets used in the smaller river-branches and lakes for catching crucians and smaller fish, they must certainly have even smaller netting-needles and mesh-boards than the last-named ones, even though always of the same form; but these are of so much less importance that, when I inquired about them, they were neither able to show me any nor give me special names for them.

286 Now when the knotting of a net with the instruments described is being done, a special wooden fork designed for this purpose is fastened to the bench in the yurt, on the edge of the boat, or wherever the work is to be done, and one of its prongs is used to hold the net being knotted, while over the other one are hung the pieces already completed (1). After the knotting

192 1. The Gilyak designation for this fork remains unknown to me; according to Maack (op. cit., p. 130), the Goldi call it ilaking.

is completed, the net is edged all around with cord twisted out of willow bast and is provided with a second cord of this kind at the upper and lower ends on the outside, running close to the first one and connected with it only at individual points. While 227 fishing, small stones or the above-mentioned wooden or bark 226 floats are fastened between these two cords as required. The 286 nets of the Gilyak are always handled with great care and

/534 cont./

227 consideration, repaired at the slightest damage, and dried in 286 the sun after every fishing expedition. For this purpose they 184 are spread out over special racks taller than a man, and superstition requires that if the drying nets are in a person's way he must always go around them, never underneath them. And, finally, not until the nets are completely dry may they be used again. Treated in this fashion a net lasts for several years among the Gilyak and rewards many times over the care and labor used in making it.

226 /535/ What has been said in the preceding about Gilyak 183 fishing may in general be applied to the Tungusic peoples of the lower Amur region more or less neighboring them, although with a few qualifications and modifications, which are determined in part by the way of life and the character of these peoples and in part by the distribution of those species of fish principally caught. 262 First of all it must be emphasized that, with regard to fishing, all the Tungusic peoples of the lower Amur region differ from the Gilyak, not so much by practicing it by means of any new methods unknown to them as by the essential, crucial fact that none of them is ichthyophagous to the extent that the Gilyak are or is dependent on fishing for its entire economy like the Gilyak, and therefore none of them practices fishing to the extent and with as much constancy, care, and energy as the latter. Among all these peoples, and not excepting the Olcha, who are closest 224 to the Gilyak in all their external behavior and way of life, hunting, as a means of directly and immediately satisfying the urgent needs for food and clothing, plays a far more important role than fishing. Among the Gilyak, and, to be sure, this is more and more generally the case the farther one goes upstream and into the side valleys of the Amur River. Consequently, it must take up more time and labor, or rather must take this away from fishing. In particular, it cuts heavily into winter fishing. In no season of the year does the basic difference in 226 character between the Gilyak and the Tungusic peoples of the 262 lower Amur region appear more clearly than in winter, in that the former remain the same sedentary fishermen, despite vario

/535 cont./

kinds of eager and assiduous hunting of game, whereas the onset of winter seems to awaken in the latter a passion not entirely suppressed by the fishermen's life, which temporarily transforms them, as it were, into hunting nomads. Nevertheless it should not be thought that among the Amur peoples the Gilyak alone busy themselves in the winter with fishing (1). The Olcha likewise

1. As, for example, Arthur Nordmann ("Ueber den Fischfang und die Jagd der am Amur wohnenden Giljaken /On the Fishing and Hunting of the Gilyak Living on the Amur/." -- Bull. de la Soc. Imp. des Natural. de Moscou, Vol. XXXIV, Part 2, 1861, p. 230) says.

The Olcha likewise practice it to a very considerable extent, and the Marinski post in the middle of their area was abundantly supplied with fresh fish by them in the winters of 1855 and 1856. The Amur Goldi, too, devote themselves to it, but it gradually decreases among them going upstream: as I myself experienced, the traveler going in this direction in winter is more and more commonly offered deer, elk, and wild-pig meat or fat instead of fresh fish. Przewalski (2) said of the Usuri dwellers that fishing

2. Putesh. v" Ussur. kraie /Journey to the Ussuri Region/, p. 98.

practically ceases among them in winter because all the able-bodied men go hunting then and only the old men and the women left behind engage in angling. Sitting for hours at the table in the ice, they continually move their tackle, equipped with only a small piece of red cloth or a bit of fat instead of bait. /538/ up and down, and, despite this simple procedure, it is said that on good days they succeed in catching from two to three pood of fish, chiefly carp (Cyprinus carpio) and salmon trout (Salmo fluviatilis Pall.). I found the Samagir along the

/536 cont./

zin-jui (3), hausen, in the Churcha or Mutwan-ho (Mudan-shan

3. According to Maack (op. cit., p. 201), Acip. orientalis is called zing-huan by the Chinese.

in the Russian version), the last large right tributary of the Sungari, and that they are speared with iron fishhooks through holes in the ice in winter, was reported even by the Chinese Utchen in his memoir on Ninguta written in 1722 (4). But of all

4. Vasil'ev", "Zap. o Ningutie /Notes on Ninguta/" (zap. Rustk. Geogr. Obshch., Book XII, 1857, p. 88).

the Sungari tributaries the Nonni is said to be the richest in fish (5). The big sturgeon or hausen which Father Paranin served

5. Barabash", "Sungar. Eksped." (Voen. Sborn., 1874, No. 1, p. 149; No. 2, p. 346).

to the Russian ambassador Ismailof and his party in Peking in the winter of 1721, and which allegedly had been brought from the Amur frozen and packed in snow, may even have come from the Sungari or Ussuri (6).

6. Bell d'Antermony, Voyage depuis St.-Pétersb. en Russie dans diverses contrées de l'Asie, Paris, 1746, translated from the English by M ***, p. 366. According to Maack (op. cit., p. 201), Chinese merchants annually bring hausen and other fish from the Ussuri to Peking to sell.

Aside from some minor differences in details, the methods of catching sturgeon and hausen among the Olcha and Goldi are exactly the same as among the Gilyak, but the inclination toward

/538 cont./

hunting inherent in them, as in all Tungusic tribes, makes it certain that they will prefer methods of fishing that are less common among the Gilyak. For example, the /537/ above-mentioned method of fishing with a hook attached to a wooden clog, which is little used among the Gilyak, is very popular among the Olcha and even more among the Goldi, both on the Amur and in particular on the Ussuri, and, judging by the striking correspondence in the designations for the individual pieces of this fishing apparatus among the former and among the latter (1),

1. For example, the anchor part of this apparatus is called tschabch by the Gilyak, tschabbe by the Olcha and Goldi; the main rope fastened to the bottom by means of it is called tyk by the former, dyka by the latter; the clog equipped with the hook is called kita by the former, kuirai and kuitraie by the latter.

I am inclined to believe that the Gilyak, despite the fact that in most things concerning fishing they may be regarded as the teachers of their Tungusic neighbors, have borrowed this method of fishing from the latter. Still greater and more characteristic in comparison with the Gilyak is the preference of the Olcha and in particular the Goldi for catching sturgeon and hausen with the above-mentioned and illustrated (Pl. XLI /p.1021/, Fig. 8) too, the fact that the Gilyak term for this weapon (tschak) is very similar to that of the Olcha-Goldi (dshogbo) seems to me to argue in favor of a borrowing of it on the part of the Gilyak from their Tungusic neighbors, whereas the much greater and more characteristic harpoon, the tugnay, was probably theirs originally. In the preference of the Olcha and Goldi for this method of fishing, which is closest to hunting, indeed, in fact is more fish-hunting than fishing, their Tungusic hunter-nature is clearly to be seen. Moreover, it is intimately bound up with the boldness, ease, and adroitness with which they glide over the water in small

/538 cont./

extensive trade relations, keep a smaller number of dogs than the Gilyak, their requirements for winter supplies of fish are not as large as among the latter. And naturally they spend less time and effort on obtaining and preparing them. Linked with these more or less purely quantitative differences in the salmon fishing of the Olcha and Goldi in contrast to that of the Gilyak, there are also qualitative ones inasmuch as the individual species of salmon go up the Amur and its tributaries in varying numbers and frequency and therefore vary in their importance for some of the dwellers on it. Salmo proteus, for instance, highly regarded among the Orochi, the Gilyak on the coast and on the Amur, and the Negda on the Amguni on account of its mass migrations, very soon loses its importance farther upstream. To be sure, it occurs throughout the Olcha area and is said to go up the small river emptying near the village of Kada as far as the lake in its upper course; indeed, a fine-meshed net used among them, as well as among the lower Goldi, for catching smaller fish bears the designation daa-magda after it, but it was not named for me among the Gorin fish by the Samagir in Ngaghs, and it is likewise not mentioned by Maack, Przewalski, and others for the Ussuri. On the other hand, another species of salmon, S. lycaodon, which is less important to the Gilyak, receives greater consideration among the Olcha and Goldi. Whereas it plays only a very subordinate role in the mouth part of the Amur River, in comparison to the great masses of S. proteus and S. lagocephalus, between whose migrations it appears in incomparably smaller numbers, its appearance farther upstream comes at a time when there are relatively few fish, in that the former gradually declines and the latter appears later, and therefore meets a definite need of the river dwellers. On July 3/16, 1855, I saw the Olcha of Adi and in the days following also the Goldi of Kõurmi and the adjacent villages upstream busily catching cheike or selike, as they call S. lycaodon; not only did they feast on the freshly caught fish, but they also took advantage of the great schools in which they traveled for the preparation of supplies, which the Gilyak, as a rule, disdain to do with this species of salmon (their well-

/538 cont./

in spite of the fact that the Olcha and Goldi villages named, where I saw S. lycaodon in great numbers, lie quite close to the mouth of the Gorin, it does not seem to enter this latter river, for among its fish enumerated for me by the Samagir the cheike was absent. In the Amur, however, it also occurs farther upstream and is designated by the Goldi above the Geong Mountains with the name uru. Nevertheless it does not seem to reach the Ussuri; at least I did not get any information about it there, /539/ and in the latter reports by Maack and Przewalski concerning the fish fauna of this river, it is not mentioned.

By far the most important of all the species of salmon, however, for all the Tungusic tribes of the lower Amur region, is for the Gilyak, it S. lagocephalus, called daua or dawa (1)

1. The w here is pronounced like the English w.

by all of them. This salmon goes from the lower Amur into all its tributaries, the Amguni, Gorin, Chongar, and Ussuri, and goes up to their uppermost tributaries. In the region of the latter, strange to say, it avoids Lake Kengka, otherwise so rich in fish, and, to be sure, as Przewalski (2) suspects, because of its all too

2. Op. cit., p. 97, footnote.

muddy water. Its migration up the Ussuri is said to last for about 14 days, from the middle of September on. Late in the summer of 1855, when I traveled down the Amur from the Ussuri mouth, I met the first specimens of S. lagocephalus going upstream on August 25 and 26 (September 6 and 7) near Sioja and Emmero at the outlet from the Geong Mountains. Just three days later, near Chongar and Ommoi, I met it in mass migrations, and the Goldi were completely absorbed in catching it. In the latter village, where I rested for a few days, an old and very intelligent man told me that the mass migration of the daua lasted here for about 10 days, after which it was scarcer, to be sure, but continued to migrate for another 20 days or so. Farther downstream [Gilyak, the villages of Adi and Kõurmi--Analist] in the Gorin fish, chiefly carp (Cyprinus carpio) and salmon trout (Salmo fluviatilis Pall.). I found the Samagir along the

/539 cont./ Farther downstream everything revolved exclusively around the catching of this fish and the preparation of winter supplies out of it, everyone feasted on it, the drying racks standing around the yurts were hung with tight rows of cut-up fish, like wide red ribbons, and the refuse poisoning the air yielded abundant food for the dogs, crows, and blowflies. In Mongolo, near the northern boundary of the Olcha, on September 13/26, the people thought that the mass migration of the daua had already come to an end, and only straggler were still going upstream. Nevertheless I found the Gilyak as far as Nikolayevsk still busy everywhere catching lyghi-tscho, either at the salmon weirs or with the help of ordinary nets. By the way, the catching of S. lagocephalus is done among the Olcha and the Goldi in precisely the same way as among the Gilyak, in part with ordinary nets, which, with meshes of a definite size, bear the name daua-magda after this principal fish, and in part with the help of the above-mentioned salmon weir, called mynga by them. The bag-shaped net on this latter (adule) is also made exactly like the myreh-ki of the Gilyak, is likewise equipped with signal cords (Gilyak umyss), Olcha and Goldi sirachs), and is also handled in the same way. But the salmon weirs of the Olcha and Goldi, in accordance with the above general remarks about their fishing in comparison with that of the Gilyak, are, as a rule, smaller, less carefully made, and less numerous than among the latter.

Prior to the surplus of fish brought about by the appearance of S. lagocephalus, there is a rather long period that is relatively poor for fish, during which the Olcha and Goldi /540/ are dependent on the fish living permanently in the Amur. The most important among them, aside from the species of Acipenser already discussed, are several cyprinoids, such as Cyprinus carpio (Olcha ua, Goldi kyaga; Carassius carassius vulgaris (Olcha and Goldi chargi), Pseudaspius leptocephalus (Olcha and Goldi suwa and ava), Hypophthalmichthys dybowskii (Olcha and Goldi takko and tawa), Leuciscus erythropterus (Olcha and Goldi diadi ch), and other fish as well as Salmo fluviatalis (among the Olcha and Goldi dhal, among the Samagir on the Gorin dishl), the sheatfish, Silurus asotus (Olcha and Goldi lachu), and the pike (Olcha koro, Goldi guzza, Samagir gutscha).

/540 cont./

Goldi guzza, Samagir gutscha). I have even seen jukola made from the last two, though only in small quantities and for the immediate future. Certainly a river so rich in fish as the Amur could provide the dwellers on it with a rich yield of fish even when it is not filled with species of salmon going upstream, if only they were willing to fish with diligence and energy, but in this respect the Olcha and Goldi fall far behind the Gilyak. I sometimes saw the Goldi badly in want in the middle of summer but instead of energetically going fishing, which would certainly have crowned their efforts with success, even though not to the same extent as in the period of the migrating salmon, they contented themselves with lazily and comfortably angling for small fish near the shore, which were supposed to relieve their momentary distress. They lack what is needed to overcome their natural indolence, the peculiarly Gilyak love of fishing, if it does not have the character of hunting, as in the case of sturgeon and hausen fishing carried on with a harpoon.

With regard to the fishermen's nets of the Olcha and Goldi, it is to be noted that, with the same nature as the Gilyak nets, they nevertheless present some variety with regard to the materials used in making them, for they are not only made out of nettles, but also, and, to be sure, the more frequently the farther upstream one goes, out of the stems of the hemp plant (Cannabis sativa L., Olcha and Goldi onochto), which grows in great profusion along with nettles and artemisia around their yurts. Moreover, instead of the stones which the Gilyak sometimes use to weight their nets, they use oblong-parallelepiped pieces of clay (libicha) intended expressly for the purpose, which fit exactly in between the two willow-bast cords (Olcha and Goldi bartoche) framing the net and are equipped with suitable straps for being fastened to them. For making these net-weights, a wooden mold consisting of two individual halves is used. It is first greased with fish oil, then the clay is packed in, and any protruding beyond the mold is cut off with a knife. These pieces of clay are not fired, however, after they are taken out of the mold, but instead are dried and slightly hardened on the seven Sling benches or in front of the hearth-fire in the yurt.

/525 cont./

226 [114] The dates given here for the migrations of S. proteus and S. lagocephalus at the mouth of the Amur agree very well with the dates given above for various points of the northern part of the Sea of Japan, especially if one keeps in mind, as is required on the basis of the available data, the multiple, intermittent, more or less large migrations or ascents of one and /526/ the same species. If one also takes into account the greater or smaller numbers in which they appear at the points mentioned above, one comes to the conclusion that S. proteus and S. lagocephalus, moving northward from the northern part of the Sea of Japan reach the Amur-Liman and the mouth of the Amur River, in the course of which the former, especially toward the end of its migration period, enters all the bays and inlets, and even the smallest rivers of both coasts, in great quantities, whereas the latter visits only the larger and major ones among them, but avoids the smaller ones, and in the main, moving against the current coming from the Liman and strongly mixed with fresh water, strives for the mighty Amur in order to go far up into its extensive network and in particular into the large tributaries of its lower course. In the following, while discussing the fishing of the other peoples of the Amur region living upstream from the Gilyak, we shall repeatedly encounter it on its migration. First, however, we must remain for a moment with the appearance of S. proteus and S. lagocephalus in the Gilyak area.

226 192 805 The arrival and the mass migration of these two fish especially *important for the economy of the Gilyak* are, of course, phenomena of such extraordinary significance for them that they are used by them to designate the periods of the year, the months, in which they occur. For instance, May is known among them as the month in which the tengi-tscho (S. proteus) first comes upstream, walten-tengi-long, and June, in which its mass migration takes place, tengi-wota-long (1). August

1. Long in Gilyak means "month"; I am unable to offer a detailed explanation of the expressions "walten" and "wota," but

/526 cont./

226 192 805

1. (cont.)
it seems to me that in these as well as in the following designations for the months the first expression refers to the first and still sparse appearance of the fish concerned, and the latter to the main or mass appearance of it.

during which the lyghi-tscho (S. lagocephalus) goes up the Amur River in colossal numbers and the activity of the entire population is required for the preparation of winter supplies, is called among the Gilyak lyghi-wota-long or pilja-tschrar- (2), or simply

2. The word "tschrar" is undoubtedly related to "tscho," fish.

pilja-long, i.e., the "great fish-month," or also simply "great month." This latter designation gives especially convincing evidence of the great importance which S. lagocephalus has for the entire economy of the Gilyak. In comparison with June and especially with August, July is only poor for fish. Among the species of fish peculiar to it S. lycaodon (Gilyak well, the nerka of the Russians) is the most prominent. This species of salmon, however, only plays a certain role farther upstream, among the Olcha and Goldi, which will be discussed at the appropriate place, but for the Gilyak it is of no special importance, inasmuch as it does not appear by far in such quantities as S. proteus or even S. lagocephalus and does not provide as good and as long-lasting a jukola as these do; indeed, in view of the certain quantities of lyghi-tscho to be expected soon, the Gilyak regard it as useless and not worth the trouble /527/ to prepare jukola supplies from the well. In contrast to August, the "great fish-month," July is therefore called by the Gilyak matschn-

226 192 805 /527 cont./
tschrar-long -- "the little fish-month" (1).

[128]

1. At the appropriate place in the following there will be a discussion of the other designations which the months May-August bear among the Gilyak and which are derived from factors other than the periods of the migrations of fish, as well as the names customary among them for the other months.

226 The direction and the time of migration of S. proteus and S. lagocephalus along the east coast of Sakhalin seem to be somewhat different than in the northern part of the Sea of Japan, in the Liman, and at the mouth of the Amur. According to Mizul, the former goes along this coast from south to north, reaches the Bay of Patience about the middle of June, and in July and until late August goes up the Plyi or Poro-nai and its tributaries. During the first half of August it also appears along the island's coast located to the north of the Bay of Patience, goes up into the Tymy River, and by the middle of this month and until late in the fall is found in its upper course and its tributaries. S. lagocephalus appears somewhat later than S. proteus, and, as Mizul expressly remarks, first in the northern part of southern Sakhalin and not until later in the southern part, so that its migration here, in contrast to that of S. proteus, seems to go from north to south; moreover, it appears there in smaller quantities and not in all, but only in certain rivers, in these, however, every year, though in variable numbers (2). It therefore seems principally to strive

2. Mizul, op. cit., pp. 46-49.

for the larger rivers on the east coast of Sakhalin also, that is, the Poro-nai and especially the Tymy. At the mouth of the latter, in Nvi Bay, Poljakof in 1881 witnessed the mass appearance and ascent of S. lagocephalus into the river, which continued

226 throughout the second half of August and did not decrease until the 30th (3). For the Gilyak living along the Tymy River, and

3. Poliakov", Putesh. na o. Sakhalin" v" 1881-1882 gg. /Journey to Sakhalin Island in 1881-1882/ (supplement to Vol. XIX of Izv. I. R. Geogr. Obshch.; p. 97).

226 184 805 For the Gilyak living along the Tymy River, and especially along its upper course in great density, September is therefore chiefly the month that brings them the greatest quantities of laghi-tscho, so essential to their economy, and in which, traveling to meet the ascending fish, they devote themselves entirely to fishing and the preparation of supplies of fish for the winter. This explains the fact, repeatedly told to me by the Tymy Gilyak, that among them not August, but September bears the name pilja-long, "great month," whereas August, less rich in fish in comparison with it, is designated only as matschki-long, "little month." Thus, as a result of somewhat different natural conditions, a shift in the names for the months customary among the Amur Gilyak takes place there (4). Whether this also extends to the Tro Gilyak, for

4. The shifts or other differences in the names of the rest of the months that occur among the Tymy Gilyak in contrast to their countrymen on the Amur will be discussed later where appropriate.

whom the names customary along the Amur would actually be more appropriate, I am unable to say because I had too little contact with them. But it is not impossible, since the Tymy Gilyak speak the same dialect as they do and generally have a /528/close and, to a certain extent, decisive relationship with them, similar to the one that the Amur Gilyak have with those of the Liman, the west coast of Sakhalin, and the south coast of the Sea of Okhotsk.

/528 cont./

226 The great numbers in which the salmon, and in particular the two species repeatedly named, go up the Amur and its tributaries make catching them in the largest quantities an easy matter for the Gilyak. In the small tributaries, such as the Litsch, Kamr, etc., the fish crowd and almost push themselves onto the bank and can be taken from the shallow water simply with the hand, and from deeper water scooped up in dragnets or pulled up with hooks and thrown into the boat. Women and [251] children participate in this work, and within a short time one [252] boat after another, filled with fish, returns home, where the previously described, more strenuous work of skinning, cutting up, and hanging the fish on the drying racks is undertaken. [462] While the women attend to this, the men bring more and more new material. In the smaller rivers, a net is also often drawn across the entire width of the river, and in this manner the whole shoal of fish ascending at the time is caught, insofar as [462] the net permits this without tearing. In the large river where fishing is done exclusively by the men, the schools of ascending fish are likewise so densely crowded that the simplest nets suffice to catch vast quantities in a short time. The fishermen, in two boats and holding a net between them, go downstream toward the ascending fish and draw up the filled net first into the one boat and then into the other, until both are full. Or two men, holding one end of a net, travel downstream at some distance from the shore toward the fish, while a third man, with the other end of the net in his hand, walks along the shore in the same direction. When they notice that the net is sufficiently filled, the fishermen sitting in the boat turn their vessel about and quickly row toward the man walking along the bank, in order to jump out of the boat near him and, joining forces, 227 drag the net to land. The nets used for catching salmon are given different names by the Gilyak in part according to slight differences in shape and the manner in which they are used and, in addition, are differentiated according to the species of salmon for which they are intended on the basis of the size [192] of their meshes. For example, the above-mentioned, simple,

/528 cont./

227 192 quadrangular net is called tschessk and, depending on the size of its meshes, is a lyghi-tschessk or a tengi-tschessk; another one was named for me as kyrn-kä and likewise distinguished as lyghi-kyrn-kä and a tengi-kyrn-kä (1), etc.

1. Kä in Gilyak means "net" in general.

226 In order to catch greater quantities of the ascending fish without much trouble, weirs are erected from the bank into the river for the purpose of deflecting the fish from the direction of their migration and directing them into a bag net set up alongside. For this, places are chosen on higher banks in the vicinity of a projecting tongue of land, where there is a stronger current and, as is known from experience, the fish usually ascend in great multitudes. /529/ The nature of such a salmon [192] weir, called myr among the Gilyak, is the following. From the bank a series of piles one fathom apart is driven out into the river, and from the end of it, at a right angle, a second, shorter stretch running downstream is driven into the river bottom. The spaces between the piles are then so closely interwoven with osier switches from the surface of the water as far down [192] as possible that the fish can find no exit. Between the lower end of the row of piles running downstream and a single post standing some distance from it and closer to the bank, the bag net, the myrch-kä of the Gilyak, is fastened. This has the shape of a long funnel very gradually becoming narrower toward the bottom: a specimen from the village of Tschcharbach that I measured, spread out on the ground, had a length of six and a half meters and a width of three meters at the upper end and one and a half meters at the lower one. From the upper edge of this funnel-shaped net, equipped with two parallel willow-bast cords, a slit in the net about 12 decimeters long runs down along one side, and on each of the two tips thus formed along the edge of the funnel are put two cords, which, like the similar cord found diametrically opposite them, serve for fastening the net to the appropriate piles. Furthermore, from one of the above- [192] mentioned tips there extends the signal cord (Gilyak umyssj), a

edition), p. 390 and note 7. Veniukov's observation that the language of the Gilyak is radically different from that of the Tungus is completely confirmed by Jakobsen. That is the reason for the wording of the text.

differentiated from the neighboring Goldi with regard to language whereas in biological make-up they are only slightly different from them. According to photographs that the traveller acquired on the spot and has brought with him, the beard growth of the Gilyak seems to be somewhat heavier than that of the Goldi, without however, reaching the thickness of growth of the Ainu on Sakhalin Island. Originally they probably occupied the bank of the Amur up to the Gorin, while nowadays the southern boundary of their territory lies about 100 versts above Nikolayevsk and their former territory is now inhabited by the transitional people that we mentioned repeatedly in number 10 of this volume [see Goldi source 18: Genest--Analyst]. They occupy the northern part of Sakhalin Island but one will also encounter them among the Ainu in the southern part of the island where they probably came as laborers for the Japanese fishers (3) or

3. We will have more to say below about the Japanese fishers on Sakhalin Island. Jakobsen encountered Gilyak even on Aniva Bay.

for the purpose of hunting sable. Formerly their settlements were particularly numerous along the shallow shore of the island across from the mouth of the Amur. But these had [379] disappeared by the time Jakobsen passed along this stretch of shore because the Gilyak who used to live there had fled from the maltreatments of the convicts deported to Sakhalin Island. They had, however, established new settlements near their former residences, for the traveller observed a large number of boats the occupants of which were Gilyak engaged in fishing in the sound (1).

1. In all these boats there were also dogs which were set on land to pull the boats along whenever the wind was against the fishermen as well as whenever they were struggling against the strong north-south current that predominates in the Tatar Strait.

Goldi RKS

/600 cont./

1/2 ja, a whole fur-coat of squirrel skins 7 ja), whereas the Gilyak with their great wealth of precious furs, pay no attention to these worthless, trifling materials. In further contrast to the Gilyak, limiting themselves almost solely to catching fur-bearing animals and fur trading, the Goldi also bring the hides and skins of the deer-like animals eagerly hunted by them to trade with the Chinese (a roe-deer hide, for example, costs 1/2 ja among them, a red deer or elk hide, untanned, 1 ja, tanned 2 ja). Like the furs, the principal products from fishing also have a higher price among the Goldi than among the Gilyak (a large sturgeon, for example, costs 10 ja among the former), on the one hand because the fish supply in the Amur River decreases upstream, and on the other hand because they are nowhere near as productive in this respect as the Gilyak, who are devoted exclusively to fishing. Cereals and vegetables (beans of various kinds), however, seem to be cheaper for them than for the latter, both on account of their greater proximity to the agricultural Chinese and because they themselves cultivate some vegetables. Finally, the same is quite decidedly also the case for tobacco, in that one "string" of it, equal to three hundred bundles, is valued by them at 20 ja (2).

2. At 30 ja by the Gilyak, according to the above table /see p. 935/.

Incidentally, immediately after the arrival of the Russians, the value of the Chinese (Manchurian) tobacco rapidly sank in the eyes of the Gilyak, since the far stronger Russian (Circassian) tobacco is much more to their taste.

Since principal commodity of the Amur peoples in trading with the Chinese consists of animal skins, and in particular sable, fox, and otter skins, and the Gilyak, as we saw above, are, on the whole, only /601/ clumsy and not very industrious hunters, they must, above all, in order to be able to carry on this trade on a large scale, think of procuring this commodity in the largest quantities possible, not only by hunting, but in another way better suited to their nature. To this end they trade with their

/669/

423 224 226 619 Finally, they also embrace the communistic that they have no limitations or restrictions on fishi ing, except for the places on the river where they h salmon weirs and those spots in the forest where the self-shooters are set up. Thus they tolerate it, wh limitation, when the Liman Gilyak go to the Amur and the Tschomi Gilyak go far downstream on the T for salmon fishing, and the latter, in turn, move to coast to catch kangi. It is true, the Tschomi and t Gilyak have ties of hospitality with each other. Al [648] vast forest the Gilyak permit even Olcha and Samag trate into their territory without molesting them.

685 [421] [123] Like the communism, the inviolability of pro based upon the national principle. I have seen eve dignified Gilyak men who could not resist a small t ample, a piece of butter or the like, quite apart fr people, who go so far as to cut open and pillage tra etc., as happened to me in the village of My in the [186] Liman. I was repeatedly warned by the Amur Gilya inhabitants of the village of Langr, located at the e 685 648 the latter. The opposite, however, that the Russian the Gilyak, happens much more frequently, and the to remove a makeshift door or a fish net hanging in to enter a storehouse and to pillage it is indeed muc Even the small burial houses were not safe for their though they did not contain anything but a few artic bolic significance. Thus it came about that I becam [192] with the principal international relationship betwee peoples from the Gilyakized Russian term for "to ste Russ. ukrastj), and the Gilyak word (enngarsitsch) di known to me until much later. But it hardly ever h one Gilyak will steal anything from another. Indee 685 123 persons, such as Judin in Tebach, Mradamn in Ssaba whom I could fully trust even from an international The former, for instance, after a few days, returned cigar case which I had left in his yurt, and there wa

Economy and Everyday Life

226 [433] The Nivkhi's basic occupations were fishing and sea hunting. The most important fishing activities involved runs of the salmon species—Siberian salmon and humpback salmon. These were caught in "zyyezdki," nets and seines. A "zayezdok" was an L-shaped barrier of thick stakes and twigs, set at right angles to the shore with the transverse bar along the current. On this bar, the Nivkhi set up a drawnet, near which they kept watch in a boat. The fish, going in a solid mass along the shore, hit the wall of the trap and turned and swam into the net. When they saw the movement of the signal ropes, the fisherment lifted the net and emptied it into the boat. By this [433] method, several days' fishing produced 4000-5000 fish, which quite filled the [496] needs of the fishermen. The "zayezdok" was usually built jointly by several families.

The seines, fairly small in size, were formerly made of nettle fiber. 227 [283] They were pulled by two or three fishermen, one of whom walked along the shore, while the other two were in a boat. Later, the Nivkhi learned from [177] the Russians to sew together large seines. Beluga and sturgeon were caught with harpoons and hook-tackle—the hooks at the end of short cords, attached to a long rope stretched in the water.

Very important to the Nivkhi was fishing for (single-net fish), carried on throughout the year. These were caught with fishing rods, fixed nets (winter and summer), floating nets (summer) and seines (during the spring and autumn seasons).

225 The Nivkhi living in Sakhalin and in the estuary did a good deal of sea hunting. They hunted sea lions and seal. The former were caught in large fixed nets. Seal were hunted in early spring, at the first sign of breaking ice. They were killed with harpoons and clubs as they climbed up to warm themselves on the ice floes. Seal-hunting continued into the summer as well. In open waters, they were hunted with a floating harpoon (iykh). This consisted

286 516

Sewing together a seine.

Means of transportation and hunting:
1—river boat made of boards; 2—old dogsled; 3—club for killing seal; 4—brake poles used in steering sled; 5—old dog-harness; 6—fishing with seines.

d was prepared with
-oil or seal-fat. A favorite delicacy was mos', prepared with fishskins,
-fat, berries, rice, and sometimes crumbled yukola. Another favorite
was talkk—a salad of raw fish, garnished with wild garlic. The Nivkhi
ame acquainted with rice, millet and tea from the time when they traded

Among the Sakhalin Nivkhi, who differed in their economy and material culture from the above peoples, socialist reconstruction followed a somewhat different pattern. Many Nivkhi went to work in fishing and lumbering enterprises. The first Primary Productive Organizations were organized among the Nivkhi in 1927. Subsequently, the Nivkhi began to socialize the instruments and means of production—nets, boats, dogs, etc., and went on to a more advanced form of social production—the agricultural cooperative. A part of the Nivkhi population joined Russian collective farms, situated near Nivkhi villages.

As they learned new methods of conducting their economic activities and mastered new techniques of production in the collectives, the Nivkhi began to develop new economic activities, formerly unknown to them; tillage, gardening and cattle-breeding. At first, the work of the Primary Productive Organizations, particularly on the eastern coast, where villages lie at considerable distances from one another, was seasonal in character. The Nivkhi gathered at the fishing camp from several nearby villages and fished cooperatively for 3-4 months, after which they dispersed. In winter, they engaged in carting, using dogs as draught animals. Later the cooperatives became permanent. As a rule a collective farm was first made up of the inhabitants of one village. But larger collectives also developed, such as the "Chir-Unvd" ("New Life") collective, which united the economies of three villages along the middle course of the Tym' River (Kirovskiy Rayon). An important role in the organization of collectives was played by the Nivkhi youth, particularly by members of the Komsomol.

The organization of collectives and their successful development were openly resisted by the rich Nivkhi and former elders. The greatest resistance was to the building of new collective-farm villages and the resettlement of the members in new sites. The resettlement was necessitated by the need to enlarge the villages, which had often consisted of two or three houses, and to transfer them to more convenient places, nearer to good fishing areas. The Soviet government spent large sums on this. Most of the collective members left their old smoky dwellings and moved to new, bright homes.

At present, fishing occupies an important place in the Nivkhi economy. The former primitive fishing methods have been abandoned. Along with seines, the fishermen set up more efficient zayezdki; manually worked scoops have given way to winches; fish is transported on Amur sailboats (kungasy) and cutters; and Motor-Fishing Stations (MRS) provide extensive aid to the collective fishermen.

Many Nivkhi collective members participate today in fishing expeditions. To do so, they travel to Okhotsk and other districts. Expedition fishing usually lasts from April to August. It is also carried on in Sakhalin, where the continental Nivkhi also come to work. In spring, the members of the fishing collectives hunt seal in the estuary and on Sakhalin. In winter, they hunt fur-animals.

Agriculture is a new branch of economic activity among the Sakhalin Nivkhi. The first Nivkhi agricultural collective, "Chir-Unvd," was organized in 1930 along the basin of the Tym' River in northern Sakhalin. In 1937, the collective already consisted of some 50 households. Its acreage under cultivation rose from 1.5 hectares in the first year of its existence to 61 hectares in 1937. The main crop was potatoes. The collective farm has its own skilled agricultural personnel—brigadiers and team leaders—although there was a time when the Nivkhi considered agriculture a great sin. As the old men used to say, "He who digs or plants will die."

were forced to take the boat from him for not one of them had a boat suitable for sea voyages.

In the previous examples of the distribution of the quarry we saw that the share of the owner of the boat who also happened to the pilar was precisely the same as that of the other hunters and that he was not specially rewarded for supplying the boat and for his work in connection with organizing and leading the collective.

The last quoted example illustrates the exploitation that arises out of ownership of the tools of labor. The Exploitation is effected under the guise of the particular form of leasing tools. Here the owner of the boat does not participate in the hunt. He rents the boat to others and still gets a share of the quarry which he would get had he participated in the hunt.

Going from Kul - which is at the present time the northernmost Gilyak village on the continent - in the direction of the town of Nikolayevsk -na -Amur, until recently the center of capitalist influence on the Gilyaks, we note an interesting phenomenon. In the villages located in the proximity of the town of Nikolayevsk-na-Amur and, consequently, exposed most pronouncedly to its influence, the owner of the boat until recently claimed two shares: one - as a participant in the hunt and the other - as owner of the boat. This represents another forward step in the development [91] of the exploitative relations whose rise we noted in the fishing industry of the Gilyaks of the village Kul. On top of that, the owner of the boat claims shares for his wife and children who take no part whatever in the hunt.

The tendency to claim for oneself extra shares of the quarry can be explained by the fact that some time after the founding of the town of Nikolayevsk-na-Amur the commercial value of fish increased. The lower reaches of Amur, one of the world's richest Siberian salmon areas, attracted many people from the fishing industry as well as merchants, who brought up Siberian salmon from the Gilyaks. The Gilyaks of the lower reaches of the Amur, who formerly traded with the Chinese and Japanese began selling Siberian salmon to the Russians; an item of no importance in their trade with the Chinese and Japanese. Owners of zayezdki and seins turned into entrepreneurs supplying whole-sale fish-dealers, Luri, Viderman and others. They began to increase zayezdki and to hire labor from among Russians, Koreans and, especially, Gilyaks who come to them from Sakhalin and from the villages located North of Nikolayevsk-na-Amur. "With a zayezdok as a source of income, the Gilyak turned into a rentier who was always idle and drunk throughout the summer, "says the ardent colonizer

471 exploitative relations evolved among the Gilyaks on the basis
427 of ownership of the tools of labor did not produce new forms
476 of distribution. Distribution persisted, as of old, in the form
226 of the hunter's ancient way of dividing the quarry into shares.
177 It was only new claimants of shares who appeared. A new content was given to the old form. The owner of the tools of labor, striving to receive a greater part of the quarry, began to claim shares for members of his family who did not participate at all in the process of production such as wives and children. (2) He would also claim shares for the renting

2. I was told of cases where, on the island of Langer the owner of the seine sometimes included into the artel his young son who was capable only of performing minor tasks. Still, the father would obtain a full share, locally pay, of the quarry for him.

of the tools of labor such as the boat and the seine and even for the use of the bench in the boat (mlət) and of the stick over the door of the house (ŋəmr-ṭis).

We give here illustrations of the above.

225 According to the Gilyak argun (?) now living in the village
471 Cəarva (Charbakh), back in 1917 or 1918 he and three other
427 Gilyaks from the village Kal'ma as well as fourth one from the village Təlmə went to the lower reaches of the Amur and worked there during the run of Siberian salmon on the island Langer for the Gilyak Armən who was an inhabitant of the island. I often saw Armən in 1931. Armən's brother worked with him. In all there were seven men working. When the fishing season was over, Armən divided the quarry. He and his brother got six shares, while the remaining Gilyaks received five shares, one share per man. The six shares obtained by Armən were accounted for as follows: one share for Armən, one share for his brother, one share for the use of the boat, one share for the use of the seine, and finally, one share each for his wife and his old mother, neither of whom took part in the fishing.. The Gilyak workers got no shares

116, 226, 411

"Vanka, . . . got out his long fish-spear (marikh), and, balancing himself on the prow of the boat, skilfully lunged at passing salmon. His weapon, which is one of a kind used by many of the tribes of North-Eastern Siberia, was of a peculiar character. To the shaft, which was about fourteen feet long, a large iron hook was loosely fastened by a thong. Close to the end was also another thong, bound round three or four times, but just loosely enough to allow of the hook being temporarily slid into it, the 'business' end free and pointing with the shaft. Ready now for action, the weapon was like a magnified letter h. On sighting the gleam in the limpid depths beneath, the skilful harpooner gives a rapid thrust, and the belly of the salmon is pierced. The action of piercing looses the hook from the threefold thong, and the struggles of the fish now only serve the hook, which is dangling from the first thong, to gain a firmer grip.

The first lunge by Vanka proved unsuccessful, as a cry of 'Kaukray' announced; again a silvery gleam, and [172] a second attempt had happier results, for a kita of fifteen to twenty pounds was hauled in, splashing and somersaulting. A blow on its head, and the fish lay dead; whereupon our Gilyaks whipped out their knives, and, like the Red Queen in 'Alice in Wonderland,' 'offed with its head,' and with teeth and knife devoured their tasty morsel raw, leaving nothing but the jaws. The natives regard the head of a salmon as a great delicacy, especially the cartilaginous parts, and in this they can claim kinship with the bear, for during the spawning-season Master Petz will come down to the river's edge, and in one night spoil a score of kita, devouring the heads, and throwing away the bodies."

484 sled is 70-80 rubles.

492 The chief value of the dog as a draft animal is the fact that he does not sink in so far in deep, loosely-packed snow as the horse, and in general is much more agile, so that a dog-sled finds its way without a road where horses sink in up to their chests and cannot move from the spot. Moreover, one can [118] take along food for the dogs and thus visit uninhabited regions. 13-15 dogs can draw a man and about 30 pood of baggage. However, this applies more to Russian teams, for the Russians feed their animals better (1) and their dogs pull

with their chests.

481 As is well known, snow shoes are used for walking on the loose snow, for one's foot does not sink in very far. The Gilyak snow shoe consists of a board of larch wood about two arshin long. On the bottom it is covered with seal-skin, the hair of which is turned in such a way as to prevent the shoes from slipping back.

226 VII. Trades and Occupations

286 These consist of hunting, fishing, and the indispensable tasks connected with housekeeping, clothing, etc.

Fishing. Smaller fish such as carp, whiting, etc., are caught with nets. The net is made of nettle thread or hemp fiber. (2) The dried plant is exposed to the frost for a time,

2. Only wild hemp is used.

then it is unraveled and the fibers are spun. The spindle is like that used by the Russians. The long, lower end of the shaft is taken between the legs, the disk is set into motion and at the same time one end of two long strands is tossed over the head of the spinner, while the other end is pressed against the spindle shaft, turned, and wound up. The net is braided with wooden needles. Both tasks are the duties of the women, but sometimes the men also condescend to do them.

226 Carp, pike and whiting are sometimes caught with a fishing rod. Fish roe is used as bait. In places along the coast haddock is also plentiful that there is a special kind of hook used for it. The end of the line is studded with a number of hooks which face in all directions; in winter such a line

226 without any kind of bait on it is lowered into a crack or a hole drilled into the ice and is as a rule immediately pulled up with one or more fish attached to it. [119]

Sturgeon are caught with hooks. Large iron hooks are fastened to pieces of either wood or cork by means of a rope which in turn is held in place by heavy stones deep in the water, that is, not much above the bottom. The sturgeon which goes down deep is, curiously enough, attracted by the moving pieces of wood, he "plays" with them, as the natives say, and thus gets caught by one or another hook. In winter this fish is also caught in strong nets, for at this time it is supposed to be weaker.

The greatest activity occurs at the time of the salmon run. The results of it influences the lives of these people for the rest of the year, therefore whole swarms of Gilyak are to be found on the Amur. The fish are caught by means of enclosures (1): near the shore a row of posts are driven into the

1. Called sayesdka by the Russian fishermen.

river bed; in general the enclosure has this shape ⊓, the open side of it is turned toward the mouth of the river from which the fish comes. The fish bumps against the wall, turns sideways, and is caught in the bag which is lowered from the boat on the inner sides of the enclosure. At the height of the salmon run there are such masses of fish that the bags are filled almost as soon as they are lowered. The fish weighs 8 to 12 or even 20 pounds and costs three to five Kopeck.

226 The women also take part in this catch. There is no partic-
423 ular organization in the matter of assigning the fishing places but care is taken that every head of a family fishes where his father and grandfather did before him; this place in the river is then practically his property.

225 Dolphins are harpooned, but this is considered a difficult
411 hunt. The animal is cautious and does not let the hunter come very near; and should this happen, the wounded animal can easily upset the boat. The harpoon consists of a long hook which has points and barbs at one end and at the other, a rope about 15 fathoms long with a blown-up bladder fastened to it. As is the case in whale fishing, the bladder must show the place where the wounded dolphin went under. When the animal reappears, he is given the finishing blow with harpoons or lances. [120]

These buildings were the receptacles of dried fish for the winter use of dogs and their owners. The elevation of the floor serves to protect the contents from dogs and wild animals. I was told that no locks were used and that theft was a crime unknown.

The dwellings were generally divided into two apartments one a sort of ante room and receptacle of house-keeping goods, and the other the place of residence. Pots, kettles knives, and wooden pans were the principal articles of household use I discovered. At the storehouses there were several fish-baskets of birch or willow twigs. A Gilyak gentleman does not permit fire carried into or out of his house, no even in a pipe. This is not owing to his fear of conflagrations, but to a superstition that such an occurrence may bring him ill luck in hunting or fishing.

It was in the season of curing fish, and the stench that greeted my nostrils was by no means delightful. Visits to dwellings or magazines would have been much easier had I possessed a sponge saturated with cologne water. Fish were in various stages of preparation, some just hung upon poles while others were nearly ready for the magazine. The manner of preparation is much the same as in Kamchatka, save that the largest fish are skinned before being cut into strips. The poorest qualities go to the dogs, and the best are reserved for bipeds.

Though the natives do the most of the fishing on the Amoor, they do not have a monopoly of it, as some of the Russians indulge in the sport. One old fellow that I saw had a boat so full of salmon that there was no room for more. Now and then a fish went overboard, causing an expression on the boatman's face as if he were suffering from a dose of astonishment and toothache drops in equal proportions.

There were dogs everywhere, some lying around loose, and others tied to posts under the storehouses. Some walked about and manifested an unpleasant desire to taste the calves of my legs. All barked, growled, and whined in a chorus

vidently on a trading expedition. He had a boat about wenty-five feet long by eight wide, with a single mast carrying a square sail. His boat was full of boxes and bales and ad a crew of four men. A small skiff was towed astern nd another alongside. These Manjour merchants are quite nterprising, and engage in traffic for small profits and large isks when better terms are not attainable. Before the Rusian occupation all the trade of the lower Amoor was in Manour hands. Boats annually descended from San-Sin and goon bringing supplies for native use. Sometimes a merhant would spend five or six months making his round ourney.

The merchants visited the villages on the route and barained their goods for furs. There was an annual fair at the Gilyak village of Pul, below Mariensk. and this was made he center of commerce. The fair lasted ten days, and durng that time Pul was a miniature Nijne Novgorod. Manjour nd Chinese merchants met Japanese from the island of Sakalin, Tunguse from the coast of the Ohotsk Sea, and others rom the head waters of the Zeya and Amgoon. There were Gilyaks from the lower Amoor and various tribes of natives rom the coast of Manjouria.

A dozen languages were spoken, and traffic was conducted n a patois of all the dialects. Cloth, powder, lead, knives, nd brandy were exchanged for skins and furs. A gentleman ho attended one of these fairs told me that the scene was ull of interest and abounded in amusing incidents. Of late ears the navigation of the Amoor has discontinued the fair f Pul. The Manjour traders still descend the river, but they re not as numerous as of yore.

With a good glass from the deck of the steamer I watched he native process of catching salmon. The fishing stations re generally, though not always, near the villages. The natives use gill nets and seines in some localities, and scoop nets in others. Sometimes they build a fence at right angles o the shore, and extend it twenty or thirty yards into the

226 stream. This fence is fish-proof, except in a few places where holes are purposely left.

The natives lie in wait with skiffs and hand-nets and catch the salmon as they attempt to pass these holes. I watched a Gilyak taking fish in this way, and think he dipped them up at the rate of two a minute; when the fish are running well a skiff can be filled in a short time. Sometimes pens of wicker work are fixed to enclose the fish after they pass the holes in the fence. The salmon in this case has a practical illustration of life in general: easy to get into trouble but difficult to get out of it.

GILYAK MAN.

For catching sturgeon they use a circular net five feet across at the opening, and shaped like a shallow bag. One side of the mouth is fitted with corks and the other with weights of lead or iron. Two canoes in mid stream hold this net between them at right angles to the current. The sturgeon descending the river enters the trap, and the net proceeds of the enterprise are divided between the fishermen.

251 It requires vision or a guide to find a fishing station, but the sense of smell is quite sufficient to discover where salmon are dressed and cured. The offal from the fish creates an unpleasant stench and no effort is made to clear it away. The natives and their dogs do not consider the scent disagree-

227 FISHING GEAR--description of fishing implements and equipment; miscellaneous gear used in fishing (e.g., rods, baskets, lures); etc. See also:
Manufacture of lines . . . . . 283 Manufacture of tackle 391
Manufacture of nets 286

/519 cont./

226 (umyssj) running from the walls of the bag betray the entrance /520/ of the fish, the net is drawn together, and the fish is caught. Sometimes this bag net is set permanently in the river, for which two posts are driven as firmly as possible into the river bed as far apart as the diameter of the bag opening, and the net is fastened to them by means of the rings and cords on its edges on either side. A Gilyak sitting in a boat takes up his station at one of the posts and holds the signal strings in his hand so that, as soon as a fish has entered the net, he either catches it definitively and recovers it himself or he procures the help needed to do it.

The two last-mentioned nets are also used for fishing in winter, but the ice cover of the river then makes necessary a few other devices and manipulations. First of all, for each net, two holes must be made at a distance corresponding to its length, or, in the case of the bag net, to the diameter of its
226 opening. To scoop out the detached pieces of ice floating in
192 the holes the Gilyak use the hand net (Gilyak chuntulk) (1)

• [227] 1. The net stretched in the hoop is called assj in Gilyak, the crosspiece in the lower part of the hoop -- lott, the long and crude handle-stick, with which the new ice that perhaps arose in the hole is sometimes broken up -- kip.

[227] illustrated on Plate XL /see p.1020/, Fig. 3. A special instru-
[532] ment is used for setting up the net under the ice: it is a long, flat, wooden staff curved slightly upward toward the tip, the so-called odn, which on the end runs out into an approximately triangular plate with two points directed toward the rear and with two eyes carved in it in a primitive manner, which bears the name odn-tschongr, i.e., odn head (see Pl. XL, Fig. 4).
226 One reaches into one of the holes in the ice with this staff and shoves it forward, close under the ice, until the tip, the odn-tschongr, comes out at the other hole. Here one of the two

/528 cont./

226 The great numbers in which the salmon, and in particular the two species repeatedly named, go up the Amur and its tributaries make catching them in the largest quantities an easy matter for the Gilyak. In the small tributaries, such as the Litsch, Kamr, etc., the fish crowd and almost push themselves onto the bank and can be taken from the shallow water simply with the hand, and from deeper water scooped up in dragnets or pulled up with hooks and thrown into the boat. Women and
[251] children participate in this work, and within a short time one
[252] boat after another, filled with fish, returns home, where the previously described, more strenuous work of skinning, cutting up, and hanging the fish on the drying racks is undertaken.
[462] While the women attend to this, the men bring more and more new material. In the smaller rivers, a net is also often drawn across the entire width of the river, and in this manner the whole shoal of fish ascending at the time is caught, insofar as
[462] the net permits this without tearing. In the large river where fishing is done exclusively by the men, the schools of ascending fish are likewise so densely crowded that the simplest nets suffice to catch vast quantities in a short time. The fishermen, in two boats and holding a net between them, go downstream toward the ascending fish and draw up the filled net first into the one boat and then into the other, until both are full. Or two men, holding one end of a net, travel downstream at some distance from the shore toward the fish, while a third man, with the other end of the net in his hand, walks along the shore in the same direction. When they notice that the net is sufficiently filled, the fishermen sitting in the boat turn their vessel about and quickly row toward the man walking along the bank, in order to jump out of the boat near him and, joining forces,
• 227 drag the net to land. The nets used for catching salmon are given different names by the Gilyak in part according to slight differences in shape and the manner in which they are used and, in addition, are differentiated according to the species
[192] of salmon for which they are intended on the basis of the size of their meshes. For example, the above-mentioned, simple,

/528 cont./

227 192 quadrangular net is called tschessk and, depending on the size of its meshes, is a lyghi-tschessk or a tengi-tschessk; another one was named for me as kyrn-kä and likewise distinguished as lyghi-kyrn-kä and a tengi-kyrn-kä (1), etc.

1. Kä in Gilyak means "net" in general.

226 In order to catch greater quantities of the ascending fish without much trouble, weirs are erected from the bank into the river for the purpose of deflecting the fish from the direction of their migration and directing them into a bag net set up alongside. For this, places are chosen on higher banks in the vicinity of a projecting tongue of land, where there is a stronger current and, as is known from experience, the fish usually ascend in great multitudes. /529/ The nature of such a salmon [192] weir, called myr among the Gilyak, is the following. From the bank a series of piles one fathom apart is driven out into the river, and from the end of it, at a right angle, a second, shorter stretch running downstream is driven into the river bottom. The spaces between the piles are then so closely interwoven with osier switches from the surface of the water as far down [192] as possible that the fish can find no exit. Between the lower end of the row of piles running downstream and a single post standing some distance from it and closer to the bank, the bag net, the myrch-kä of the Gilyak, is fastened. This has the shape of a long funnel very gradually becoming narrower toward the bottom: a specimen from the village of Tschcharbach that I measured, spread out on the ground, had a length of six and a half meters and a width of three meters at the upper end and one and a half meters at the lower one. From the upper edge of this funnel-shaped net, equipped with two parallel willow-bast cords, a slit in the net about 12 decimeters long runs down along one side, and on each of the two tips thus formed along the edge of the funnel are put two cords, which, like the similar cord found diametrically opposite them, serve for fastening the net to the appropriate piles. Furthermore, from one of the above- [192] mentioned tips there extends the signal cord (Gilyak umyssj), a

286 283 /532 cont./ this work and describes it as follows (1). "The thread intended for

[113] [114] 1. Bullet. de la Classe phys.-math. de l'Acad. Imp. des sc., Vol. XV, p. 230, note 5; Mél. biolog., Vol. II, p. 501, note 5. The observations were made by Mr. Maximowicz on a voyage in the lower Amur region between the Nikolayev and Mariinski posts; to be sure, it is not said whether he was among the Gilyak or among the Olcha, but it may be safely assumed that the work discussed is done in precisely the same way among both of these peoples.

the cord is wound on as many spindles as the cord is to have strands; the spindles are set up firmly on the yurt bench, a piece of thread is led from each of them, through a ring fastened in a roof beam, and almost down to the ground, and the rest of the thread is protected against unwinding. The threads running through the ring are tied to a suspended spindle, which is kept in rotating motion until the cord is firmly twisted together sufficiently, and, as a consequence of this, the rotating spindle has been forced almost up to the ceiling. The firmly twisted piece of cord is now wound on the suspended spindle and protected against unwinding. Then new thread is released from the stationary spindles, the rest is made fast, and the work continues in the same way." The cords obtained in this manner are in no way inferior in tightness and uniformity to good types of our hemp cords.

286 In view of the considerable variation in size of just the [227] principal fish that the Gilyak catch, say, from the smaller cyprinoids or the tengi-tscho, Salmo proteus, to the colossal hausen, the nets used for catching them are also made with meshes varying greatly in size and out of cord of various thicknesses. And, correspondingly, the instruments used by the Gilyak for knotting their nets are of widely varying sizes, while

/534 cont./

226 286 great multitudes and heavily crowding one another could easily slip through, which would considerably reduce or even bring to naught the mass catch of the most important of all fish aimed at by erecting the myr. Furthermore, this bag net need not be made out of a very thick cord, because, when filled, it is immediately dragged to the not very distant bank. I did not see the mesh-board which go with the latter two netting-needles, and which of course, are likewise of correspondingly smaller size in comparison with those mentioned earlier. Since the Gilyak have even finer nets than the myrch-kä, such as, for example, the bag nets used in the smaller river-branches and lakes for catching crucians and smaller fish, they must certainly have even smaller netting-needles and mesh-boards than the last-named ones, even though always of the same form; but these are of so much less importance that, when I inquired about them, they were neither able to show me any nor give me special names for them.

286 Now when the knotting of a net with the instruments described is being done, a special wooden fork designed for this purpose is fastened to the bench in the yurt, on the edge of the boat, or wherever the work is to be done, and one of its prongs is used to hold the net being knotted, while over the other one are hung the pieces already completed (1). After the knotting

[192] 1. The Gilyak designation for this fork remains unknown to me; according to Maack (op. cit., p. 130), the Goldi call it chalang.

is completed, the net is edged all around with cord twisted out of willow bast and is provided with a second cord of this kind at the upper and lower ends on the outside, running close to the first one and connected with it only at individual points. While 227 fishing, small stones or the above-mentioned wooden or bark floats are fastened between these two cords as required. The [286] nets of the Gilyak are always handled with great care and

G /534 cont./

227 [286] [184] consideration, repaired at the slightest damage, and dried in the sun after every fishing expedition. For this purpose they are spread out over special racks taller than a man, and superstition requires that if the drying nets are in a person's way he must always go around them, never underneath them. And, finally, not until the nets are completely dry may they be used again. Treated in this fashion a net lasts for several years among the Gilyak and rewards many times over the care and labor used in making it.

G. /535/ What has been said in the preceding about Gilyak 226 433 fishing may in general be applied to the Tungusic peoples of the lower Amur region more or less neighboring them, although with a few qualifications and modifications, which are determined in part by the way of life and the character of these peoples and in part by the distribution of those species of fish principally caught. G. First of all it must be emphasized that, with regard to fishing, [262] all the Tungusic peoples of the lower Amur region differ from the Gilyak, not so much by practicing it by means of any new methods unknown to them as by the essential, crucial fact that none of them is ichthyophagous to the extent that the Gilyak are or is dependent on fishing for its entire economy like the Gilyak, and therefore none of them practices fishing to the extent and with as much constancy, care, and energy as the latter. Among G. all these peoples, and not excepting the Olcha, who are closest to the Gilyak in all their external behavior and way of life, [224] hunting, as a means of directly and immediately satisfying the urgent needs for food and clothing, plays a far more important role than among the Gilyak, and, to be sure, this is more and more generally the case the farther one goes upstream and into the side valleys of the Amur River. Consequently, it must take up more time and labor, or rather must take this away from fishing. In particular it cuts heavily into winter fish- G. ing. In no season of the year does the basic difference in 226 character between the Gilyak and the Tungusic peoples of the 221 lower Amur region appear more clearly than in winter, in that the former remain the same sedentary fishermen, despite various

lyak fishing equipment: 1 -- fishhook for Gadus wachnja (Pall.), -- hook for pulling out fish; 3 -- net for cleaning out the holes the ice; 4 -- odn-tschongr of the Gilyak.

Economy and Everyday Life

226 [433] The Nivkhi's basic occupations were fishing and sea hunting. The most important fishing activities involved runs of the salmon species—Siberian salmon and humpback salmon. These were caught in "zyyezdki," nets and seines. A "zayezdok" was an L-shaped barrier of thick stakes and twigs, set at right angles to the shore with the transverse bar along the current. On this bar, the Nivkhi set up a drawnet, near which they kept watch in a boat. The fish, going in a solid mass along the shore, hit the wall of the trap and turned and swam into the net. When they saw the movement of the signal ropes, the fisherment lifted the net and emptied it into the boat. By this method, several days' fishing produced 4000-5000 fish, which quite filled the needs of the fishermen. The "zayezdok" was usually built jointly by several families.

[423] [406] 227 228 [199] The seines, fairly small in size, were formerly made of nettle fiber. They were pulled by two or three fishermen, one of whom walked along the shore, while the other two were in a boat. Later, the Nivkhi learned from the Russians to sew together large seines. Beluga and sturgeon were caught with harpoons and hook-tackle—the hooks at the end of short cords, attached to a long rope stretched in the water.

Very important to the Nivkhi was fishing for (single-net fish), carried on throughout the year. These were caught with fishing rods, fixed nets (winter and summer), floating nets (summer) and seines (during the spring and autumn seasons).

225 The Nivkhi living in Sakhalin and in the estuary did a good deal of sea hunting. They hunted sea lions and seal. The former were caught in large fixed nets. Seal were hunted in early spring, at the first sign of breaking ice. They were killed with harpoons and clubs as they climbed up to warm themselves on the ice floes. Seal-hunting continued into the summer as well. In open waters, they were hunted with a floating harpoon (lykh). This consisted

286 516

Sewing together a seine.

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

THE ABORIGINES OF THE SOVIET FAR EAST

Go 177 166 The Soviet authorities transferred the Udege from the isolated huts which were scattered over a wide area to larger compact settlements. This brought them within the range of medical attention and educational facilities. As a result of this contact with Soviet Russian culture, the young generation of the Udege now speak the Russian language 'almost without any accent'.[28] The next step in the development of the Udege will be that they will forget their own native tongue, and soon 'the last of the Udege' will really have disappeared.

THE NIVKHI

Gi 131 166 101 Near the mouth of the Amur is the National District of the Nivkhi. They number just over 4,000, of whom 1,700 live in Northern Sakhalin, and the rest on the Soviet Far Eastern mainland and on three small islands lying off the mouth of the Amur. These islands, Udd, Langr and Kevost, were ignored by the Soviet authorities until 1936, when the famous Russian pilots Chkalov, Baidukov and Belyakov, landed on Udd Island during their trans-polar flight. From that moment the islands became very popular. They were renamed after the three pilots, [187] and it became almost a Russian patriotic duty to develop and colonize the little archipelago. The Soviet Far Eastern fishing industry established [228] a plant there, and Russian workers' settlements were built on both Chkalov and Baidukov Islands, which had previously been inhabited exclusively by Nivkhi.

186 198 The Nivkhi of the Asiatic continent are very conscious of the fact that, together with the Nivkhi of Northern Sakhalin, they form one single people. Accordingly, under pressure of persecution by the Soviet authorities in the late 'twenties', the Shamans of the mainland Nivkhi fled to their kinsmen on Sakhalin. But these Shamans only fell out of the frying-pan into the fire, because of the activities of the local anti-religious fanatics. In 1930 the League of Militant Godless in Northern Sakhalin even destroyed the Nivkhi cemetery in an attempt to cure the 'natives' of their religious prejudices. This action caused considerable unrest among the Nivkhi, who lodged a complaint with the authorities. The latter apparently condemned the 'left-wing excesses' of the Sakhalin atheists.[29]

634 111 In theory, the Sakhalin Nivkhi live in two National Districts, the 'Western Sakhalin National District', and the 'Eastern Sakhalin National District' which, together cover a large part of Northern Sakhalin. In point of fact, both National Districts have been completely fictitious right from the beginning of their existence. The so-called Western Sakhalin National District, for instance, had, in 1933, only a few hundred natives among its 17,000 inhabitants.

/25 cont./

889 man was possible at a very remote time. As a matter of fact,
225 these fish that travel in masses upstream to spawn even now serve
262 as the basis of life for the Gilyak and his only domestic animals,
231 the dogs. The fish, caught and dried in the sun by the tens of
251 thousands, /26/ are stored in pile storehouses and, in the literal sense of the word, replace bread for the Gilyak during the long winter. The fresh local fish that he catches all year round are merely an addition to this daily bread of preserved salmon. The countless schools of the fish that travel in masses upstream to spawn provide food not only for the Gilyak. No smaller packs of all kinds of pinnipeds and cetaceans follow the schools of fish,
225 pursuing the abundant food. After the fish, the pinnipeds consti-
262 tute the second source of the food supply of the Gilyak. In early
[221] spring, at the first signs of the opening of the ice, the famished native comes out to hunt seals, which are happy for the opportunity to breathe the fresh air on the ice floes which are breaking up.

225 In favorable places these animals are hunted all through the
146 summer by means of a very long harpoon which is thrown from a boat. Besides their skins, which are quite indispensable in the Gilyak economy, seals also provide supplies of fat, which serves as a seasoning for the hard yukola, and also as an independent food product that is extremely important for the life of the Gilyak. The effect of the fat on the organism of the native is striking. Here it is the end of winter. The famished Gilyak, if he has not been brought down by scurvy, can hardly walk. But the seal need only appear, and he is momentarily transformed. He greedily throws himself on the melted fat, drinks it in all forms, with tea, with fish, and even just as it is, and in a few days he becomes unrecognizable: his cheeks become pink, his body gains weight, and vitality expresses itself in his every movement.

224 In autumn, after the end of the run of fish, an active and
[221] happy season of hunting begins. Bears in abundance come down to the banks of the streams to regale themselves on salmon, and the Gilyak lies in wait for them with gun and spear. Every bear killed is an occasion for communal festivities and celebrations. Before the season for fish and bear has come to an end, the sable has put on his dark coat, and it is time to hunt him. Now the setting up of snares at the crossing of rivers and the building of

/60/

796 This festival has already been described many times,
231 and therefore I shall consider for the most part those features that have not been noted before. First of all, it is remarkable
[769] that ordinarily the festival is generally celebrated in memory of a dead clansman, being a kind of funeral feast for the deceased. A very close kinsman of the deceased buys for money or catches for himself in the taiga a bear cub, which is brought solemnly and amidst cries of joy and music into the native village. Here a separate framework is built for it out of thick poles and spars and decorated in the corners
[614] with sacred trees. The feeding of the cub is done, not by its specific master, but by the entire clan: One or another family in turn, feeds the honored guest for the duration of the appointed time, cleans the framework, and in general takes care of it in every way. On appointed days the bear is taken from its cage for a walk. This is a great event in the life of the settlement, taking many hours and giving extraordinary pleasure to young and old. The procedure of getting the bear out of the cage is quite complicated. First of all, while the bear is still in the case, they hobble its legs, sticking through the spaces between the poles thongs which end in quickly tightened nooses and are put on sticks. After this they take away a few links of the top part of the cage, providing the bear with the opportunity to stick its head out; then they put a stick into its mouth, which it violently clenches with its teeth, and at this time they very tightly bind its mouth. After this, it is calmly pulled out of the cage, and an iron ring is put on it, clasping it at the belly. Long thongs are attached to this ring on both sides, and several men hold fast to them, pulling them hard in opposite directions; they do not give the bear any opportunity to attack the surrounding people. Only then do they free it of its hobble and take it for a walk.

/60 cont./

796 Having bathed the bear and teased it to their satisfaction
231 and made fun of it, they tie it between two posts and leave it alone. It generally uses this respite to give in to the instinct, now futile for it, to dig the ground with its paws for a lair.

The feeding of the bear continues for several years, until the cub becomes a well-fed, large beast, and then they begin the prefestival preparations. This means extensive preparations. For several days, one will have to feed and entertain with all kinds of delicacies, not only clansmen and villagers, but also a great number of guests from other places and, /61/ in addition, the numerous dogs on which these guests came. All this requires trouble, work, and great expense, because, besides dishes of local products, large purchases of rice, buda, flour, tea, sugar, and vodka or Chinese grain vodka are made. Here is
[614] displayed that remarkable clan organization of the Gilyak, so
[182] impressive in its harmonious combination of social solidarity and individual freedom.

796 There is no compulsory organ to assemble products, to
621 compel, demand, or control. Conscious of its obligation to
476 participate in the common religious affair, each family works with all its might, not out of fear, not from conscience, cooks all sorts of dishes, helps with the chores, and contributes its mite, according to its means, toward the expense of the purchases. The money and supplies are handed over to the master of the bear, who disposes of them without control. No one reprimands anyone, for each one strives to make the festival
796 come off most brilliantly. Several days before the festival, which is generally celebrated in February, a different kind of work begins -- the building of an arena for the killing of the bear. The arena consists of a small stamped-down plot of
[778] ground, in which, depending on the number of bears that are being killed, is placed one or several pairs of sacred trees-posts hung with inau and covered with complicated ritual carving; a bear is tied between them. Up to this plot of ground is stamped a long, narrow alley, on both sides of which, in two rows, are set up 30 pairs of young trees: the first 15 pairs are fir; the other 15 are purple willow.

/85 cont./

[723] respectful attitude toward the bear which I mentioned earlier.
[724] Furthermore, with regard to the fact of the ad hoc feeding of
[725] the bear, this at first sight may not at all appear to an ele-
[726] ment of a religious nature. In hunting, the Gilyak on some
[727] occasions may catch young animals, and, whenever he finds
[728] it profitable, he feeds them thus. he feeds the fox for its fur,
[729] and he fattens pigs for their feathers. Similarly, it is disad-
[730] vantageous for the Gilyak to kill a bear cub, and he prefers
[731] to feed it in order to obtain later a huge carcass of meat and
[732] an enormous skin. Furthermore, there is nothing more
[733] natural it would seem than to use the killing of the bear for
[734] a solemn occasion like the celebration of the funeral feast
[735] of other persons. By the way, the feeding and the killing
[736] of a bear is an excellent means of education for the youth
[737] who from childhood become accustomed to the most terrible
[738] animal of their land: learn not to fear it. and shall be indis-
[739] pution. its strength. and its weaknesses. The procedure for
[740] getting the best out of its cage is a simple rehearsal for getting
[741] it out of the woods.

Nonetheless. it is not these crude. utilitarian motives that
[742] play the major role in the Gilyak's expensive. wearisome
[743] and prolonged care in feeding a bear. He is governed here by
other motives. perhaps also utilitarian. but of a quite different order. As we have already seen. in the eyes of the Gilyak
[744] the bear is a creature sui generis. No matter what creature is
concealed under the hairy covering of the bear. a divine
[745] clansman of the master of the mountains. a mountain man. or
a real animal sent as a present to the Gilyak by its master. in
any case he is a creature of a higher order. more powerful.
and superhumanly strong. The presence of such a being for a
long stretch of time in his native settlement. according to
the view of the Gilyak. who is convinced of the constant
conspiracies of crowds /86/ of evil spirits eternally threatening his life and health. must be extremely beneficial. The
presence of this mighty creature. like a very strong disinfectant.
must kill and drive away any insidious spirit. It is not by

/207 cont./

[765] next to the umbilical cord. A wooden board is attached to the
[766] ground at some distance from the place of the cremation of the
[767] dead person and a Yenisei fox. The body of the deceased is dressed
in stocking, a waistband, a woman's hat of lynx; if the deceased
is a man, then in a man's winter hat, while to his belt is attached,
on one side, a curved knife (ng-dexin) and, on the other, ke'ser
-- an iron chain and a needle case, and, in the front, mij -- a
purse with a flint, tinder, and steel. Then alongside is placed a
little stake, and on it a human hair (from the wife, sister,
[768] mother) -- mu n'kvekh kiur, which will serve the deceased as
an insole for footwear upon going over into the world beyond the
grave; then, alongside, a little stake with three hairs (be-kiur) from
on which is placed a small cup for a cuckoo (pyk ngi); further-
more, a little stake with a wooden cuckoo -- mu n'kvekh pyk,
i.e., "the cuckoo of the dead man," and finally still another little
stake with an eagle feather -- chamngar.

The building of a little grave house can be postponed, but
the dressed dead body -- kak (?) must be made without fail.

1. K'ak -- wooden image of the deceased,
a receptacle for his soul.

Temporarily a little balagan of bark, kak-raf, is erected over
him. Finally a little house, raf, is built, and the funeral repast
is held.

[769] In a day, a week, a month, the closest kinsmen arrive,
drink, eat, and commemorate. They do this for a year; in
some cases for two or three years, but if there is no one to do this,
then for one month, depending on status. At the end of the
term of "observation" (tigr ar'ado) -- "observation of the tree,"
the time of periodic funeral repasts at the house of the deceased),
they buy vodka and rice, assemble the kinsmen and the "in-laws,"
and for three or four days go to the grave and commemorate;
this is the last funeral repast (raf pykyr'do, tigr pykyr'do).
[770] They walk to the tut, the place of the cremation of the
deceased, pour vodka there, sprinkle it from all the dishes,

1: Shternberg--447 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2 Amur

/207 cont./

[771] and bring over the favorite dog and feed it. This dog is called
[772] pyrsik -- gum (from the Gilyak "gum," i.e., "to carry
person, carry a child, but without fail his own pyrsik). From
childhood everyone has his favorite dog,and when a man dies,
they sacrifice -- if the man favorite dog or the best of those
[773] mentioned to the sled and make a pyrsik of it. If it dies, they
[774] bury it and cover it with chocks. Each says the following to the
deceased: "Ning yu: hdemnyr; hyr'kzam; tog-ngdo yugar ejin
[775] ning-d'vunk gedzih mlyvrosah (gimlyh-tado). Yingle, /208/
[776] eriktomydz, hdin pyk yunakhand, pyk tydd, chi ertinashana
hongan ga ochgan, chamngar, dzhakhan dzhakhan dzhangr
[777] hankhand ofanu khah'a ngr, kiur kezal, h'dhagyind ngzyd
kakgdr, tut kher; tor'a, pyhr'do; pyk chakh tanydz; pyk tekd;
[778] nemakhind." Urga vis; namugur hmnyd pyrsik dzhakhan
gumakhe dzgu; pi ngzgdo-ka, vis'.

"To live near us, there is no happiness (not fate), in such a
case, fine, go to the deceased, to the settlement of the dead
(to your settlement of the dead). When you go, you will cross
the river; a cuckoo will cuckoo there; after the cuckoo bird
cuckoos for a long time, you will wake up. When you get up,
[779] you will shake off ashes and coal with eagle feather, then you
will dress yourself, make an insole out of the hair (1), put on

1. Out of the hair of the wife,
or mother.

this clothing, and, having made something like a little bridge
from the figure, cross; a cuckoo bird, becoming tired (?) after it

[780] 2. All during the trip to the stream the
cuckoo will cry; before the stream there
will be no water and no food. It will
become tired and will have no drink
from the cup. There are cuckoos which
squeal, which means that they are tired
from accompanying the deceased.

/208 cont./

[781] The favorite dog, "pyrsik" (every man has his own pyrsik)
[782] is brought to be present at the funeral ceremony, and before it is
taken away to the yurt, tied to the place where the dead man slept,
and fed from his bowl for three years -- if it is a man, and four
years -- if it is a woman. After this it is sold or given as a gift, but
they cannot keep it.

[783] Even where cremation is practiced, Intsne persons after
death are buried directly into the ground.

[784] In Ady-Tymt, if they suspect that a person died from magic,
[785] two men with rifles are sent at night to stand guard at the place
[786] of cremation. Both appear dressed, their hats and foxes and then
[787] the cerni-mlih, rubbed with clay and other arrows, are sent to
[788] the boiled food, rice, buda, peas, and tobacco are sprinkled in
[789] the raf and around it. On the following day someone must come
[790] and eat up the remains of the boiled food.

[791] After this, the mu n'kyvyn is fed no longer, though
[792] they continue to look, smoke, and, frequently, to drink vodka.
Talk continues for from two days to one three months. The
[793] n'kyvyn is then returned to its original place. It may not be
[794] sacrificed or eaten; one may not make a fur coat of its skin,
[795] clothes for kinsmen or for someone from abroad.

[796] After the death of a murderer, at his cremation, they set
[797] up a chikich (see below, pp.475-476), and then they make a raf
[798] [illegible]

[799] The soul and the world beyond the grave, Mlyvo. Every man is
[800] killed by a mlih (evil spirit), who carries away his soul. The soul
[801] is made and taken with Pal-n'ngyvyn or Tol-n'ngyvyn, depending
on which mlih killed the person. The soul will return to Mlyvo
[802] in at most three years. If an old man died, he will arrive there
[803] old, if young, then young. After death in Mlyvo, the soul goes
[804] to another Mlyvo, and the soul of a woman to still a third Mlyvo,
[805] and then is born again. The soul of a man is completely similar
to the man.

1: Shternberg--449 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2 Sakhalin

/231 cont./

The dead come in a dream. Thus Indyn's mother came to
[806] her several times. The last time she said to him, "Your father
[807] took me to Ogdyn," and he did not appear.

The big soul inhabits the entire body, and in the head of this
[808] large soul live small souls -- tum. After the death of a person,
[809] a small soul lives in his pyrsik (dog), which is tied to his grave
[810] [illegible]. Small souls resemble eggs and are white in color. During
[811] sleep the small soul goes everywhere, talks, sees, and so forth.
[812] [illegible] Ady-Tymt means "until has one tiny little soul." If a person dies
[813] away from home or drowns, his soul comes home. The soul of a
dog which died accidentally roams all over.

Every body has a soul, and its shape corresponds to the body.
Therefore, if the body is given a certain shape, it will acquire
a corresponding soul, and therefore if a thorat is sore, they make
[814] the tongue, and his soul lives in that tongue, and he can speak
[815] which children have been playing must not be let loose, for it will
carry away the soul.

[816] The fate of the soul depends on the kind of death. 1. A person
who has been eaten by a bear lives in a ripe old age with
[817] Pal-n'ngyvyn (the master of the forest), while a person who
[818] allowed -- with Tol-n'ngyvyn, and then goes directly to Mlyvo.

2. A suicide (who hung himself) goes directly to Mlyvo.

3. Those who died from an epidemic (an epidemic is
[819] caused by the bloodshed dropped years ago by the Japanese, the
Chinese, and the Russians) also go straight to Mlyvo.

4. One who died a wound (by a knife, a bow, or a rifle)
[820] lives, like a bear, in the forest. The souls of such unfortunates
[821] [illegible]

5. Until a tibuind (ransom) is received, one who was
killed by a person will also fly in the sky. If blood vengeance is
taken for the dead person, both souls go to Mlyvo together.

[822] The night bird tabich is of the size of a crow and just as
black, but its beak is red. If it cry is heard at night, one must
not call it by name, but must say ets.

When a person is killed, a great number of these birds fly
together into the village.

1: Shternberg--449 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2 Sakhalin

[The Western Coast and the Tym' Basin]

/385 cont./

[823] many of his children had died between
the beginning of his marriage and the
date of the census. In this way, we obtained an exact number of children
in a given family, living and dead.
Hence, it was easy to calculate the rate
of mortality.

[824] fertility rate -- 2.7%, although this figure is below the actual one,
[825] for in the number of marriage records were found only the one
[826] hand, children for whom their parents had bought child wives,
and, on the other hand, adults who were married to child wives.
[827] In an average of 111 people living in each year, although
[828] there are a number of yurts with several dozens of inhabitants;
[829] for example, one yurt in the settlement of Nyanivo accommodated 42 persons of the same clan.

As to the size of the winter settlements, the largest of
[830] these are the following: Yamgyn and Lirkyvo (144 persons each),
[831] Vishno (116), Nyur (103), Arkyvo (87), Kimidvo and Tengi
(64 each), Kimidvo and Pomr (59 each), Nyanivo (58); the
smallest settlements are Yamy (4 persons), Vaat (8), Nokoy (8).
In the summer the most densely populated settlement is Tamlyvo.

[832] Seals killed in all the settlements during the last season,
[833] 1,926; sables killed in the settlements nearest to the Aleksandrovsk
[834] post, 238 (%) /386/ There are 183 yurts and 201 huts (one boat
[835] [illegible]

5. The number of fur animals and so forth
killed during the last season was obtained
from reports of the Gilyak themselves.
These figures are most probably somewhat
below the actual ones. The tarosta in the
village of Kimidvo, for instance, deliberately tried to persuade me not to tell
the truth to the Russians, who, according to
him, would come and take away the bounty . . .

[836] /386/There are 183 yurts, 201 boats (one boat
[837] to every five persons), and 2,100 dogs. To make some money,

/387 cont./

[838] settlements the settlement of Mos'vvo
on the banks of the Tym' River, seven
versts from the settlement of Sykoshnyo.
In connection with this settlement of
Mos'vvo, the author makes the following comment. "It is inhabited only in
autumn and winter. In spring and summer the inhabitants pass on to the west-
[839] ern coast, mainly to the vicinity of
Arkyvo, where in the early spring they
hunt seals and during the summer catch
fish which set out to the bank in the
Tym' at this time of the year. At the
beginning of August, before the Siberian
salmon run, the population moves
their winter dwellings." Editor of the
journal, Etnogr. Obozr."

[840] with 109 yurts. The total population here is 703 persons (197
[841] on the Tym' River, 506 on the Okhotsk coast), of whom 416
are male and 287, female; there are 109 yurts and 109 [illegible]
[842] households, 483 adults, 175 married persons, 9 male polygamists, average fertility -- 3; 332 children survived birth; 143
[843] died. Gum -- 64 (of which 23 were on the Okhotsk coast and
[844] the remainder on the Tym'), 121 men, 122 boats, 1,480 dogs.
[845] During the last season 688 seals killed, 386 sables, 134 foxes,
[846] 43 otters, and 63 bears.

From this one can draw the following conclusions: here
[847] there are, on the average, six persons per yurt, an average
[848] family has /388/ four to five members. There are 13 married
males for one bachelor (1), one bigamist in 19 married men.

[849] 1. The word bachelor is applied only
to oldster, so speaks, inveterate
bachelors.

[The eastern Coast and the Tym' Basin]

/388 cont./

162 The ratio of the number of males to that of females (416:287) is
such that there are 694 females per 1,000 males. In Rustia there
are 1,923 females per 1,000 males, and in Asia as a whole 969
165 females per 1,000 males. The infant mortality rate is 33.7%.
231 Every Gilyak, on the average, has two dogs and each adult Gilyak,
192 three dogs. There is very little hunting equipment, especially
611 guns, on the whole.
182

The Tymovskie and the Okhonk Gilyak belong to 18 clans (9,
126)

2. The property of each person has been
registered to this or that clan, the figures
on the number of clans, etc.

of which especially numerous clans are: Chuy-guy in the settlement
of Chayvo (114 persons), Ady-Tymovskiy (156 persons),
Mymyzi in Nyyvo (94 persons), Urlandah in Chayvo (55 persons).
The most notable settlements in population are: Chayvo (151 per-
361 sons), Kekhrvo (90 persons), Nyyvo (46 persons), Tekhrvo (51
103 persons), and on the Tym' -- the trinity of settlements, Ady-Tym'
162 and the neighboring Khomrvo and Flyvvo (106 persons), not count-
ing the immigrant population from the western coast. Most two
20 (Rykovskoe, 56 persons), and others. Communication between the
first two of these settlements, Chayvo and Kekhrvo, is extremely
(184) difficult; aside from the shallow water, the journey is difficult
because in several places it is necessary to carry the boats over long
stretches of dry land. As has been mentioned above, there is
communication from the settlement of Kekhrvo to the village of
Pomr and the western shore.

133 North of Kekhrvo the coast is uninhabited, and summer
484 travel to the north is extremely difficult and completely impossible
along the shore itself for lack of any means of transportation
across the wide mouths of numerous bays. The only means of
484 transportation is on reindeer by way of the taiga and over the
mountain ridges. If one adds to this the fact that a draft reindeer
makes its way with great difficulty in the summer, it is clear
how difficult and slow such a journey is.

/327 cont./ they are fed through openings (f) on their front side and on top have /329/ a round
(415) hole (g) for the large kettle, in which the fish broth for the dogs
and under certain circumstances even food for human beings are
342 prepared. Directly adjacent to the hearths are the sleeping and
(415) sleeping benches or plank beds (h, Gilyak: ukkv) which bend in
354 very little and are somewhat low, about one and a half feet high
and one fathom deep, and run all around the walls. Their chief
characteristic is that they are warmed from below by means of
wooden pipes (i) lined with clay, which come out from both
hearths, run under the benches, and join in the corner of the
house diagonally across from the entrance. From here the single
pipe serving the two hearths and at the same time as an outlet
for the smoke runs out of the house underground and opens not
far away into an identically-shaped, vertical, high chimney (k,
Gilyak: ilin) usually higher than the house. The benches are
342 covered with mats usually plaited by the Gilyak themselves out
355 of a kind of reed, with only the edge of the bench left uncovered,
(288) and not infrequently the walls, too, are covered with such mats in
places. In the center of the house, between the two pipes
342 supporting the ridge, there is a large, heavy table (l), about two
355 fathoms long and half as wide, on which the dogs are fed, and
(223) which I shall therefore simply call the dogs' table (Gilyak: krtl).
The top of it, which along its longitudinal usually projects
out in crudely carved, pyramidal, cone or hook-shaped continua-
tions, rests upon four posts (m) firmly rammed into the ground
and, if necessary, when there is space in the house, serves during the heat festival, for instance, can be lifted off of them.
Above the two ends of the dogs' table two cross-sticks hang down from the central longitudinal beam of the house, and a long pole can be stuck between them, to which the dogs are tied during the feeding. Our Plate XII,[1] which shows the feeding of the dogs, to be discussed later, also gives some insight into the nature of the interior of a Gilyak winter-house. I must mention, however, that the dogs' table on it is drawn a little too small and, on the other hand, the space between it and the plank bed is too wide. Subsequent pictures which are to illustrate the bear festival and the mourning ceremonies among the Gilyak give more accurate

1. See Category 116, P. 992 -- Analyst

/328 cont./

342 proportions in this respect and at the same time show other pre-
(415) viously discussed details in the construction and interior arrange-
ment of a Gilyak winter-house. In passing, I should also description I
(353) must mention that along the walls (n), immediately to the right
and left of the entrance, there are sometimes shelves or cupboards
for storing household utensils, and here, too, is the place for one
or more large receptacles which contain the water needed for
drinking and cooking the food. An open-air cabinet with various
cooking and eating implements similarly hangs on the wall behind
342 the hearth. Finally, it should be noted that in the front transverse
354 wall of the house, close to the roof, there is a round hole which
can be closed with a similarly-shaped, straw mat and is used for
ventilating the house when it is filled with smoke and steam during the preparation of the fish broth for the dogs or with smoke when there is insufficient draft in the pipes. Incidentally I almost always saw it open, and closed only at night. Since, because of
(394) the smoke hole, the /329/ plank bed along the front transverse
(288) wall is very slight, it is regarded as the best place in the house
and usually lacks the straw mats, whereas the bench along the
front longitudinal wall and, after that, the one along the rear transverse wall are regarded as the best, and here, to honor a
342 guest, a small rug acquired by trade from the Chinese is some-
(223) times also spread out over the straw mat, which is never lacking.

As advantageous as the Chinese winter-yurt of the Gilyak is
(107) over their earth yurt, insofar as it is more roomy, good, lighter,
(288) and in general, due to the pipe lines under the plank beds, also
warmer and not subject to such sudden changes of temperature,
nevertheless it, too, has many disadvantages, and in part some
that the earth yurt does not have, or at least not to the same
degree. The thin outer walls and large windows do not offer
sufficient resistance to the heavy frosts and violent snowstorms.
There is often a strong draft, and in many places fine powdered
snow comes in, or there is a deposit of ice. The draft is even
stronger along the floor, especially since the door opens directly
to the outside and not into a protected space in front, as in the
earth yurt. In addition, it must occasionally be kept open for

/383 cont./

342 yurt, between the piles, for protection against the rain, and the
(171) dogs, too, find a suitable abode under the same protective roof.

The above description applies, apart from the
342 specific references to the pile-construction, to the summer dwell-
231 ings of the Gilyak put on level ground at certain places on
Sakhalin and, as has already been mentioned, of very similar
nature, and it will therefore suffice to add to it only the following remarks referring specifically to the latter. If the yurt is
on level ground, the flat sill, space j, projecting along its front
side is likewise on the ground. As long as it is still winter, this
space is used for the erection of a shelter before the entrance to
the yurt, even though only a crude one! For this purpose, on
both sides and in front, where the dotted line is on the plan a
few poles and boards are set up vertically and, -with the exception of a passage, are bound together with plaited switches, and
the spaces between them /388/ are filled with grass and brush-
wood, so that a sort of anteroom is produced. This is assigned
to the dogs for their abode, and, in general, it is regarded as the
entrance to the house, they make good sentinels for it.

Since the main occupation of the Gilyak during the
342 summer is fishing and preparing the supplies of fish for the winter,
(126) one always seen beside the summer dwellings several contrivances
(417) for this purpose. Thus, more or less numerous, open racks for
hanging and drying the fish in the sun are never lacking, and
342 over their earth yurt, insofar as it is more roomy, good, lighter,
(184) and in general, due to the pipe lines under the plank beds, also
warmer and not subject to such sudden changes of temperature,
nevertheless it, too, has many disadvantages, and in part some
that the earth yurt does not have, or at least not to the same
degree. The thin outer walls and large windows do not offer
sufficient resistance to the heavy frosts and violent snowstorms.
There is often a strong draft, and in many places fine powdered
snow comes in, or there is a deposit of ice. The draft is even
stronger along the floor, especially since the door opens directly
to the outside and not into a protected space in front, as in the
earth yurt. In addition, it must occasionally be kept open for

1. A more detailed description of the
treatment of the fish before they are dried,
as well as of the use of the individual parts
and the like, will be given later at the
appropriate place.

/384 cont./

342 dwellings of the successive peoples in this direction. One need
(171) only compare the Gilyak summer-house, made of beams and
resting on piles, with the daura of the adjacent Tungusic peoples.
Moreover, if the daura of the Olcha, Nanaia, and Samagir, even
though only made out of light /384/ materials, wooden poles,
some of them perhaps of somewhat greater thickness, birch bark,
etc., are nevertheless rather spacious and resemble a house on the
outside, those of the Goldi shrink to small tents made of willow
twitches and birch bark and easily transported from place to
place, and the daura of the Orochi do not even go beyond the
roof shape, the simplest of all tent forms. In the upper Amur
region, the nomadic Birar, Manegir, and Orochon, the forms
of conical form again appear, to be sure, but these are wholly
adapted for a nomadic life, and, for a temporary stay at
a place, are furnished to merely a few poles and a bark mat
wrapped around them. Moreover the winter dwelling constructed
on the Chinese pattern has not penetrated to these peoples or to
the Orok on Sakhalin at the diametrically opposite end of the
Amur region, though it has penetrated the area lying between
and is customary among the Gilyak on the Sea of Okhotsk and on
the northern tip of Sakhalin, and the tent with only a side covering,
in spite of the severe climate, is also their winter dwelling.

In these housing conditions of the indigenous peoples
it is evident that there is a feature fundamentally different be-
tween the ancients sedentary, Paleo-Asiatic Gilyak and the
Tungusic peoples surrounding them, who wandered in later,
Indeed, it does not seem probable that the Gilyak ever could
inclined toward the wandering, nomadic life. The differences
in dwellings discussed above are closely linked to the total way
of life and subsistence of the peoples mentioned. The Gilyak are
predominantly fishermen and, along the seacoast, also seal
hunters; correspondingly, they are almost exclusively ichthyo-
phagous, as is their only domestic animal, the dog. Now, in
order to support themselves and their dogs, they need both
the fishing for fish and winter trips and trade journeys and for pro-
curing the customary winter clothing, during the period when fish
are scarce, they need a considerable supply of fish, and this is

/385 cont./

231 are, on the contrary, of such a type that they find all the more
192 abundant food with a nomadic life because of the change of
611 grazing areas and therefore in a way give their owners an addi-
182 tional motive for the nomadic life.

/386/

Section 5

External Appearance: Clothing, Hair Style,
Ornaments, Tattooing

The clothing of primitive peoples, even more than the
dwelling, is intimately bound up with their total way of life and
means of subsistence. For insofar as the materials required by
them for clothing are not obtained through barter with a civilized
people, they secure them from the same source as their food,
whether this be fishing, hunting, or the raising of domestic ani-
mals used for food or for transport, and give them a style suitable
to their life and activity, their crafts and occupations.

As for the Gilyak, with whom we shall again begin our dis-
cussion, it must first of all be repeated that fishing and seal-
hunting are their chief occupations, whereas hunting takes only
(223) second place among them. Furthermore they keep only one
(109) domestic animal, the dog, but this in large numbers as draft
animals, and finally, as the oldest reports that the Russians had
about them said (1), they maintain constant trade with the

1. See p. 203. above.

Chinese. Accordingly, their principal materials for clothing, be-
sides cotton, which since ancient times they have obtained from
the Chinese and at the present time also from the Russians (Gilyak,
pon; Russian-Siberian, dabk), are the skins of dogs and seals and
fish skins, while the chief furs animals, fox, otter, sable,
squirrel, etc., are used only for trimmings or for smaller articles
of clothing. such as caps, gloves, scarves, etc., but otherwise

/389 cont./

342 preference for dog fur for their own use may, in part, be the
(171) same ones that, according to Steller (1), made the ancient

1. Steller, Beschreibung von dem Lande
Kamtschatka [Description of the Country
of Kamchatka], Frankf. and Leipzig, 1774,
p. 137.

Italimen on Kamchatka prefer to use dog fur for their clothing,
even preferring it to fox and sable. Of course, in view of the
conservative tendencies of every primitive people, the usage one
customary, the custom handed down for generations, may also
play an important role. In addition, however, the advantages
of this fur, learned from experience, come into consideration,
its "warmth," durability, and the firmness of its hair, even if it
has been exposed to weather--characteristics which must rank
it especially prized by the common man almost always exposed
to bad weather. And finally, in addition to all that, there is
still another circumstance -- and in this may lie the chief reas
(223) why the Gilyak -- in spite of dog fur among the Gilyak -- in
the ease and cheapness of obtaining it, since the Gilyak keep
dogs in great numbers as indispensable draft animals, and the
fur cannot be used profitably in trade with either the Chinese,
Japanese, or Russians.

Nevertheless fur coats made out of the fur of other anima
are found among some Gilyak. They do not serve for use, bu
are carefully stored as valued and rare objects. A lynx coa
(Gilyak tschlyul-utschi) in particular plays such a role among
them. A person who owns a lynx coat is regarded among the
Gilyak as a rich and distinguished man, and at the time of my
stay in the Amur region they could name for me only three of
countrymen and one Olcha who enjoyed such a possession. The
Gilyak were. Nenjdan in the village of Allof on the Amur,
Mengun in Patt, each having one coat of this type, and Pavgun
in Tamlin -- the Gilyak in Tymovskiy, and the Olcha in Tudo
Todo in Tschlivi, who likewise had one such fur coat in his
possession.

/61 cont./

796 The eve has finally arrived. This day is called Nau-vakhnku,
778 the day of the preparation of the inau, i.e., sticks with sharpened ends, which play an important religious role in the festival. These sticks, of various forms and sizes, represent orators-intercessors, which, together with the slain bear will set out to go to the master of the taiga and remind him of the needs of the Gilyak, and will be his talismans as well. Each kind of inau is made in pairs; each pair is spouses, so that they will be happier, and so that they will propagate and multiply. Some of the inau are hung as ornamentation on the posts of the
796 arena; some are attached to them at the bottom. While the
574 preparation of the inau takes place, the clan elder, together
614 with the master of the bear, and several clansmen ride out to greet the so-called narkh'i. These narkh'i are honored guests and play a very important role in the festival: the killing of the bear is left to them alone, to them /62/ alone is given all the meat of the killed beast and even the skin. The narkh'i are not arbitrarily chosen people, but of necessity representatives of that clan into which the daughters of the master of the bear, as well as the women of his clan in general, marry.
[606] Most often, therefore, a narkh is a son-in-law /zyat'/ of the master of the bear /see navkh, p. 82/. The narkh'i in turn take along their sons-in-law and decide among themselves which one of them is to kill the bear. If several bears are killed at the same time, narkh'i are invited from all the clans from which the clan arranging the festival has taken wives, so that sometimes up to ten clans participate in such a festival. It is these narkh'i whom the master of the bear must solemnly greet and lavishly entertain when he meets them, and transport them with honor to his village.

796 The following day is the day of the killing. It is called
●231 Na-khan-ku (the day of the killing of the bear) or Chkhyf-aryn-ku (the day of the feeding of the bear). Early in the morning the bear is taken out of its cage in the same way as to take it for a walk. A large woven belt to which are tied bags full of assorted viands is put on it, and it is tied up near a yurt and given the opportunity to enjoy the last hours of life remaining to it in this

/62 cont./

796 ●231 semifreedom. Around noon it is untied and, held by thongs on both sides, is taken for a walk. This walk, however, gives the bear little pleasure, for from every side they tease it in every way and try to drive it beyond patience. The bear at first lets out some grumbling, but gradually becomes enraged, attempts to attack the people, and gets up on its hind legs, but it is held by dozens of hands, and all its rage is lost in fruitless thrashing. But now, seizing the moment, the master of the bear cautiously steals up, seizes it by the head, kisses it good-by, and, without waiting for a return kiss, speedily jumps away. Most often, however, the bear freely returns the good-by kiss to its protector, who considers himself quite lucky if the clumsy one limits itself to tearing off a good chunk of meat and does not get its teeth into, say, an eye or the throat arteries. A wound inflicted by a bear on such occasions, however, is considered an expression of good will on the part of the good-natured beast. The walk ends in leading the bear three times around the yurt of its master. Beforehand everything living, even suckling babies and animals, is removed from the yurt; only the clan elder stands in the passageway, and every time the bear comes around even with the entrance he teases it with a long pole with an uncut crown of coniferous needles at the end and speaks gentle words. /63/ At the end of this procedure the bear is led to the plot of ground and tied between the two trees which have been ritually decorated. The pole with which the bear was teased is fixed to the hearth, so that its spreading crown of coniferous needles rises high above the smoke opening. After that there is an intermission. The 796 bear is again left to itself, while the people assemble in a 574 dense throng in the yurt of the master of the bear, where lavish entertainment begins. They literally sit on one another's heads; nonetheless the gaiety is extraordinary; the loud talk, the laughter, and the jokes never cease. Only the narkh'i are serious: they bend their bows, sharpen their arrows, and prepare themselves for the crucial moment. Meanwhile all kinds of cold viands are carried in huge troughs on dog sleds to the sacred plot of ground; there are frozen fish of all kinds, rice,

/63 cont./

796 buda, and beans, and, finally, all kinds of the ritual dish, 574 "the mos'," whose method of preparation I have already described in the second chapter.

796 This is all placed in rows near the bear. The clan elder ●231 or the master feeds the bear for the last time from a big spoon on a long handle, giving it a taste of each dish, while asking it to offer a "good spot" at the time of the killing. Finally he addresses the bear with the following farewell words: "Good-by. I am feeding you for the last time. Go quickly, go quickly to your master, and may your master greatly love you." Other clansmen also try to offer something to their old friend; even 796 small children participate in this kindly affair. After the short [562] break all the people pour out of the yurt, with the exception of the women, who are forbidden to be present at the killing of the bear -- otherwise it will not offer a good spot -- and arrange themselves in fighting formation. The master of the bear or the clan elder walks in front with a kettle and an ax in his hands. Next to him is the elder of the narkh'i, also with a kettle and an ax. Behind them are the remaining narkh'i, with bows and arrows, and, finally, all the participants in the festival follow on ski on both sides in a picturesque, happy throng. Within a hundred paces of the place where the bear is tied, the people stop, the master drives his ax into the snow and places the kettle next to it; the narkh does the same with his kettle and ax. The ax and the kettle bear the characteristic name of nich, i.e., mine -- thine. The master of the bear and the narkh elder exchange these nich'i at the end of the festival as a sign 796 of eternal brotherhood. When the nich'i have been placed, the 526 next to the last act of the tragedy begins: the preliminary competitive archery. Once, when the bow played a more important role in the life of the Gilyak, this shooting /64/ no doubt had the character of a great competition; now, however, it is reduced almost to a simple formality. The target is a board placed behind the bear. The narkh'i shoot first, and after them the clansmen of the master; the latter try not to embarrass the guests and make intentional misses. The crowd follows with

Gi 23 /457 cont./

222 various places on the Amur and especially on the Ussuri and have
[177] small gardens and farms. Apart from the dog and the house cat
[241] occasionally present among the Goldi, Olcha, and Gilyak /458/
[439] and treated merely as a luxury item (1), the first domestic animal

Gi 171 231

1. Concerning the distribution of the house cat in the Amur region and its position among the Amur peoples, see what is said in the first volume of this work, pp. 98-100.

met among the Amur peoples, going upstream, is the pig. As was discussed in detail in the first volume of this work (p. 155), individual specimens are found even among the Olcha (2), but

G [231] 439 [262]

2. There was none among the Gilyak in my time. Later, when there were pigs raised by the Russians in Nikolayevsk, the Gilyak occasionally bought some in order to consume them in festive fashion (Vostochnoe Pomor'e, 1866, p. 59).

a regular breeding of pigs is found first among the Goldi, up the Amur from about Ssargu and Naiche on and along the Ussuri.
Gi 23 The animals, fed on fish, are sold by the Goldi to their country-
439 men or to Chinese traders, through whose mediation they reach
[438] the Olcha farther downstream. The Goldi get the breeding ani-
[262] mals, however, in part from the Man-dse (Chinese) along the upper Ussuri (3), but for the most part from the Sungari region

basis of tales told by the Hollanders who had been prisoners in Korea
171 in the middle of the seventeenth century, that in winter there one
175 binds small boards under the feet in order to be able to walk over the snow without sinking into it.

G Gi 484 171 Of the greatest importance for the economy and the whole life of primitive peoples is the manner in which they undertake their greater moves from place to place by land, and in this respect we find in the Amur region very different, and for the individual peoples characteristic, phenomena.

G 492 231 Of all the peoples of the Amur region the Gilyak are the ones who use the dog for traveling to the greatest extent and among whom the dog plays more important role in the economy and whole life than among any other of these peoples. For, aside from its principal purpose as draft animal, it furnishes the Gilyak, as we have seen, with the generally most popular and most used fur for clothing, and even serves them as food, which, aside from the Ainu, does not occur among any other people in the Amur region. Nowhere is the keeping of dogs for winter travel required by natural conditions and by the way of life and needs of the people to such an extent as among the Gilyak. If the dog is to serve as a draft animal, it must, because of its little strength, be kept in large numbers, and for that, in view of its predatory nature, large, never-failing stores of animal food are required, such as, not the roaming hunters, but fishermen settled along a river rich in fish or along the seacoast are in a position to provide for them.
G 226 These requisites, as discussed above (3), are best met among the
484
492

3. See pp. 645 ff. above.

Gilyak, who occupy the part of the Amur region richest in fish and are the most sedentary of its peoples and the one most devoted to fishing, and who, in addition, are impelled by their lively commercial spirit to undertake winter trips and voyages more than the others.

/479/

231 The dogs of the Gilyak are of the same breed as the draft
136 dogs distributed throughout Siberia and over to North America with the Eskimo: wolf-like, long-haired, with short, erect ears, and of all possible colors, black, white, brown, fox-red, mottled, and especially often of a striking wolf-like yellowish-gray color. The Gilyak dogs are small in comparison with the dogs of the polar regions of eastern Siberia, of the Jana /Yana/ and Indigirka regions, or even with those of Kamchatka as they were formerly
231 and still occur in isolated specimens (1). Nothing is done among
232

1. In the summer of 1854, in Peter-Paul Harbor, I saw two extremely large dogs which had been brought to the governor from the interior of the peninsula. I measured a still young, not quite fully grown animal likewise belonging to the large, old-Kamchatka stock, which was 11 decimeters long from the point of the snout to the root of the tail, four of which was the head and neck to the withers, and at the latter seven and a half to eight decimeters high.

the Gilyak to improve the breed: they neither convert especially large and strong individuals into breeding animals nor sort out and care for the whelps afterwards. A circumstance greatly contributing to the deterioration of their breed of dog is the bad treatment that they give the bitches. They do not use them for harnessing, and so they shortsightedly do not give them the same amount of food as the male dogs. Whereas the latter, insofar as circumstances permit, are fed with great regularity, daily in winter, every other day in summer, the former are excluded from these meals and in winter receive only a little food from time to time, just enough so they will not starve, but in summer no one concerns himself about them and they are left to find all of their food themselves. One therefore sees them, wretched and emaciated, slinking around the yurts and in them and greedily snapping at any scrap.

/479 cont./

231 The diet of the Gilyak dogs, like that of their masters,
136 sists almost exclusively of fish. Their principal food is provi in particular by the same fish appearing on the coasts and in rivers in shoals at certain seasons on which the existence of t Gilyak also principally rests, that is, the various species of s especially lyghi-tscho and tengi-tscho (Salmo lagocephalus a Salmo proteus), and in winter along the seacoast the kangi f (Gadus wachnja), which, however, on account of its smallne stands far behind the former. The part of these fish especial and exclusively intended for the dogs is the above-mentione

2. See p. 646.

so-called chark in Gilyak, the pieces consisting of the head a backbone with a little flesh attached to it (3). Only if there

3. The Russians in the Amur region and throughout Siberia very aptly call it kosstj, that is, bones, which in fact is all it is.

more of it available is the jukola intended for the people use dog food. Next to this, seal and white-whale meat, and alo the seacoast not infrequently the meat and blubber of strande whales, serves the same purpose. With the exception of the which, as was mentioned above, may not be brought into the according to Gilyak superstition, /480/ food is never given to dogs in the raw state, as the Russians do, but rather cooked to soup. Also, the feeding does not take place outside, but alw
462 the yurt. Like all housework, it falls upon the women. In th
352 tschadryf, the table found in the center or in a corner (Gilyak kyll) (1) is used for this purpose; in the toryf, the platform o

462 hearth. When the soup, made out of the above-mentioned m
512 terials in one of the large hearth-kettles, is ready, which is a ways one of the first of the daily chores of the women, a cou

/404 cont./

made and nevertheless cruder and poorer, weaving.

All the other peoples of the lower Amur region in general have the same clothing as the Gilyak. Nevertheless, to the extent that the natural conditions of the region, the means of subsistence, and the principal occupations of the people differ, more or less conspicuous differences and peculiarities show up among them, in that other clothing materials gradually gain the upper hand, many an article of clothing no longer corresponding to the changed requirements will be modified or disappear, and, on the other hand, there may a new one appear, etc.

The greatest, and in fact virtually complete, correspondence with the Gilyak in their clothing is shown by their nearest neighbors on the lower Amur, the Olcha, who live under the same physical conditions and in the same manner as they do, chiefly by fishing and, in de Castries Bay, also by seal hunting, and, like the Gilyak, keep hunting dogs, as their sole domestic animal, for winter trade and intercourse with the neighboring peoples. During the long period of living beside and in part among the Gilyak, the Olcha adopted, among other things, the clothing of the latter completely, and every one of the garments described above, not excepting even the lynx cap so peculiarly Gilyak, as well as the implements customarily used for making them, is found identically among the Olcha and has an Olcha-Tungusic designation. Nevertheless, among the Olcha, especially in the upper part of their area of distribution, closer to the Samagir and Goldi borders, one sometimes comes across an article of clothing that came from the last-named peoples and is foreign to the Gilyak, such as a deer-leather or elk-leather robe, a boa made of musk-deer skins instead of squirrel tails, etc.

The situation is the same with regard to the clothing of the Negda and the Ulguni (Ulgun), where Maldendorff, coming from the Tugur Tungus, visited them, everything gave him the impression, despite their language, differing only dialectically from the Siberian Tungus, "that he had come upon a new people". The shape and cut of the individual articles of clothing, the

/405 cont./ (1) In all they more or less provide merely a kind of accompaniment, and to be sure, they are either the wild, natural products of the country, which are simply gathered, some cereals and vegetables obtained by trade from the adjacent civilized peoples, the Chinese, Japanese, and, more recently, Russians. The individual peoples of the Amur region will accordingly differ from one another as far as food is concerned only in that fish among some or least among others is the principal food, each according to their principal occupation, and furthermore the proportion of plant food to animal food differs for each one according to their greater or lesser communication and trade relations with the Chinese or Japanese.

/406 cont./ (2) Fish is chosen by their nearest neighbors as the most pronounced ichthyophagi. One cannot imagine their life without fish; it is the condiris sine qua non of their own existence as well as of their only domestic animal, the dog, which provides them with food as well as transportation and clothing. There is hardly a fish in their country that the Gilyak would eat, if necessary, use as food. But starting in the first rank, of course, are those fish that, because of their seasonal appearance in great numbers, make it possible to prepare the large supply of food needed for the long winter when there are scarce, hence the species of salmon coming up the rivers flow the sea, among which, in turn, Salmo lagocephalus Pall. Gilyak nam, Ulch. Ussuri Sakhalin lagi-tschop and Salmo pneus Pall. Gilyak /426/ tengi-tschop play the principal role (1).

(1) In all of eastern Siberia to Kamchatka and northwestern America, the Russian terms for these two species of salmon are keta and gorbuscha; hence in the following I shall refer to them occasionally as keta and gorbuscha salmon.

At the time when these fish come up into the lower Amur and its tributaries, which falls in June for S. pneus, in August for S. lagocephalus, an active life prevails among the Gilyak, for everyone is busy with preparing supplies of fish for the winter.

/427 cont./ campfire, will serve him very well. Jukola, by the way, is not /428/ eaten as natural, but is also an important ingredient of many dishes, whose composition and preparation I shall come back to later. Finally, in addition to the chark, it is the principal food for the dogs, a fact of the importance of jukola for the Gilyak, it is understandable that, despite the indolence and carelessness more or less characteristic of all primitive peoples, they are very intent on preparing the largest possible supply of it and do not hesitate to make long trips and even temporary changes of residence for this purpose. This, for example, when those types of salmon come up into the rivers of the Amur Gilyak come to the Amur in order to take advantage of its surplus; others, such as some of the Tchomi Gilyak and the inhabitants of some places on the west coast of Sakhalin, come to the Tymy River in the interior of the island, which is especially rich in fish, and do not return with the acquired supplies until winter. On the other hand, at the other times, for instance, when the kangi-tschir (Gadus wachnia Pall.) migrates in large numbers along the sea coast, some of the Tymy Gilyak, conversely, betake themselves to their countrymen on the west coast and live in exile for a while in order to hunt and fish. In this respect there seem /428/ to have developed in the course of time certain mutual agreements and relations based on reciprocity between the inhabitants of various places, for example, between the Tchomi and the Tymy Gilyak, or between the latter and the Gilyak of Duf, Arkai, Tangi, and other places on the west coast of Sakhalin.

However plentiful the jukola supplies might be, however, they would never suffice to make the life of the Gilyak secure if they were not over at every season of the year more or less, depending on the locality, many other kinds of fish, which the Gilyak eat fresh, besides their salmon. In this connection the most favorable locality is the Gilyak region, of course, the mighty Amur River, and therefore along its banks, as discussed above, one also finds the largest concentration of the population and the richest development of the Gilyak individuality. The dwellers along the banks of the Amur scarcely ever lack fresh fish to eat.

/429 cont./

(2. cont.)
February, 1856, thought that it occurred only along the east coast of Sakhalin, without going up into the rivers.

Salmon Gilyak, upon returning home from Sakhalin, not infrequently bring some pieces of chok-tscho to the Amur as a special delicacy.

Finally, with regard to those Gilyak who have their habitation sites directly on the seacoast where there are no river deltas for only small, insignificant streams, although their situation is in general unfavorable for the above-mentioned fish and lacking for them and they /430/ can prepare only small stores of fish, nevertheless even in winter the sea supplies them with fresh fish. Of greatest importance to them is the sea, which abounds in fish in itself and not very tasty, but which, at a time when their supplies are running short, appears in shoals directly under the ice in the vicinity of the shore and can be caught in quantity with the most primitive methods. It is the aforementioned kangi-tscho, Gadus wachnia Pall. In February and March, 1856, I saw the people and dogs living almost exclusively on this fish in Nyi on the east coast of Sakhalin and in Duf, Arkai, Tangi, and other places on the west coast. It is only eaten raw and the treatment is always the same, in that first a thin slice with the tender skin is cut off and eaten with salt, and then the meat is cut from either side with one slice and is eaten; the remaining head with the backbone furnishes the kangi-chark, some of which, together with the rest of the scraps, is immediately cooked into a soup for the dogs and some is stored as food supplies for them, but, of course, it is far inferior to the kangi-chark and tengi-chark. Because of the importance of the kangi fish for the coastal Gilyak, more superstitions are connected with the preparation and eating of it than with the use of more other fish. Thus, it must be eaten without any accompaniment, and on the last day of the kettle of yurt in only an open container, a bowl or a basket, etc. Moreover,

/430 cont./ with regard to these and similar views, there are many local differences among the Gilyak. For instance, the Tro Gilyak did not be subject to the kangi fish prohibition, and they eat the gill in front of the hearth fire, while those of Arkai interpreted this as sacrilege and permitted without harm only at a fire burning in the open air.

As on Sakhalin, the kangi fish also occurs along the continental coast of the Sea of Okhotsk, near Kulu, Tagi, Hinka (Pendolin, Simonyo, etc. According to a statement by the Gilyak, it is absent in the Liman, and therefore, in order to catch it, the Tschomi Gilyak go every year to the west coast of Sakhalin along the northern part of the island and even throughout the winter. In 1855 and 1856 the Gilyak supplied the Nikolayev post so amply with sturgeon meat and caviar, especially from the tshki-tschir which, it seems, is more common in the lower Amur, that this was our principal and almost daily food in the winter, /431/ and, despite its initial tastiness, we became very tired of it in time. They especially liked to sell their caviar in particular, for since the Russians paid them a good price for it, whereas they themselves, although they likewise use it as food, do not prize it highly, they could, in exchange for it, obtain from the Russians all they always eat raw in the manner indicated above, is regarded among them as one of the tastiest of foods. Enormous quantities of sturgeon are consumed especially during the winter at the festivals, which take place in the winter. On such occasions I saw whole rows of the mighty great animals lying on the floor of the yurt decorated for the celebration, though they are not on the menu of the actual feasts at the bear festival and are only eaten in between them or on the days preceding or following the festival. Like the human beings, the dogs, too, get their share of these fish, in that a soup is cooked for them out of the discarded, less desirable pieces and especially out of the gristly skeleton with the meat clinging to it, but the gristle itself is fished out of the kettle in order to be sold, cleaned and dried, to the Chinese.

/431 cont./

(1. cont.)
Bergsal. Sbom., St. Petersburg, 1870, p. 13).

the main use that they make of it, but on the Liman I have seen them eat seal meat, and I also tasted it on this occasion. Like the meat of all mammals, it is only eaten cooked, not raw, whereas the latter, as we have seen, is often and sometimes even preferably done with fish. On the other hand, the Gilyak have a general, superstitious aversion against the frying of fish or meat, superstitious I often had to fight during a stay in their yurts, for whenever a piece of meat was being fried for me, with the fine aroma of the fat that it left in the pan, the owner /432/ shouted, almost furiously could be heard from all sides and it was often difficult to finish the cooking (2). As little as the Gilyak like seal meat, they

(2. Steller (op. cit., p. 303) also points out with regard to the Itelmen and Koryak that they do not like to fry, in contrast to the Tungus and Yakut.

nevertheless greatly relish seal fat or blubber, which they eat cut in slices, and, finally, most popular is the train oil obtained from it, which is in general use among them and is kept among their supplies in seal bladders and numerous jars or bottles, apart from its use to illuminate the yurts, sometimes in the preparation of many kinds of dishes and sometimes simply eaten with a spoon as fish oil along with jukola or enjoyed in other ways. It is by this ingredient, which becomes more general and more essential the closer one comes to the Amur-Liman and the seacoast, that the food of the Gilyak is principally distinguished from that of the other Amur peoples living farther upstream and inland.

Besides seals, Nature offers the Gilyak another important and precious foodstuff in almost the same way: it is the dolphin whale, Delphinapterus leucas Pall. (Gilyak pomi-tschop), which, with the sole exception of the coast along the northern part of the

/433 cont./

the English by Pichard, Paris, 1837, Vol. 1, p. 312. John Bowring, "Die Chinesen, ihre Sitten und Gebräuche (The Chinese, Their Manners and Customs)" (Germanism Georg. Mithell), 1858, p. 319). Girard, France et Chine, vie publ. et privée des Chinois etc. et mod., Paris, 1869, Vol. II, p. 32. Others, like the English missionary Milne (Petermann's Georg. Mittheil., 1857, p. 436) and Prosper Montagne (La Chine et en Mongolie de Mr. et de Mme. de Bourboulon, Paris, 1866, p. 272), deny the use of rats for food among the Chinese.

Gilyak were taught better by experience, perhaps as a result of painful or even fatal experiments, that the meat of the bear and other mammals there are only two that are of special significance in food for the Gilyak, and, to be sure, both on account of their general and frequent use and the great importance that they place upon them. These are the bear and the dog.

Bear meat and bear fat are the greatest delicacies that there are for a Gilyak. For the greater part of the year, the bear is taken from its lair and kept in captivity for a long time and fed. But, according to Gilyak custom, it may not be eaten except at certain times and with the observance of certain ceremonies and practices that are undertaken in large ad hoc festive gatherings. I have had an opportunity, as an eyewitness, to become acquainted with these bear festivals, which play a most important role in the life of the Gilyak, in all their individual acts from beginning to end, and therefore I am obliged to discuss them in a special, later section of this work. Besides that, however, the bear is considerable insight into the food and cooking of the Gilyak in general, for to entertain the large festive company assembled many dishes must be prepared and served in the course of a few days. And so most of what is presented below concerning their culinary achievements was observed by me on such occasions.

/434/

*262 The use of the dog for food on the part of the Gilyak is of
23 a wholly different significance, not so much social as practical. Understandably they must try to get the greatest possible use from their sole domestic animal, which, moreover, they are obliged to keep in large numbers as draft animals. This is attained
(B31) inasmuch as even in case it becomes useless for transportation, because of debility or injury, they utilize it by using its skin for clothing and its meat for food. As a result of this triple usefulness, the dog has the same significance for the Gilyak as the reindeer has for the Tungus and other reindeer nomads. Moreover, the Gilyak find great satisfaction in dog meat, which is understandable inasmuch as it, as a consequence of the almost exclusively fish diet that the dogs have among them, must likewise taste strongly like fish, and this can be nothing but most agreeable to the Gilyak palate (1). For this reason the Gilyak were always willing to buy

(123) (B34)

1. I could not bring myself to taste even the dog meat that the Gilyak ate in my presence, but I know that the meat of an animal fed on fish acquires a strong fish taste. From my experience with a little pig which Maximowicz and I bought from the Goldi on the Usuri and which we soon, although long deprived of meat, gave up eating for the reason mentioned. As early as Strabo one finds the remark that in the land of the ichthyophagi (on the coast of present-day Baluchistan) the meat of cattle tasted like fish (Tyler /Tylor/, Forsch. über die Urgesch. der Menschheit und die Entwickel. der Civilisation /Researches into the Early History of Mankind and the Development of Civilisation/, translated from the English by H. Müller, p. 269). It is known that in Kamchatka even the milk of cows, if they have been fed hukola for a time because of a shortage of hay, always gets a more or less strong fishy taste.

(113)

23 /434 cont./
(B31) from me for a small consideration the dogs that had become useless on a trip. The Gilyak do not consume their dogs, however, (B34) without an urgent reason. Such a reason can appear readily enough, however, if individual animals are injured or rendered useless, or if there are too many of them and, correspondingly, a shortage of food; in fact, even superstitious ideas can give rise to it. Thus, I have seen it happen, for example, in the village of Tyk on Sachalin, where I was delayed on account of severe snowstorms for several days in February, 1856, in the company of (B32) a few traveling Tschonsi and Tymi Gilyak that, in order to calm the bad weather, after other means had already been sought in vain, three young dogs were strangled and consumed, which was to be repeated on the next day in case of failure. The meat and the entrails of the animals were thrown into the kettle, a part being added to the hukola soup for the dogs, and -- characteristically enough -- I saw the woman occupied with these preparations bite off a piece of the bloody entrails beforehand for herself and hand another little packet of it to a child, who likewise seemed to enjoy it very much. On another occasion, in the village of Duf, I was a witness to the entertainment of a large company of Gilyak with dog meat. This happened only as a celebration subsequent to a bear festival held there a short time before, traces of which were still to be seen in the exterior and interior decoration of the yurt. The dogs, among them a couple of invalids furnished by me, were killed in front of the yurt, skinned, disembowelled, the meat and the bones cut up, and all the pieces belonging to one animal wrapped in its pelt. /435/ Inside the yurt, the place between the rear sleeping bench and the hearth, where the scaffold with the bear's head had stood during the bear festival (1), was

(B34) (B32) (B31) (B34)

1. The details concerning this will be found in the present section specifically devoted to this subject.

marked off by two staffs, between which, on the floor, there was a stick decorated with a bundle of thin, curly, crimped wood

23 /435 cont./
● 262 shavings, the so-called zach, whose significance will be discussed
*262 in the following. The bundles containing the meat and bones of
the dogs were now brought into the yurt and arranged on the rear sleeping bench, whereupon the women went to the hearth and, under the kettles on the hearth in order to cook the meat and to make a broth out of the bones. These preparations, however, took so much time that the meal could not take place until late in the evening. Meanwhile the flames leaping on the hearth, the steam and smoke rising from the kettles, and the crowd of people, who not only occupied all the sleeping benches, but had also settled down on the floor of the small earth-yurt, soon made any further stay in it so unbearable that I found it necessary to leave before the actual meal and to seek another shelter for the night.

(B31) (B34) (B32)

If one wished as a conjecture to grast for the northern peoples the discovery made in the south among various Negro tribes, namely, that the enjoyment of dog meat is generally the first step toward anthropophagy and accompanies it (2), he would look quite

(B14) (B31) (B34) (B32)

in vain for evidence of it among them. I have never come across anything among the so generally and markedly cynophagous Gilyak that would even distantly support such a conjecture. On the other hand, I believe it can be said as a general rule for these peoples with respect to the custom of eating dogs that it is common only in the case of those among them who keep the dog as the only domestic and draft animal, for only in this case can it be considered quantitatively as a food and morally nothing stands in the way of its use as such since the draft dog does not at all stand in the close, individual, and to a certain degree personal

(B31) (B34) (B32)

23 /435 cont./
● 262 relationship to his master as does the hunting or house dog,
*262 who, through loyalty, personal attachment, and other character-
(B31) istics lacking in the draft dog, makes himself the constant companion and friend of man. Accordingly, just as among the Gilyak, one also finds cynophagy among other Paleo-Asiatic peoples, for example, among the Ainu of Sakhalin (3) and of

as Steller expressly states. Or had they perhaps already given up eating dogs in Steller's time, as a result of their well-known, exceedingly eager imitation of the Russians (3), for whom it was a

(B13)

3. Steller, op. cit., p. 285 and elsewhere.

particular abomination? And all the more since it could not have been difficult for them in material respects in view of Kamchatka's great wealth of fish (4). On the other hand, those peo-

(B13)

4. According to the observations made by the Voga Expedition, the Chukchee of Pitlesai and Jinretlen referred to as the Reindeer Chukchee slain dog (Nordenskiöld, Die Umseegelung Asiens und Europas /A Voyage around Asia and Europe/, Vol. I, p. 96). Whether this is general among the Chukchee has not yet been ascertained.

ples -- as I should like to formulate the above rule further -- who keep the dog only for hunting or to guard house and grounds, but use another domestic animal, the reindeer or the horse, for traveling, sledding, or burden-carrying, such as the Orok, the Siberian Reindeer-Tungus, Orochon, Manegir, etc., not only eat no dog meat, but even have a more or less marked aversion to it. (B20) From this point of view it is noteworthy that the Olcha, who at

Goldi RX3
Olcha

G1 /436 cont./ From this
23 point of view it is noteworthy that the Olcha also
● 262 present have with the same way of life as the Gilyak and likewise
*262 have only one domestic animal, the dog, and, to be sure, as a
(B17) draft animal, nevertheless do not eat dog meat. When
(B16) Pragatschekii asked them about this in the village of Pul, they "expressed their aversion to such fare and even designated this as
(B20) the particular feature of the Gilyak (5). One might, then,

5. Pargachevskii, "Poiezdka zimnim putem" vverkh" po r. Amuru /Journey by the Winter Route up the Amur River/" (Vestn. Imp. Russk. Geogr. Obshch., Pt. 21, 1857, Sec. on Res. and Mat., p. 162).

G1 (4) One might
23 at first infer see in this a contradiction of the first part of the
● 262 rule set forth by me above; considered more carefully, however,
*262 it is a splendid confirmation of the second part. For, as discussed
above, the Olcha were formerly reindeer nomads and were forced into settling along the Amur and into the life of fishermen like the Gilyak only through the loss of their reindeer (6). And since

6. See pp. 284, 308, and elsewhere above.

the memory of that change in their way of life is said to live on in their legends, it should not surprise us that their aversion to eating dog meat, which dates from that nomadic period, has also been preserved among them. Conversely, one can also see in this aversion of theirs more proof for their former reindeer nomadism. The situation may be similar for the Negda, Samagir, and Kile (7).

7. See pp. 322-329 above.

In fact, neither from my own experience nor through other travelers (Wenjukof, Przewalski, Nadarof) /437/ is it known that G. the Goldi and Orochi eat dog meat. Thus cynophagy in the Amur
23 region, Sakhalin included, remains limited to the two Paleo-

traced back to Chinese influence.

23 Rich furnish the Gilyak hukola less food than do mammals,
● 262 merely for the reason that they are not hunted very much on ac-
*262 count of their little use otherwise and, as a rule, they are much
more difficult to catch. Whatever the Gilyak do catch, however,
is consumed indiscriminately, and some birds which are periodically more easily caught make a somewhat larger contribution, though always a minor one, to their diet here and there. At
(B36) several places, for instance, the ptarmigan (Lagopus alba Gm.,
(B36) Gilyak gerzi, on Sakhalin tschiskol-ngi) is caught by them in large numbers by means of simple snares. Along the west coast
(B36) of Sakhalin, from Tyk to Duf, I saw them consuming with great relish the fjhalerja cristatella Pall. (Gilyak nochka-ngi), which easily falls prey to them in winter because they alight individually or in small flocks on the ice near open places in the sea and freeze
*262 to it. The meat of the sea eagle, which the Gilyak lift out of its
23 nest and use to spell the fall of the leaves, is likewise
(B17) consumed by them when its hour of death tolls.

/562 cont./

prey in their region and at the same time the animal that most pleases their palates and that, because of the festivities connected with eating it, also plays an especially important role in their social life. Striving, above all, to capture the animal alive, they eagerly search in the fallen snow for where a bear might have its winter quarters. When this has been discovered, a number of courageous and strong men band together, in order, equipped with the required paraphernalia of ropes, chains, pikes, etc., to surprise the sleeper in its lair, disturb its rest, fetter it, and lead it into captivity. Needless to say, this cannot be done without a fight, and however skilled the usually experienced bear-catchers may be, more or less serious wounds not infrequently result, which, however, are borne more easily than others by the Gilyak, because they are regarded as especially honorable and lend the one concerned an aura of manly fortitude. Nevertheless, the frequency of the bears kept in captivity among the Gilyak indicates that the outcome of the battle is usually or often successful; there is scarcely a village of any size in which on a trip through the region, one would not see one or several such animals. If the place where the bear was lifted from its lair and fettered is not far from the village to which its captors belong, it is simply taken to it in its fetters by ropes and put in the prison kept ready for it. For greater distances, however, the sleds on which the hunters came also serve to take their booty home. The fettered bear is put on one or, if the route permits, even on two sleds put side by side and tied together, and is brought to its new domicile in a triumphal procession amid the loud cheers of the sled drivers and the barking of the many, passionately excited dogs. The nature of the bear's prison and the treatment of the captured animal will be discussed later in speaking of the bear festivals of the Gilyak, but at the moment it is primarily only a question of its capture. The battle with a bear disturbed from its rest does not always end in its being fettered. It often defends itself so tenaciously and vigorously and is so dangerous for its adversaries that they find it necessary to put an end to it with their pikes and lances. In fact, the latter happens

Furuhjelm, at that time head of the agency of the Russo-American Trade Company in Ajan, Nikolayevsk and the Murawjof post, estimated the total number of animal furs annually obtained in trade from the Japanese by the Ssisam voyagers in Ssiranussi at about 2,400 otter pelts, 1,300 sable pelts, and 640 fox pelts (1). This rich

1. Tikhmenev", Istor. obozr. obrazov. Rossiisko-amerik. Kompanii, Part II, p. 128.

supply of furs which the Gilyak and Olcha bring home from their Ssisam voyages is used by them in the trade with the Chinese on the Amur and especially on the Sungari in the manner described above and thus contributes greatly to the maintenance, stimulation, and augmentation of all their trade operations.

439 484 487 Meanwhile, the stay of the Ssisam voyagers on Sakhalin for the purpose of trade with the Ainu and Japanese often extends over a considerable length of time. In particular those arriving in the summer either wait for winter in order to return with their dogs on the above-mentioned route via Kussunai, Manuë, the Poro-nai, and the Tymy sources, or even remain through the entire winter in the southern part of the island and not until the next spring or summer set out on the return voyage by boat along the west coast of Sakhalin. On this voyage they [231] still carry on trade with the Ainu so far as they can and, as Fr. Schmidt reports (2), are especially anxious to get bear cubs in

2. "Histor. Ber.," etc., op. cit., p. 54.

order to raise them at home.

648 439 484 The Japanese do not permit the Ssisam voyagers to go beyond Ssiranussi and to visit, say, the Japanese settlement of Kussun-kotan in Aniwa Bay. This, then, as in Ssan-ssin, is the [823] southernmost boundary of the world known to the Gilyak from

Gilyak summer yurt.

/696 cont./

825 like them it stands upright in combat, etc. In spite of all this,
[262] however, the Gilyak is not willing to forgo the great enjoyment which bear meat and fat provides for his palate, and he longs for it especially if the bear first lived in captivity for a time and was fed on fish, for this food adds a fishy flavor to its meat and fat, which is especially agreeable to the Gilyak. Moreover, a person may /697/ then indulge in the enjoyment of these savory morsels quite without danger and without punishment, for, in order to achieve this, according to Gilyak belief, a long series of preliminary act is necessary, all of them aimed at outwitting the bear during its lifetime by attestations of esteem and to deceive it, as it were, about everything that is done with it, but, after its death, to pacify the angered spirits of revenge of the mighty beast by paying homage even to the manes of the slain animal.

•231 The attestations of esteem begin immediately with the leading of the bear into captivity. If the bear has been discovered in its lair and safely shackled following a successful battle, it is taken, as has been said (1), on two sleds put side by side and tied

1. See p. 878-880 above.

together, in a triumphal procession to the place from which the hunters set out, and it is received there with loud shouts of jubilation from young and old. The same thing happens when a Gilyak returns from a trading trip to Sakhalin and in the central space of his boat brings with him one or a couple of young bears bought on the island (2). In the Gilyak villages there is usually

2. See p. 960 above.

never a lack of lodging for putting up the bear, but if need be a new one is erected for it. This consists of a square box made of beams, open at the top, with a small, heavily barricaded door and an even smaller, always open window. The bear is forced to climb into it and, after it has been unfettered, is prevented from escaping its prison by a layer of boards spread over it, fastened with poles, and weighted with stones. From now on

• 23 /697 cont./ From now on
75 it belongs,so to speak, to the whole village, for all its members
[421] have to attend to its care and feeding and, accordingly, are entitled to participate in the forthcoming festival in its honor, ultimately ending in its death and the consumption of it. The
[182] bear festival, then, in a very eminent sense is a communistic festival which unites all the individual members of one village community and therefore understandably represents the climax of the social and co-operative life of the Gilyak. The original owner of the bear, the man who bought it or who arranged for its capture, has only the right to determine the time when the festival is to take place and to direct it, always, of course, within the limits of traditional practice. Similarly, as the host,
[574] he may make the feast a more or less opulent one by adding culinary delicacies other than the ones furnished by the bear and, accordingly, to invite to it relatives, friends, and acquaintances, even of a foreign tongue, living beyond his village. Finally, after the festival is over, the skin of the bear goes to him.

231 The feeding of the captive bear by all the inhabitants of the village takes place in accordance with a previously established order. The food given to it, through the little window in the prison consists exclusively of fish in a raw or dried state (jukola), mossj, i.e., a mush made of ground fish-skins or cut-up jukola, fish or seal /698/ oil, and red bilberries or crowberries (1),

1. Concerning its preparation, see p. 671 above.

and water, which in summer may be given to it in liquid form, but in winter only as ice or snow. The long spoon (Gilyak nichyr) illustrated on Plate LI /p.125?/, Fig. 2, is used for presenting the food, in particular the mossj and the water. From time to time, but only rarely and chiefly, no doubt, for the purpose of cleaning the cage, the bear is taken out of it. For this procedure, however, which I witnessed in the village of Tschomi on the Amur-Liman, it must be partly bound again. This is done by carefully pushing apart a couple of the boards on top of the cage, throwing a noose round the neck of the bear still in the cage, and shackling its

/698 cont./

• 231 hind legs. After this the other boards on top of the cage are removed, and the bear is dragged by a number of people into the yurt, where the dogs' table found in the middle of it has meanwhile been removed. Since one cannot depend on merely the leather noose thrown around the neck of the animal, if it is full-grown, a Gilyak now jumps in front of the bear with legs apart, seizes it by the roots of the ears, and presses its head against the floor. Simultaneously two other Gilyak armed with wooden poles do the same thing with its front paws, and now still another jumps on the back of the animal, straddles it, and puts a collar on it, from which, by means of a revolving ring, long iron chains and leather straps run in two directions. With these the bear, after its hind legs have once more been unfettered and, roaring loudly, it has stood erect, is now tied between the two central posts of the yurt in such a way that it can comfortably lie down and get up again. As a reward, so to speak, or as a token of fondness a few slices of jukola or seal fat are then given to it, whereupon it is led around the inside of the house several times and then back to its cage.

114 Undoubtedly this Gilyak custom of keeping bears in cap-
231 tivity, occasionally bringing them into their houses, and treating
175 them in the manner described has given rise to the legend, very widespread in Siberia, that they tame bears and use them as domestic animals for riding and driving. In a Russian document about the Amur stemming from the seventeenth century and published by Spasskij (2) ("Skazanie o velikoi riekie Amurie /Story

[113] 2. In his article, "Sviedieniia Russk. o riekie Amurie v" XVII. stol. /The Russians' Knowledge about the Amur River in the Seventeenth Century/," in Viestn. Imp. Russk. Geograf. Obshch., Pt. VII, 1853, Sec. II, Res., p. 20.

about the Great Amur River/"), it is said: "on a large island (Sakhalin) lying opposite the mouth of the river live the Gilyak peoples, who keep 500-1000 dogs in their villages, eat all kinds

/698 cont./

114 of animals, and feed bears for peaceful work" (3). At the

3. In the original the latter passage reads: "i medvyedei kormyat" v" ulusakh" diya raboty mirno."

beginning Spasskij did not want to give any credence to the latter statement, both on account of its strangeness and from the lack of any other confirmation. But in the "Copy of a Sketch from the Siberian Country" (Spisok" s" chertezha Sibirskiia zemli) published by him in 1849, it is said explicitly: "The Gilyak people sow no grain, eat fish, and drive or ride on /699/ bears" (Gilyanskie lyudi khlyeba ne syeyut", pitayutsya ryboyu, a yezdyat" (1) na medvyedyakh"). Witsen also found

[192] 1. The Russian verb, yezdit', means both "to drive" and "to ride."

the same legend, that at the mouth of the Amur River "lives a savage people, called Gilaki, who keep many bears and dogs in order to utilize their services" (2). Finally, it is also found in

2. Witsen, Noord- en Oost Tartarye /Northern and Eastern Tartary/, 1705, p. 884.

Strahlenberg (3), for it says there: "at the mouth of the Amur

[113] 3. Das Nord- und Ostliche Theil von Europa und Asia /The Northern and Eastern Part of Europe and Asia/, Stockholm, 1730, pp. 386, 387.

River lives a people whom the Russians call Kilaki; some 'Yaku Tatars' have related to me about these people that they tame bears and use them as we do horses" (4).

4. Witsen (op. cit., p. 686) was also told

/699 cont./

114 ●231 195 4. (cont.)
this fable by the Yukagir in the country of "Ssabatsia" (sobach'ya zemla = dog country) in Siberia, but he himself labeled the report doubtful.

231 *796 The length of the bear's captivity depends on its age: old animals are kept in captivity only a few months; young ones for several years, until they are fully grown. When it has acquired a thick layer of fat as a result of plentiful food and lack of exercise, the time draws near to lead it with great pomp to its doom. The only season of the year in which bear festivals take place among the Gilyak is winter, for then they stay, at least on the mainland, in the spacious dwellings built in accordance with the Chinese pattern and have much time for social gatherings, festivities, and feasting; in fact, the abundance of time is probably the chief reason why they like to prolong them as much as possible. In particular December, or Anj-long of the continental Gilyak, is the month in which most of the bear festivals occur. But this is by no means obligatory; they may equally as well take place in January and February; indeed, I myself attended such a festival among the Olcha that did not begin until March 22 (April 3). But this is about the latest date for it, for by then preparations for the summer begin in earnest, and soon afterward, in April and at the beginning of May, the move to the [956] summer dwellings is undertaken. Sometimes setting the date for when a bear festival is to take place is assigned to the shaman, but usually, as was mentioned, it is left to the owner of the bear or bears, who is also the host, and he will let it depend on his own business affairs and can, if the latter demand it, have a more or less long pause between the individual acts of the festival. As a result of this, as well as thanks to the great number of bears [609] kept in captivity by the Gilyak and Olcha and the long duration [123] of the whole festival, it may easily happen that the traveler in the country will encounter here or there an individual act of the festival, but usually on such an occasion the Gilyak, animated by mistrust and suspicion, try to keep such strangers from entering their dwellings by all kinds of pretexts, as I myself experienced on Sakhalin.

/700 cont./

*796 526 to some of our French rounds: the players joined hands, forming a circle; the circle moved around rapidly until it broke at one point, and a single row was made out of the circle. As soon as this happened, the first man passed under the raised arms of the last two members at the other end of the row, pulling the whole row after him, and making it necessary for the last man to turn himself around himself. If he succeeded in doing this and thus became the first man, he did what the first one had done, and so it alternated on and on, until the clumsiness of one of the leaders or a slip and fall by a member of the chain caused the whole row to break up, which happened not infrequently in the slippery, unevenly packed snow in front of the house and was always accompanied by the resounding laughter of all the bystanders. Close by another circle made up of young boys romped about and imitated exactly everything relating to the adults (see Plate XI /p. 991/). Many women, girls, and small children of the village had gathered around both circles and at every opportunity expressed their approval by wildly shouting in unison and by stamping and loudly beating on their furs and robes.

*796 ●231 After the game had come to an end, Judin approached us and urged us to enter the house, /701/ into which the whole crowd from outside followed us. The dogs' table had been removed and in its place were three bears who were tied to the two central posts of the yurt and to the supports on either side of the absent dogs'-table top, for the latter alone would not have offered enough resistance. The bear wears a stout leather band around its neck and a second on its back connected with the first around its body directly behind the front legs, which serves to keep the neck-band from slipping over the head of the animal. The space otherwise taken up by the dogs' table is rather small for three bears, especially since the animals cannot be put too close together, so the chains running from the neck-band, which are extended by a long rope on either side, are drawn quite taut, but always so that the animals can lie down, get up again, and move somewhat to the side. This greatly restricts the free

/701 cont./

*796 ●231 traffic within the yurt, for now with every step one has to stay close to the edge of the sleeping benches in order not to be unexpectedly seized by the paw of a bear.

Only two of the bears, a very large animal of the female sex and a considerably smaller, yet fully grown, seven-year-old male bear, belonged to Judin, who had bought them in the villages of Tschilwi and Aure, inhabited entirely and half by Olcha, respectively; the third and likewise male bear of medium size came from Kalm and was the property of another Tebach Gilyak. As in size, the animals also differed in coloring: the small bear was light brown, the large one dark brown, and the medium-sized one almost black. Moreover, the large bear differed from the other two in that it had a whitish-gray band on the lower part of its neck, but not enough to be called a collared bear (Gilyak molk) by the Gilyak, which happens only if the white is quite pure and extends over a large part of the throat. Finally, the three bears also differed in their behavior, especially in the way they defended themselves, as we shall presently see.

Immediately after we, followed by the throng, had taken *796 526 seats on one of the sleeping benches, another game was begun [191] here, despite the limited space, the one that I described above in discussing the Goldi games and which consists of jumping over a rope swung by two persons. The Gilyak called it tyk-tyk (1).

[192] 1. Tyk means cord.

and the activity that goes with it, tykyrtsch. But it did not last long and was not performed nearly as skillfully as by the Goldi. Nevertheless it is part of the entertainment program during a bear festival and, judging by the noise, shouting, and laughter of the onlookers, found hearty approval. I did not see it performed by the Gilyak at other times, and the fact that it took place in the limited space of the house and not outside, where, in the moonlit night, it would have been much better and more comfortable for the fur-clad players as well as for the spectators, and the brief duration of the game, /702/ almost permit one to conclude that

/702 cont./

*796 it took place only in honor of the bears present. The latter, moreover, were immediately afterwards treated with mossj, which they *796 ●231 licked from long nichyr.

Next came the chief entertainment of the festival, the procession with the bears from house to house. For this, as for all subsequent events, the same order was always observed with the animals, in that first came the small one, then the large one, and finally the medium-sized bear -- an order evidently determined by the unequal share of their owners in the festival, since two of them belonged to Judin and he was at the same time the chief host of the entire festival. Accordingly, the procession began with the small bear. The ropes with which it was tied to the posts were loosened, and at each of them a long row of Gilyak posted themselves in alternating order. The two men standing next to the bear on either side had reversed their fur coats, wearing the back in front, and their sealskin apron-skirts (kossjkha) were around the body as tightly and smoothly as possible, so that if a bear claw grazed them, it would not catch anywhere, but would slide off the smooth skin. Each of them also held a short stick in his hand in order to tease the bear. The first man standing in the direction in which the procession is supposed to go now jumps in front of the bear with his legs apart and his chest pushed far out and goads it with his stick. The animal roars loudly, throws itself forward, partly lifts itself up, and flies out at its opponent with its paw. But the latter instantly jumps back a step, and all those standing at the same rope move one step forward toward the house door, dragging the bear after them. The same thing is repeated a second time, a third time; the bear tries in vain to seize its opponent, but its claws always slide off the smooth skirt. Meanwhile others are busy with sticks and poles pushing the bear in the direction it is to go. If it presses the man in front too much, if it has not only grazed him with its paw, but clawed his fur coat, making his plight dangerous, the first man in the row behind the bear goads the animal from the rear and forces it to turn around and to direct its attacks at him, while those standing at the rear rope at the same time drag the animal backward.

/702 cont./

*796 Thus the procession sways along, sometimes forward, som
354 times backward, but always closer and closer to the house doo
●231 amid the loud roars of rage of the bear being tugged back and forth, in which the other two animals join, and amid the wild intermittent shouts of jubilation of the bear leaders as well as bystanders. The few oil-lamps do not sufficiently illuminate the large space of the yurt with its dark sooty beams so that al those who are busy with the bear can clearly see its movemen and yet this is absolutely essential for the prompt intervention one or the other man in front. Hence a number of boys leap onto the sleeping benches and from there illuminate the turbu proceedings, following the procession back and forth with im-provised torches, which consist of rolled-up birch-bark and so times flare up brightly and then again spread only dark smoke Truly a strange picture (see Plate XLVII /p.1247/).

*796 The two other bears were then /703/ led out of the house
231 the same manner as the small bear. The first one was decide the most enraged and intractable of all, which the Gilyak asc to the fact that it had broken a leg while being captured and c sequently was still limping. It was remarkable how differentl the three bears expressed their rage and defended themselves: whereas the small bear and the large one straightened themsel up and tried to claw the man goading them, the third bear be haved quite differently; it did not try to get up at all, but at tempted to ward off the thrusts of the stick by holding its paw front of its face and reaching out for the legs of the one goadi it, or it would lie down on its back and defend itself with its p It was also the only one of the three which in its fury, tried to scratch up the stamped-earth floor of the yurt, which, howeve the Gilyak stopped it from doing each time.

The purpose of the procession with the bears was to lead t
[825] through all the houses in the village, of which there were seve Tebach; the procession with the three bears turned into each c them, and everywhere they were arranged in the same order, large bear in the middle, the two others at the sides, and trea with mossj from nichyr spoons as a sign that they are held in e and are welcome guests in each house.

The interior of a Gilyak winter house. Feeding the dogs in it.

/480 cont./
long troughs are placed along the edge of the dogs' table or the hearth platform, the door of the yurt is opened, and the dogs lying outside and held by straps or chains are untied. As soon as this is done, the dogs, already impatient, dash straight into the yurt, often jumping on and over one another, and stand on the kyll or on the ground in front of the troughs. Meanwhile, the women, with the help of large ladles (2), have filled several

2. See p. 683 and the illustration above.

buckets with the soup, bubbling and steaming in the kettle, and now pour it into the troughs. Since the whole pack ravenously and greedily pounces on the food, each animal trying to outdo the other and to snatch everything for himself, furious struggles and fights usually break out between neighboring dogs, but are stilled by blows on the heads of the animals delivered with sticks by the women and children standing by and holding the dogs by leashes or chains. Plate XII /see p. 992/ illustrates the feeding of the dogs in one of the large, Chinese winter-yurts of the Gilyak. In the earth yurt, where the low sitting and sleeping benches are separated from the hearth platform by only a narrow passage, this takes place so close to one that he finds himself almost surrounded by the wild pack. If one now imagines the cold streaming in over the floor through the open door and the steam rising from the hot fish-soup, he will readily understand why the whole procedure does not exactly contribute to the comfort of a stay in the earth yurt. Beyond this meal the Gilyak dogs get nothing to eat when they are at home resting. In times of scarcity, however, even this meal is very meager; for instance, in the village of Tyk on Sakhalin, I noticed that the dogs received only a soup made of a little jukola, reindeer moss, and a small amount of seal oil, and if times become even more difficult, the feedings become more infrequent, only every other day. On long journeys, however, the Gilyak, if about noontime they do not reach a village in which the dogs are given their usual meal, throw them some chark or ma twice a day, around noon and at night, whereas the Russians at such times

/480 cont./
23 [484] [171] feed their dogs only once, only at the overnight campsite and always only dry jukola. The Russian dogs, therefore, are perhaps even more exclusively ichthyophagous than the Gilyak dogs. Lacking jukola, I once had them given elk meat, and they left it untouched. Only severe hunger makes the dogs omnivorous, and in summer along the Amur one cannot adequately protect his belongings /481/ against the starving dogs of the natives, seizing everything that is of animal nature, such as fish-skin and fur covers, boots, etc.

Like the grown animals, the whelps, too, are fed in the yurt. To be sure, on Sakhalin they are often kept inside the house the rest of the time, too, and on the sleeping benches at the very rear where they come up against the roof. The greater care of the whelps on Sakhalin may be the reason why the dogs there, and especially those of the Tymy Gilyak, are said to be the largest and finest in the whole region.

Since the actual master and owner of the dogs, as soon as he has returned from a trip, no longer pays any attention to them and their entire care and feeding are managed by the female occupants of the yurt, with the assistance of the children, they are actually as good as masterless and they do not have the usual characteristics of the dog which is kept more or less singly as the follower and companion of man, such as personal attachment, faithfulness, and vigilance, or they are not developed in them. The situation is the same, incidentally, with respect to the Russo-Siberian draft-dogs so that one may probably say in general that dogs kept in large numbers for harnessing and treated more or less as a pack, in comparison with hunting or watchdogs, have remained on a lower level of culture, so to speak, or have again sunk to one. But a certain attachment to the place and house where they get their food may be found among them, too, so that, even unleashed, they do not readily leave it, and if, in harness, they get free from their driver as the result of an overturned sled, they go home as a rule, or to the nearest village (1). The dogs

[113] [171]

1. According to Sujef (see Pallas, Reise

/481 cont./

231 171 113

1. (cont.)
durch versch. Prov. des Russ. Reichs /Journey through Various Provinces of the Russian Empire/, Vol. III, p. 44), the Ostyak on the lower Obj also keep their draft-dogs outside, but always feed them in the yurt.

231 171 439 The dogs of the Russians on the Amur, bought from the Gilyak, to be sure, but, as was mentioned above, treated differently and in particular only fed outside, may fall short of the Gilyak dogs in this respect.

493 The Gilyak sled (tu) has a peculiar form and nature. In comparison with the Russo-Siberian narte, as the sled used for traveling with dogs is called by the Russians, the Gilyak sled is very light, delicately and gracefully built, and, as a result of its flexibility, no less durable. Its form and construction is always the same, even if the size varies, so that in making it it seems that a certain proportion with regard to the individual dimensions [123] and parts is always observed. I had many opportunities to become familiar with the construction and measurements of these sleds because the Gilyak used my house in Nikolayevsk as temporary quarters and even had permission to put their sleds in a corridor of it, after the dogs had been unharnessed, while they tended to their affairs in the village. An ordinary sled which I measured, illustrated on Plate XXXVI, /see p.1016/, Fig. 1, had the following /482/ principal dimensions: the length from one end to the other was 14 feet and 8 inches (Russian or English), the width 1' 4", the height in the middle (including the protective soles to be discussed forthwith) 11". Thus, the sled was precisely 11 [192] times longer than wide and 16 times longer than high. Regarded as a whole and with respect to the individual parts, its construction is the following: the narrow and thin soles /runners/ (Gilyak tusskrj, a in the illustration) are horizontal only in the middle sections, but toward the ends gradually and gently slope upward. Because of their thinness, they would wear out easily; to protect [192] them from this and at the same time to give them the proper upward curve toward the ends, they are provided on the underside.

NS 492 484 /488 cont./
development, also by the Russians, of the greatest and fullest use of them and for the longest journeys, for instance, to the New Siberian Islands, etc., were found there along the Jana and Indigirka.

K 231 [361] [492] To the north of Kamchatka we find another Paleo-Asiatic people, the Koryak living in permanent sites along Penshinsker /Penzhinskaya/ Gulf and along the Bering Sea, who likewise have only the dog as a domestic and, at the same time, draft animal. I believe that I have already proved above (7) that

K 174 231 361

7. See pp. 481 ff.

formerly the ancestors of the now nomadic Koryak and the closely related Chukchee (the Onkilon) had permanent habitation sites and, in fact, earth yurts, just as they did, and, correspondingly, as fishermen, seal-hunters, etc., like them, they, too, may have had only the dog as a companion until they became acquainted with the domesticated reindeer, probably through the Tungus pressing in on them from the south and the west, and with it took up their present nomadic life.

G. G1 NS K 231 171 /489/ Thus, we must designate the dog, this oldest of all animals domesticated by man, as the only domestic animal and therefore, especially in its position as draft animal, as, so to speak, a characteristic form of the Paleo-Asiatic peoples, this oldest formation of peoples in northeastern Asia. Where, subsequently, another domestic animal appears among them, such as the reindeer among the nomadic Koryak and Chukchee in the case mentioned above, it is always a gift brought to them at a later period by a younger family of peoples with whom they came in contact.

E 231 171 174 Without doubt it may be assumed that the Eskimo, like other Paleo-Asiatic peoples, had the dog as their only domestic animal and used it in harness when they were still on their original Asiatic soil. With this domestic animal they crossed over to America, and there, continuing to live in the same way by fishing, seal-hunting, etc., they spread across the entire northern

123

1. (cont.)
the same thing was repeated several times later with other Gilyak from the various villages along the Amur and Liman, so that I never once succeeded in producing my stick in front of them, and from then on gave it up completely, trying in vain to think of a reason for this strange, highly excited, and fearful behavior toward an object as harmless as a fishing rod. How great, therefore, was my surprise when, already in St. Petersburg after my return, I once happened to hear Mr. v. Middendorff, who had visited the Gilyak ten years before I had, and, to be sure, in their most remote dwelling sites along Ulban Bay in the Sea of Okhotsk, relate how he had once played the following joke on them. As he stood in their company [231] in front of a white-tailed eagle which, chained, was perched on one of the fish-drying racks -- a very common sight in their villages, which will be discussed further in the following -- in front of their eyes he cut off a thin willow switch, stuck its point, unnoticed, into a little bottle of prussic acid which he carried with him, and held it in front of the beak of the eagle. The animal immediately collapsed and died, but the Gilyak were seized with horror and fear and from then on regarded our traveler as a powerful sorcerer. To me there now remained no doubt: obviously the news

/703 cont./

and are welcome guests in each house. Thus the procession lasted a long time, and the bears were not returned to Judin's house for the night, but remained in one of the other houses. It was not until the morning of the following day (January 11) that the two animals belonging to our host, the small and the large bear, were brought back to his house and were displayed there in the customary manner.

Meanwhile it was time to feed the dogs which always takes place in the morning. There were many of them on account of the many guests who had traveled to the place. Since the dogs' table had been removed, another arrangement had to be made in order to feed the dogs in the house. For this, a long pole was put through an opening in one of the central posts between which the large bear stood, and it was fastened at the ends to the supporting posts at either side of the top of the dogs' table. The dogs, very excited by the presence of the bears in the house, were now tied to this pole; and in front of them lay a board upon which their troughs with the steaming fish-broth were placed. The feeding of the dogs seemed to be done with special care this time, because dog races were to take place on the following day. Judin was very busy and concerned that everything should be done properly for his guests.

After the arrangement for feeding the dogs had been removed, the leading of the bears in and out began again, without my being able to discern any apparent purpose for it: the small bear was taken into another yurt, while the large bear was led out of the door of the house and immediately back in again four times, with intervals of only a few minutes. Perhaps through the frequent repetition of this experiment the neck-band on this bear may have become somewhat loose or damaged in some other way; it soon appeared necessary to the Gilyak to provide it with some auxiliary ropes -- an undertaking that was most interesting for me, for it showed me the great intrepidity /704/ of the Gilyak in confronting the bears and their enormous skill and adroitness in dealing with them. This task was even more difficult than putting on the neck and body bands at the beginning, which was

/704 cont./

described above, for the latter was done after the hind legs of the bear had already been fettered in the cage, but here the bear could make full and free use of all four extremities and its teeth. While the procession halted outside the house, all the ropes and straps required for carrying out the feat were held in readiness. Seizing the moment when the mighty animal stood fully erect, one of the Gilyak threw himself from the front around its neck and embraced it as firmly as he could. At the same moment a second one muzzled the animal. Simultaneously several others seized the animal from the rear, pulled its hind legs from under it by means of nooses, and held them against the ground. The bear fell on its front paws, but here, too, someone was ready to press them against the ground with a pole and to fetter them. Thus through quick and concerted steps the animal was completely disarmed and fettered in an instant, and now the auxiliary ropes needed on its neck-band could be put on in peace and safety. As soon as this was done, all the Gilyak jumped off the bear, all the knots and nooses fastened around its snout and paws with special skill were loosened with one jerk, and the bear again stood there on its chain entirely free and unfettered, except for the neck and body band, roaring loudly, repeatedly shaking itself. Now, together with the small bear, it was led back into the house and regaled there with finely crushed ice and cowberries /Strichbeeren/, whereupon, after a short pause, the same procedure was again repeated several times; that is, the small bear was taken immediately from Judin's house to another one, but the large bear only after having been led in and out four times, or sometimes only twice.

Immediately after the bears had been removed, the male youth of the village began to carry large and small sticks of alder and mountain ash into the house and to deposit them at the place where the bears had stood, until there was a large pile of them. Everybody who had a knife, except for the women and girls, began to cut the sticks at one end, or, more properly, to whittle them, that is, to make the so-called nauws (1) of the Gilyak out of them.

1. The ŋ here is to be pronounced soft, like the French g.

/704 cont./

Many of them were whittled with the knife on only one side, but others on two opposite sides. And some all around; indeed, from some of them very fine and gracefully curled wood-shavings (the repeatedly mentioned so-called zach of the Gilyak) hung down from the upper end of the stick to the lower one. This symbol, which among the Gilyak accompanies all religious performances based on the fear of the influence of evil spirits, such as the giving of offerings to the river (2) conjuring away storms (3), etc.,

2. See pp. 802-804 above.

3. See p. 1088 above.

may not, of course, be absent from the bear festival. Thus we already see it exhibited over the roof of the house in which a bear festival is to be celebrated and at the same time a part of the bear cult is to be enacted. We were to /705/ encounter it in more complete form as the bear festival progressed. For the moment, however, the whole heap of whittled sticks was again carried out, in order to be used on the following day. While the men, youths, and boys carved on the sticks, the women prepared a fresh supply of gonej, into which this time they also mixed pulverized fir-needles (from Picea ajanensis). Finally, Gilyak twink -- an activity which lasted until evening.

Meanwhile the leading of the bears in and out of the other houses of the village went on without interruption. The Gilyak can never have enough of this entertainment, and they take a lively an interest in all the individual incidents that occur in connection with it as is shown among other peoples at, say, contests, festive games, or dances with the merry music, which in this case is provided by the roaring of the bears. Everyone has an opportunity as the head of the one or the other row of bear-leaders to display his prowess, intrepidity, skill, and presence of mind; the closer he allows the infuriated animal to approach him, the greater the danger to which he exposes himself, the louder is his share of the applause and the greater his fame and distinction among the people. Every detail is followed attentively and afterward

/705 cont./

discussed about in an animated discussion in short, on such an occasion one hardly recognizes the otherwise serious, sedate, cautious, and somewhat taciturn Gilyak. Late at night the procession with the medium-sized bear paid a brief visit to Judin's house. But only the two bears that belonged to him returned to it for the night. Men and animals had tugged themselves weary and seemed to need a rest. The night also passed more quietly than one would expect with two bears quartered in the house.

Toward the morning, January 12, however, I was awakened by a loud roar from the bears: the leading of the animals back and forth, out of the house and back again, had begun anew. First our two sleeping companions were taken out, and then all three bears were brought back in again, in the order established at the beginning of the festival, and fed out of three pitchys, the mosej that had been prepared the day before, some of which the people ate, and then the foreign bear was removed again, while the other two remained in the house. Then began the preparation of the place where on the following day the bears were to meet their deaths and then be skinned and cut up. For this, a rectangular area not far from the house was marked off with the sticks (nauws) carved the day before, and at each of four places about a fathom apart on its longitudinal sides, two posts were set up and lies with beam-shaped tops were rammed into the ground beside each other. These stakes were old and may already have served the same purpose several times. They were likewise surrounded by whittled sticks. At one end, in line with the two posts, a small square was also marked out by the nauws (the so-called kabdra of the Gilyak) was left open at the other, opposite end a small structure made out of boards (called lâŋug (1) among the Gilyak stood somewhat elevated above

1. The ŋ is to be voiced like the French g.

the ground on four posts driven into the earth and was closed in the back, but in front, in the direction of the row of stakes, was marite /706/ open. and here, besides a croupole near the roof, had a second, lower croupole, from which the opening was

/705 cont./

divided into approximately even halves. The path leading from Judin's house to this place of death for the bears was also marked out with a line of whittled sticks.

Meanwhile the dog-feeding was going on in the house in the same way as on the day before, except that those animals that were to participate in the races an hour hence did not get anything for the time being; they were also brought into the house, to be sure, but could only watch while the other dogs ate, their feeding being postponed until after the races in order to stimulate them to run faster. Everyone now set out for one end of the racecourse, which was laid within the bare cover of the river and consisted of a strip about two fathoms wide, on which the snow had been shoveled to the sides and the ice smoothed somewhat for a distance of about one and a half to two versts. Here stood two sleds, one harnessed to 14 dogs, the other to ten, of which the latter was front men on the first sled were adorned with elegant Manchurian collars, the above-mentioned rŋak (1). In front of the sleds two other dogs were held

1. See p. 750 ff. above with the woodcut, and Plate XXXVI /p.1016/, Figs. 4 and 5.

on long straps. Many spectators had stationed themselves on the elevated embankments at both sides of the racecourse. First the two dogs not harnessed to the sleds were released, they glided behind them at the end of their long straps only a fox tail and the tail of a black dog, respectively. With this light burden they disappeared from the racecourse in an instant and ran up the hill to the house where they were caught by the women and children. They were particularly twift-footed animals, one of which was a so-called kyll or kyll-kan among the Gilyak, over the possession of which Judin was very proud, saying that in the whole Amur region there were only two or three animals of the same quality, and he could name their owners. It was not clear to me, however, what the special characteristics of the kyll-kan are, aside from twift-footedness. The animals harnessed to the sleds did not get off so easily, for although the bucks which they had to pull was

/705 cont./

hardly greater -- on each of the otherwise quite empty sleds lay only two brake-sticks stuck into the plaited work -- obstacles of another kind were put in their path. As soon as the dogs were racing along at top speed, a Gilyak standing on the embankment of the racecourse threw himself on the sled and tried to gain control of the dogs and their vehicle by using the brake-sticks, at which, of course, he was not immediately successful. If one failed, a second one did it, and a third: throwing himself upon the sled, he held on to it tightly, the sled overturned two or three times, but the man held on tightly and let himself be dragged along at the utmost speed until he succeeded in sitting astride and, with the two brake-sticks in his hands, driving up the hill in triumph. During the entire race the women drum with cudgels and sticks upon a /707/ beam suspended from a framework in front of the house. This is done with a certain regularity and requires some special knowledge. For there are various types and modes of drumming, depending on the occasion. Every woman is given two cudgels, or one cudgel and one stick, and beats with them on the beam two or three times, either simultaneously or alternately, then cudgel on cudgel or cudgel on stick, then again on the beam, etc., in different rhythms and tempos, as the mode of the moment requires (see Plate XLVIII /p.1248/). As soon as all the dogs participating in the races have returned the longed-for meal it sat before them in the house by the women. The men bypower, indulge in a lively discussion of all the details occurring in connection with the races, in that one dog is to be praised and another criticized, but even more to laugh over the ineptitude of one of their countrymen and to marvel at the courage and agility of a second and third. For, as is to be seen from this description, the dog races among the Gilyak do not serve to test the quality of the dogs as much as to give the men an opportunity to show off their above-mentioned physical and moral virtues, just as is the case for other entertainments that are part of the bear festival.

After this interlude, the leading of the bears which had been interrupted in the morning, was resumed, and everything was repeated as on the preceding days. for example, the large

/707 cont./

bear did not leave or enter Judin's house until after it had been led back and forth through the door four times. Again the bears had to be led through all the houses in the village and treated everywhere with mosej and crushed ice. Twice they came into Judin's house and received the same treatment. The Gilyak especially like to see their boys, even if they are very small, participate in the feeding of the bears: they bravely step up to the animal and offer it the spoon filled with mosej, which is sometimes held and supported by several small hands; many a little fellow who can hardly stand on his legs, not to speak of holding a nichyr, must be helped by the father or older brother, who lifts up the little one. Perhaps this is done for pedagogical reasons, but more probably for superstitious reasons, namely, in the belief that through this the children will continue to have the good will of the mighty animal even after they are grown. As soon as the bears have again been taken out of the house, however, the children use the free space to romp about in and to perform an exact duplicate of what they have seen during the leading of the bears, during the changing of the bands on them, etc., most faithfully imitating all the movements, positions, and demeanors of the adults, as has been described above (pp. 1136 ff.). Thus they learn how to deal with the bears long before they can lend a helping hand.

In the evening, in bright moonlight, the bears were led beyond the village and all the way around Cape Tebach on the river ice. It was a long procession that started moving down toward the river, for, in addition to the three bears, who were led in the same order as /708/ always, a great number of idle boys followed them. Since the bank is high and slopes rather steeply down to the river, it was interesting to see how the procession moved down the slippery hill without falling into disorder even for a moment: while those standing at the front rope ran down at top speed, the ones busy on the rear rope had to hold back with all their might in order to prevent the bear from running down just as quickly and causing damage below, by their combined efforts, however, they succeeded in letting all three bears slide down the hill slowly and evenly. It was much easier going back, for those

/708 cont./

in the rear let themselves be taken in tow by the bears and dragged up the hill. During the whole procession the women again drummed incessantly on their beams. A short pause followed, during which a few games were played in front of the house, such as the above-mentioned roundelays, the competitive jumping, sometimes on one leg, sometimes on two. which I had previously seen among the Goldi, and then the popular leading of the bears, never tiring the Gilyak began again and continued far into the night. For during this night immediately preceding the killing of the bears no one among the Gilyak may sleep; the men spend it alternately leading and feeding the bears, while the women prepare the foods for the feast that is to take place on the following day. Let us therefore now turn to these for a moment.

In a previous section (1), it has already been pointed out

1. See pp. 676 ff. above.

that the foodstuffs used in connection with the bear festival are primarily of a vegetable nature and in particular consist of the cereals and legumes of Manchu-Chinese, Japanese, and Russian origin named there. This is especially true of the great feast held shortly before the killing of the bears and, as we shall see in the following, of the one during which, sometimes at a much later date, the bear itself is eaten. Aside from these two, I might almost say official feasts, which are held in a more or less opulent manner in all or at least most of the houses of the village where a bear festival takes place, and which sometimes are even repeated for a certain length of time, the Gilyak also eat their regular fish diet even during the bear festival, but in an irregular fashion, during the intervals between the individual festive events and generally in accordance with the requirements of the individuals. Considering the large number of people invited to the festival or taking part in it generally, however, the consumption of fish on such an occasion is always very considerable, and I was amazed at the colossal quantities of hausen and sturgeon which were used, in addition to the regular jukola diet of the Gilyak, in Judin's house alone.

/708 cont./

000 house-house. Hence it is quite understandable that during the
*796 entire bear festival, but especially during the night preceding the
252 principal feast, the Gilyak women are fully occupied with the
preparation of the dishes required for it, which, as has been men-
[354] tioned (2), is sometimes very complicated. /709/ They are al-

2. See p. 676 above.

ways prepared on the hearth which is located on the transverse wall
of the house in a line with the bears arranged in the center area
and is thus exposed to their gaze in particular. I shall therefore
*796 call it the bear hearth. In it, and in it alone, quite large quanti-
[824] ties of fresh fir branches (from the Picea ajanensis, Gilyak twink)
are burned by the women from time to time, not only during this
last night, but throughout, for the entire duration of the bear festi-
val, which may be one of the attestations of homage which are given
to the bears or one of the offerings which are presented to them.
Thus a bear festival is proclaimed by the prevailing fragrance of
burned pine-needles in the houses and to some extent even outside.

*796 On January 13 at about 6 o'clock in the morning, the
•231 leading of the bears finally ceased. After they had made their
last rounds through the village, the animals were led to the place
of execution prepared for them, the so-called kadhra of the Gilyak,
and arranged and carefully bound there between the stakes stand-
ing in a row in the middle of it. The order of the bears was again
the same so that the female bear was closest to the building in the
back of the kadhra, the läsgn, the large one in the middle, and
*796 the medium-sized one next to the entrance. Then everybody
went into Judin's house, where in the meantime the women had
set out the foods prepared for the feast, in wooden troughs, round
wooden bowls, and square bowls of birch bark, on the floor in the
central area of the house, where the bears had previously stood
The guests invited to the feast took their places on the bench
[509] along the transverse wall opposite the bear hearth, which on such
an occasion is regarded as the bench of honor, though as a rule,
it is probably less warm and often less light than longitudinal bench

/710 cont./

*796 amid the drumming of the women, some of the dog races of the
[541] day before were repeated; the best runners, each equipped with a
fox tail or the tail of a black dog, were let loose down at the river
[244] and were recaught above at the house. A short informal breakfast
on the leftovers of the feast concluded this interlude, whereupon
the important schedule for the day began.

From all the houses of the village the people congregated
*796 around the place where the bears stood tied to their stakes. Three
824 Gilyak carried in their hands insignia of a peculiar kind. They
consisted of a straight young fir tree (Picea ajanensis) from which
all the branches had been removed except the crown and the
uppermost branches closest to it, which were pressed up around
the crown and tied with a string. A boa (Gilyak tolp) made of
[241] squirrel tails, such as the Gilyak wear around their heads and necks,
[239] or a fox tail was wound around the crown of the little tree twice
in serpentine-fashion and then also fastened. Two of these
peculiar banners were of the first type; the third was of the latter
type. The three banner-bearers were joined by a fourth, who,
as far as I could see, had only a plain long stick in his hand, but
he carried it as erect as the others their banners. While everybody
now stood assembled around the bear place, the three men with
their insignia entered the enclosure, went directly around the
bears several times, always refiring to the same place, and
there running around again, and, finally, planted one of their
insignia in front of each of the bears. This was, so to speak, the
signal for the departure: the bears were freed from their stakes
and led out of the kadhra.

Before going any further, the neck and body bands on the
*796 bears had to be examined as to their strength. For the large bear
• 231 this had been done the day before, and the animal had been pro-
vided with new auxiliary bands. Everything was likewise in order
on the medium-sized bear. The especially bad-tempered and
stubborn small bear, however, definitely seemed to need to have
his fetters strengthened, and this is always a very dangerous experi-
[156] ment. Chuisiin, Judin's oldest son, a young and strong man who
evidently still had not had enough during the days of goading the

/710 cont.

*796 bears, volunteered to do this. The day before he had already per-
• 231 formed this task in the large bear. /711/ brilliantly proved his
156 bold and resolute courage. When this bear was led out of the
house, it seized so firmly with its claws the front Gilyak goading
it that the latter could not free himself any more and was pulled
close to the furious animal. At this moment, Chuisiin, who
stood immediately behind the bear, jumped over the animal's
back and landed directly in front of its snout. The startled bear,
infuriated anew, dropped its first prey and bit at the second, but
fortunately without success. Now, for the small bear, Chuisiin
took the precaution of wearing his dog-fur coat reversed, with the
fur on the inside, and over it he put on a reindeer-fur coat with the
fur on the outside and the back part turned to the front, at the
same time tying his belt around himself in such a manner that the
fur coat projected out in front of him hump-like and stuck out far
from his body. So equipped, he waited for the moment when the
bear, goaded with sticks, showed its teeth in a roar, now he
stepped up to it with chest thrust forward and let it bite into the
puffed-out fur-coat over it. Then he threw himself around the
animal's neck, seized its head at the ears, and bent it down.
The men standing around were ready at this moment to muzzle
it, to press its paws down, etc., as I have already described above.

After this was taken care of, the bears set out on their
*796 last walk: in the same order as before, the procession, accom-
23 panied by the loud drumming of the women, went down the high
bank to the river. Having reached there, it circled at a distance
of several times in the hole in the ice where the women scoop water
(see Plate XLVIII, p.1248 /), and returned up the hill. The bears
passed close to Judin's house and the one where the owner of the
third animal lived: the doors were open, and the procession in-
voluntarily came to a halt because the bears made the greatest
effort to get back in. But they were no longer permitted to do
[857] this. The procession halted at the entrance to the kadhra. Boys
came running from all sides in order to shoot their small, but
not always harmless arrows at the animals, which the leaders,
visibly amused, permitted them to do.

/711 cont./

*796 visibly amused, permitted them to do. The choice of the archer
• 231 who is to dispatch the bear and move toward the bear, however, is
[854] made by the owner himself and is regarded as an honorary token
of his favor. For the two animals belonging to him Judin had
chosen two young people, one of them, an Olcha from Tschihvi
whose father was a friend of his and from whom he had bought
one of the bears. Both animals, hit in the right lung at a dis-
tance of about five paces, fell dead after the first shot; the third
animal died slowly after it had been hit by two arrows. The blood
[784] which they lost in dying was immediately covered with snow, for
[826] otherwise someone might step in it, which would definitely be
ultcin.

As soon as the bears were dead, they were dragged into
the kadhra by their chain and an auxiliary strap tied around the
snout, and put down at the places where they had stood in life,
on a bed prepared for them out of peeled sticks. Here all three
carcasses lay in the same order and the same position: the snout
and the front legs to the front pointing toward the entrance into
the kadhra, the hind legs to the rear, pointing toward the läsgn.
The neck /712/ and body bands were taken off of them and the
snow beaten off their fur with sticks. Next the carcasses were
skinned and cut up. For this purpose I illustration appears here;
strap was next slung around the neck of the animal and attached
[784] to the stake in front. Again it is ultcin to step over this strap --
one may only walk around it, either in front or in back. The
bear was now rolled over on its back, and a cut was made down
the middle of the entire belly side, beginning at the throat, and
from this middle cut four others went out to the legs. Then the
fur was stripped off and cut around the paws in such a manner
that a ring of fur remained above the claws on each one. After
the belly side had been skinned, the animal was turned over and
the fur stripped off the back side up to the head. Then the man
standing at the tail end once more waved the fur up and down
over the carcass and threw it over the head of the bear to his
companion at the head end, who threw it back again. This

/712 cont./

*796 experiment was repeated several times, whereupon the carcass
• 231 was once more rolled over on its back to be cut up. First of all
this is to dispatch the bear, and the bear, however, is
made by the owner himself and is regarded as an honorary token
of his favor. For the two animals belonging to him Judin had
chosen two young people, one of them, an Olcha from Tschihvi
whose father was a friend of his and from whom he had bought
one of the bears. Both animals, hit in the right lung at a dis-
tance of about five paces, fell dead after the first shot; the third
animal died slowly after it had been hit by two arrows. The blood
[784] which they lost in dying was immediately covered with snow, for
[826] otherwise someone might step in it, which would definitely be
ultcin.

/713 cont./

*796 from the head and cut into halves on one side along the spine.
• 231 Then the dismemberment was completed, and only the head
remained in the skin. All three bears were treated in exactly
the same way. After the pieces of meat and bone of the
bears, and finally also the strips of fat hung on the sticks
and meanwhile frozen, were put away in the storage chamber,
the three bear-heads with the rest of the skin were carried
to the läsgn and there, by means of a strap slung around the

Place of death for the bears.

of the entire belly side, provided at one end with an eye-shaped
cut, and hung by it on one of the surrounding peeled sticks. A
similar strip of fat reaching from the head to the tail was also
taken from the back side of the /713/ carcass, again rolled over,
and was treated similarly. Then, between these two longitudinal
strips, two narrow transverse strips were cut out on either side, one
directly behind the front legs, and the other directly in front of the
hind legs, and the same was done with them. Obviously this was
intended as an offering, which perhaps was to serve to appease the
spirits of revenge of the slain bears. The whole layer of fat was
divided by the longitudinal and transverse grooves cut in the fat
into six areas, which were now individually removed and each one
immediately placed between two fresh fir-branches and carried
into the storage chamber. While this work was going on, the Gilyak
could not resist nibbling at the fat now and then. Cutting up the
rest of the carcass now followed: first the legs were amputated,
then the breast and belly pieces carved out, the intestines removed
and squeezed out, and, finally, the rest of the body was severed

The arrangement of the heads with the skins in the läsgn.

skin directly behind the head and knotted to the upper crosspole,
arranged so that the heads rested on the lower crosspole,
but the skins inside the house. It thus appeared as though
the bears had entered this abode and were looking out of it
through the window opening, the large one in the middle, to
the left of it the small one, and to the right the medium-
sized bear, that is, in the order in which they had stood in the
house. In front of this structure, however, a fir branch was
planted in the snow, the tip of which reached to the heads of
the bears and partly shaded them.

*796 With this the first big act of the bear festival came
to an end. The head and the skin of the bear are kept in the

/718 cont./

*796 just as it would be extremely ultsch if one wanted to fry, not only
859 bear meat, but any meat at the one or the other bowl, for the
[784] bear would hear the sizzling of the frying meat and would be
[263] shocked. When it was thought that the bear meat was done, the
broth was scooped into the aforementioned bowls and drunk, but
the meat was placed upon fir branches under the ätugbre and
covered with the same. Not until evening was it put into the
trough hanging in front of the bears' heads. Moreover, toward
[782] evening, six of the largest sturgeon and hausen, one of which was
about eight feet long, were brought into the house and placed in
front of the bears; they were offered to them as a sacrifice and
were intended for the forthcoming feast.

In the morning of the following day (January 29) the old
*796 men resumed their work in front of the bear hearth. The young
[889] people were likewise busy, with some of them bringing in addi-
[851] tional firewood, others going into the nearby mountain forest in
order to bring from a storehouse for bilberries, which the women
had erected there in the fall, the supply required for the festival.
*796 In the meantime the dogs were fed, except for those 14 animals
• 231 which Judin had selected for a heavier ride on the river. They
54 were decorated with the above-mentioned red-tasselled collars
and harnessed to a small, prettily decorated sled which was driven
by its owner himself. The drive, amid loud drumming by the
women, proceeded at top speed, first down the steep bank to the
river and then on a leisurely course along the latter, and ended
without a mishap amid the wild applause of the assembled throng.
Only then were these dogs given their meal in the house, while
the people enjoyed the bear-meat broth.

*796 In the afternoon, the old men began to cut the bear fat
[889] into long strips which, decorated with wood shavings (zach) and
fir branches, they likewise hung in front of the bears' heads,
and not until shortly before complete darkness did they take them
down again to put them in a small trough decorated in the same
way and placed on the floor in front of the bears. In the mean-
time, more life and commotion had entered into these prepara-
tions for the feast: some young men began to cut up the six

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

The Nivkhi 783

Among the Sakhalin Nivkhi, who differed in their economy and material 177
culture from the above peoples, socialist reconstruction followed a some- 643
what different pattern. Many Nivkhi went to work in fishing and hunting 474
enterprises. The first Primary Productive Organizations were organized
among the Nivkhi in 1927. Subsequently, the Nivkhi began to socialize
the instruments and means of production—nets, boats, dogs, etc., and went
on to a more advanced form of social production—the agricultural coopera-
tive. A part of the Nivkhi population joined Russian collective farms, situ-
ated near Nivkhi villages.

As they learned new methods of conducting their economic activities [241]
and mastered new techniques of production in the collectives, the Nivkhi [231]
began to develop new economic activities, formerly unknown to them; till-
age, gardening and cattle-breeding. At first, the work of the Primary
Productive Organizations, particularly on the eastern coast, where villages
lie at considerable distances from one another, was seasonal in character.
The Nivkhi gathered at the fishing camp from several nearby villages and
fished cooperatively for 3-4 months, after which they dispersed. In winter,
they engaged in carting, using dogs as draught animals. Later the coopera-
tives became permanent. As a rule a collective farm was first made up
of the inhabitants of one village. But larger collectives also developed,
such as the "Chir-Unvd" ("New Life") collective, which united the econ-
omies of three villages along the middle course of the Tym' River
(Kirovsky Rayon). An important role in the organization of collectives was
played by the Nivkhi youth, particularly by members of the Komsomol.

The organization of collectives and their successful development were
openly resisted by the rich Nivkhi and former elders. The greatest resist- [367]
ance was to the building of new collective-farm villages and the resettlement
of the members in new sites. The resettlement was necessitated by the
need to enlarge the villages, which had often consisted of two or three
houses, and to transfer them to more convenient places, nearer to good
fishing areas. The Soviet government spent large sums on this. Most of the
collective members left their old smoky dwellings and moved to new, bright
homes.

At present, fishing occupies an important place in the Nivkhi economy. 177
The former primitive fishing methods have been abandoned. Along with 643
seines, the fishermen set up more efficient zayezdki; manually worked 474
scoops have given way to winches; fish is transported on Amur railboats [22]
(bunksy) and cutters; and Moscr-Fishing Stations (MRS) provide extensive [241]
aid to the collective fishermen.

Many Nivkhi collective members participate today in fishing expeditions.
To do so, they travel to Okhotsk and other districts. Expedition fishing [122]
usually lasts from April to August. It is also carried on in Sakhalin, where
the continental Nivkhi also come to work. In spring, the members of the
fishing collectives hunt seal in the estuary and on Sakhalin. In winter, they
hunt for animals.

Agriculture is a new branch of economic activity among the Sakhalin 177
Nivkhi. The first Nivkhi agricultural collective, "Chir-Unvd," was 643
organized in 1930 along the basin of the Tym' River in northern Sakhalin. 474
In 1937, the collective already consisted of some 50 households. Its [241]
acreage under cultivation rose from 1.5 hectares in the first year of 474
its existence to 61 hectares in 1937. The main crop was potatoes. The
collective farm has its own skilled agricultural personnel—brigadiers
and team leaders—although there was a time when the Nivkhi considered
agriculture a great sin. As the old men used to say, "He who digs or plants
will die."

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

784 Peoples of Northern Siberia and the Far East

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of
[241] potatoes and cabbage per hectare. In the course of only 3 years, from 1949
[122] to 1951, the collective harvested twice as much.

Along with agriculture, the "Chir-Unvd" collective engages in animal
husbandry. Since the war, it has substantially increased its herd of cattle
[231] and established a sheep-breeding farm. Other Nivkhi collectives have also
progressed.

An essential prerequisite for the successful organization and develop-
177 ment of collective farms was the unification of small villages, formerly
643 scattered over large distances. Before the Revolution, Nivkhi villages often
474 consisted of no more than 3-5 households. But even in the larger villages,
the houses were scattered without plan. The enlargement of old villages and
36 the construction of new populated centers made rapid strides after the
collectivization of the Nivkhi economy. The modern Nivkhi villages are com-
fortable, well planned, and laid out in streets. In the building of new villages,
particular attention is given to selecting convenient and wholesome sites.
Before the Revolution, most of the Nakhi lived in dugouts, and most
of the continental Nivkhi lived in frame huts resembling the Manchu-
Chinese fanza.

177 The most widespread of the new dwellings is the warm Russian log
643 house. Near the houses of the collective members are various barns, sheds,
474 etc. Every collective-farm village has a number of public buildings, a
school, a reading room, a club, an administrative building, and buildings
36 devoted to economic uses (a collective-farm garage, a smithy, a vegetable
[342] storehouse, cattle-yards, etc.). Almost every collective-farm village has a
bathhouse—something the Nivkhi never used in the past. Today, many indivi-
dual collective-farm families build their own private bathhouses.

177 The internal furnishings of the Nivkhi home have also changed, and are
643 today similar to those of Russian homes. Some collective-farm villages
644 have electricity and radio. In the Nivkhi homes, especially on the conti-
475 nent, one often sees plastered and whitewashed walls, or walls covered
with wallpaper, and a variety of bought furniture, as well as curtains and
31-2 flowers in the window. The Nivkhi are very fond of pictures, and adorn the
33 walls of their homes with illustrations, placards and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They
177 also use unskrwear, which was entirely unknown in the past. In winter, the
643 continental Nivkhi wear city-type coats, felt boots, high overshoes, and
[244] also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made
[239] of reindeer or seal skins. They obtain the reindeer skins from Orok
collective-farm members. The fur clothing and homeiress remain of the
[244] traditional cut and materials. Many Nivkhi women make their own clothing
[239] of factory-made fabrics, bought in stores opened in collective-farm villages.
Here and there, one encounters the ancient national costume. On holidays,
[242] the young people love to wear robes made of fabric and richly ornamented.
Such robes are made even today. Clothing of fishskin is almost discontinued,
as are the old conical birchbark hats.

177 Substantial changes have taken place in the Nivkhi diet. There is greater
643 use of vegetables, bread, butter, tea, sugar and other purchased products.
[242] The incidence of illness, and particularly of tuberculosis, which had been
755 widespread in the past, has dropped sharply as a result of radically im-
proved sanitary conditions and the wide network of medical institutions.
[243] Already during the early years of the Soviet regime, hospitals and medical
and maternity centers were opened for the Nivkhi, but wide educational
work was needed to accustom the Nivkhi to use these institutions for medical
aid. Soviet medicine rightly won the confidence of the Nivkhi.

9: Hawes--162 T-3 (1901) 1903 Gilyak

116, 231, 527, 783, 796

"The object of the capture and feeding of the bear is the holding of a great yearly semi-religious festival, in which the slaughter of the beast plays the chief part. It is more probable, that in the older times a full-grown bear was captured just previous to the fête, and that to-day the letter rather than the spirit of the sacrifice is kept up by seizing cubs and rearing them for three or four years. The feeding is a matter of no difficulty, as will be seen when we come to the preparation of the Gilyak's winter stores. [LSS: See category 116, p. 174.] To the owner or capturer of the bear, the feast turns out a very profitable investment, for visitors from neighbouring villages flock in, and while necessaries are provided by the owner, luxuries are on sale, and bring him in a handsome profit.

The animals are kept in stout log cages, adorned with a pine-branch at each corner. Wishing to see, and if possible to photograph one of the occupants, I desired the villagers to bring one out, or at least unroof him. There were, however, too few men-folk at home, and the adult bears were very fierce, as indeed we gathered from their movements and remarks within; so two of the five little cubs were partially unroofed. The poor little orphans snarled, and shrank frightened into a corner, tumbling over one another, and trying in their terror to hide each beneath the other. Ere the month of January, 1905, is passed, or perhaps before, their spirits will have been released to carry messages to the great Pal ni vookh."

9: Hawes--172 T-3 (1901) 1903 Gilyak

116, 231, 492

"Another village, Auk-vun-wauk by name, hove in sight, and, paddling in, we stepped gingerly from our unstable craft. Vanka insisted on accompanying me because of the crowd of yelping dogs, although the most savage were tied up to a pole underneath a hut built on piles. These animals are fierce towards strangers, and especially white men, although I believe it is on the whole true the world over, that, if you show no sign of fear, dogs may yelp and growl, but will stop short of actual attack. My present position reminded me of an incident in Southern China—a sahib obliged to appeal to a piccaninny for protection from a buffalo, whose discrimination between the white man and the yellow is well known.

These dogs are used by natives in hunting bears and in tracking brodyagi. In winter, harnessed to the sledges, they are not fed until the end of the journey, and are then much more dangerous to encounter."

9: Hawes--195-196 T-3 (1901) 1903

116, 231, 527, 796

"Emerging from the hut into a crowd of yelping d
cage. In front hung a birch-bark basket, as seen in
[LSS: See Visual File] containing fresh water for B
dried fish, and holding it before a hole in the cage,
his great paw out to grasp the fish, the while I snap
mal, having already attained his majority, was due
in the following January.

The bear fête, which probably originated as a pur
a 'Bank Holiday' in the Gilyak calendar, the great b
winter. The proceedings are unique and interesting
tured young, and fed up until he attains the age of fo
following January. Invitations are then sent round t
habitants, however, need no such announcement, fo
coming event. On the morning before the fête the vi
guests arrive in great numbers, their sledges, dra
from all parts of the snow-mantled forest. [LSS: Se
description of the bear fête.]"

13: Seeland--45 E-5 (no date) 1882 Gilyak

533 boats. However, there are some to be found among them
who are considered singers; they are improvisors of a sort
who entertain the others with their songs.

535 The dance does not exist among the Gilyak, unless one in-
201 cludes in this category the spontaneous leaps with which a
517 tipsy one occasionally (if his neighbors are sober). There is a
521 reason for the Gilyak's facial expression of which we spoke
above. It is neither sullen nor sad, but also not unhappy
or good natured; it is neither or indifferent. But I must
hasten to add that this immobility and indifference only
reaches to a certain point. The Gilyak's imagination and
his sense of humor are not immediately apparent, but in
reality he possesses both. The favorite pastime on winter
evenings is listening to a story teller, and his voice is
alternately interrupted by laughter and exclamations.

527 Holidays and festivals. There are no special rest days
787 which would, for instance, correspond to our Sundays.
483 The bear festival is the only one worthy of this name. It is
celebrated once a year during our January, it lasts two
weeks and is accompanied by various entertainments. Young
bears which, as we said, are brought up for this festival,
are taken direct from their caves or they are bought from
Sakhalin kinsmen. Occasionally 100 rubles are paid for a
one-year-old. Young bruin is put into a hollowed-out tree
trunk to which he is fastened with a leather collar, and thus he is
transported by sled. The yurts where this traveler halts are
considered particularly lucky. It has happened now and then
that the bear, because of negligence on the part of the people
transporting him, has crushed a child to death, but such
accidents are not mourned by the parents, who regard it as
a good omen.

527 The bear is kept in a special enclosure in his new home.
• 231 An old woman is appointed to feed him and give him water.
The latter is offered him in a long wooden spoon which is
inserted through a little opening. His chief food consists of
dried fish, sometimes he also gets millet and various

13: Seeland--59 E-5 (no date) 1882 Gilyak

164 also seems to me that the almost exclusive fish diet is a
contributory factor. At any rate, I knew people who had a
skin itch after eating fish, which, to a certain extent, points
to its etiological significance.

Lithiasis does not occur among the Gilyak or the Russians
of the Amur, and this may be partly explained by the soft-
ness of the water.

Goiter is also unknown. The only case I saw there, was
that of a woman living in the Russian Amur.

755 The treatment of disease is of course very rudimentary.
They expect the most from the magic tricks of the shamans,
since usually black magic is part of the game. The natural
healing agencies over which the shamans commands are very
few in number and are carefully guarded.

752 Sprains are usually set by stretching. In cases of breaks,
splints are used. Wounds are frequently left quite open and
washed only with water. In cases of suppuration bits of
agaric, [Lärchespilz] are sometimes put in the wound.

757 Frozen limbs are wrapped in oiled or clean cotton. In cases
of chronic stomach and intestinal catarrh, bitter herbs,
especially wormwood, are used as infusions. In cases of
violent attacks of colic, which occur with this illness the
Gilyak sometimes set Moxa of burning sponge. Rheumatic
bathe in the warm springs near the village of Mihiki, and
these actually prove to be very helpful. (1) In bad

1. They have a temperature of 24 to 36
degrees Reaumur and belong to the in-
different thermal waters.

epidemics of measles, etc., the Gilyak sometimes separate
into groups of families and go into the taiga.

The natives generally do not like to undergo treatment.
They suffer patiently all the sharp pains only in extreme
cases. They very seldom turn to Russian physicians, but
they regard them also as shamans, but wiser than the

19:Gennet--2 U-2 (1884-85) 1887 Gilyak

142 observation that the language of the
Gilyak is radically different from that
of the Tungusic completely confirmed
by Jakobsen. That is the reason for the
wording of the text.

differentiated from the neighboring Goldi with regard to
language whereas in biological make-up they are only slightly
different from them. According to ethnographs that the
traveller acquired on the spot and has brought with him, she
heard growth of the Gilyak seems to be somewhat heavier
than that of the Goldi, without however, reaching the thickness
101 of growth of the Ainu on Sakhalin Island. Originally they
probably occupied the basin of the Amur as far as the Gorin,
while nowadays the southern boundary of their territory lies
about 100 versts above Nikolaievsk and their former terri-
tory is now inhabited by the transitional people that we
mentioned repeatedly in number 10 of this volume (see
Goldi source 16: Genest--Analysi). They occupy the northern
part of Sakhalin Island but one will also encounter them
among the Ainu in the southern part of the island where they
probably came as labourers for the Japanese fishers (3) or

1. We will have more to say below about
the Japanese fishers on Sakhalin Island.
Jakobsen encountered Gilyak even on
Aniva Bay.

361 for the purpose of hunting sable. Formerly their settle-
163 ments were particularly numerous along the shallow shore
166 of the island across from the mouth of the Amur. But these
228 have disappeared by the time Jakobsen passed along
• 231 this stretch of shore because the Gilyak who used to live
133 there had fled from the maltreatments of the convicts de-
ported to Sakhalin Island. They had, however, established
new settlements near their former residences, for the
traveller observed a large number of boats the occupants
of which were Gilyak engaged in fishing in the sound (1).

1. In all these boats there were also dogs
which were set on land to pull the boats
along whenever the wind was against the
fishermen as well as whenever they were
struggling against the strong north-south

19:Gennet--4 U-2 (1884-85) 1887 Gilyak

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, and, moreover, they are so
bold that they nibble at the clothes that the inhabitants are wear-
ing on their body. Jakobsen was told that they even gnaw at the
fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
117 fish skin, hides and Chinese or Russian cloth. The festooni
customary among the Goldi women (see above, number XI, p. 173)
[see Goldi source 16: Genest--Analysi] do not exist among Gilyak
women; the latter generally seem to be interested less in grace-
fulness than durability in their clothing. The curious belt worn
not only by the Goldi but also by the transitional people mentioned
repeatedly earlier, is also in use among the Gilyak and with the
177 same appearance as there. It might be mentioned that tobacco,
372 that, aside from stone and steel for lighting a fire, matches are
already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The dress of the Gilyak
441 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon
often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use
492 of smaroschka; on land they travel in winter by narrow sleds to
• 231 which are harnessed eight to ten dogs. For that reason one will
not a large number of dogs in the Gilyak settlements just as in
the Goldi villages. These dogs are highly vicious and on occasion
even dangerous for the stranger.

171 During his brief sojourn in the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
101 experience was sufficient to make the following assertion: The
Gilyak are no less superstitious than their neighbors. The
amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear
rings on their chests as amulets and no offer however
high can induce them to sell them. All the same, our
traveller was able to acquire such a ring from an old
Gilyak who had stolen it. The latter had been informed, a
offer it for sale to Jakobsen in the village itself, but
met him on the river to conclude the bargain there.
The traveller believed in this case that it would be
permissible to silence his conscience and to enter upon

19:Gennet--5 U-2 (1884-85) 1887 Gilyak

171 among the Goldi, are in use throughout the Gilyak people
622 to be killed by the same means as those discussed earlier
574 village as such but individuals in it who are the owners of
the captured animals. Once an agreement has been reached
796 on this point the animals intended for slaughter are led from
777 house to house several weeks before the fixed date and must
spend a night in each, in order to bring its inhabitants lack
796 by their stay. During this time the animals get only a little
fooi, but at the end of it they are hundred fat. They pay 30 to
796 60 rubles for them. It was interesting to watch how, to take
141 part in the race, some of the Gilyak who were assembled by
322 track threw themselves on the sleds that travelled by them at
a speed almost equal to that of an express train. Some Gilyak
succeeded very well in this attempt, others, on the other hand,
were thrown along some distance by the speeding sleds and
sometimes suffered a tumble. Nevertheless, they kept hanging
with the best good humor despite the pain and the ridicule of
their luckier companions.

796 The festival ended with the whole crowd, closely followed
by the traveller, of course, went back to the enclosure
mentioned above and released the bear from his prison. Then
the entire male population of Vaida, together with the guests
from outside—altogether more than 100 persons—led the
bear down the hill, some of the fence was erected, to the vil-
lage. On the way, one half pulled the bear forward by the belts
described above since it gave indications of no longer wanting
796 to follow of its own willingly. The others steered the bear
522 more or less by means of the belts attached to its back. During
this, the crowd of people made a terrible racket. Now both parties
would shout methods of procedure at each other, now one or
another would fall into the deep snow to the amusement of his
companions, and the bear would then have fallen into would kick and
jostle him in the most merciless manner, without this, how-
796 ever, being able to free himself in any way. Then again, the
bear would attempt to seize one of its tormentors with its
teeth and claws and it always had to endure a resounding,
scornful laughter if it did not succeed. In short, it was a
highly agitated scene that presented itself here to the eyes of
our traveller. When they arrived in the village, [181] they
stopped first of all in front of the house in which the bear had
enjoyed its last meal the evening before. He a beam about
three metres long had been placed in front of the
door in such a manner that it hung down vertically about a
796 meter above the ground. Beside this beam there stood six to
530 eight girls and women who were provided with clubs like sticks

796 sled race has the same purpose and is likewise held on this
541 occasion. Here it does not matter either whether the draught
• 231 dogs show outstanding spee.. This is shown by the fact that
437 only one sled starts along the track at a time; the test is,
rather, how accurately the team and especially its leading
dog run along the prescribed route. Such sledges, which
show themselves to be particularly reliable, especially in
understanding an following exactly the calls of the leaders,
are very highly appreciated and can also be paid from 30 to
796 60 rubles for them. It was interesting to watch how, to take
141 part in the race, some of the Gilyak who were assembled by
322 track threw themselves on the sleds that travelled by them at

with the Chinese. After the appearance of the Russians in the Amur region, the Nivkhi began to use small quantities of bread, sugar and salt.

The immemorial, and until recently the only, domestic animal of the Nivkhi was the dog. It served as a draught animal and provided for fur clothing and meat for food; it was widely used as a medium of exchange and played an important part in religious ideas and rituals. The number of dogs in a household was an index of wealth. As a rule, every household kept 30-40 dogs, which demanded considerable care. They were fed chiefly fish and seal-fat; feed had to be stocked for the whole winter, when dogs were used most as draught animals.

The old sled of the Nivkhi, which was still found in use by Shrenk in the middle of the last century, was so narrow that the driver sat astride it, resting his feet on small skis; sometimes he raised himself and ran in this position on skis. The runners of this sled were curved both in the back and in front. The dogs were harnessed to the towing strap alternately on either side, rather than in pairs. The harness was a simple collar, so that the dog pulled with the neck.

Until quite recently, dog races were still a part of the bear festival; in these, the Nivkhi used the old sled and the old type of harness. The harness and the sled which appeared among the Nivkhi in the beginning of the 20th century were considerably different from the old type. They were of the so-called Eastern Siberian type; the sled was of greater capacity and equipped with a vertical shaft-bow and paired harness, not in collars but in yokes, which the dogs pulled with the chest.

The development of the carting trade brought with it a new type of sled. Its greater size and stability permitted the transportation of up to 200 kg of goods. It was usually drawn by 9 to 11 dogs. The best trained and most valuable dog was the leader. The driver—kayur—usually called out his directions to this dog. The dogs were stopped with a shouted order and a brake pole. Dogs were sometimes also harnessed to a boat on a longer tow strap.

The horse as a draught animal appeared among the Nivkhi relatively recently.

In addition to dog transportation, winter travel on land was done by skis—bare skis without fur lining, or skis lined with seal fur. The former were used for short trips; the latter, for distant expeditions during the fur-hunting season. The Nivkhi skis were distinguished by the wooden strips nailed over the fur.

Travel along the rivers (particularly in Sakhalin) was in light hollowed boats made of poplar. These dugouts were so light that they were carried by hand across barriers (shallows and isthmuses). They were propelled with oars or poles (usually employed for upstream travel). For long-distance travel, the Nivkhi had a large boat similar to that of the Ul'chi, Nanays and Orochi. It was made of three wide cedar boards, of which the bottom one was bent upward in front, projecting like a spade. It was rowed with 2 to 4 pairs of oars, by lifting alternately the right and the left ones.

The Nivkhi villages were usually situated near the mouths of spawning-rivers, and seldom exceeded 20 dwellings. Until recently, the dwellings of kinsmen were set side by side. Some 40 to 50 years ago, the Sakhalin Nivkhi still widely used the dugout house. It was made by digging a pit some 1.25 meters deep, over which a wooden framework was built of thin logs, and covered on the outside with earth. The smoke vent served as a window as well; the hearth was built in the center, and plank beds were set around the walls. At the end of the 19th century,

sea. Both the Nivkhi dwelling and every river had its yz', who took care 771
man. The sky was thought to be inhabited by "sky people." The sky 776
ple—the sun and moon—had no close relations with man, but the Nivkhi
e always in close relations with the yz'. "Receiving" from them fish,
animals, etc., the Nivkhi had to "give" them in return—to sacrifice
hem. The cult connected with the "masters" of nature was of pronounced
n character.

The "mountain man," the "sea man" and the bear, in the Nivkhi 796
king, were common to the clan. And the bear festival (chkhyf-le- 614
rno—"bear game") was a clan festival. The clan which celebrated the 231
tival assumed the expense and work of arranging it. This festival was [269]
nected with the cult of the dead, since it was usually held in memory of
dead clan kinsman. A bear cub was caught in the taiga or bought and
ced in a special frame building. The cub was reared by members of the
en clan. On specific days it was taken out and led on a chain through the
ampment. The bear was reared for several years. Before the festival,
the clan members gave the bear's master products and money. The
ster's family prepared food for the holiday (usually held in February).
t a platform—a shooting ground with one or several pairs of trees—poles
g with ritual shavings (inau) and covered with carving. The bear was
between them. The honorary duty of killing the bear was given the
kha—people of the clan in the relationship of "son-in-law" to the clan
ding the festival. The festivities sometimes lasted several days and con-
ed of a complex ceremony of killing the bear with a bow and arrow,
al feasting on the bear meat, the sacrifice of dogs, and so on. The
rskin with the head was lowered into the yurt through the smoke vent
a high pole. In the intervals between eating, there were dog races, [526]
oting matches with bow and arrow, fencing with sticks, and dancing.
er the festival the head and bones of the bear, the ritual utensils et
era were put away in the special clan storehouse. Wherever a Nivkhi
d, he retained his contact with his clan storehouse, where he always
ught the skulls of the bears he killed.

The burial rites of the Nivkhi differed sharply from those of the 764
guso-Manchurians of the Amur regions. The Nivkhi characteristically

Among the Sakhalin Nivkhi, who differed in their economy and material 177
culture from the above peoples, socialist reconstruction followed a some- 648
what different pattern. Many Nivkhi went to work in fishing and lumbering
enterprises. The first Primary Productive Organizations were organized 474
among the Nivkhi in 1927. Subsequently, the Nivkhi began to socialize the instruments and means of production—nets, boats, dogs, etc., and went on to a more advanced form of social production—the agricultural cooperative. A part of the Nivkhi population joined Russian collective farms, situated near Nivkhi villages.

As they learned new methods of conducting their economic activities [241]
and mastered new techniques of production in the collectives, the Nivkhi [231]
began to develop new economic activities, formerly unknown to them; tillage, gardening and cattle-breeding. At first, the work of the Primary Productive Organizations, particularly on the eastern coast, where villages lie at considerable distances from one another, was seasonal in character. The Nivkhi gathered at the fishing camp from several nearby villages and fished cooperatively for 3-4 months, after which they dispersed. In winter, they engaged in carting, using dogs as draught animals. Later the cooperatives became permanent. As a rule a collective farm was first made up of the inhabitants of one village. But larger collectives also developed, such as the "Chir-Unvd" ("New Life") collective, which united the economies of three villages along the middle course of the Tym' River (Kirovskiy Rayon). An important role in the organization of collectives was played by the Nivkhi youth, particularly by members of the Komsomol.

The organization of collectives and their successful development were openly resisted by the rich Nivkhi and former elders. The greatest resist- [361]
ance was to the building of new collective-farm villages and the resettlement of the members in new sites. The resettlement was necessitated by the need to enlarge the villages, which had often consisted of two or three houses, and to transfer them to more convenient places, nearer to good fishing areas. The Soviet government spent large sums on this. Most of the collective members left their old smoky dwellings and moved to new, bright homes.

At present, fishing occupies an important place in the Nivkhi economy. 177
The former primitive fishing methods have been abandoned. Along with 648
seines, the fishermen set up more efficient zayezdki; manually worked 226
scoops have given way to winches; fish is transported on Amur sailboats 474
(kungasy) and cutters; and Motor-Fishing Stations (MRS) provide extensive aid to the collective fishermen.

Many Nivkhi collective members participate today in fishing expeditions. To do so, they travel to Okhotsk and other districts. Expedition fishing [22]
usually lasts from April to August. It is also carried on in Sakhalin, where the continental Nivkhi also come to work. In spring, the members of the fishing collectives hunt seal in the estuary and on Sakhalin. In winter, they hunt fur-animals.

Agriculture is a new branch of economic activity among the Sakhalin 177
Nivkhi. The first Nivkhi agricultural collective, "Chir-Unvd," was 648
organized in 1930 along the basin of the Tym' River in northern Sakhalin. 241
In 1937, the collective already consisted of some 50 households. Its 474
acreage under cultivation rose from 1.5 hectares in the first year of its existence to 61 hectares in 1937. The main crop was potatoes. The collective farm has its own skilled agricultural personnel—brigadiers and team leaders—although there was a time when the Nivkhi considered agriculture a great sin. As the old men used to say, "He who digs or plants will die."

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%.

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, placards and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical aid. Soviet medicine rapidly won the confidence of the Nivkhi.

"The object of the capture and feeding of the bear is the holding of a great yearly semi-religious festival, in which the slaughter of the beast plays the chief part. It is more probable, that in the older times a full-grown bear was captured just previous to the fête, and that to-day the letter rather than the spirit of the sacrifice is kept up by seizing cubs and rearing them for three or four years. The feeding is a matter of no difficulty, as will be seen when we come to the preparation of the Gilyak's winter stores. [LSS: See category 116, p. 174.] To the owner or capturer of the bear, the feast turns out a very profitable investment, for visitors from neighbouring villages flock in, and while necessaries are provided by the owner, luxuries are on sale, and bring him in a handsome profit.

The animals are kept in stout log cages, adorned with a pine-branch at each corner. Wishing to see, and if possible to photograph one of the occupants, I desired the villagers to bring one out, or at least unroof him. There were, however, too few men-folk at home, and the adult bears were very fierce, as indeed we gathered from their movements and remarks within; so two of the five little cubs were partially unroofed. The poor little orphans snarled, and shrank frightened into a corner, tumbling over one another, and trying in their terror to hide each beneath the other. Ere the month of January, 1905, is passed, or perhaps before, their spirits will have been released to carry messages to the great Pal ni vookh."

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

171 among the Goldi, are in use throughout the Gilyak people
751 and are essentially the same as those discussed earlier
301 (Number XIII, p. 207) [see Goldi source 18: Genest--Analyst]. The Gilyak on Sakhalin Island whose houses
372 Jakobsen entered were likewise highly indignant whenever
462 he left the house with a lighted pipe or when his companions
776 extinguished the fire burning in a hut by pouring water on it. For in their opinion such things tended to conjure up destruction not only over the inhabitants of the one hut but over the whole tribe. The inhabitants of one house in the village of Varki below Nikolayevsk predicted the same result when Jakobsen was about to light a fire for making the tea, and they forced him to wait till the house-wife saw to this task, since, in their opinion, this was a job only to be performed by her. Plainly this conduct has its basis in the sacred position of fire. [380] Though this no longer leads to a personification of a fire god among the Goldi and the Gilyak, it no doubt existed among them at one time as it still does today among the Buryat.

776 The system of gods of the Gilyak is in no way behind that
171 of the Goldi in variety. Human and animal figures in color-
825 ful diversity serve as representations of celestial beings.
796 Here, too, there is a great similarity to the religious conceptions of the Goldi; the most important difference seems to me the one that was touched upon earlier (XIV, p. 223), [see Goldi source 18: Genest--Analyst] the fact that the Goldi pay zealous homage to the tiger while the Gilyak do honor to
796 the bear. It is true, though, that this homage is disastrous
415 to the bears since it means keeping a number of these
531 animals imprisoned in the cages in every village and killing
231 them at a bear festival. Before the festival the bears are fed plentifully for an extended time by means of large wooden spoons prepared especially for the purpose and decorated
796 with ingenious carvings. These bear festivals are usually held late in autumn and in winter and they are affairs of the greatest importance to their celebrators. I will now give the description of the festival that Jakobsen had the opportunity of observing in person.

796 On the 7th of February, 1885, the traveller arrived in
622 the early morning at the Gilyak village Vaida about 30 versts
574 above Nikolayevsk, where, as he had been informed, a festival was to take place on that day. From several other villages, some of which were considerable distances away large numbers of guests had come in already, and the whole place was astir in anticipation of the festival at hand. The opening of the bear festival is in the hands of the village

food of the dogs.
231 The Gilyak eats meat relatively infrequently. Besides
252 hazel grouse and duck, they have the meat of the elk, rein-
262 deer, dog, and bear. Fowl is usually cooked, the rest is eaten raw at times, and sometimes it is cooked. Roasting is hardly customary. Bear meat is considered a particular delicacy and it is eaten either raw or slightly roasted. When ever they have an opportunity, the Gilyak eat dog meat. Thus, old dogs that are no longer useful as draft animals must yield their flesh and their pelt to their masters. (2) The Gilyak

2. The fondness of the Gilyak dogs for their masters is inconsistent with the "wild and troublesome behavior" which dogs are supposed to show toward dog-eaters. (Philosophie des Unbewussten. 1878, page 85.)

are very fond of the fat house-dogs which they occasionally beg from the Russians.
262 They love fat, especially seal blubber by itself or with cranberries, and this is a favorite dish of everyone. Withal, we must consider that this blubber has such a penetrating, offensive odor that a civilized nose even finds the odor of the boots which the Russian common people grease with seal blubber, unbearable even at a distance. The taste, of course, corresponds to the odor. The fat of the fish and other animals is often eaten by itself. The blubber of the dolphin is also considered a great delicacy, but it is hard to get.
They are very fond of eggs, and seek out and rob birds'
262 nests. It does not occur to them to raise chickens or ducks.
272 [111] Milk was unknown to the Gilyak before the Russians
515 occupied the country (1) except, of course, mother's milk. If

1. The Chinese and Koreans do not milk a single one of their domestic animals. The Koreans use their cows as riding animals.

they are occasionally treated to milk, they manifest pleasure. Worms, insects, etc., are not eaten; with the exception of the louse. It is an ordinary sight to see them pick a louse out of their hair, put it between their teeth, and swallow it.

333 windows have fish skin stretched over them instead of glass
342 panes. The simple, low door has leather straps instead of
354 hinges. There is no ceiling; instead, there are a few cross bars on which lie or from which hang various implements, among other things a kettle which reaches to the front opening of the hearth. The hearth or the stove, if you like, consists of pressed clay; the larger houses have two of them. The smoke passes into a horizontal pipe made of stones and covered with clay, which goes around the room under the sleeping boards, leads out through the side wall and ends in a high wooden chimney that stands separately. The Goldi and Manchurians have the same arrangement. The smoke pipe is seldom cleaned, and yet fire does not often occur. The thin walls of the Gilyak house do not hold the heat, the stove is low and small, and thus the warming of the benches from below is a very practical arrangement. Even so, it is often very cold in the houses, especially when it is below freezing and there is a wind. A large kettle for water is put into the upper opening of the stove and besides that, as we have said, a smaller kettle or cooking pot is suspended from a chain and rests just in front of the front opening of the stove, right next to the floor. The logs are usually so long that [114] they do not fit properly and burn outside the opening of the stove, which frequently causes the room to be filled with clouds of smoke.
231 The furniture is very simple. Not far from the door is the
352 hearth or, if there are two, they are put on either side of the entrance. Around the walls run the benches, or, rather, one continuous bench. It is low and so wide that a tall man can lie diagonally across it. It is covered with woven mats made of arundo. In the middle of the room is the long and low dog table. The dogs are called in before they are fed and tied on the table; they are let down one by one, fed, and chased out again. Besides, there are hanging cradles, a primitively decorated cabinet, a box, etc. On the benches stand a few stools in case a higher seat is needed for some work. On the cross beams below the roof hang all kinds of skins, fish, cloths, etc.; above these, diagonally, lie oars, lances, bows, and the like. There are no idols to be seen; these are usually kept in the storage houses and are brought out only on special
354 occasions. In the evening the room is lighted in the most primi-
373 tive fashion: a cloth and a small bowl of fish oil is the lamp, or, if there happens to be no oil, a pine chip is lighted.
513 In summer their bed consists of mats, in winter of bear skins or other skins. For pillows they use long, cylindrical cloth sacks stuffed with hay, one of which serves for several

502 In general the Gilyak are skilled boatmen. Necessity has taught them to recognize certain signs by which to predict a storm and as soon as they become aware of any of these, they are afraid to go out, especially if their errand takes them to the sea coast. If it happens that their vessel overturns in its battle with wind and waves, they usually succeed in straddling it while looking about for help. [116] But since most of them are poor swimmers, especially in their clothes it happens not infrequently that someone perishes.
231 During the warm season the dogs have little to do; occa-
492 sionally they are used to pull a boat upstream by a rope. Winter is their real working season. The Gilyak dog is of medium height, strongly built, has pointed ears and a short stump of a tail, he is coarse haired but not shaggy and in general resembles a Russian village dog. He lives five to six years and ends his career in the stomach of his master. It cannot be said that the Gilyak dogs are vicious, but in driving they often become so and try to attack everything that comes their way. If a horse-drawn sled appears, the Gilyak usually turns to one side and reins in his pack so that they will not pounce on the horses and wound them. Pigs that wander around the Russian villages have particularly good reasons to be afraid of these hunters.
493 The dog equipage usually has the following appearance: the
516 sled (1) is about two to two and one-half meters long, very

1. In the Gilyak language a sled is called tu, but the Russians refer to it as narta which term, I believe, stems from Kamchatka.

narrow, rounded at both ends equally, and is equipped with a knob to fasten the rein. It has no hollow space. The Gilyak straddles it, and holds a stick with a metal point in each hand; he braces himself with his feet and occasionally also with the sticks in order to balance the sled and also guide it in the right direction. The harness consists of a long middle strap and two smaller straps or loops fastened to it, which are slung around the dogs' necks. The middle strap has such a loop at its front end for the foremost or lead-dog. The dog harnesses of the Russians are better, for their loops are more like a hame, so that the dog pulls more with its chest, and a cross strap goes under its belly. The Russians have also modified the sled. The floor of theirs does not consist

493 of long strips like the Gilyak's, but of boards and is enclosed
516 with a rail in back and on the sides, against which the rider can lean. The driver sits sideways in front and holds on to a handle with one hand and grasps his stick with the other. [117]
231 A complete pack consists of 13-15 dogs, but fewer are also
492 used. There are no driving reins, only the stick and the command guide the dogs. If they go too fast the kayur (driver) braces himself with his feet against the snow, if they are to turn right or left the point of the corresponding stick is driven into the snow. The chief command is "takh", "takh" (foreward); "kai" means "turn around", and "chy", slower.

Because of the loose harness, the number of animals and their energy, and the lightness of the sled, the driving of a dog sled is very difficult work.

484 In the back of the sled lies the baggage or the wares, or
492 sits the traveler. (1) Part of the baggage consists of dried

1. In Nikolayevsk and in Sofiyskoye there are Russian kayurs who transport goods and travelers on those winter roads where driving with horses is impossible, for instance to Sakhalin and De Kastri.

fish for the dogs, whose food on the trip consists only of fish and snow. On the run they constantly break wind which has a very obnoxious odor. Their endurance is superb, their only protection against the cold is their own pelt. If on the journey the Gilyak is overtaken by such a bad snow storm that he can go neither forward nor back, he tries to get to a sheltered place in the woods, which wind or snow do not penetrate; there the company remains, the dogs huddled against each other, until the raging storm subsides. However, at times, that is, when food runs out before a way of escape is discovered, men and dogs are sacrificed to the cold. Such cases occur most easily when channels are crossed, and on the island of Sakhalin, when the kayur must usually take along a fish supply for the entire journey.

The lead-dog is the most cautious and intelligent animal of the pack. In dangerous situations a good lead-dog can be counted on; at times he finds the way where to do this seemed utterly impossible. 80-100 rubles are paid for the best lead-dogs; but the usual price for an average pack along with the

533 boats. However, there are some to be found among them who are considered singers; they are improvisors of a sort who entertain the others with their song.

535 The dance does not exist among the Gilyak, unless one in-
201 cludes in this category the spontaneous leaps with which a
517 tipsy one occasionally cools off his exuberance. There is a
521 reason for the Gilyak's facial expression of which we spoke above. It is neither sullen nor sad, but also not unhappy or good natured; it is serious or indifferent. But I must hasten to add that this immobility and indifference only reaches to a certain point. The Gilyak's imagination and his sense of humor are not immediately apparent, but in reality he possesses both. The favorite pastime on winter evenings is listening to a story teller, and his voice is alternately interrupted by laughter and exclamations.

527 Holidays and festivals. There are no special rest days
787 which would, for instance, correspond to our Sundays.
483 The bear festival is the only one worthy of this name. It is celebrated once a year during our January, it lasts two weeks and is accompanied by various entertainments. Young bears which, as we said, are brought up for this festival, are taken direct from their caves or they are bought from Sakhalin kinsmen. Occasionally 100 rubles are paid for a one-year-old. Young bruin is put into a hollowed-out tree trunk to which he is fastened with a chain, and thus he is transported by sled. The yurts where this traveler halts are considered particularly lucky. It has happened now and then that the bear, because of negligence on the part of the people transporting him, has crushed a child to death, but such accidents are not mourned by the parents, who regard it as a good omen.

527 The bear is kept in a special enclosure in his new home.
231 An old woman is appointed to feed him and give him water. The latter is offered him in a long wooden spoon which is inserted through a little opening. His chief food consists of dried fish, sometimes he also gets millet and various scraps. [236]

Not all villages have bears, therefore people from different villages usually assemble for the festival, even from those places that had their own bear festival and had already consumed their bear. Often Sakhalin-Gilyak come to the mainland at this time, although they themselves are well supplied with bears.

527 Besides feasts, various amusements take place at the
541 festival; for instance, dog races. A track is cleared on the
437 ice and staked off, and the trained dogs run for wagers.

164 also seems to me that the almost exclusive fish diet is a contributory factor. At any rate, I knew people who had a skin itch after eating fish, which, to a certain extent, points to its etiological significance.

Lithiasis does not occur among the Gilyak or the Russians of the Amur, and this may be partly explained by the softness of the water.

Goiter is also unknown. The only case I saw there, was that of a woman who had come from Irkutsk.

755 The treatment of disease is of course very rudimentary.
They expect the most from the magic tricks of the shamans, since usually black magic is part of the game. The natural healing agencies over which the shaman commands are very few in number and are carefully guarded.

752 Sprains are usually set by stretching. In cases of breaks,
splints are used. Wounds are frequently left quite open and washed only with water. In cases of suppuration bits of agaric [Lärchenpilz] are sometimes put in the wound.

757 Frozen limbs are wrapped in oiled or clean cotton. In cases
of chronic stomach and intestinal catarrh, bitter herbs, especially wormwood, are used as infusions. In cases of violent attacks of colic which occur with this illness the Gilyak sometimes set Moxa of burning sponge. Rheumatics bathe in the warm springs near the village of Mikhil, and these actually prove to be very helpful. (1) In bad

1. They have a temperature of 24 to 36 degrees Reaumur and belong to the indifferent thermal waters.

epidemics of measles, etc., the Gilyak sometimes separate into groups of families and go into the taiga.

The natives generally do not like to undergo treatment. They suffer patiently and call the shaman only in extreme cases. They very seldom turn to Russian physicians, but they regard them also as shamans, but wiser than the native ones.

231 Of diseases occuring among their sole domestic animal,
the dog, I can mention only epidemic colds which sometimes wreak havoc. As for rabies, [251] not a single case has occurred up to now in the coastal region, which may be related to the fact that among natives as well as among many Russians, dogs are systematically kept for work, that is, for draft purposes.

101 edition), p. 390 and note 7. Veniukov's
142 observation that the language of the Gilyak is radically different from that of the Tungus is completely confirmed by Jakobsen. That is the reason for the wording of the text.

differentiated from the neighboring Goldi with regard to language whereas in biological make-up they are only slightly different from them. According to photographs that the traveller acquired on the spot and has brought with him, the beard growth of the Gilyak seems to be somewhat heavier than that of the Goldi, without however, reaching the thick-
101 ness of growth of the Ainu on Sakhalin Island. Originally they probably occupied the bank of the Amur up to the Gorin, while nowadays the southern boundary of their territory lies about 100 versts above Nikolayevsk and their former territory is now inhabited by the transitional people that we mentioned repeatedly in number 10 of this volume [see Goldi source 18: Genest--Analyst]. They occupy the northern part of Sakhalin Island but one will also encounter them among the Ainu in the southern part of the island where they probably came as laborers for the Japanese fishers (3) or

3. We will have more to say below about the Japanese fishers on Sakhalin Island. Jakobsen encountered Gilyak even on Aniva Bay.

361 for the purpose of hunting sable. Formerly their settle-
563 ments were particularly numerous along the shallow shore
166 of the island across from the mouth of the Amur. But these
226 had [379] disappeared by the time Jakobsen passed along
231 this stretch of shore because the Gilyak who used to live
133 there had fled from the maltreatments of the convicts deported to Sakhalin Island. They had, however, established new settlements near their former residences, for the traveller observed a large number of boats the occupants of which were Gilyak engaged in fishing in the sound (1).

1. In all these boats there were also dogs which were set on land to pull the boats along whenever the wind was against the fishermen as well as whenever they were struggling against the strong north-south current that predominates in the Tatar Strait.

796 elder who also determines how many and which bears are
622 to be killed by the consent of their owners, for it is not the
574 village as such but individuals in it who are the owners of
the captured animals. Once an agreement has been reached
796 on this point the animals intended for slaughter are led from
777 house to house several weeks before the fixed date and must
spend a night in each, in order to bring its inhabitants luck
796 by their stay. During this time the animals get only a little
food, but at the end of it they are indemnified for their involuntary fast by being taken throughout the night from house to house and fed the choicest tidbits, namely, fresh and dried fish, berries and a thick gruel prepared from millet.

796 While making the rounds through the village, the bears are
563 irritated by being pricked, and they are enraged by a mock
hunt staged on them with lances. The bears are ones that have
been captured young in the woods or bought full-grown from
the Chinese or Manchu who are also quite numerous in the
796 Gilyak territory. During the mock-hunt the Gilyak naturally
take the precaution of tying the animals in such a way that
they cannot easily get at their tormentors. Close behind the
front legs they tie a strap around their body to which are
attached rings through which are run iron chains. To these
chains, in turn, they fasten thick belts of seal hide and of
considerable length, in such a way that some go forward and
others backward. A number of Gilyak take hold of these belts
and in this way they are able to force the bear to stand completely still by alternately tightening the belts depending on
whether the bear is turned frontwards or backwards when it
wants to attack its leaders.

796 Outside the village there is a kind of fence made of sturdy
417 willow sticks, which has an opening for an avenue that is also
fenced in on both sides with similar willow sticks. Inside
this enclosure the bear, after it has finished its tour through
796 the village, is tied between two tree trunks. There it is left
541 to itself for a while, while the inhabitants of the village amuse
231 themselves with the dog race almost always held at these
437 celebrations. In the village visited by Jakobsen they also had
a track especially constructed for this purpose, which, however, was not very long. After the dogs had been led to the
track by their owners and placed next to each other, they
were let loose at intervals of a few seconds, but they all
arrived at the finish about the same time. There is, by the
way, no idea of winning prizes at this race, since such do
not even exist. Rather, it might be called a purchasing race
since the race serves to place the good qualities of the dogs
in the right light and thus to arouse a desire for buying. The

796 sled race has the same purpose and is likewise held on this
541 occasion. Here it does not matter either whether the draught
231 dogs show outstanding speed. This is shown by the fact that
437 only one sled races along the track at time; the test is, rather, how accurately the team and especially its leading dog run along the prescribed route. Such leader dogs, which show themselves to be particularly reliable, especially in understanding and following exactly the calls of the leaders, are very highly valued among the Gilyak who pay from 30 to
796 60 rubles for them. It was interesting to watch how, to take
541 part in the race, some of the Gilyak who were standing by the
322 track threw themselves on the sleds that travelled by them at a speed almost equal to that of an express train. Some Gilyak succeeded very well in this attempt; others, on the other hand, were thrown along some distance by the speeding sleds and sometimes suffered grave injuries, which they bore, however with the best good humor despite the pain and the ridicule of their luckier companions.

796 At the end of the race, the whole crowd, closely followed by the traveller, of course, went back to the enclosure mentioned above and released the bear from its prison. Then the entire male population of Vaida, together with the guests from outside—altogether more than 100 persons—led the bear down the hill on which the fence was erected, to the village. On the way, one half pulled the bear forward by the belts described above since it gave indications of no longer wanting
796 to follow its tormentors willingly. The others steered the bear
522 more or less by means of the belts attached to its back. During this, the company raised a terrible racket. Now both parties would shout methods of procedure at each other, now one or another would fall into the deep snow to the amusement of his companions, and those that came after him would kick and jostle him in the most merciless manner, without this, how-
796 ever, spoiling his good humor in any way. Then again, the bear would attempt to seize one of its tormentors with its teeth and claws and it always had to endure a resounding, scornful laughter if it did not succeed. In short, it was a highly agitated scene that presented itself here to the eyes of our traveller. When they arrived in the village, [381] they stopped first of all in front of the house in which the bear had enjoyed its last meal the evening before. He a beam about three meters long had been attached to a stand in front of the door in such a manner that it hung down vertically about a
796 meter above the ground. Beside this beam there stood six to
533 eight girls and women who were provided with club-like sticks

343 These buildings were the receptacles of dried fish for the winter use of dogs and their owners. The elevation of the floor serves to protect the contents from dogs and wild animals. I was told that no locks were used and that theft was a crime unknown.

685

342 The dwellings were generally divided into two apartments; one a sort of ante room and receptacle of house-keeping goods, and the other the place of residence. Pots, kettles, knives, and wooden pans were the principal articles of household use I discovered. At the storehouses there were several fish-baskets of birch or willow twigs. A Gilyak gentleman does not permit fire carried into or out of his house, not even in a pipe. This is not owing to his fear of conflagrations, but to a superstition that such an occurrence may bring him ill luck in hunting or fishing.

415

777

257 It was in the season of curing fish, and the stench that greeted my nostrils was by no means delightful. Visits to dwellings or magazines would have been much easier had I possessed a sponge saturated with cologne water. Fish were in various stages of preparation, some just hung upon poles, while others were nearly ready for the magazine. The manner of preparation is much the same as in Kamchatka, save that the largest fish are skinned before being cut into strips. The poorest qualities go to the dogs, and the best are reserved for bipeds.

226 Though the natives do the most of the fishing on the Amoor, they do not have a monopoly of it, as some of the Russians indulge in the sport. One old fellow that I saw had a boat so full of salmon that there was no room for more. Now and then a fish went overboard, causing an expression on the boatman's face as if he were suffering from a dose of astonishment and toothache drops in equal proportions.

● 231 There were dogs everywhere, some lying around loose, and others tied to posts under the storehouses. Some walked about and manifested an unpleasant desire to taste the calves of my legs. All barked, growled, and whined in a chorus

● 231 like a Pawnee concert. There were big dogs and little dogs, white, black, grey, brown, and yellow dogs, and not one friendly. They did not appear courageous, but I was not altogether certain of their dispositions. Their owners sought to quiet them, but they refused comfort.

These dogs had some peculiarities of those in Kamchatka, but their blood was evidently much debased; they appeared to be a mixture of Kamchadale, greyhound, bull dog, and cur, the latter predominating. They are used for hunting at all seasons, and for towing boats in summer and dragging sledges in winter. I was told that since the Russian settlement of the Amoor the Gilyak dogs have degenerated, in consequence of too much familiarity with Muscovite canines. Nicolayevsk appeared quite cosmopolitan in the matter of dogs, and it was impossible to say what breed was most numerous. One day I saw nineteen in a single group and no two alike.

ABOUT FULL.

609 Near the entrance of the village an old man was repairing his nets, which were stretched along a fence. He did not regard us as we scrutinized his jacket of blue cotton, and he made no response to a question which Borasdine asked. Further along were two women putting fish upon poles for drying, and a third was engaged in skinning a large salmon. The women did not look up from their work, and were not inclined to amiability. They had Mongol features, complexion, eyes, and hair, the latter thick and black. Some of the

142

302

men wear it plaited into queues, and others let it grow pretty much at will. Each woman I saw had it braided in two queues, which hung over her shoulders. In their ears they wore long pendants, and their dresses were generally arranged with taste.

When recalled by the steam whistle we left the village and took a short route down a steep bank to the boat. In descending, my feet passed from under me, and I had the pleasure of sliding about ten yards before stopping. Had it not been for a Cossack who happened in my way I should have entered the Amoor after the manner of an otter, and afforded much amusement to the spectators, though comparatively little to myself. The sliding attracted no special attention as it was supposed to be the American custom, and I did not deem it prudent to make an explanation lest the story might bring discredit to my nationality.

825 middle of a village, and there fattened upon fish. On f
days he is led, or rather dragged, in procession, and of cou
796 is thoroughly muzzled and bound. Finally a great day
rives on which Bruin takes a prominent part in the fest
by being killed. There are many superstitious ceremo
carefully observed on such occasions. The ears, jawbo
and skull of the bear are hung upon trees to ward off
spirits, and the flesh is eaten, as it is supposed to make
who partake of it both fortunate and courageous.

I did not have the pleasure of witnessing any of th
ursine festivals, but I saw several bear cages and looked u
a bear while he lunched on cold salmon. If the bear w
more gentle in his manners he might become a household
among the Gilyaks; but at present he is not in favor, es
ially where there are small children.

231 Ermines were formerly domesticated for catching rats,
high price of cats confining their possession to the weal
825 Cats have a half-religious character and are treated
great respect. Since the advent of the Russians the sup
439 is very good. Before they came the Manjour merchants u
to bring only male cats that could not trouble themsel
about posterity. The price was sometimes a hundred rou
for a single mouser, and by curtailing the supply the M
jours kept the market good.

756 The Gilyaks, like nearly all the natives of Northern A
are addicted to Shamanism. The shaman combines the
753 ble function of priest and doctor, ministering to the phys
and spiritual being at the same time. When a man is ta
sick he is supposed to be attacked by an evil spirit and
shaman is called to practice exorcism. There is a dist
spirit for every disease and he must be propitiated in a
ticular manner. While practicing his profession the sha
contorts his body and dances like one insane, and howls w
than a dozen Kamchadale dogs. He is dressed in a fanta
manner and beats a tambourine during his performance.
accommodate himself to the different spirits he modulates
voice, changes the character of his dance, and alters his

The dogs of the Gilyak are of the same breed as the draft dogs distributed throughout Siberia and over North America with the Eskimos: wolf-like, long haired, with short, erect ears, and of all possible colors, black, white, brown, fox-red, mottled, and especially often of a striking pale yellowish-grey color. The Gilyak dogs are small in comparison with the dogs of the polar regions of eastern Siberia, of the Iaka *Yrsaul* and Indigirka regions, or even with those of Kamchatka as they were formerly [234] and still occur in isolated specimens (1). Nothing is done among

[235] 1. In the summer of 1884, Dr Peter-Paul Herber, I saw two extremely large dogs which had been brought to the governor from the interior of the province. I measured a still young, not quite fully grown animal likewise belonging to the large, old-Kamchatka stock, which was 11 decimetres long from the nape of the neck to the root of the tail, four of which was the head and neck to the withers, and at the latter seven and a half to eight decimetres high.

the Gilyak to improve the breed; they neither convert especially large and strong individuals into stallions nor use, or care and care for the whelps afterwards. A circumstance greatly contributing to the maintenance of this breed of dogs is the bad treatment that they give the bitches. They do not use them for harnessing, and so they thoroughly do not give them the same amount of food as the male dogs. Whereas the latter, insofar as circumstances permit, are fed with great regularity, daily in winter, every other day in summer, the former are excluded from these meals and in winter receive only a little food from time to time, just enough so they will not starve, but in summer no one concerns himself about them and they are left to find all of their food themselves. One therefore sees lean, wretched and emaciated, slinking around the yurts and in them and greedily snapping at any scraps.

/396 cont./

I believe that the reason that a lynx skin, and all the more a coat made of six skins of this kind, has so high a conventional value must be sought in the influence of Chinese concepts. In any case the lynx skin has a considerable real worth for the Gilyak, since in trade with the Chinese it is regarded as the equivalent of two otter skins or 10 sable skins (1), but

1. Merely two leg-pieces from a lynx skin and the tail are worth as much as two sables.

there are even more expensive furs, such as black fox, for example, which in trade is equal to 15 to 20 sables, and so it is used by the Gilyak like lynx furs for coats of imaginary value. As a table to be presented below on the values given by the Gilyak to various objects will show, there are also a number of things in the household which they value even more than a lynx coat and which nevertheless do not possess for their possessor such an aura of wealth and distinction as the latter does. Conceptions of this sort must therefore come into play here. In view of the conditions and trade relations of the Gilyak with the Chinese, they could not fail to know in what high honor the skin of the tiger, as the highest, most ferocious, and most dangerous of all animals, as well as that of its related species, the panther, stands in China, up to the throne. For example, the skin of high Chinese officials, governors, mandarins, generals, etc. are draped with tiger and panther skins for solemn occasions or processions, and the Chaje cuhsiers carried behind them have just such fur coverings (2); the hunting tents of the emperor are

(flap, through which the head may be much outside of its covering if necessary (1).

1. On the hand coverings of the Tungus and of the Russian in Siberia the flap for sticking the hand out has no protective flap; on the other hand, it is present on the dog-fur coverings of the Orochi of Hadshi Bay.

The Gilyak never have a hood hanging down the back between the shoulders on their fur coats for protection for the head, as is customary among all the tribes in the Northern peoples, Kamchatkal, Koryak, Chukchee, Eskimo, even Tungus, and so others. Instead, the neck and head have special articles of clothing. For the protection of the head there is made of the half-fur of squirrels (Gilyak tolgi, Fl. XIX[7]) an oval and a semicircular piece, which are sewed together, and also a number of things in the household which they value even more than a lynx coat and which nevertheless do not possess for their possessor such an aura of wealth and distinction as the latter does. Conceptions of this sort must therefore come into play here. In view of the conditions and trade relations of the Gilyak with the Chinese, they could not fail to know in what high honor the skin of the tiger, as the highest, most ferocious, and most dangerous of all animals, as well as that of its related species, the panther, stands in China, up to the throne. For example, the skin of high Chinese officials, governors, mandarins, generals, etc. are draped with tiger and panther skins for solemn occasions or processions, and the Chaje cuhsiers carried behind them have just such fur coverings (2); the hunting tents of the emperor are

and at the front corners has either two bands (as in the pertinent illustration, Fl. XXI, Fig. 1[8] for tying it under the chin, or only a single band connecting the inner corners of the two corners

See Category 16, Pp. 999, 998, 1000, 1002, 1001 respectively—Analysis

/398 cont./

band mentioned is first brought under the chin, and then the cap is pulled down over the head. The cap is sewed together at the edges, which, standing out in front and on the outside, also form the edging. The outside consists of either the same kind of sealskin throughout or various pieces of fur not infrequently put together artistically and carefully. /399/ For example, the tom-fish of a Tschoni cuipsa also valued one in Nikolaiewsk, which is illustrated on Fl. XXI, Fig. 1, was of this type. The upper middle piece of this cap, based on the pattern, is made of sealskin, the white sealsoccur in it are of short-haired dog-skin; the edging, separated from the middle piece by a blue band, is made up of three pieces, the front piece being of sealskin, the two, consisting of the fox fur emerging from the inside, but at the bottom the cap is trimmed all around with long-haired white dog-fur. This trimming, by the way, is not lacking on the less elegant, indeed even on the simplest fur-caps of the Gilyak and gives them at a special, particular value. The long-haired white or gray hair of the cap reaching down to and the neck, the more beautiful it appears in the eyes of the Gilyak, just as it is in the eyes of the Haimen on Kamchatka trimming the fur coats, which might have been coarser or fine skin, all sewed with long hair, which, was always regarded, as Steller puts it (1), as the "greatest

1. Steller, Beschr. von Land Kamtschatka, p. 138.

ornament" of them. This trimming on the caps, by the way, may offer some protection for the neck against wind and snow. The cap is made in severe cold the Gilyak wear several undergarments under the fur coat. In particular, immediately next to it, for example, in Nikolaiewsk, there is a kind of cotton material or of cloth, the so-called nikiby in Gilyak, a garment somewhat of Chinese cut, which they wear in cold weather or on walks without a fur coat, with only the tulp around

/399 cont./

and copper arabesques and various engravings (ibid., Fig. 2). The sheath is always of thick seal leather (from Phoca barbata) adorned with various kinds of embossed arabesques, and it is by any authority in shape, silent in the middle, tapering toward the bottom, and not closed at the tip, but only provided with a bundle of leather lappets to protect the point of the blade (ibid., Fig. 3, and Fl. XIX[9]). Usually a second knife is also worn at

5. On Fl. XVIII[10] one never absent, large belt-knife was omitted by mistake.

the belt: the ul-jibakho (Fl. XVII, Fig. 4)[11] quite indispensable to the Gilyak, which usually, just like the tinder-box, wooden handle, which, for greater firmness, is equipped with a bone ring at the lower end. It is always inserted in a form sheath made of Angelica root or of wood or bone tip (ibid., Fig. 5). The ul-jibakho is used for cutting wood and making all kinds of crude as well as elaborate articles of all of it. It should be noted that the Gilyak always cuts toward himself, not away from himself, as Mamia Rinsô reports about them. It is, on the contrary, in the

/396/ Japanese (1). Just as rarely lacking in a Gilyak's belt as

1. Cf. Mamia Rinsô, "Ô-tsin ki ko," in Siebold's Nippon, VII, p. 188, besides the latter's work, p. 205.

the above-mentioned kettle is the fire apparatus: a container for the tinder and flint, and a steel. The former is either a small bag of sealskin leather (Gilyak nchunjak, Fl. XXVIII, Fig. 1), or is elegantly decorated with embossed arabesques or with small fur rosettes sewed on it (5), or a box (Gilyak mlo, ibid.,

2. In the village of Tyk on Sakhalin I saw a specimen of this kind that was decorated with small pieces of Chinese cut, which they wear in cold weather or on walks without a fur coat, with only the tulp around

p. 189, of the present work).

See Category 16, Pp. 999, 998, 1011 and 1008 respectively—Analysis

/396 cont./

Fig. 4) that is very peculiar with regard to the material as well as the form and arrangement. It is made out of the skin of a fish, which is sewed together beforehand for the purpose and later hardening like wood: on the Amur out of the skin of the tshilbatsche of the Gilyak (Salmo lycaodon Pallas), Sakhalin out of that of an allegedly similar kind occurring in the northern part of the island of Sakhalin and called ojiro by the Gilyak. The mlo consists of two quite similar pieces that may be inverted over each other and at their upper or lower edge are bent into a spiral and attached to a leather strap in such a way that, after pushing away a bone tube running on the latter, the upper piece can be lifted off the lower one. On the inside there, the steel, too, often hangs down from the belt on a long chain (Gilyak, yaxi, Fl. XXVIII, Fig. 2) or is sometimes replaced by a bone tip (ibid., Fl. XXIX, Fig. 3) sometimes there is also found on this a bent, little iron ring pointed at the bottom (Fl. XXVIII, Fig. 1 and 2), which, as it can be easily separated and used for all kinds of purposes, at one time for making a hole in a strap, at another time for loosening a knot or cleaning the pipe, etc. [The instrument (Gil. tsekki) is not infrequently also made of bone or horn, and as insignificant and unessential as it is, it is not also of Chinese title, on which gay-colored dragon figures (Fl. XXVIII, Fig. 3). Finally, and there is which the steel is represented (1). On the inside this cap is likewise lined with fur

1. It is well known that the dragon design on fabrics, furniture, and other articles is very popular among the Chinese, but only the emperor is said to be entitled to have five-clawed dragon on his clothing and utensils, whereas all other persons, from imperial princes and mandarins down, are only allowed to have four-clawed dragons (Van-Braam, Voyage de l'Ambassade de la Comp. des ven l'Empr. de la Chine

/482 cont./

493 all along the horizontal middle piece, with mountings, or rather,
192 if one thinks of the considerable length of the latter, with a
second pair of soles, the protective soles (Gilyak motass), b
in the illustration), which are fastened by means of wooden pegs
and, at their sharply reduced ends, also by means of leather straps
to the main soles. The sole-mountings are usually likewise of
wood and can easily be replaced when worn out. In the spring,
237 however, when the snow melting in the sun sticks to the wooden
sole and makes travel very difficult, instead of the wooden mount-
ings, some made of whalebone are fastened to the sled, or the
wooden protective soles are covered with a whalebone plate, as
I have seen on several occasions, especially on Sakhalin, where this
material is more readily available (1). A very characteristic feature of the

237 1. As was discussed in the first volume of
493 this work (p. 193), these quite long whale-
192 bone plates come from a kind of whale which
171 the Gilyak call kalm and which presumably
136 is Balaena australis Desmoul, but as a rule
the bone plates are taken from the lower jaw
or the ribs of Balaenoptera longimana Rud.
(Gilyak keng), the one most frequently stranded
along the coasts of the Sea of Okhotsk. Even
among the Russians in Siberia bone or whalebone
mountings are often used on the sleds, espe-
cially for travel over sea ice which is covered
with salt crystals that have separated out
(Vrangel', Putesh. po siev. ber. Sib. i po
Levod. moriu /Journey along the Northern
Coasts of Siberia and through the Arctic Sea/,
Vol. II, p. 238). According to information
given by A. Schroot in the Leipziger Tageblatt,
237 bone sled-mountings (sled-runners), as well as
bone skates, were formerly used in many
regions of Germany, for instance, in
the province of Brandenburg, in several
Bavarian lake districts, in Salzkammergut,

/482 cont./

237 1. (cont.)
171 etc., and such bones have been found a
number of times in excavations in
Scandinavia, on Iceland, on the Zealand
Islands, in Friesland, Pomerania, in the
March, in Moravia, and even in the pile
dwellings of the Swiss lakes (St. Petersb.
Zeit., 1880, No. 58).

493 Gilyak sled is that when it is equipped with the protective soles
and is placed on firm level ground, the latter is touched by only
a small part of the sole, equivalent to about one-quarter of the
total length of the sled, while the two ends rise to a considerable
height above it. For example, in the case of the specimen meas-
ured by me, their distance from the ground amounted to one foot,
493 ten inches. Between the two ends of the thus shallowly arched
192 soles run, as sinews, the two longitudinal side-bars (Gilyak kigi,
c in the illustration) of the sled, which form the frame of the very
shallow sled-basket serving as a seat and for holding effects. They
rest on several thin little supports (Gilyak ich, d in the illustration)
set into the soles from above, and their ends, moreover, are con-
nected with the soles by means of a perforating wooden crosspiece
493 (Gilyak kemghi, h in the illustration). The ich, of which a/483/
Gilyak sled of regular size, like the one illustrated, has five on
either side, a smaller one only four, are rather wide and solid at
their ends, somewhat reduced toward the middle, and their posi-
tion and distance from one another and from the ends of the sled
likewise seem to be standardized by quite definite proportions. If
there are five of them, the middle one is exactly in the center of
the entire length of the sled, all the others are at a distance of
1' 10" from one another, that is, at precisely one-eighth of the
sled's length, and the distance of the two outermost ones (the
front and the back ich) on either side from the sled-ends is double
that, therefore 3' 8" or two-eighths of the length of the sled each.
The sled touches level and firm ground only with the part of the
soles which is found between the two supports standing next to the

493 /483 cont./
exception of the curved pieces of wood at both ends of the sled,
192 which are made out of the particularly flexible wood of the black-
824 alder tree, and the bottom of the sled used for sitting, which is
either likewise made of black-alder or of willow switches.

/484/ As is to be seen from the above description, lightness
is the basic characteristic of the Gilyak sled: it has no iron at all
and throughout is made only out of thin, carefully selected and
fitted pieces of wood also fastened together in part by means of
straps. It owes to the resulting flexibility its ability to withstand
even rough trails such as the forest or the river and sea ice all too
often present to it. It is not suitable, however, for carrying much
baggage and heavy loads. In this respect it falls far behind the
Russo-Siberian narte. This, generally provided with larger di-
mensions and wide soles, rests on the same principle as the ski,
the distribution of the load over the largest possible surface and
the greatest possible elimination of friction-resistance in move-
ment, for which purpose, before a trip, the soles are provided with a
thin layer of ice with a damp cloth, which to a certain extent sub-
stitutes for the fur covering of the ski (1). The narrow soles of the

1. The above-mentioned covering of the sled
soles with bone or whalebone plates serves
the same purpose.

Gilyak sled encounter only a little friction-resistance and therefore
do not need the ice coating; on the other hand, it does not allow
for a distribution of the load over a large surface and hence, even
with a small load, cuts too deeply into the snow to be able to glide
along easily. In accordance with its lightness and small size, the
Gilyak sled has little space for baggage, for the basket designed
for it is, as was pointed out, very shallow, only as deep as the
wooden longitudinal side-pieces rise above the switches forming
the bottom of the sled, and this is very little. To prevent the
237 baggage from falling off, a cover made out of fish skin (Gilyak
mytsch) is first spread over the bottom of the sled, the baggage
is placed on it, wrapped in it, tied crisscross to the sled with a
long strap.

493 /484 cont./
long strap. If a longer trip is undertaken, a few of the most
necessary weapons, a lance or a bear spear, are stuck under the
strap. In front, approximately above the outermost ich, a saddle-
192 shaped hollow is left when the baggage is loaded, which, covered
237 with a piece of fur (Gilyak tyws) (2) likewise fastened to the sled,

104 2. The s here is soft, pronounced like
the French z.

and, to be sure, a piece of fur from either a bear's head or an
elk's head (Gilyak kotr-ngar-tyws and toch-tschongr-tyws, re-
spectively, serves as a seat for the Gilyak going on the trip, who,
with small ski on his feet, sits astride it (see Pl. XXXVII /see
p.1017/).

192 The Gilyak dog-harness is very simple and primitive: to
192 the above-mentioned long guide-line (Gilyak nygtsch, Pl. XXXVI
237 /see p.1016/, Fig. 2) plaited out of seal straps are fastened, at
regular intervals and alternating from one side to the other, seal-
leather neck-bands or collars (Gilyak chall) of the form shown in
Fig. 3 of the last-mentioned plate, and such a one, but without
the movable iron ring, is also attached to the end of the strap
(Gilyak lat) serving as an extension of the guide-line. This latter
/485/ neck-band is pulled over the head of the lead dog, the others
over the other dogs, and the team is ready. The harnessing of
the dogs, therefore, is the work of only a few minutes among the
192 Gilyak. On solemn and festive occasions, such as matchmaking
trips or the dog races arranged during the bear festivals, and the
like, instead of ordinary collars the dogs get elegant ones with
high-standing, Chinese horsehair braids and tassels made of red-
dyed sheep or goat wool, the so-called rüssk of the Gilyak, like those
illustrated on Plate XXXVI /see p.1016/, Figs. 4 and 5. The ac-
companying woodcut serves to show the way in which such a collar
is put on the dog. /Illustration appears here./ The chief dis-
advantage of the Gilyak harness is that the dogs have to pull with
their necks, and, with great exertion and in violent excitement,
they all too readily choke themselves. In this it is far behind the

/544 cont./
880 bartering with them. Tschomi plays the same role in the south-
225 ern part of the Amur-Liman that Langr does in the north. In
184 particular the small group of the Hagimif Islands is one of the
361 localities there frequently visited for hunting seals by all the
mainland Gilyak living adjacent to it. In order to hunt seals,
however, the enterprising Tschomi Gilyak also go south of the
Amur-Liman into the Mamia-Rinsô Strait and to the northern
end of the Sea of Japan, as well as to the opposite coast of
Sakhalin, where I saw them staying, for example, at Poghobi,
for this purpose. Scarcely less than in the rest of the Amur-
Liman, seal-hunting is also practiced immediately at the mouth
of the Amur River, at Tschcharbach, Ngale-wo, and Pronge,
where in particular the small island of Ulsut is an especially
favorable spot for it.

225 According to the Gilyak, all the species of seals of the
136 Amur-Liman also enter the Amur River, with the sole exception
of the "alch," Phoca equestris Pall., but the old animals are
said to go only a short distance from the mouth, whereas the
younger ones go up farther. In any case, Ph. nummularis
Schleg., which in the adult state is called phghi-langr by the
Gilyak, gjäuchssa by the Olcha, goes farthest upstream. It is
therefore the most important species of seal for the Amur Gilyak.
225 One sees its more or less densely spotted fur everywhere among
237 them and used in all kinds of ways, for clothing, as was dis-
136 cussed in detail above, ski, bags, small pouches, etc. Scarcely
less important for them, however, is the kighitsch, the Ph.
barbata Müll., which is less common in the river and whose
thicker skin, with the hair removed, is used for making the
foot part and the soles on their boots, the dog harness, and the
225 straps needed everywhere. The seals are said to go about 60
versts upstream in the two largest rivers of Sakhalin, the Tymy
and Plyi or Poron-ai (1), but as yet nothing is known about

113 1. Mitsul', Ocherk" ostr. Sakhal. /Sketch
of Sakhalin Island/, St. Petersburg, 1873,
p. 48.

the habits of the individual species.

/558 cont./

123 152 203 1. (cont.)
of this event had spread from Ulban Bay to the Amur and Liman, and the Gilyak were afraid that I might have a similar magic wand.

411 191 In my time the only shooting weapons of the Gilyak were the bow and arrow, which they used on occasion against large as well as small animals. The bow (Gilyak puntsch, on Sakhalin [192] punt) is of the same nature as among the Tungus and other Siberian peoples. It is made of the wood of young ash trees [824] or, lacking them, of good birch wood. In the Tymy Valley [192] on Sakhalin the Gilyak designated to me the kind of wood called per by them, i.e., according to Schmidt and Glehn, Evonymus macropterus Rupr., /559/ as their "punt-tschchar" (bow wood) (1), as is also the case among the Ainu (2).

1. Or, as they said as a rule, "punt-lytynt-tschchar," that is, bow-making wood.

[113] 2. Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin, Botanischer Theil /Travels in the Amur Region and on Sakhalin Island, Botanical Section/" (Mém. de l'Acad. Imp. des sc., seventh series, Vol. XII, No. 2, pp. 99, 213, 215).

411 239 53 In order to protect the wood from dampness and to retain its flexibility, the bow has fine birch bark pasted on it, or, as I have seen on especially fine specimens, for example, on the bow from Tebach shown on Plate XLIV /see p.1024/, Figs. 4 and 5, is covered with fine elk skin on the inside, i.e. on the side turned away from the marksman when shooting, but on the outer side turned toward the hunter, with whalebone (Gilyak asm) (3),

[104] 3. The s is soft here, like the French z.

/559 cont./

411 239 [53] [192] [439] which also bears fine silver decorations on the specimen illustrated. Sometimes used for this purpose are thin plates from Chinese buffalo horn, which for this reason the Gilyak call puntsch-ngynif, i.e., bow bones, or from the nose-piece of the Rhinoceros tichorhinus, which presumably reaches the Amur region by way of the Tungus and Yakut. The bowstring (Gilyak 411 kich) is twisted out of fine strips of the skin or gut of the white 192 239 whale. A case made out of fur or fish skin (Gilyak puntsch-chal) [283] is used to protect the bow, especially on trips. The arrows (ku) [415] have wooden shafts with vanes from the tail feathers of the fishing eagle (Haliaëtos albicilla) set in the lower part of two opposite sides (Pl. XLV /see p.1025/, Fig. 4) (4) and points of various forms,

4. By this characteristic alone they are essentially different from the simple shafts of the arrows used on the self-firer and, accordingly, have a special designation in that they are called uch, but the latter winngyr. The eagle feathers on the arrow shaft are called kyla-ngar in Gilyak; the notch at the lower end of the shaft, used for setting the arrow on the bowstring, is called korm.

depending on the animals for which they are intended. In my time among the Gilyak iron arrow points (Gilyak luch) were almost the only ones used, but there were also some of bone (Gilyak krangch), which were supposedly made of the leg bones of the 411 musk deer in particular. Some of these iron arrow points intended 192 for larger animals, elk, reindeer, and the like, and equipped on either side with a more or less sizable barb and in most cases also with a series of smaller barbs and notches, are illustrated on Pl. XLV /see p.1025/, Figs. 1-3. The two-pronged point (kor) used on the arrows for both the bows and the self-firer for killing smaller animals, sable, otter, fox, etc., has already been discussed above. An arrow with a very special shape, called

G 223 [439] /565 cont./
article of trade with the Japanese, among whom, as the former told me, they are used to decorate the windows in the dwellings of prominent persons, thereby distinguishing them from the dwellings of ordinary people. Moreover, the Gilyak use eagle feathers G [239] 411 [164] to feather their arrows and to make certain articles of symbolic significance for their little burial houses. In order to obtain the 283 rectrices of the eagle as undamaged as possible, the Gilyak take 231 the young birds out of the nest, in connection with which they 439 fell tall trees that are hard to climb and have nests in their tops before the young can fly. The captured young eagles are kept chained to the fish-drying racks and fed with fish scraps until they are in full feather, whereupon they are killed, but their tail feathers are carefully spread out between sheets of birch bark and in this fashion stored for trading. The number of eagles annually caught and raised by the Gilyak must be very considerable, since one can scarcely enter a Gilyak village in which he does not see several of them on fish-drying racks. In particular, however, the southern coast of the Sea of Okhotsk is regarded as the eagle region proper, because there not only the myghr-tscham is captured, but also the tscharngai-tscham, whose tail feathers are especially prized by the Japanese. Thus, it is not at all unusual for the Amur and Liman Gilyak to go to the coast of the Sea of Okhotsk for a stay of several years in order to obtain eagles' tails G 231 there. Like the Gilyak, their closer and more distant neighbors 439 on the Amur, the Olcha and Goldi, also occupy themselves with 114 raising young fishing eagles of the same species (Hal. albicilla, 136 Olcha gussi, Goldi kāktscha), and, to be sure, not, as Maack thinks (1), in order to show them religious veneration or to keep

1. Putesh. na Amur", pp. 143, 170, 206.

other birds away from the fish hanging on the drying racks, but likewise only in order to sell their tails to the Japanese, which A 231 is done either directly or through the Gilyak. Finally, the same 439 is done by the Ainu of Jesso and the Kuriles, as has been

G 325 191 /574 cont./
to the peoples of the lower Amur region, but it does not seem to have gone beyond the Goldi on this route, while the peoples living farther downstream along the Amur and on Sakhalin, the Ainu, Gilyak, and Olcha, had already received it earlier, as discussed above, from the Japanese. During the past decades, finally, the peoples of the lower Amur region have had the opportunity to become acquainted with the Russian manner of forging iron.

G 714 [192] [239] The net armor (Gilyak kä-petsch) is entirely different in nature from the iron armor. It consists of a sleeveless camisole or short shirt (Pl. XLIV /see p.1024/, Fig. 1), which is plaited with multiple strands of nettle-yarn cord, such as is also used G [239] for knotting fish nets, and with individual strips of whalebone added here and there. The neck opening is trimmed with long-haired dog fur and has a button and a loop for buttoning it, otherwise the armor, pulled on over the ordinary dog-fur coat, remains open in the front. The net armor is very heavy on account G [126] of the coarse plaiting containing a great quantity of material; the specimen illustrated, which I bought from the Gilyak Mradamu in Ssabach, is 2' 4" long, 1' 10" wide, and weighs 28 1/2 pounds (Russian). Whereas the iron armor is of Manchu-Chinese origin, the net armor is genuinely Gilyak. According to the G [628] Gilyak, the net armor was formerly used by them during major feuds when, as the result of a murder, wife-stealing, or the like, a village took to the field against another one. In my time, however, it was no longer used and, it was said, was to be found G 714 in only a few specimens. In fact, the piece acquired by me 126 shows the signs of great age, and its aged former owner was of the 556 opinion that neither his father nor his grandfather had seen it new. Nevertheless, the Gilyak attribute little value to this armor because it was made of worthless material and by them /575/ themselves and is not to be compared with the former, often fragmentary and rusted Manchurian armor (1).

G 714 191 1. The armor of two other peripheral peoples of East Asia living to the south and to the north of the Gilyak is also made in part

1. (cont.)
de St. Pétersb., VIIth series, Vol. XII, No. 2, p. 99).

276 415 (171) Among the Gilyak, the tobacco, chopped fine on a special board (Pl. XXXIV, Fig. 8)[z] and, when dry, disintegrating almost to powder, is kept in a pouch, which, adopted everywhere in the Amur region, seems to be of one and the same Manchu-Chinese form: long and narrow and provided with a lateral slit close to the upper end, by means of which the pipe is stuck in, in order to be filled with tobacco inside the pouch. It is always carried in this position, together with the pouch, which as a rule is fastened to one of the top buttons of the fur coat or the shirt and hangs down from there over the chest. Usually it is ordinarily [237] [531] made of fish skin, leather, or a piece of fur, bordered with Chinese cotton or silk along the edges, decorated at the top with some embroidered or painted arabesques, and occasionally made out of one of these fabrics.

276 574 The Gilyak likes to share the pleasure of smoking tobacco with others. This is never done, however, by passing the pipe around among all the persons sitting around the hearth or a fire burning outdoors. This is prohibited simply by the small size of the pipe, as well as by the social or moral differences usually existing between those present. As a rule, however, one sees the pipe go back and forth between two persons sitting side by side. In particular, if a newcomer appears in the yurt, the host, after he has taken a seat beside him, hands him his newly lighted pipe, which the latter, after he takes a puff from it, returns again to the former, receives it from him again, and so forth, until the pipe is finished, whereupon the guest pays him back in the same way. This is always a sign of friendly welcome and of good understanding, or of a certain esteem and equal footing. [439] I often saw the Chinese merchants on the Amur do this with the natives who entered the yurt and approached them, which undoubtedly was for the purpose of winning them over by such advances, very flattering to them, and putting them in a more favorable mood for the business dealings.

z [See category 116, P. 1014 — Analyst]

Ainu ABL

G 481 /474 cont./

As essential a service as the small ski performs, however, they are not very suitable for long trips over deep and loose snow on uneven forest terrain. For, because of their small size, they prevent sinking into the snow only in a very imperfect way, they are not very flexible, and, as a result of not having a fur cover, they are not very smooth; indeed, in wet weather, the clinging snow makes travel on them very difficult. For their hunting expeditions and other long trips, the Gilyak therefore do not use the small ski, but the large ones -- enj (Pl. XXXV, Figs. 4-6 /see p.1015/). G [824] Like the small ski, they are usually made of larch wood (Gilyak koi), which the Gilyak therefore designate as lakk-tschchar, i.e., ski wood (3), but are considerably longer and wider and provided

A 481 824 113

3. The Ainu on Sakhalin prefer to make their ski out of the wood of Sorbus aucuparia (Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin /Travels in the Amur Region and on Sakhalin Island/." -- Mém. de l'Acad. des sc. de St. Pét., VIIth series, Vol. XII, No. 2, p. 99; Mitsul', Ocherk" ostr. Sakhalina /Sketch of Sakhalin Island/, p. 33), the Goldi out of ash wood (Budishchev", "Opis. lies. chasti Primorsk. obl. /Description of the Forests of Parts of the Maritime Oblast/." -- Zap. Sib. Otd. Imp. Russk. Geogr. Obshch., Books IX, X, p. 128).

G 481 824 G 237

with a fur cover, although otherwise they have about the same shape as the former, in particular being likewise flat and level up to the front end gently curving upward. The cover is made of sealskin, which, with the hair pointing toward the rear, is pasted as smoothly as possible over the whole underside of the ski by means of isinglass and is turned up along the two edges. In addition, for fastening it, there are two long strips of whalebone or carefully polished wood running like rails along the edges of the ski and fastened by wooden pegs to the ski board. The straps for

/683 cont./

534 made to vibrate. The second form (b), made out of a thin wooden board, is manipulated in the same way, but it is wider, and the initially likewise wide tongue-lamina suddenly tapers at half its length and is equipped there with a small hole and a peg which precisely fits into it in order to help the vibration and to permit modulating it as desired. Finally, the third form (c) consists of a narrow and rather massive bent piece of iron, between the shanks of which there is a thin lamina of the same metal, bent upward at the free end. In order to play on this jew's-harp it is ordinarily pressed to the lips with the iron blade of an ax, which makes the tone come out more clearly and at the same time serves for resonance.

517 During his leisure hours the Gilyak, stretched out on the
533 sleeping bench, greatly likes to take up his jew's-harp and draw
534 forth from it the trills, which in his singing, too, are so agreeable

534

Gilyak jew's-harps.

517
533 to his ear, and other melodies, which are always rather melancholy.
534 And the skill which he shows at it is truly quite extraordinary.

/684/ The other musical instrument, which is also familiar
534 to the Gilyak but is not nearly as widespread among them, is a stringed instrument, a monochord or very primitive violin (Gilyak tyngrsch, Olcha tankara). It consists of a small birch-bark cylinder-
[824] casing (Gilyak tyngr-tschobrai), which is closed on top by means
[237] of a tautly stretched fish-skin (Gilyak tschobrai-tywrch). A small stick is stuck through it crosswise, one end of which projects out of the cylinder-casing only a little, but the other end quite far.

/710 cont./

*796 amid the drumming of the women, some of the dog races of the
[541] day before were repeated; the best runners, each equipped with a fox tail or the tail of a black dog, were let loose down at the rive
[264] and were recaught above at the house. A short informal breakfast on the leftovers of the feast concluded this interlude, whereupon the important schedule for the day began.

*796 From all the houses of the village the people congregated
824 around the place where the bears stood tied to their stakes. Three Gilyak carried in their hands insignia of a peculiar kind. They consisted of a straight young fir tree (Picea ajanensis) from which all the branches had been removed except the crown and the uppermost branches closest to it, which were pressed up around the crown and tied with a string. A boa (Gilyak tolp) made of
[291] squirrel tails, such as the Gilyak wear around their heads and neck
[237] or a fox tail was wound around the crown of the little tree twice in serpentine-fashion and then also fastened. Two of these peculiar banners were of the first type, the third was of the latter type. The three banner-bearers were joined by a fourth, who, as far as I could see, had only a plain long stick in his hand, but he carried it as erect as the others their banners. While everybody now stood assembled around the bear place, the three men with their insignia entered the enclosure, went directly around the bears several times, always returning to the path that led to it and there turning around again, and, finally, planted one of their insignia in front of each of the bears. This was, so to speak, the signal for the departure: the bears were freed from their stakes and led out of the kadhra.

*796 Before going any further, the neck and body bands on the
231 bears had to be examined as to their strength. For the large bear this had been done the day before, and the animal had been provided with new auxiliary bands. Everything was likewise in order on the medium-sized bear. The especially bad-tempered and stubborn small bear, however, definitely seemed to need to have his fetters strengthened, and this is always a very dangerous experi-
[156] ment. Chusisin, Judin's only son, a young and strong man who evidently still had not had enough during the days of goading the

Goldi RX3

which were strung in a row by means of the Foramina vertebralia on the branches of the brush, and beside them hung Goldi birch-bark bowls and baskets, such as are found also on the grave sites, of deceased human beings and which apparently were offered as a sacrifice to the manes of the slain bear.

It is not to be assumed that the Gilyak of Sakhalin differ essentially from their fellow-tribesmen on the mainland in their basic ideas about the bear and the festival dedicated to it, especially since we must think of how the Gilyak spread, that, having come to Sakhalin from the mouth of the Amur, they found a home there for a long period, and only then, oppressed by the Ainu, migrated back to the mainland for the greater part (1). In individ-

1. See pp. 214 /untranslated/, 247 /untranslated/, 889, and 892 of this work.

ual phases of the festival, on the other hand, there are very considerable differences between them, determined chiefly by the different method of construction and the spaciousness of the dwellings of the continental and the Sakhalin Gilyak.

As plain as the exterior of an earth-yurt of the latter is -- a low, conical, snow-covered mound somewhat blackened at the top by the smoke streaming out -- its external decoration for the bear festival is just as shabby. As a rule, only one or two young fir trees, stripped of their lower branches, are stuck in the snow at the entrance to the yurt, with a few ringlet-shaped, curled wooden-shavings (zach) hanging down from their crowns and from the branches of neighboring shrubs. Only when a bear has been eaten in the same dwelling a few weeks or a month previously or even in the course of the year is its skin used for the exterior decorating of the yurt, being spread over a long and sturdy branch stuck obliquely into the snow and sometimes supported by a small railing, and in front of it is put a bundle of wooden curls (zach) (2).

2. See the woodcut, p. 1180.

I saw this, for example, in Tyk, Duĭ, Jwlk, Pud-wo, and elsewhere along the /732/ west coast and in the Tymy Valley of Sakhalin. If

/732 cont./

Bearskin hung up near the yurt.

If the head and leg pieces of the skin have already been cut off to be used as bowls at the bear-festival feasts, they are sewed back on the rump section on such an occasion, in order to make the skin look whole.

The narrow, low, and dark passageway leading into the earth yurt and the small entrance often closed only with a board that can be pushed in a horizontal direction instead of a door make it impossible to lead the bear in and out here, and in the interior of the yurt, taken up almost entirely by the hearth and the three sleeping-benches, there is no room for temporarily displaying even one bear, much less two or three (1). Thus this principal pleasure of the Amur

1. See the plan and the arrangement of a Gilyak earth-yurt, p. 452 of this work.

Gilyak during a bear festival must be renounced by their fellow-tribesmen on Sakhalin, in so far as there are only earth yurts there. The opportunity for this was first offered to the Gilyak when the earth yurts (toryf) originally customary among them even on the mainland, were replaced by houses built in the Chinese fashion (tschadryf), which in my day had already taken place throughout on the mainland, except for one earth yurt in Pättach, and to a large extent along the Liman coast of Sakhalin (2). At first, the conservative spirit which

"If there were more friends of the Gilyaks like Mr. Pilsudski, who was a political exile on the island, they indeed might yet be saved from extinction. He recognized that their means of livelihood, hunting and fishing, were beginning to fail them, and therefore endeavoured to induce those who dwelt near the Russian settlements to cultivate potatoes and to salt fish. To the natives utterly unused to it, the work was extraordinarily exhausting; and one gave it up after two hours because 'his back ached,' while others eagerly sought permission to eat the seed potatoes! I fear, unaided and not followed up, [230] his efforts have failed, though after a great amount of persuasion he got several puds sown."

Sakhalin

/350 cont./

Manchu reached them also and installed elected starosti. There was such a starosta, for example, in Tangak. It was from the Manchu that the Gilyak used to obtain all those objects which they could not produce themselves.

I shall not at this time enter into the question of how long the Gilyak have inhabited the island. I shall only say that when they first appeared there they must have been in possession of the entire economic inventory which they possess at the present time (with the exception, naturally, of firearms). Needless to say, the Gilyak could not have existed on Sakhalin without sleds and boats, without trained sled dogs, and without iron tools, etc. His first cultural products must have been made in areas which were especially favorable, at least with regard to fishing. It may be that the Amur River was such a cradle.

The Sakhalin Gilyak, like their fellows on the continent, have taken many very basic things from their civilized fellows. They have replaced the bow with the gun, their dishes made of wood and birch bark with metal kettles. They forge iron and artfully work with carpenters' and cabinetmakers' tools. They build yurts in the Manchu style and make stoves and tremendous chimneys of stone. They master Japanese sabers and they preserve expensive spears decorated with silver inlays. They wear robes and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of groats). They have finally begun to plant potatoes. In the near future they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

Of all the borrowings made by the Gilyak, the use of iron is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to process ore, but are even incapable of making tools. Until recently, iron itself was very expensive among them. Their boats and sleds do not contain a single nail, though the Gilyak

[The western Coast]

/386 cont./ To make some money,

115 individuals, i.e., one-sixth of the adult population, make the trip to Nikolayevsk. The settlements richest in seals and dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is also richer in sables than the others. Potatoes are raised by the Gilyak in Khoe and Tangi. In the settlement of Tyki, the Gilyak have made a request concerning the settlement among them of at least one Russian with whose help they could raise potatoes. The settlement of Tyki should be mentioned for several other reasons. In the first place, starting from this point the Gilyak are ceasing to hunt sables because of the overwhelming competition from the Tungus who have killed off the sables in the vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyak were very successful in hunting wild deer and sables. In the second place, beginning at this settlement one notices a progressive improvement in the construction of the winter yurts. In Tyki the dugout rises a little above the ground, it has windows made of fish skin, and in one yurt even of glass; in the middle of the yurt, instead of a smoking hearth, one finds a chimney-like stove with a pipe. Farther on, beginning with the settlement of Tengi, one encounters enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and stretch along the wall under the plank beds serve mainly to heat these latter; the smoke goes through a subterranean passage into a high vertical pipe which is made of a hollow tree trunk especially adapted for this purpose. A similar system of heating is used by the Amur Gilyak and in the fanza /houses/ of the Manchu, from whom it may have been borrowed.

As to the character of the region, the maritime sections of the western coast are mostly tundra-like, with sparse vegetation. The road runs partly along the sea, partly through the taiga, and occasionally over the mountain ridges. Near the settlement of Pomr the coast becomes more elevated, and, beginning at the summer settlement of Muz'vo, it strikingly

177 themselves give a reason other than the scarcity of iron for this.
325 As recently as a generation ago a steel was a valuable thing, /351/
[372] and sometimes an entire clan possessed a single communal steel.
Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in
177 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 Even at the present time, the basic food of the Gilyak is
241 the ready products of nature -- fish, fowl, berries, roots; he
181 is as yet incapable of helping nature along and accelerating her
492 creation of foodstuffs. He does not plant or sow, or raise domes-
252 tic animals for meat. This is the fundamental feature of a
415 "savage" state. Moreover, Gilyak traditions of times when
323 water was boiled in troughs by means of hot stones and their
174 memories of wooden dishes coated with clay, and the absence
173 of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

225 of a small board equipped with a harpoon-tip, attached to a stick from 10 t
30 meters long. The lykh was lowered into the water; the hunter hid himsel
nearby in his boat or on the shore. When he caught sight of his quarry, th
hunter carefully directed the lykh at it and quickly drove it into the animal

324 As compared with its role among other Amur peoples, hunting played
22 smaller part among the Nivkhi. The hunting season began in autumn, afte
[184] the end of the fish-runs. At this time bears come down to rivers to trea
themselves to the delicacy of fish, and the Nivkhi awaited them with bows o
guns. Sometimes they set crossbows for them. In winter, they hunted bear
with spears. The bear season was followed by the sable-hunting season
Sable and certain other fur animals (otter, lynx and marten) played an im
portant part in the Nivkhi economy. The Amur Nivkhi went out every autum
in their large, heavy boats made of boards, to hunt sable in Sakhalin, return
ing from there only in early spring. This was due to the abundance of sabl
on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen tree
which served the sables as crossings.

224 The main weapon in hunting was the gun, which in the early 20th centur
[177] replaced the compound Nivkhi bow with its horn covering. However, the bo
[178] was preserved in the bear festival and in children's games. Squirrel an
foxes were hunted with dogs. Crossbows were set for both small and larg
animals.

241 Agriculture already began to appear among the Nivkhi in the middle
the 19th century, when they first learned to plant potatoes. Individual Nivk
had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths
some of the villages, who reforged Japanese, Chinese, and later Russia
metal articles for their own needs; they made knives, straight and curve
adapted to wood-carving; arrowheads, tips for harpoons, spears, and
forth. The smiths used double bellows, an anvil and hammer. Pieces
massive chains preserved from the past speak of the high skill of the o
smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. T
887 old men wove ropes from bast and nettle, built sleds and made dog-harnes

Men's work included fishing, hunting, making the tools required in the
462 occupations, including tackle and means of transportation, the preparati
and transportation of firewood, and blacksmithery. The women processed t
skins of fish, seal and dogs, prepared birchbark for various uses, sewed a
ornamented clothing, made birchbark utensils, gathered plant products, d
the housework and took care of the dogs.

177 By the time the Far East was Sovietized, commodity relations were qui
433 strongly developed among the continental Nivkhi. The old forms of collecti
production and distribution had almost entirely disappeared under the impa
of the increasing property differentiation. Many fishermen and hunters w
lacked the necessary gear were compelled to hire out as lumberjacks a
other hired laborers, transport goods, etc. The smallness of the incor
from fishing made the Nivkhi turn to agriculture. Fur-hunting played an i
significant role among the Amur Nivkhi. The catch of seal, white whale a
sea lion went mainly to fill the needs of the hunters and their families. Fis
ing was done by cooperative parties usually consisting of 3 to 7 person
Workers were also hired, on a half-share basis. Some Nivkhi worked duri
the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but
22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yuk
262 took the place of bread. Meat was eaten rarely. Food was prepared w

Among the Sakhalin Nivkhi, who differed in their economy and material culture from the above peoples, socialist reconstruction followed a somewhat different pattern. Many Nivkhi went to work in fishing and lumbering enterprises. The first Primary Productive Organizations were organized among the Nivkhi in 1927. Subsequently, the Nivkhi began to socialize the instruments and means of production—nets, boats, dogs, etc., and went on to a more advanced form of social production—the agricultural cooperative. A part of the Nivkhi population joined Russian collective farms, situated near Nivkhi villages. 177 648 474

As they learned new methods of conducting their economic activities and mastered new techniques of production in the collectives, the Nivkhi began to develop new economic activities, formerly unknown to them; tillage, gardening and cattle-breeding. At first, the work of the Primary Productive Organizations, particularly on the eastern coast, where villages lie at considerable distances from one another, was seasonal in character. The Nivkhi gathered at the fishing camp from several nearby villages and fished cooperatively for 3-4 months, after which they dispersed. In winter, they engaged in carting, using dogs as draught animals. Later the cooperatives became permanent. As a rule a collective farm was first made up of the inhabitants of one village. But larger collectives also developed, such as the "Chir-Unvd" ("New Life") collective, which united the economies of three villages along the middle course of the Tym' River (Kirovskiy Rayon). An important role in the organization of collectives was played by the Nivkhi youth, particularly by members of the Komsomol. [241] [231]

The organization of collectives and their successful development were openly resisted by the rich Nivkhi and former elders. The greatest resistance was to the building of new collective-farm villages and the resettlement of the members in new sites. The resettlement was necessitated by the need to enlarge the villages, which had often consisted of two or three houses, and to transfer them to more convenient places, nearer to good fishing areas. The Soviet government spent large sums on this. Most of the collective members left their old smoky dwellings and moved to new, bright homes. [361]

At present, fishing occupies an important place in the Nivkhi economy. The former primitive fishing methods have been abandoned. Along with seines, the fishermen set up more efficient zayezdki; manually worked scoops have given way to winches; fish is transported on Amur sailboats (kungasy) and cutters; and Motor-Fishing Stations (MRS) provide extensive aid to the collective fishermen. 177 648 226 474

Many Nivkhi collective members participate today in fishing expeditions. To do so, they travel to Okhotsk and other districts. Expedition fishing usually lasts from April to August. It is also carried on in Sakhalin, where the continental Nivkhi also come to work. In spring, the members of the fishing collectives hunt seal in the estuary and on Sakhalin. In winter, they hunt fur-animals. [22]

Agriculture is a new branch of economic activity among the Sakhalin Nivkhi. The first Nivkhi agricultural collective, "Chir-Unvd," was organized in 1930 along the basin of the Tym' River in northern Sakhalin. In 1937, the collective already consisted of some 50 households. Its acreage under cultivation rose from 1.5 hectares in the first year of its existence to 61 hectares in 1937. The main crop was potatoes. The collective farm has its own skilled agricultural personnel—brigadiers and team leaders—although there was a time when the Nivkhi considered agriculture a great sin. As the old men used to say, "He who digs or plants will die." 177 648 241 474

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%. [241] [433]

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed. [231]

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza. 177 648 474 361

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses. 177 648 474 36 [342]

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, placards and photographs. 177 648 474 342 353

Today, the Nivkhi widely wear bought clothing of the Russian type. They also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats. 177 291 [294] [292]

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical aid. Soviet medicine rapidly won the confidence of the Nivkhi. 177 262 758 [143]

they wore it braided—the men, in a single braid, the women, in two braids.

Social Relations and Religion

Problems of the ancient social order of the Nivkhi are particularly 114
interesting in connection with the study of the origins of the family and marriage. Thanks to the well-known works of the Russian ethnographer L. Ya. Shternberg, we have a detailed descritpion of the clan organization of the Nivkhi (or Gilyaks, as they were called in the past) at the end of the last century. Shternberg conducted ethnographic studies of the Nivkhi for a number of years, and collected materials which attracted the attention of F. Engels. Engels wrote about Shternberg's work in a special article, "A Recently Discovered Instance of Group Marriage" (first published in Die Neue Zeit, 1892, and later, as an appendix to "The Origin of the Family, Private Property, and the State").

The Nivkhi were divided into exogamous clans (kk'khal), of which there 614
were several dozen. Most of their names were taken from rivers, such as: Mybing, i.e., "those who live on the My River," Chombing—"those who live on the Chom River," and so on. Already in Shternberg's time, the Nivkhi clans no longer represented territorial and economic entities. A Nivkhi village was inhabited by members of various clans. However, the Nivkhi clan preserved many forms of social ties among clan kinsmen, expressed chiefly in family and marriage norms, and in religious rituals and customs.

The Nivkhi clan was patriarchal, with but a few relics of the more ancient matriarchal order. These relics included the special relationship [60]
with the mother's brother, who took part in receiving ransom for the murder of his sister's son, and also the custom of sending gifts and a share of every catch to sons- or brothers-in-law—which may have been a remnant of matrilocal marriage.

The Nivkhi clan was a group of kinsmen along the male line, bound by strictly observed rules of clan exogamy: mutual duties in payment of blood-money (tkhusind), which replaced the vendetta among the Nivkhi; participation of clan members in the payment of bride-price and burial expenses; and the common clan cult (clan fire, clan organization of the bear festival, the clan storehouse for ritual objects, etc.).

In distinction to the Tunguso-Manchurian peoples of the Amur region, the Nivkhi took their wives, not from the clan to which they gave their women, but from a third clan. Thus, each clan was bound by marriage ties to at least two other clans. For example, the Khyyyegnung clan took its women from the Kegnang, the Kegnang from the Tykfing, and the latter from the Khyyyegnung. This was connected with the Nivkhi rule, which, in distinction to those of their Tunguso-Manchurian neighbors, permitted a man to marry the daughter of his mother's brother, but not the daughter of his father's sister. The clan from which men of a given clan took their wives was the former's akhmal'k (father-in-law); conversely, the clan to which the women of a given clan were given was called ymg'i (son-in-law). Hence, the Nivkhi themselves defined the clan as follows: "We have one (i.e., a common) akhmal'k (father-in-law), one ym'gi (son-in-law), one fire, one bear, one tkhusind (blood-money), and one sin."

Among the seals of this kind the Gilyaks distinguish a few age groups: a seal belonging to a particular age group is named accordingly. For instance:

1. Qrγər is the youngest of all pəγi.
2. Mat-γəski is the next to the youngest pəγi. For the time being this name is conditional. Its etymology can be given as follows: mat-γəski-kəld; mat - 'smal,' γəski 'back,' kəld 'long,' little long-back.
3. Tje-γəsχəl last year's γəsχəl.
4. [illegible]at next in age to tje-γəsχəl.
5. Siusui-γa next in age to qat, i.e. the oldest pəγi.

Qoma.

1. Heqr-motk - the youngest qoma.
2. Ta[illegible]a - next in age to heqrmotk.
3. Ar-fk - next in age to taγarγa, i.e. the oldest qoma.

Alχ.

Here the Gilyaks distinguish the olvarak - multicolored alχ and dalr - grey Alχ.

225 The sivuch is considered by the Gilyaks to be the most
237 valuable of all seals listed above. The toughest straps, dog harness and shoes (vamps and soles; tops are made out of the skin of other varieties of seals) are made out of sivuch skin.

If the quarry is big, the hunters prefer to take with them the extra hides with the fat and the heads of the seals, leaving the meat on the ice. They separate the head together with two jugular vertebrae (maχt) and two upper ribs.

225 When the Gilyaks kill a seal or a dolphin at sea, they first
782 "feed" it the root of the plant piskər. (1) If not enough of this

1. In villages further South they feed the root of the plant "orŋoχt."

plant has grown, they feed the grass muzγi. When setting out on a hunt, the Gilyaks take along with them a sufficient supply of these plants. Having killed a seal, they open its mouth and through it they put the root of this plant in the nasal cavity. Gilyaks put the stalk of the plant next to the seal on the ice and leave the seal there. They also leave pər 'gall' of the seal on the ice and next to it they put piskər.

1 (the work of stretching the hides on frames and of cutting
2 straps is performed by men). Finally, the heads have to be cooked and prepared for throwing out into the sea.

1 I watched the two wives of Xitkun work after he returned from the hunt. The younger of the two was busy peeling suet from hides. In this she was helped by a woman, the wife of one of Xitkun's kinsmen. The job of peeling suet from hides is very hard. Most of the time the woman has to work in a bent position. I saw Xitkun's wife lift a hide in the process of cleaning it of suet by seizing a part of the cleaned hide with her mouth. At the same time she held the peeled suet with her left hand and continued the peeling process using a large narrow and somewhat curved knife which she held with her right hand.

7 The Gilyaks prepare thin seal fat in the following manner.
5 They cut the suet (ŋɔ̃ʔ) into pieces. They put the pieces into
1 a barrel (in the past they used to put them into a large, deep trough) which they then place in a warm spot. There the suet begins to decompose and to melt (I am not in a position to give a more detailed account of the process which takes place in the suet). This yellow fat (tóm) flows out of the suet. Depending on the age and variety of the seal the fat is either light or dark and turbid. The Gilyaks pour the melted fat into dried seal stomachs. They give the leavings of the melted suet (ta) to the dogs. Stomachs of seals are used by the Gilyaks for storing seal fat. Having killed a seal the Gilyaks empty out its stomach, blow air into it and hang it up to dry. The fat can be stored for a long time in such a bladder. Once the bladder is filled with fat, it is hung in the barn.

3 While one of Xitkun's wives was busy peeling suet from
2 hide, the other wife, Hemanχ, 'old woman,' was preparing the heads for cooking. It was certainly no accident that it was Hemanχ, Xitkun's older wife, who was preparing the heads for cooking. Preparing of the heads requires a certain knowledge of religious ceremonies the guardians of which are the old people.

[93] À propos the interpretation of the words hemanχ old woman' and hemar 'old man'. Both words have in common the sound combination hem and differ in their respective endings ar and anχ. Ar means in the Gilyak language male and anχ - female. What then is hem? In the village Chayvo where a certain form of the Sakhalin dialect is spoken, they call an old man hajmŋar. In comparison with the Amur dialect the Sakhalin dialect has retained a great many ancient forms. The etymology of the word hajmŋar can be easily

193 explained. In the same dialect there exists a word ja-jmnd
197 'to know' (to this word there corresponds in the Amur dialect the word jəjmd). In the direct object, which according to the rules of the Gilyak language merges with the predicate, the letter j alternates with c h. Thus for instance "I know Mizgun" sounds in Gilyak Ni Mizgun-hajmnd. In this way the verb jajmnd gives rise to the second form of the stem - hajmnd which exists independently of the first as a distinct word (just as the intransitive form of the transitive verb jajmnd 'to know') meaning 'to get old'. Hajmnd means 'to get old'. (In the Gilyak language intransitive verbs are formed out of transitive verbs by alternating the first consonant of the stem of the transitive verb.) In the Gilyak language "to know" and to "get old" derive their origin from the same stem and this is understandable for in the case of primitive man knowledge came with experience and so with age. We have thus explained the origin of hajm in the word hajm ar: hajm is derived from the intransitive form of the stem which, in this form, means 'to get old.' ŋ is the suffix which transforms verbs into nouns. We already know the meaning of ar. Thus the word hajmŋar means 'the knowing male' or 'old male.' The Amur hem is, of course, the same as hajm-ŋ in the Sakhalin dialect which change considerably in the Amur dialect. The disappearance of ŋ in it is understandable for the Amur dialect drops its final ŋ's as against the Sakhalin dialect which does not. For instance, 'horse' is murŋ in the Sakhalin dialect and mur in the Amur dialect, 'dog' is qanŋ in the Sakhalin dialect and qan in the Amur dialect. At present we find it difficult to explain why hajm became hem in the Amur dialect, contrary to the rules which would lead us to expect həjm as the counterpart of hajm; thus, həjmr instead of hemar. At any rate it is incontestable that hemar and hajmŋar have the same meaning and, accordingly, hemanχ means a 'knowing female' or and 'old female.' It is possible that at one time or another the Gilyaks meant by ar not only male but also man. This is quite probable for at present they use two words for man: azmət in the Sakhalin dialect and utku in the Amur dialect.

252 Hemanχ sat in squatting position at the trough containing
237 the heads of the sivuchs. The skin was taken off the heads of the sivuch right down to the level of the eyes. The skin on the snouts was untouched. First the old woman cut out the throat together with the tongue. Then she took out of the heqr kuti (?) the plant piskər placed there by the hunters. Then she pulled out the whiskers and put them in a separate cup. After

52 cutting in half the skin on the snout of the sivuch, she peeled
37 it off. The skin peeled off the snout is hung over the door where it stays until, as the Gilyaks say, it is "lost". After taking out the eyes, the old woman cut them and poured their content into the cup containing the whiskers. Then she turned the eyes inside out and cut out first the lens and then the pupil Afterwards, she cut off the noz-ŋək and put it in a separate cup since it is eaten in raw form.

This done, she cut the meat covering the skull. If the skull was broken by the striker, she picked the bone splinters, sucked them one by one and put them in a separate vessel. Subsequently, the splinters together with the heads are thrown into the sea.

62 [94] If the skull was whole the old woman broke it with a
84 stone. I asked the old woman why she would use a stone rather
12 than an axe to break the skull; to which she replied that it is
52 a sin to use an axe just as it is a sin to cook the brain, for it has to be eaten raw. Brains are not the only items consumed by the Gilyaks in raw form, others are: the back, the heart, the intestines, the kidneys, the wind pipe and the noz-ŋək.

11 To watch the old woman break the heads of the sivuch with
77 a stone, sink her fingers in each bloody brain and draw it into
52 her mouth with a sob-like sound, I felt returned for a second to the stone-age by time machine. In fact, if we disregard guns recently acquired by the Gilyaks, and iron which they also recently learned to work into the knives using Japanese kettles as the starting material, spear tips, arrows and harpoons, we are back to the stone tip on the harpoon shaft and on the arrow, the stone axe, which is still remembered in their language (1) and we find no Japanese iron kettle. It

1. Cf. our paper - "Gilîatskîe chîslîtel'nyîe" ("Gilyak Numerals"), Published by Nauchno-issledovatel'skuî Assotsiatsii Instituta Narodov Severa TSIK SSSR, p. 10, 1932.

then becomes clear to us why the old woman uses a stone in breaking the head to get at the brains and why the Gilyaks eat the brains as well as the meat taken from the animal's back, the heart, the intestines, the kidneys, the wind pipe and other parts of the animal - raw. It is then that we see all of the Gilyak mode of life in an entirely different light.

2 Having taken out the brain and having put it in a separate trough, the old woman separated the lower jaw, tied the plant piskər around its middle and put it in the kettle to cook.

extensive trade relations, keep a smaller number of dogs than the Gilyak, their requirements for winter supplies of fish are not as large as among the latter. And naturally they spend less time and effort on obtaining and preparing them. Linked with these more or less purely quantitative differences in the salmon fishing of the Olcha and Goldi in contrast to that of the Gilyak, there are also qualitative ones inasmuch as the individual species of salmon go up the Amur and its tributaries in varying numbers and frequency and therefore vary in their importance for some of the dwellers on it. Salmo proteus, for instance, highly regarded among the Orochi, the Gilyak on the coast and on the Amur, and the Negda on the Amgunj on account of its mass migrations, very soon loses its importance farther upstream. To be sure, it occurs throughout the Olcha area and is said to go up the small river emptying near the village of Kada as far as the lake in its upper course; indeed, a fine-meshed net used among them, as well as among the lower Goldi, for catching smaller fish bears the designation oko-magda after it, but it was not named for me among the Gorin fish by the Samagir in Ngagha, and it is likewise not mentioned by Maack, Przewalski, and others for the Ussuri. On the other hand, another species of salmon, S. lycaodon, which is less important to the Gilyak, receives greater consideration among the Olcha and Goldi. Whereas it plays only a very subordinate role in the mouth part of the Amur River, in comparison to the great masses of S. proteus and S. lagocephalus, between whose migrations it appears in incomparably smaller numbers, its appearance farther upstream comes at a time when there are relatively few fish, in that the former gradually declines and the latter appears later, and therefore meets a definite need of the river dwellers. On July 3/15, 1855, I saw the Olcha of Adi and in the days following also the Goldi of Köurmi and the adjacent villages upstream busily catching chelke or sselke, as they call S. lycaodon; not only did they feast on the freshly caught fish, but they also took advantage of the great schools in which they traveled for the preparation of supplies, which the Gilyak, as a rule, disdain to do with this species of salmon (their well).

/638 cont./

586 material reasons, which are always decisive to a great extent among the Gilyak, each of the two parties avoids taking the initiative in the dissolution of the marriage.

462 For the most part similar utilitarian considerations lie at the root of the peaceful life shared by the husband and wife and the good treatment which the latter receives from the former. /639/ The Gilyak is much too practical and too intent on the preservation and increase of his possessions not to realize the great usefulness of his wife and to appreciate the tremendous amount of work she achieves through her industriousness, skill, patience, and experience. In the division of labor between husband and wife for their common household, the greater share by far falls to her. In general, the man only has to attend to providing the most important means of subsistence. Hunting, catching sturgeon and hausen, killing the seal and dolphin, and trade, and, in particular, the many trips and voyages required for it, make up the field of action that is exclusively his. To be sure, he also does other fishing and, at the time of the mass migrations of the various species of salmon, even does this in a very energetic fashion, but in this the women are of great help to him, and the tiresome work of cleaning the tremendous amount of fish brought ashore, of cutting them up and hanging them on the racks to dry in the sun, falls entirely on them. They also collect, in part with the help of the children, all the winter supplies of vegetable foods inso[illegible] as they are part of the native flora, the various edible berries, roots, herbs, moss, and the like. In addition, the wife has to tend to the entire household and everything pertaining to it. The single thing that the man does for it directly is to cut the needed firewood in the nearby forest, split it, and bring it to the front of the house. To carry it into the house as needed, however, is again left to the women, just as they are obliged to fetch the water needed for drinking and cooking -- a task which in winter and in bad weather involves much toil and effort in the villages that lie high above the river. These are, as a rule, also the first tasks of the day,

462 462 22 [251] 462 [313]

/639 cont./

462 since the house, which has cooled off during the night, must be heated again in the morning, the fish broth cooked for the dogs, and the latter fed in order for them to be ready for possible ex-
● [251] cursions by the men. The storing of all food supplies and the
[252] preparation of food for the occupants of the house likewise fall, of course, entirely on the women. In the morning and during the day, however, the Gilyak usually eat only cold food. The
462 main meal, for which hot foods, too, are to be prepared, does
264 not take place until toward evening, for that is when the men
[574] return from their outside activities and when persons traveling through who have ties of hospitality with one of the occupants of the house and claim shelter for the night may arrive. Moreover, through the preparations for this meal the yurt is heated to the temperature which the Gilyak finds agreeable for the night.

294 Making the clothing for the whole family occupies the women
462 even more than the preparation of food for the human beings and dogs. First of all, this involves procuring or putting into proper
[281] condition the materials used for it: to dress the animal pelts and skins; to clean, pound, and dry the fish skins, which, besides being used for clothing, also replace window glass; to prepare the sewing thread from nettle fibers or from animal and fish skins, and so forth. This is followed by the cutting, /640/ sewing, and quilting of the various articles of clothing, which, as we have seen, are provided, in accordance with Gilyak taste, with all sorts of colorful, intertwined embroidery and other decorations
462 and embellishments. There are still other domestic duties, such as making household utensils, bowls, baskets, buckets of birch bark, sewing blankets and large and small bags and pouches out of cloth or animal pelts or skins for various uses, and the like.

462 Thus one literally never sees a Gilyak woman without work
411 even for a moment, whereas the man, upon his return from hunting
[517] or fishing, spends much time in rest and idleness and at home he has nothing to do but to make the implements needed for his own activities. Since these are very numerous and complicated, in that, among other things, they include all the varied and in part artistic wrought-iron lances, knives, harpoons, and the like, one

231 which Judin had selected for a bravura ride on the river. The
541 were decorated with the above-mentioned red-tasselled colla and harnessed to a small, prettily decorated sled which was d by its owner himself. The drive, amid loud drumming by th women, proceeded at top speed, first down the steep bank to river and then on a leveled course along the latter, and ende without a mishap amid the wild applause of the assembled th Only then were these dogs given their meal in the house, whi the people enjoyed the bear-meat broth.

*796 In the afternoon, the old men began to cut the bear f
252 into long strips which, decorated with wood shavings (zach) a fir branches, they likewise hung in front of the bears' heads, and not until shortly before complete darkness did they take t down again to put them in a small trough decorated in the sa way and placed on the floor in front of the bears. In the mea time, more life and commotion had entered into these prepa tions for the feast: some young men began to cut up the six

/25 cont./

man was possible at a very remote time. As a matter of fact, these fish that travel in masses upstream to spawn even now serve as the basis of life for the Gilyak and his only domestic animals, the dogs. The fish, caught and dried in the sun by the tens of thousands, /26/ are stored in pile storehouses and, in the literal sense of the word, replace bread for the Gilyak during the long winter. The fresh local fish that he catches all year round are merely an addition to this daily bread of preserved salmon. The countless schools of the fish that travel in masses upstream to spawn provide food not only for the Gilyak. No smaller packs of all kinds of pinnipeds and cetaceans follow the schools of fish, pursuing the abundant food. After the fish, the pinnipeds constitute the second source of the food supply of the Gilyak. In early spring, at the first signs of the opening of the ice, the famished native comes out to hunt seals, which are happy for the opportunity to breathe the fresh air on the ice floes which are breaking up.

In favorable places these animals are hunted all through the summer by means of a very long harpoon which is thrown from a boat. Besides their skins, which are quite indispensable in the Gilyak economy, seals also provide supplies of fat, which serves as a seasoning for the hard yukola, and also as an independent food product that is extremely important for the life of the Gilyak. The effect of the fat on the organism of the native is striking. Here it is the end of winter. The famished Gilyak, if he has not been brought down by scurvy, can hardly walk. But the seal need only appear, and he is momentarily transformed. He greedily throws himself on the melted fat, drinks it in all forms, with tea, with fish, and even just as it is, and in a few days he becomes unrecognizable: his cheeks become pink, his body gains weight, and vitality expresses itself in his every movement.

In autumn, after the end of the run of fish, an active and happy season of hunting begins. Bears in abundance come down to the banks of the streams to regale themselves on salmon, and the Gilyak lies in wait for them with gun and spear. Every bear killed is an occasion for communal festivities and celebrations. Before the season for fish and bear has come to an end, the sable has put on his dark coat, and it is time to hunt him. Now the setting up of snares at the crossing of rivers and the building of

/382 cont./

In the evening of the day of arrival at the hunters' balagan, they make chukh-chugynd (a sacrifice) to Pal-n'ngyvyn, the master of the mountains; the master says, "Az'nyr sikrd, urgur n'un'ujd, munkjd" -- "there are no more presents, make it so that I am not afraid, look after us well!" They make chukh-chugynd before a particular tree (uig-chkhar -- a taboored and forbidden tree); then they only feed the fire, saying: "Urgur in'ja, hiulan tugur mujd, pal'akh pong arguid -- eat well, make the mountain people take pity on us!" The fire may not be made by an alien kikhal. Only the master -- yz'ing -- may clean the fire, tugurmynd; /383/ the cleaning is done in the winter quarters in fall and in the summer quarters in spring; the rubbish is put in one place. Mos' for the fire is prepared also only by the yz'ing and his kikhal, but the sacrifice may be offered by anybody. On the first evening they make the sacrifice to the hearth: "Urgur in'ja pal'akh ponargja nula n'ivukh mungja" -- eat well, make the mountain take pity on me, make me a happy man!" Old takhej (trees with bifurcations) are stacked together, and new ones are made. Near the balagan there is an uig-takhej on which are hung sables, nooses, and so forth. The word to it: "Pal ponargja n'akh hiulan -- n'igyvyn mungja!" -- "mountain, take pity on me and make me successful in hunting the bear!"

Near the balagan is an uig-chkhar to which sacrifices are thrown merely with spoons -- no chkhnaj are made. They also feed kelnung an'kh (a bitch looking into a behind) and Lymyz'n mam.

Those who have arrived with the game hang it on the common takhej, where it hangs for several hours until it dries. Anyone from the same clan can take off the skin. The boiled head of a sable is decorated with inau, placed on sticks on the front part of the hearth, nearer the ponang (the middle plank-bed), and rice, puchka, sarana, and mos' are stuffed through the opening in the back of its head and through its nostrils; then the head is eaten by anyone who wishes.

When the head and the bones of the animal have been put together in chumashki, sacrificial dishes are prepared, and the bones

/355 cont./

the low threshold and soaks the floor when the snow melts quickly or when there are heavy rains. Even these dwellings, however, become impossible in summer because of the warm sleeping benches, which inevitably are heated each time food is cooked, and because of the above-mentioned vermin, and, finally, the catching of fish carried on in this season of the year requires the move into the summer dwellings, which are more favorably and conveniently located for it.

The summer dwelling of the Gilyak is of the same type everywhere, on the continent as well as on Sakhalin, and bears the same designation in both places: kkryf. The most striking exterior feature is that it rests on piles which rise four to five feet above the ground. Only at isolated points on the west coast of Sakhalin, south of the Amur-Liman, especially in Tangi, Choji, Arkai, and Dui, did I see summer houses set on level ground, but otherwise of exactly the same type, outside and in, as those resting on piles (1). The aim that the Gilyak have in

1. The large village on Nadeshda Bay at the northern tip of Sakhalin (Ngyvr-wo, see p. 467 above), which was visited by Krusenstern, had summer houses resting on piles. See his Reise um die Welt, Vol. II, p. 182.

in mind with this construction on piles is a twofold one: first, to protect their dwellings against inundations, since the Amur, as a result of prolonged rainfall, often rises considerably and floods the lower stretches of its banks; and then also to make the houses airier and drier by setting them not directly upon the damp ground but somewhat above it, with a constant flow of air under them and penetrating even into the house itself through the crevices in the floor; this is all the more necessary since part of the fish supply is stored in them. Both may also have been decisive for the Gilyak living along the seacoast, for there, too, depending on the locality, a sudden rise of the waters as a result of stormy winds must be reckoned with, and

/357/ This is exactly like the interior of the earth yurts,

/357 cont./

yurt, between the piles, for protection against the rain, and the dogs, too, find a suitable abode under the same protective roof.

The above description also applies, apart from the specific references to the pile-construction, to the summer dwellings of the Gilyak put on level ground at certain places on Sakhalin and, as has already been mentioned, of very similar nature, and it will therefore suffice to add to it only the following remarks referring specifically to the latter. If the yurt is on level ground, the flat sill, space a, projecting along its front side is likewise on the ground. As long as it is still winter, this space is used for the erection of a shelter before the entrance to the yurt, even though only a crude one. For this purpose, on both sides and in front, where the dotted line is on the plan a few poles and boards are set up vertically and, with the exception of a passage, are bound together with plaited switches, and the spaces between them /358/ are filled with grass and brushwood, so that a sort of antehouse is produced. This is assigned to the dogs for their abode, where, posted at both sides of the entrance to the house, they make good sentinels for it.

Since the main occupation of the Gilyak during the summer is fishing and preparing the supplies of fish for the winter, one always sees beside the summer dwellings several contrivances for this purpose. Thus, more or less numerous, open racks for hanging and drying the fish in the sun are never lacking, and not infrequently one finds a roof supported by piles, quite similar to the one on the summer yurts but much cruder, with crossposles under it, on which the fish, hung up in rows and protected against rain and sun, are dried in the continual air current (see Pl. XIII) (1). For the storing of the supplies prepared in summer,

1. A more detailed description of the treatment of the fish before they are dried, as well as of the use of the individual parts and the like, will be given later at the appropriate place.

/358 cont./ For the storing of the supplies prepared in Sum

there are special storehouses, which, however, since consumption takes place in winter, are always located beside the winter dwellings, and the supplies are carried to them as they accumulate.

The storehouses of the Gilyak (njõ, in the Tro and Tymy dialect njo) /illustration appears here/ appear at first glance to be very similar to the summer dwellings in that, like them, they rest on piles (on which the above-mentioned pieces of birch bark may not be absent) (2) and have the same kind of walls and roofs, inde

2. Pallas (Reise durch versch. Prov. des Russ. Reiches, Vol. III, p. 482) mentions that the Cheremis along the Kama and Wjatka, like most of the Kasan Tatars, put their sheaves of stored grain in round, pointed heaps above four piles connected by beams and covered

Plan of a Gilyak Storehouse (njõ, njo).

a -- Balcony-like sill on the front side of the house. b -- Entrance opening. c -- Front section, e -- rear section. c -- Door between them. f to q -- The eleven wall surfaces.

with bark, which makes them inaccessible to mice.

even the same balcony-like sill on the front side, to which one climbs on a thin, notched beam, which can easily be taken away; but even the largest of them are always smaller than the latter, and the entrance is likewise lower and narrower, indeed, sometimes

/426 cont./

SS 262 (in that they more or less provide merely a kind of accompaniment,
171 and to be sure, they are either the wild, natural products of the
25 country, which are simply gathered, some cereals and vegetables
obtained by trade from the adjacent civilized peoples, the Chinese,
SS Japanese, and, more recently, Russians. The individual peoples
[184] of the Amur region primarily differ from one another as far as
food is concerned only in that fish among some or meat among
others is the principal food, each according to their principal occupation, and furthermore the proportion of plant food to animal
food differs for each one according to their greater or lesser communication and trade relation with the Chinese or Japanese.

Among all the peoples of the Amur region the Gilyak are
G *262 the most pronounced ichthyophagi. One cannot imagine their
G life without fish; it is the condition sine qua non of their own
[231] existence as well as that of their only domestic animal, the dog,
which provides them with food as well as transportation and
G clothing. There is hardly a fish in their country that the Gilyak
G *262 would not, if necessary, use as food. But standing in the first
222 rank, of course, are those fish that, because of their seasonal
25 appearance in great numbers, make it possible to prepare the
large supply needed to last through the long winter when fish
are scarce, hence the species of salmon coming up the rivers
from the sea, among which, in turn, Salmo lagocephalus Pall.
(Gilyak hyghl-tscho, or on Sakhalin lagu-tscho) and Salmo
proteus Pall. (Gilyak /426/ tengi-tscho) play the principal role (1).

G [104]

1. In all of eastern Siberia to Kamchatka
and northwestern America, the Russian terms
for these two species of salmon are keta and
gorbuscha; hence in the following I shall re-
fer to them occasionally as keta and gorbuscha
salmon.

At the time when these fish come up into the lower Amur and
its tributaries, which falls in June for S. proteus, in August for S.
lagocephalus, an active life prevails among the Gilyak, for
everyone is busy with preparing supplies of fish for the winter.

/426 cont./

*262 While the men land enormous quantities of these salmon, espe-
251 cially the later species, in nets and boats, the women occupy
252 themselves with skinning them and cutting them up: a longitudi-
[142] nal cut is made from the head to the tail near the spine on either
[142] side and on the belly side with the tschomauwa, a knife with a
[226] long and narrow blade (Pl. XXXI, Fig. 6, and Pl. XXXII, Fig. 1 3/4),
and then a transverse cut from top to bottom just behind the head;
then the skin is pulled off from the side with one jerk each, the
meat is removed from each of them in one piece, and each of them
is cut into two long strips, each of which has a cut made in its upper
end, whereupon the strips of flesh are strung on a cord and hung on
[190] the above-mentioned drying racks near the summer yurts. This is
the jukola (2), chiefly intended for the people and only in small

2. As is well known, jukola is the term,
probably originally stemming from Kam-
chatka, customary among the Russians
throughout Siberia for cut-up and dried
fish.

part for the dogs, the ma of the Gilyak, the makoré of the Olcha and
Goldi. The head with the backbone and the flesh remaining on it,
which is provided with transverse cuts along the latter for drying
it more readily, furnishes the jukola used exclusively as food for
the dogs, the chark of the Gilyak, the dalongi of the Olcha and
[258] Goldi. Oil is boiled out of the especially fatty belly pieces, which
provides a most important foodstuff and is stored in seal bladders
and stomachs. The entrails and the milt, rejected with horror
by the Gilyak on principle, are given to the dogs, but the roe
is eaten and is used with various foods, though it is not especially
*262 prized. Apart from the two kinds of salmon mentioned, jukola
262 is also made out of other fish, for example, Salmo lycaodon Pall.
252 (Gilyak weli), which comes up the Amur somewhat before the
[226] keta salmon), Salmo callaris Pall. (Gilyak longi-schi), Salmo
leucomaenis Pall. (Gilyak ssawong), etc. The jukola made out
2/3 (See Category 116, pp. 1011-1012 respectively—Anakes)

/431 cont./

p. 13).

[114] the main use that they make of it, but on the Liman I have seen
[231] them eat seal meat, and I also tasted it on this occasion. Like
*262 the meat of all mammals, it is only eaten cooked, not raw,
252 whereas the latter, as we have seen, is often and sometimes even
preferably done with fish. On the other hand, the Gilyak have a
general, superstitious aversion against the frying of fish or meat,
a superstition I often had to fight during a stay in their yurts, for
whenever a piece of meat was being fried for me, with the first
sizzle of the butter or fat in the pan, the cry "ultsch, ultsch" (un-
lucky) could be heard from all sides and it was often difficult to
●[251] finish the cooking (2). As little as the Gilyak like seal meat, they
[171]

2. Steller (op. cit., p. 323) also points
out with regard to the Italmen and Koryak
that they do not like frying, in contrast to
the Tungus and Yakut.

nevertheless greatly relish seal fat or blubber, which they eat cut
in slices, and, finally, most popular is the train oil obtained from
it, which is in general use among them and is kept among their
supplies in seal bladders and stomachs to be utilized, apart from
its use to illuminate the yurts, sometimes in the preparation of
many kinds of dishes and sometimes simply eaten with a spoon as
fish oil along with jukola or enjoyed in other ways. It is by this
ingredient, which becomes more general and more essential the
closer one comes to the Amur-Liman and the seacoast, that the
food of the Gilyak is principally distinguished from that of the
other Amur peoples living farther upstream and inland.

Besides seals, Nature offers the Gilyak another important
*262 and precious foodstuff to almost the same extent. It is the white
136 whale, Delphinapterus leucas Pall. (Gilyak gomi-tscho), which,
with the sole exception of the coast along the northern part of the

/438 cont./

*262 Compared with the animal food the vegetable food of the
Gilyak is far behind. In the first rank here, because they are
generally accessible and can be had for nothing, are the local,
wild, natural products, many kinds of berries, small tree-fruits,
tubers, herbs, algae, and seatang. All of these vegetable foods
[252] are eaten only as accompaniments to animal food or mixed with
[137] it and made into various kinds of dishes. The bilberry, Vaccinium
vitis idaea L. (Gilyak myghr-ah (?), or also /439/ simply called
[104] 7. The j is soft in pronunciation in this
word, like the French z.

ah, i.e., "berry") (1), in particular stands first among them with

[192] 1. The Gilyak from the Tymy and the east
coast of Sakhalin call the bilberry itkt or
paghla(n)-ah, i.e., "red berry."

regard to both the quantity consumed and its manifold uses and
the tastiness that the Gilyak find in eating it. Every year in the
222 fall great stores of this berry are put up for the winter. For this
[221] purpose whole families, but in particular the women and chil-
dren, go into the woods, especially up the small rivers emptying
into the Amur or Liman. At a convenient place there a tent or
merely a sloping protective roof supported by four poles is erected,
in front of which a fire blazes, and the whole time is devoted to
the gathering of berries. In the vicinity of the Nikolayevk post,
on the Kamr and Litsch Rivers, I repeatedly came across such
families picking berries. The berries are poured into large,
●[251] birch-bark bags and baskets and brought by boat to the house,
where, covered with grass, they are stored for the winter in a
frozen condition in the storage chambers. The Gilyak around
Nikolayevk had so many of them that, beyond taking care of
their own needs throughout the winter, they also supplied the
262 Russians there. Bilberries, covered with fish oil or seal train-oil
*262 and stirred, represent the whole of the customary accompaniment
for the fish, especially jukola, diet of the Gilyak. Moreover, they

/440 cont./

*262 (Gilyak tym-ah), is eaten with relish and in great quantities, but
[137] does not replace the former two in the moss). Other berries, too,
such as Rubus idaeus L. (Gilyak kelam), R. chamaemorus L.
(Gilyak edeni-ah), etc., are occasionally eaten, but are not
important.

The fruit of the wild rose, Rosa cinnamomea L., called
[192] hitrynch and tsebi in Gilyak on the mainland, and on Sakhalin
pilj-ah, i.e., "large berry" (1), provides a tasty dish for the

[113] 1. Likewise on Sakhalin the fruit of the

und auf der Insel Sachalin /Travels in the
Amur Region and on Sakhalin Island/"
(Mém. de l'Acad. des sc. de St. Pétersb.,
seventh series, Vol. XII, No. 2, pp.
213, 215).

●[251] Gilyak. The hips, gathered for storage in the fall, are, as I
[258] repeatedly saw in Tyk on the west coast of Sakhalin, put in the
kettle still frozen, heated, pounded, and stirred with seal oil to
a mush which is eaten with spoons.

*262 The excellent teeth and powerful chewing apparatus of the
252 Gilyak are characterized by the use that they make of the fruits
264 of Prunus padus L. and of the cedar or cembra nuts (Gilyak tohrr),
[142] the primary product of Sakhalin (2). I have seen them eat both by
[137]

2. Among the Gilyak the corresponding
[192] trees are called tassi (Prunus padus) and
chim (Pinus cembra, pumila).

handfuls, like the softest berries, without first crushing the
252 kernels or the nuts, and removing the shells. The latter is like-
*262 wise not done when a kind of cake is made out of them. In this
[198] connection the fruits of the black alder are merely crushed and,
with the help of a little flour and train oil, shaped into a cake,

/441 cont./

252 prepared, but with the difference that, instead of the fish roe,
*262 finely chopped seal-blubber was mixed in with the leaves. The
[137] Gilyak also use various lichens in quite similar ways, especially
reindeer moss, Cetraria islandica L. (Gilyak chitwyrk) (3), and
[192]

3. Among the Olcha: chity.

a tree moss, Usnea (Gilyak tschwlch, and, to be sure, distin-
guished as kana (white) and piula (blue) tschwlch), for food by
making soups out of them with the addition of fish roe or seal oil.

Finally, the sea, like the forest, also yields some vege-
[137] table food for the Gilyak, especially an edible alga, which they
call tschollach (4), and the Laminaria esculenta (Gilyak putsch).

4. Glehn, op. cit., p. 214.

I have seen the latter consumed in the village of Tyk in much the
same fashion as the above-mentioned tree moss and other plants,
in that, mixed with chopped jukola it was cooked in water, where-
upon, when fully cooked, it made a sticky, viscous mass of a white
[192] color in the soup. The Gilyak collect and dry the Laminaria in
[101] small stocks for the winter, which they may have learned from
●[251] the Ainu, /442/ who, according to Schmidt (1), for their part

1. Op. cit., p. 98.

learned it from the Japanese, who keep the Ainu busy at it and
annually send whole shiploads of dried and artificially rolled up
Laminaria from Sakhalin to Hakodate and Matsmai.

*262 While the natural vegetable products discussed above are
443 of great importance for the Gilyak inasmuch as they are avail-
[171] able to everyone, with a little trouble and care, and, though
not very nutritious in themselves, contribute essentially to the
greater tastiness and variety of their diet, and in times of
scarcity when no fish and no animals are caught and the supplies
of animal food run low, they may even prevent starvation.

/528 cont./

226 The great numbers in which the salmon, and in particular
the two species repeatedly named, go up the Amur and its
tributaries make catching them in the largest quantities an easy
matter for the Gilyak. In the small tributaries, such as the
Litsch, Kamr, etc., the fish crowd and almost push themselves
onto the bank and can be taken from the shallow water simply
with the hand, and from deeper water scooped up in dragnets or
pulled up with hooks and thrown into the boat. Women and
●[251] children participate in this work, and within a short time one
[258] boat after another, filled with fish, returns home, where the
previously described, more strenuous work of skinning, cutting
up, and hanging the fish on the drying racks is undertaken.
[142] While the women attend to this, the men bring more and more
new material. In the smaller rivers, a net is also often drawn
across the entire width of the river, and in this manner the
whole shoal of fish ascending at the time is caught, insofar as
[142] the net permits this without tearing. In the large river where
fishing is done exclusively by the men, the schools of ascending
fish are likewise so densely crowded that the simplest nets
suffice to catch vast quantities in a short time. The fishermen,
in two boats and holding a net between them, go downstream
toward the ascending fish and draw up the fish that they may have
one boat and then into the other, until both are full. Or two
men, holding one end of a net, travel downstream at some
distance from the shore toward the fish, while a third man, with
the other end of the net in his hand, walks along the shore in
the same direction. When they notice that the net is sufficiently
filled, the fishermen sitting in the boat turn their vessel about
and quickly row toward the man walking along the bank, in
order to jump out of the boat near him and, joining forces,
226 drag the net to land. The nets used for catching salmon are
given different names by the Gilyak in part according to slight
differences in shape and the manner in which they are used
and, in addition, are differentiated according to the species
of salmon for which they are intended on the basis of the size
[192] of their meshes. For example, the above-mentioned, simple,

equent intervals with the evergreen pine, rivalled the October hues of our New England landscape. Hills and low ountains rose on both banks of the river and made a beauful picture. The hills, covered with forest from base to ummit, sloped gently to the water's edge or retreated here nd there behind bits of green meadow. In the distance was background of blue mountains glowing in sunshine or dark n shadow, and varying in outline as we moved slowly along. The river was ruffled only by the ripples of the current or he motion of our boat through the water. Just a year earlier descended the Saint Lawrence from Lake Ontario to Quebec. saw nothing on the great Canadian river that equaled the cenery of my first day's voyage on the Amoor.

Soon after leaving Nicolayevsk we met several loads of hay loating with the current to a market at the town. On the neadows along the river the grass is luxuriant, and hay reuires only the labor of cutting and curing. During the day ve passed several points where haymaking was in progress. Cutting was performed with an instrument resembling the hort scythe used in America for cutting bushes. After it vas dried, the hay was brought to the river bank on dray-like arts. An American hay wagon would have accomplished wice as much with equal labor.

The hay is like New England hay from natural meadows, nd is delivered at Nicolayevsk for six or eight dollars a ton. Cattle and horses thrive upon it, if I may judge by the conlition of the stock I saw. For its transportation two flatbottomed boats are employed, and held about twelve feet part by timbers. A floor on these timbers and over the oats serves to keep the hay dry. Men are stationed at both nds of the boats, and when once in the stream there is little o do beside floating with the current. A mile distant one f these barges appears like a haystack which an accident as set adrift.

We saw many Gilyak boats descending the river with the urrent or struggling to ascend it. The Gilyaks form the

276 Moreover, one may safely assume that, like the Daur and Manchu
17 in the Sungari region, the tribal relatives of the Manchu who were formerly distributed from the Sungari along the southern Amur River to far below the mouth of the Ussuri, approximately to the present Goldi village of Dondon, the Djutscheren, who lived in large farming and livestock-raising villages (4), also cultivated

4. See pp. 316 ff. above.

SS tobacco among other things. Finally, it must have also spread
Gi from the Sungari and from Korea to the upper Ussuri and down this
276 river to the Amur. There can be no doubt but that even before
17 the Russian military expeditions in the seventeenth century the Goldi had become acquainted with tobacco and its cultivation from the Manchu (Djutscheren) neighboring them, indeed, in part
SS even living mixed in with them. Even today, tobacco is culti-
Gi vated not only by individual Chinese living in the area, but also
[249] by them themselves, on the Ussuri as well as on the Amur, and on the latter, strangely enough, exactly as far as the dwelling sites of the Djutscheren formerly extended. For, going upstream, we found the first Goldi cultivation of tobacco in the village of Da, which lies on the right bank of the Amur, opposite the above-mentioned Dondon located on an island. Like the Goldi, the Orochi living on the sources and tributaries of the Ussuri also obtained tobacco in this way. Furthermore, the other peoples of
G the lower Amur region, the Olcha, Samagir, Negda, and Gilyak,
[276] in contact with the Goldi as well as with the Manchu and Chinese
[249] on the Amur and Sungari, must have also become acquainted with
Gi tobacco as early as the seventeenth century even though tobacco
[249] could not be cultivated among them because of climatic and
G other reasons. Finally, through the Gilyak and Olcha of the
Gi mainland tobacco also reached their countrymen, the Gilyak
276 and Orok of Sakhalin, whereas the third people of the island, the
17 Ainu, probably received it from /468/ another source, directly
G from the Japanese (1). Later, after the Manchurian tobacco had

251 able and have no occasion to consult the tastes or smell of others. The first time I visited one of their fish-curing places I thought of the western city that had, after a freshet, 'forty-five distinct and different odors beside several wards to hear from.'

133 Above Mariensk the Amoor valley is often ten or twenty miles mide, enclosing whole labyrinths of islands, some of great extent. These islands are generally well out of water and not liable to overflow. Very few have the temporary appearance of the islands of the lower Mississippi. Here and there were small islands of slight elevation and covered with cottonwoods, precisely like those growing between Memphis and Cairo.

GILYAK WOMAN.

The banks of this part of the Amoor do not wash like the alluvial lands along the Mississippi and Missouri, but are more like the shores of the Ohio. They are generally covered with grass or bushes down to the edge of the water. There are no shifting sand-bars to perplex the pilot, but the channel remains with little change from year to year. I saw very little drift wood and heard no mention of snags. The general features of the scenery were much like those below Mihalofski.

The numerous islands and the labyrinth of channels often permit boats to pass each other without their captains knowing it. One day we saw a faint line of smoke across an island three or four miles wide; watching it closely I found it

/27 cont./

22 In spring, with the seals and the first fish that travel in masses upstream to spawn, the koryushka, herring, the Gilyak is again revived, and in the course of the summer months in the expectation of the autumn catch he again begins to make visits and dolce far niente.

574 252 In speaking of guests I cannot fail to mention a peculiar festive dish and the favorite food item to which Gilyak guests are treated -- the so-called mos'. It is prepared from a sticky broth of fish skins, seal fat, berries, rice, sometimes with the addition of small pieces of yukola. All this is mixed together and cooled. Sometimes, to add color and flavor, a solution of white clay is added to the mixture. Without any fastidiousness, the boiled fish skins are squeezed out into a trough by the dirty hands of the Gilyak women, and for more flavor the small pieces of yukola are first ground with the teeth and spat out with the saliva into the dish...

342 354 352 [177] The exterior living conditions of the Gilyak are very simple. Only in some places closest to the Amur have the Gilyak adopted the Manchu type of winter dwellings, which, by the way, are also very primitive. In form they are large sheds /28/ built with poles and spars, in which large pipes made of stone or wood and smeared with clay, and connected at the openings with the stove, are laid on the floor along each wall. Laid out over the pipes are plank beds, which are always heated by the warmth of the pipes. The smoke of the stove goes out through an underground passage into a high, vertical pipe which rises straight up from the surface of the ground. The role of this pipe, which resembles those on our factories, is played by a hollow tree. In the middle of a yurt there is a high rectangular scaffold on which the packs of dogs are let out when they are to be fed. A more primitive yurt is a dugout, which is half in the ground and covered with poles and spars smeared with clay or covered with earth. The entrance from the passageway is through a low door along several steps. The hearth is in the middle of the yurt and is surrounded by passages between the plank [132] beds; over the hearth is the smoke opening. In winter, even in the yurts of the first type, it is sometimes so cold that the mercury in the thermometer freezes, and with the least wind the yurt becomes 352 516 full of smoke. One sleeps on the plank beds with the head toward the hearth and on skins or quilted bedding; under the head there are

/382 cont./

224 782 In the evening of the day of arrival at the hunters' bal hey make chukh-chugynd (a sacrifice) to Pal-n'igyvyn, the of the mountains; the master says, "Az'myr sikrá, urgur n'i munkjá" -- "there are no more presents, make it so that I a afraid, look after us well!" They make chukh-chugynd bef particular tree (uig-chkhar -- a tabooed and forbidden tree) hey only feed the fire, saying: "Urgur in'ja, hiulan tugur m pal'akh pong argujá -- eat well, make the mountain people pity on us!" 343 These buildings were the receptacles of dried fish for the winter use of dogs and their owners. The elevation of the floor serves to protect the contents from dogs and wild ani-
685 mals. I was told that no locks were used and that theft was a crime unknown.

342 The dwellings were generally divided into two apartments; one a sort of ante room and receptacle of house-keeping
415 goods, and the other the place of residence. Pots, kettles,
777 knives, and wooden pans were the principal articles of household use I discovered. At the storehouses there were several fish-baskets of birch or willow twigs. A Gilyak gentleman does not permit fire carried into or out of his house, not even in a pipe. This is not owing to his fear of conflagrations, but to a superstition that such an occurrence may bring him ill luck in hunting or fishing.

257 It was in the season of curing fish, and the stench that greeted my nostrils was by no means delightful. Visits to dwellings or magazines would have been much easier had I possessed a sponge saturated with cologne water. Fish were in various stages of preparation, some just hung upon poles, while others were nearly ready for the magazine. The manner of preparation is much the same as in Kamchatka, save that the largest fish are skinned before being cut into strips. The poorest qualities go to the dogs, and the best are reserved for bipeds.

226 Though the natives do the most of the fishing on the Amoor, they do not have a monopoly of it, as some of the Russians indulge in the sport. One old fellow that I saw had a boat so full of salmon that there was no room for more. Now and then a fish went overboard, causing an expression on the boatman's face as if he were suffering from a dose of astonishment and toothache drops in equal proportions.

231 There were dogs everywhere, some lying around loose, and others tied to posts under the storehouses. Some walked about and manifested an unpleasant desire to taste the calves

stream. This fence is fish-proof, except in a few places where holes are purposely left.

The natives lie in wait with skiffs and hand-nets and catch the salmon as they attempt to pass these holes. I watched a Gilyak taking fish in this way, and think he dipped them up at the rate of two a minute; when the fish are running well a skiff can be filled in a short time. Sometimes pens of wicker work are fixed to enclose the fish after they pass the holes in the fence. The salmon in this case has a practical illustration of life in general: easy to get into trouble but difficult to get out of it.

GILYAK MAN.

For catching sturgeon they use a circular net five feet across at the opening, and shaped like a shallow bag. One side of the mouth is fitted with corks and the other with weights of lead or iron. Two canoes in mid stream hold this net between them at right angles to the current. The sturgeon descending the river enters the trap, and the net proceeds of the enterprise are divided between the fishermen.

It requires vision or a guide to find a fishing station, but the sense of smell is quite sufficient to discover where salmon are dressed and cured. The offal from the fish creates an unpleasant stench and no effort is made to clear it away. The natives and their dogs do not consider the scent disagree-

vear huge pewter ear-rings, five centimeters wide, which re decorated with colored glass beads. Pewter and beads re bought from the Chinese, but they make the ear-rings hemselves. Around their necks the women wear beads of olored glass, on these are sometimes hung little wooden mulets representing human figures.

Pipes and tobacco pouches are so much a part of the Gilyak ersonality that I am tempted to give them space here. Their ipes are of Chinese origin and have the uniform shape of the Manchurian pipes. The stem is about an ell long, made of lack horn which has been turned with a lathe; the mouth iece is of jade. The cup-shaped brass bowl of the pipe is o larger than a hazel nut. On their belts they wear a bone pike, ornamented with scrolls, which is used as a pipe leaner. Their tobacco pouch is tied with strings to a disk f walrus tusk which is also decorated with curlicues, and his is fastened to the upper button of the jacket. As soon as hey have finished their smoke, they stuff their pipe and obacco into the slit in their jacket.

V. Food and Diet

If the Gilyak is short on provisions he eats only twice a ay. He endures hunger relatively easily, he can hunt or ursue other activities for two days without any kind of food, nly on the third day does he feel weakness and discomfort. On the other hand, as soon as the hour of plenty is at hand, e undoubtedly eats five times a day.

It would be difficult to say how much nourishment a Gilyak akes but in general they are blessed with a good appetite. rom an eyewitness I learned that once two Gilyak on a winer journey consumed one pood (about 16 kilograms) of frozen turgeon in one day [110]

Their staple diet consists of fish: sturgeon, various types f carp, whiting, but particularly salmon and mainly kita salmo longocephalus) and gorbusha (salmo gibbosus). A reshly-caught fish is eaten raw, but the greater part of the almon catch is dried for the cold season. For this purpose he fish are cut lengthwise and are hung about six feet from he ground; by means of air currents they become a dried nonotten substance. This is the so-called sukola. The kita rovides the bulk of these winter stores, and the fish appears t the end of summer. The fish caught in winter are stored n a frozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

231 fish. It is cut into small chips and known as
262 stroganina.

food of the dogs.

231 The Gilyak eats meat relatively infrequently. Besides
252 hazel grouse and duck, they have the meat of the elk, rein-
262 deer, dog, and bear. Fowl is usually cooked, the rest is eaten raw at times, and sometimes it is cooked. Roasting is hardly customary. Bear meat is considered a particular delicacy and it is eaten either raw or slightly roasted. Whenever they have an opportunity, the Gilyak eat dog meat. Thus old dogs that are no longer useful as draft animals must yield their flesh and their pelt to their masters. (2) The Gilyak

2. The fondness of the Gilyak dogs for their masters is inconsistent with the "wild and troublesome behavior" which dogs are supposed to show toward dog-eaters. (Philosophie des Unbewussten. 1878, page 85.)

are very fond of the fat house-dogs which they occasionally beg from the Russians.

262 They love fat, especially seal blubber by itself or with cranberries, and this is a favorite dish of everyone. Withal, we must consider that this blubber has such a penetrating, offensive odor that a civilized nose even finds the odor of the boots which the Russian common people grease with seal blubber, unbearable even at a distance. The taste, of course corresponds to the odor. The fat of the fish and other animal is often eaten by itself. The blubber of the dolphin is also considered a great delicacy, but it is hard to get.

They are very fond of eggs, and seek out and rob birds'
262 nests. It does not occur to them to raise chickens or ducks.
272 [111] Milk was unknown to the Gilyak before the Russians
515 occupied the country (1) except, of course, mother's milk. If

1. The Chinese and Koreans do not milk a single one of their domestic animals. The Koreans use their cows as riding animals.

they are occasionally treated to milk, they manifest pleasure. Worms, insects, etc., are not eaten; with the exception of the louse. It is an ordinary sight to see them pick a louse out of their hair, put it between their teeth, and swallow it.

I watched the two wives of Xitkun work after he returned from the hunt. The younger of the two was busy peeling suet from hides. In this she was helped by a woman, the wife of one of Xitkun's kinsmen. The job of peeling suet from hides is very hard. Most of the time the woman has to work in a bent position. I saw Xitkun's wife lift a hide in the process of cleaning it of suet by seizing a part of the cleaned hide with her mouth. At the same time she held the peeled suet with her left hand and continued the peeling process using a large narrow and somewhat curved knife which she held with her right hand.

The Gilyaks prepare thin seal fat in the following manner. They cut the suet (ŋɔ̃ʒ) into pieces. They put the pieces into a barrel (in the past they used to put them into a large, deep trough) which they then place in a warm spot. There the suet begins to decompose and to melt (I am not in a position to give a more detailed account of the process which takes place in the suet). This yellow fat (tom) flows out of the suet. Depending on the age and variety of the seal the fat is either light or dark and turbid. The Gilyaks pour the melted fat into dried seal stomachs. They give the leavings of the melted suet (taχ) to the dogs. Stomachs of seals are used by the Gilyaks for storing seal fat. Having killed a seal the Gilyaks empty out its stomach, blow air into it and hang it up to dry. The fat can be stored for a long time in such a bladder. Once the bladder is filled with fat, it is hung in the barn.

While one of Xitkun's wives was busy peeling suet from hide, the other wife, Hemanχ, 'old woman,' was preparing the heads for cooking. It was certainly no accident that it was Hemanχ, Xitkun's older wife, who was preparing the heads for cooking. Preparing of the heads requires a certain knowledge of religious ceremonies the guardians of which are the old people.

[93] À propos the interpretation of the words hemanχ old woman' and hemar 'old man'. Both words have in common the sound combination hem and differ in their respective endings ar and anχ. Ar means in the Gilyak language male and anχ - female. What then is hem? In the village Chayvo where a certain form of the Sakhalin dialect is spoken, they call an old man hajmŋar. In comparison with the Amur dialect the Sakhalin dialect has retained a great many ancient

/326 cont./

are carried into the taiga, there they find a tree with a hollow trunk, make an opening in the hollow trunk, feed the head, and throw all the bones and the head there.

The otter is fed and buried in exactly the same way as the bear. The remaining beasts are signed kasik (i.e., there is no taboo on them).

When a pair of reindeer horns from a mature specimen are found lying side by side in the taiga, the possession of them gives the Gilyak luck.

During the hunting with nonnes (nochakhir ĉ'ŋŋundu), a woman must not sew anything sewn or pierced with a needle in her house to another, even a member of her own clan, if that thing has spent a night in the house. One must not carry the fire outside. One must not salute any other hunting nonnes. In the taiga, one may enter another's balagan, but not spend the night. If a sable is caught in a noose, an alien man may take it with his hands without the permission of the master, and in general during the hunting season the captured sable cannot be touched even by a person from the same clan if he is not participant in the hunting party; even a killed hazel-grouse may not be touched. If any person commits an offence against ☀ dog, they do not let him fish or hunt on the stream, and they do not attend his bear festival.

/327/ Sakhalin, where nonnes are hunted, is called ŋundu, ĉ'ŋŋundu, or ŋundu. In Ishdam (northwestern Sakhalin) they place a tree with a forked branch and sharpened edges not far from the yurt. Yukola is being hung on the branches of this tree, so that the wolf jumps up to seize it, sticks in his paw, which becomes caught, and he cannot free it. It is a rite to shoot a wolves.

Seals are caught thus: a net is placed around a ŋgr (?), and the seals sleeping on the sand are driven together; then they fall into the net.

Men in made twice a year (in summer after the salmon, and in autumn before the salmon). Men must eat unfailingly; all a great number of dogs owned (a minimum of four), and plenty of meat; and in summer catch a great number of bears (this will be [illegible] Ishdam). In general a great deal is done for the sake of ritualism.

/328 cont./

Germans give a reason other than the scarcity of iron for this. As recently as a generation ago wood was a valuable thing. /329/ Canoes and sledges were made of wood, and furniture was dear. Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire — a method used in burning the deceased. The Gilyak's attitude to wood is so much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their conscientious care for rewinge have inextricably bound the Gilyak with culture... *But ye or nature or the* to which their civilization stopped.

Fish, the staple food of the Gilyak, the basic food of the Gilyak is the ready products of nature — fish, fowl, berries, roots; he is yet incapable of helping nature along and accelerating the creation of foodstuffs. He does not plant or sow, or raise domestic animals for meat. This is the fundamental feature of a "savage" state. Moreover, Gilyak habitations are never where water was boiled in troughs by means of hot stones and their ancestors knew pottery made of wood, clay, and stone. Knowledge of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the-most elementary form of pottery. Yet pottery, the sign of a feature of the culture, of "savages." Along with this, we have another fact — the training of dogs for sled sweat — a trait which raises them up step to the first stage of barbarism (so use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

/328 cont./

5. The members of the clan are bound together by common sacrifices and festivals. The "festival of the bear," known to Gilyak, Orochi, Ainu, and Japanese, is celebrated by the clan, even through /333/ guests from other clans are invited to take part. The bear is always brought in nonnes in the clan, but all the expeditions in connection with the festivals are covered by the clan-mates. These expenses often reach a sum of several hundred rubles. Clansmen assemble from all directions, as well as great numbers of specially invited guests from other clans, who have to be entertained and fed for many days, and are given, in the end, a very numerous dogs as well, devour a great amount of food during the festival. The bear, which is the totem of the clan, determines its character or that the bear is considered to be divine or a spirit by the Gilyak is completely unfounded. The bear festival is purely a human festival. Naturally, there were times when a successful attack on a bear, an attack conducted in those days collectively, by the whole clan, was a real victory for the clan, which devoured the huge beast at a common feast. Since the attack on the bear was most conveniently made in winter when the sleeping animal was captured in his lair, the celebration of the bear festival in winter was perpetuated. The experience of centuries evolved a full ritual for the festival. The ceremonial, performed, as it seems in the eyes of the barbarian the character of something sacred and inviolable. All the sacrifices during the festival are made, not to the bear, but to the spirits of the forest, which place in the winter "Pal'-ninak." It is also understandable that the bear itself has acquired a position of honor. In most cases he shows in the dogs, it cannot be eaten with meaningy, etc. "Pal'-ninak" himself will exact revenge for such offenses, ordering other bear to bite especially hard. To sum up, the bear festival is a clan festival, and, on this basis, women, as the nonpermanent element of the clan, do not participate in the eating of the bear. The fire in the stove is which the meat of the bear is cooked is started only by the clan priest. A touching custom among the Gilyak is

/328 cont./

While the men land enormous quantities of these salmon, especially the latter species, in nets and boats, the women occupy themselves with drying the entire catch on racks. A hundred-tail cut is made from the head to the tail, the backbone is removed, the head and one half of the body are left attached to the tail, and thereby a long and narrow blade (Pl. XXXI, Fig. 5, and Pl. XXXII, Fig. 1) and then a transverse cut from top to bottom just behind the head; then the skin is pulled off from the side with one jerk each, the meat is removed from each of them in one piece, and each of them is cut into two long strips, and each of these strips has a rib in upper end, whereupon the strips of flesh are strung on a cord and hung the above-mentioned drying racks near the summer yurts. This is the yukola (?), the staple food of the Gilyak, which has a special character of the bear is considered to be divine or a spirit by the Gilyak is completely unfounded. The bear festival is purely a human festival. Naturally, there were times when a successful attack on a bear, an attack conducted in those days collectively, by the whole clan, was a real victory for the clan, which devoured the huge beast at a common feast. campfire, will serve him very well. Jukola, by the way, is not keeping the meat of the bear, which is considered to be a special kind of food, which is not permitted to be eaten by the Gilyak, but is given as a rule only to the former one and differentiate it, according to the kind of fish from which it comes, as lygdi-ma and tangi-ma, always giving preference to the former over the latter, for them, in the chief food of the Gilyak, their bread, so to speak (?) —

3. Steller (Beschr. von dem Lande Kamtschatka /Description of the Country of Kamchatka/, p. 75) descriptions of the Gilyak's bear festival, which is the chief festival of the Gilyak tagoschphas, as the Gilyak call their bear festival —

2. As it will known, jukola is the term, probably originally stemming from Kamchatka, customary among the Russian throughout Siberia for cut-up and dried fish.

part for the dogs, the ma of the Gilyak, the makant of the Olcha and Goldi. The head with the backbone and the flesh remaining on it, which is prepared in a special way, is called the jukola. It is made in more readily, furthers the jukola used exclusively as food for the dogs. The jukola is the chief of the dogs of the Olcha and Goldi. Oil is boiled out of the especially fatty belly pieces, which provides a most important foodstuff and is stored in seal bladders and stomachs. The entrails and the milk, rejected with horns by the Gilyak on principle, are given to the dogs, but the roe is eaten and is used with various foods, among which it is especially prized. Apart from the two kinds of salmon mentioned, jukola is also made out of other fish, for example, Salmo lycaodon Pall. (Gilyak yeŋ), which comes up the Amur regularly before the salmon, Salmo callarii Pall. (Gilyak longi-ŋdi), Salmo hucho (Gilyak ŋaŋgi), etc. The jukola made out

/328 cont./

(cont.)

Angelbis-Angel-Sachen-Sammlung für Ethnographie und Anthropologie (Bull. de l'Acad. Imp. des sc. de St. Pétersbourg, Vol. XIV, pp. 57-58) —

On March 6/18 1856 when we arrived at the village of Pechenkovsk at the mouth of the Amur, the Gilyak there were near the end of their fish supplies and impatiently awaited the thawing of the river, for then the natives would immediately collect in great numbers in order to ascend the river. But further up the Amur some are caught at particular times of the year, when the river is frozen, even in winter. In 1850 and 1856 the Gilyak supplied the Nikolayev post to ample with sturgeon meat and caviar, especially from the tabki-nerka (?). In winter, it seems, it more common and lower river, that this was our principal and almost daily food in the winter, /329/ and, despite its initial tastiness, we became very tired of it in time. They especially liked to sell their caviar in particular, since the Russians paid them a good price for it, whereas they [illegible] almost unknown to us. Although the Gilyak did not feed, in the winter, dogs much. The meat of sturgeon and hausen, however, which they caught in the Amur, is considered a special food, and, indeed they also make use of the tastiest of foods. Enormous quantities of sturgeon and hausen are consumed especially during the beer festivals, which take place in the winter. On such occasions I saw whole rows of the mighty great animals lying on the floor of the yurt decorated for the celebration; though they are not on the menu of the actual feasts at the bear festival and are only eaten in between them or on the days preceding or following the festival. Like the human beings, the dogs, too, get their share of these fish; in that a soup is cooked for them out of the discarded, less tasty pieces and mixed with the fish-meal, which remains with the meat clinging to it, but the gristle itself is fished out of the kettle in order to be sold, cleaned and dried, to the Chinese.

/329 cont./

February 1856, thought that it occurred very frequently in the taiga of Sakhalin, without going up into the rivers.

The traditional Gilyak, upon returning home from Sakhalin, not infrequently bring some pieces of chot-ucha to the Amur as a special delicacy.

Finally, with regard to those Gilyak who have their habitation since antiquity on the seacoast where there are no river deltas or only small, insignificant streams, although their situation is worse inasmuch as most of the above-named fish are lacking for them, nevertheless even in winter the sea supplies them with fresh fish. Of greater importance to them is a fish which is found in the sea and in the northern part, where at the broad outlet to the Sea of Okhotsk, the situation is quite similar to that in the latter.

Next to fish, which forms the principal foodstuff of the Gilyak, a foodstuff that is offered to them by Nature more or less abundantly in all the places in their habitation, they also eat, apart from certain localities farther from the sea, such as the Tymy Valley. For besides the seacoasts, along the Sea of Okhotsk, as well as the Amur and its tributaries, most people live in villages, where they also have the same, in that first a thin slice with the three dorsal fins is cut from the fish, then a second one, and finally the meat is cut from either side with one slice and is eaten; the remaining head with the backbone furnishes the kangi-chabi, some of which, together with the rest of the scraps, is immediately cooked into a soup for the dogs and some is stored as food supplies for them, but, of course, it is far inferior to the tagiŋ-chabi and tangi-chabi. Because of the importance of the kangi fish for the coastal Gilyak, more superstitions are connected with the preparation and eating of them with the use of most other fish. Thus, it must be eaten without any accompaniment, placed on the sleeping bench of the yurt in only an open container, a bowl or a basket, etc. Moreover,

/320 cont./ Мыхоуфкъ

with regard to these and similar views, there are many local differences among the Gilyak villages. The Gilyak of Pechenkovsk at the mouth of the Amur, for example, when they catch the kangi fish, which is the most important food for the dogs, in the Limun, and therefore, in order to catch it, the Tschonti Gilyak go every year to the west coast of Sakhalin along the northern coast of the island, where they spend the winter of 1856 I met some of them. Presumably, however, this statement applies only to the southern, more inhabited part of the Limun, and not to the northern part, where at the broad outlet to the Sea of Okhotsk, the situation is quite similar to that in the latter.

Next to fish, which forms the principal foodstuff of the Gilyak, a foodstuff that is offered to them by Nature more or less abundantly in all the places in their habitation, they also eat, apart from certain localities farther from the sea, such as the Tymy Valley. For besides the seacoasts, along the Sea of Okhotsk, as well as the Amur and its tributaries, most people live in villages, where they also have the same, in that first a thin slice with the three dorsal fins is cut from the fish, then a second one, and finally the meat is cut from either side with one slice and is eaten; the remaining head with the backbone furnishes the kangi-chabi, some of which, together with the rest of the scraps, is immediately cooked into a soup for the dogs and some is stored as food supplies for them, but, of course, it is far inferior to the tagiŋ-chabi and tangi-chabi. topograf. Shem., St. Petersburg, 1870, p. 12).

the main use that they make of it, but on the Limun I have seen [illegible] the meat of all mammals, it is only eaten cooked, not raw, whereas the latter, as we have seen, is often and sometimes even particularly fond of it. Nevertheless, the Gilyak, in general, superstitious aversion against the frying of fish or meat, a superstition which is not shared by the Gilyak in their yurts, for whenever a piece of meat was being fried for me, with the first sizzle of the butter or fat in the pan, the cry "ajhish, ajhish" (or [illegible]) was raised, and I was asked to stop it. It is more difficult to [illegible] the cooking (?). As little as the Gilyak like seal meat, they

2. Steller (op. cit., p. 202) also points out with regard to the Italmen and Koryak that they do not like the fat, in contrast to the Tungus and Yakut.

nevertheless greatly relish seal fat or blubber, which they eat cut in slices and with the skin attached, most popular of all foods among them is, which is in general very strong them and is kept among their supplies in seal bladders and stomachs to be utilized, apart from the ordinary seasoning, as a medicine against all possible ailments, many kinds of dishes and sometimes simply eaten with a spoon as fish oil along with jukola or enjoyed in other ways. It is by the ingredient, which becomes more pleasant and more essential to closer study/comes to the Amur-Limun and the seacoast, that the food of the Gilyak is principally distinguished from that of the other Amur peoples living farther upstream and inland.

1. Ed. Sperk", "Geografo-patolog. ocherki Yomskoi. Sibiri /Geographical-pathological Sketches of Eastern Siberia/" (Medito-

been not be a small consideration the dogs that had become useless on a trip. The Gilyak do not consume their dogs, however, without an ceremony. Such a thing would appear scarcely enough, however, if individual animals are starved or rendered useless, or if there are too many of them and, correspondingly, a shortage of food; in fact, even superstitious ideas can give rise to it. Thus, I have seen it happen, for example, in the village of Tyk on Sakhalin, where I was delayed on account of severe snowstorms for several days in February, 1896, in the company of a few traveling Gilyak people and Tyrs (Orochi). In order to calm the bad weather, after other means had already been sought in vain, three young dogs were strangled and commissioned, which was to be repeated on the next day in case of failure. The meat and the entrails of the animals were thrown into the tundra, a pot being added to the shiela soup for the dogs, and—characteristically enough—I saw the women occupied with sharp preparations into off a piece of the bloody entrails beforehand for herself and had another little piece cut off of it as a charm, which women seemed to enjoy very much. On another occasion, in the village of Dul, I was a witness to the sacrifice of a dog in the company of Gilyak with dog meat. This happened only as a celebration belonging to a bear festival held there a short time before, taken of which were still to be seen in the exterior and interior decoration of the yurt. The dogs, among them a couple of lovelals furnished by me, were killed in front of the yurt, skinned, disembowled, the meat and the bones cut up, and all the pieces belonging to one animal wrapped in the pelts. /A87 Inside the yurt, the place between the rear sleeping bench and the bench, where the scaffold with the bear's head had stood during the bear festival (b), was

1. The details concerning this ceremony will be found in the pertinent section specifically treated in this subject.

marked off by two pelts, one of which, on the floor, there was a stick decorated with a bundle of this, curly, crimped wood

/A88 com./
Compared with the animal food the vegetable food of the Gilyak is far inferior. In the Sea of Okhotsk, the Gilyak are generally accessible and can be had for nothing, are the lazed, wild, nature products, such as the roots, shoots, small sea-blade, lubet, berts, algae, and seaweed. All of these vegetable foods are eaten only as accessories to animal food. For the purpose of meal, the fish skins, from /A89 fish-skin or tanga-skin, are cut up in small pieces, well washed and stirred with fish oil to a mash of a white color, to which, finally, bilberries are added (2). This gives a thick substance, like thick cream (pour

/A90 com./
are a popular ingredient in many dishes of the Gilyak, for example, in the soup, which, in the case of the people living on the Amur, is called mamy. This is a mixture of ground fish-skins, or lacking them, of chopped fish, with water and millet. For the preparation of mamy, the fish skins, from /A91 fish-skin or tanga-skin, are cut up in small pieces, well washed and stirred with fish oil to a mash of a white color, to which, finally, bilberries are added (2). This gives a thick substance, like thick cream (pour

1. The Gilyak from the Tymy and the east coast of Sakhalin call the bilberry ther or ther-ghi, i.e., "red berry."

regard to both the quantity consumed and its manifold use and the nutrients that the Gilyak find in eating it. Every year in the fall great stores are laid in for the winter. For the purpose whole families, but in particular the women and children, go into the woods, especially up the Amur from swamp into the Amur or to another place, where there are to be found merely a sloping protective roof supported by four poles is erected, in front of which a fire burns, and the whole time is spent perfectly settled the gathering of berries. In the vicinity of the Nikolayev post, on the Kamt and Lunch Rivers, I repeatedly came across such families picking berries. The berries are poured into large, bark-lined baskets and carried home. In the Gilyak yurt the baskets where, covered with grass, they are stored for the winter in a frozen condition as the supply demands. The Gilyak around Nikolayevk had so many of them that, beyond taking care of their own needs, they could sell a large number, they also supplied the Russian there. Bilberries, covered with fish oil or seal train-oil (2) are stored, prepared, in the Gilyak winter, nothing stands in the way of its use as such since the dark dog does not at all stand in the chow, individual, and to a certain degree personal

since the house, which has cooled off during the night, must be heated again in the morning, the fish broth cooked for the dog, and the latter fed in order for them to be ready for possible ex-
*796 punision by the men. The storing of all food supplies and the
preparation of food for the occupants of the house likewise fall, of course, entirely on the women. In the morning and during the day, however, the Gilyak usually eat only cold food. The main meal, for which hot foods, too, are to be prepared, does not take place until toward evening, for that is when the men return from their outside activities and when persons traveling through who have ties of hospitality with one of the occupants of the house and claim shelter for the night may arrive. Moreover, through the preparation for this meal the yurt is heated to the temperature which the Gilyak finds agreeable for the night.

Making the clothing for the whole family occupies the women even more than the preparation of food for the human beings and dogs. First of all, this involves procuring or putting into proper condition the materials used for it: to dress the animal pelts and skins; to clean, pound, and dry the fish skins, which, besides being used for clothing, also replace window glass; to prepare the sewing thread from nettle fibers or from animal and fish skins, and so forth. This is followed by the cutting, /640/ sewing, and quilting of the various articles of clothing, which, as we have seen, are provided, in accordance with Gilyak taste, with all sorts of colorful, intertwined embroidery and other decorations and embellishments. There are still other domestic duties, such as making household utensils, bowls, baskets, buckets of birch bark, sewing baskets and -bags, and small boxes made from out of cloth or animal pelts or skins for various uses, and the like.

Thus one literally never sees a Gilyak woman without work even for a moment, whereas the men, upon his return from hunting or fishing, spends much time in rest and idleness and at home he has nothing to do but to make the implements needed for his own activities. Since these are very numerous and complicated, in that, among other things, they include all the varied and in part artistic wrought-iron lances, knives, harpoons, and the like, one

/708 cont./

house alone. Hence it is quite understandable that during the
*796 entire bear festival, but especially during the night preceding the
principal feast, the Gilyak women are fully occupied with the
preparation of the dishes required for it, which, as has been men-
(B54) tioned (2), is sometimes very complicated. /709/ They are al-

2. See p. 676 above.

ways prepared on the hearth which is located on the transverse wall of the house in a line with the bears arranged in the center area and is thus exposed to their gaze in particular. I shall therefore call it the bear hearth. In it, and in it alone, unlike large quantities of fresh fir branches (from the Picea ajanensis, Gilyak twink) are burned by the women from time to time, not only during this last night, but throughout, for the entire duration of the bear festival, which may be one of the attractions of homage which are given to the bears or one of the offerings which are presented to them. Thus a bear festival is proclaimed by the prevailing fragrance of burned pine needles in the houses and to some extent even outside.

*796 (B24) On January 13 at about 6 o'clock in the morning, the
23 leading of the bears finally ceased. After they had made their
last rounds through the village, the animals were led to the place
of execution prepared for them, the so-called kadhra of the Gilyak,
and arranged and carefully bound there between the stakes standing in a row in the middle of it. The order of the bears was again the same so that the small bear was closest to the building in the
*796 middle of the kadhra, the lingr, the large one in the middle, and
the medium-sized one next to the entrance. Then everybody
went into Judin's house, where in the meantime the women had
set out the foods prepared for the feast, in wooden trought, round
wooden bowls, and square bowls of birch bark, on the floor in the
central area of the house, where the bears had previously stood
The guests invited to the feast took their places on the bench
(B74) along the transverse wall opposite the bear hearth, which on such
an occasion is regarded as the bench of honor, though as a rule,
it is probably less warm and often less light than longitudinal bench

/716 cont./ At this unknown,
*796 after the bear's head has been carried through, a representation
(B52) of a toad (Gilyak mipitnch), cut out of birch bark, is pasted from
the outside onto the thin fish-skin pane that replaces the glass (see
the model, p. 1157), while in the interior of the house, on the
adjacent bench of honor, there sits a figure which is supposed to
represent a bear in Gilyak clothing (Plate LVIII /p. 1258 /, Fig.
3) (2). The significance of this symbolic act seems to me to be

2. In order to be seated, the figure concerned is movable in the hip and knee joints; the clothing, of course, is only very crudely and rudimentarily realized.

somewhat as follows. The toad, an animal that has the worst reputation among the Gilyak and is often represented independently as well as in connection with the bear and the bear festival (3),

3. See, among others, Plates LI /p. 1251 /, LIX /p. 1259/, LX /p.1260 /, LXI /p.1261 /, which will be discussed in detail later.

is regarded as an evil spirit and the actual instigator of all the misfortune that happens to the bear through its capture, death, and
*796 (B88) (B89) (B87) (B88) (B87) (B87) (B87

/733 cont./
*796 out obliquely from the smoke vent and with a bundle of curled
342 wood-shavings hanging from its tip, such as I saw in the village
184 of Tyk. Here, the toad carved out of birch bark probably also remains on the smoke vent, while the head and skin is lowered through the smoke vent directly onto the platform of the hearth.

*796 In the meantime, in the interior of the yurt there, the rack
184 for the bear's head, made, just as on the mainland, out of unpeeled alder poles and richly decorated with fir branches, has been readied. It stands close to the rear end of the hearth platform in the passageway between it and the rear bench, or bench of honor, thus, in a place which corresponds exactly to the one which it occupies in the Gilyak houses built in Chinese fashion.
*796 Since the hearth platform is raised up quite spacious,
184 two separate fires can be kindled on it, corresponding to the two
354 hearths in the tschadyf, over which the kettles used to cook the
252 bear meat as well as for preparing the other dishes hang from the yurt beams. The fire closer to the bear rack is the kotr -- or
[824] tschchyf (1) -- the bear fire, in which fresh branches of fir
[192]

1. As the bear is usually called on Sakhalin,

trees, and especially of the cedar shrubs so common in northern Sakhalin, are burned during the preparation of the bear meat and also at other times during the bear festival on account of the popular fragrance.

*796 The wooden curls (zach), being regarded as a symbol of
178 holiness, purity, and inviolability, are an essential ornament in the
355 interior of the earth yurt. They always hang down in a long bundle
184 from the center of each of the four cross-beams supporting the conical roof, and at the time of the bear festival there number is increased by four new ones, which /734/ are put in the four corners of the yurt. In the Gilyak houses, on the mainland one usually sees only two of
[171] them, and not always even these, suspended from the two supporting posts of the house, but their number seems to increase as one approaches the Ainu, among whom they are used under the name inau.

225 morning we returned to our village. We took everything out
and put it on the dock. Then we slept. Next day we got up
225 in the morning and called the people. We took off the head,
252 cut it up, fed the head to the people raw, (1) and cooked the
782

1. The Gilyaks call all raw food taig. The Gilyaks eat certain kinds of fish such as Siberian salmon and certain parts of seals and beluga raw.

parts designed for cooking as well as the jaws. After we cooked it, we took it out. Some ate the meat; others took off the meat from the jaws and ate it. Then we went to gather Hepsas. Then we brought it, cooked it, ground it and made muvi. Then we got some rowan shavings and sieved them (in the case of the beluga). Then we took the head; we took it to throw it out. Here we cut off a young tree. We cut off a forked aldera tree. We spread muvi over the shavings and in the nose of the beluga; we spread muvi on the holy bones. We stuck the tree through the ear-ring holes of the beluga, lifted it and hang it up here. Then we lifted the holy bones (jugular vertebrae) and tied them to the tree. We put down the jaws and pressed them with a stick.

Means of transportation and hunting:
1--river boat made of boards; 2--old dugout; 3--club for killing seal; 4--broke poles used in steering sled; 5--old dog-harness; 6--fishing with seines.

Food was prepared with

225 For some time after the seal-hunt at the air-holes, when
782 the broken ice recedes from the shore, the Gilyaks get out in
252 boats and "feed the sea" out of muura ("scoops for scooping water of the boat"), pieces of jelly called [79] mos, (1) porridge

1. Jelly is prepared by grinding a mixture of boiled skins of Siberian salmon, seal fat and water. As soon as the grinding is done, a lot of berries are added to the jelly and it is then left on the outside to cool.

and a dried plant aya, called puchka by the local Russians. Sometimes the feeding is followed by a seal-hunt on nearby floes.

After the first "feeding", pilgur tol-fand [major feeding of the sea,' literally, 'major feeding of the water'] is arranged. Only after this "feeding" do the hunters put out to sea on a hunt.
225 For the "major feeding" women prepare two kinds of jelly-
782 mos and muvi --one rice or millet porridge, prepare dried
776 sarana, peas, berries, tobacco, and dried stalks of puchka
825 (a, a). The Gilyaks believe that if the food for the dogs is not cooked--and they must be fed before daybreak--the dogs will eat the sea offering and the latter will not reach its place of destination. To prevent this from happening, the Gilyaks specially feed the dogs of the sea spirits according to the beliefs of the Gilyaks, spirits are human beings like themselves and have their own dogs.) For this purpose they wind puchka on fish-skin bows (mam-r) which they then throw into the sea before offering to the spirits. The Gilyaks believe that the dogs of the spirits will eat the fish bones and, having had their fill, will not touch the refreshments meant for their masters.
782 When all gifts are ready, a hunter carries them to the sea.
225 Women are not present at this ceremony. On reaching the shore the Gilyak sticks two small twigs in one place, at the very edge of the water; one twig is a keyla- -ika twig and the other is a qosa -ika ("rowan twig"). A small distance away from these he sticks another pair of small twigs at the edge of the water. These peculiar gates are called tayr. The offering is
782 thrown into the sea through the tayr. First to be emptied are
225 the uj-^ir, (2) that is, troughs from which drowned men are
766
48

2. Uj-^ir is made in memory of a man drowned in the sea. The first uj-^ir "should be lost" quickly--as the Gilyaks put it. Then they make a second one which

281 (the work of stretching the hides on frames and of cutting
452 straps is performed by men). Finally, the heads have to be
cooked and prepared for throwing out into the sea.
281 I watched the two wives of Xitkun work after he returned
from the hunt. The younger of the two was busy peeling suet
from hides. In this she was helped by a woman, the wife of
one of Xitkun's kinsmen. The job of peeling suet from hides
is very hard. Most of the time the women has to work in a
bent position. I saw Xitkun's wife lift a hide in the process
of cleaning it of suet by seizing a part of the hide, cleased hide
with her mouth. At the same time she held the peeled suet
with her left hand and continued the peeling process using a
large narrow and somewhat curved knife which she held with
her right hand.
237 The Gilyaks prepare thin seal fat in the following manner.
415 They cut the suet (ga-) into pieces. They put the pieces into
252 a barrel (in the past they used to put them into a large, deep
trough) which they then place in a warm spot. There the suet
begins to decompose and to melt (I am not in a position to
give a more detailed account of the process which takes
place in the suet). This yellow fat (tom) flows out of the
suet. Depending on the age and variety of the seal the fat is
either light or dark and turbid. The Gilyaks pour the melted
fat into dried seal stomachs. They give the leavings of the
melted suet (ga-) to the dogs. Stomachs of seals are used by
the Gilyaks for storing seal fat. Having killed a seal the
Gilyaks empty out its stomach, blow air into it and hang it up
to dry. The fat can be stored for a long time in such a bladder.
Once the bladder is filled with fat, it is hung in the barn.
888 While one of Xitkun's wives was busy peeling suet from
252 hide, the other wife, Hemanr, 'old woman,' was preparing
the heads for cooking. It was certainly no accident that it
was Hemanr, Xitkun's older wife, who was preparing the
heads for cooking. Preparing of the heads requires a
certain knowledge of religious ceremonies the guardians of
which are the old people.
193 [193] À propos the interpretation of the words hemanr
197 old woman' and hemar 'old man'. Both words have in common
the sound combination hem and differ in their respective
endings ar and anr. Ar means in the Gilyak language male
and anr ~ female. What then is hem? In the village Chayvo
where a certain form of the Sakhalin dialect is spoken, they
call an old man hajmnar. In comparison with the Amur dialect the Sakhalin dialect has retained a great many ancient forms. The etymology of the word hajmnar can be easily

193 explained. In the same dialect there exists a word ja-jmnd
197 'to know' (to this word there corresponds in the Amur
dialect the word hajmd). In the direct object, which according
to the rules of the Gilyak language merges with the predicate,
the letter j alternates with c h. Thus for instance "I know
Mizgun" sounds in Gilyak Ni Mizgun-hajmnd. In this way the
verb hajmnd gives rise to the second form of the stem -
hajmnd which exists independently of the first as a distinct
word (just as the intransitive form of the transitive verb
hajmnd 'to know') means 'to get old'. Hajmnd means 'to
get old'. (In the Gilyak language intransitive verbs are
formed out of transitive verbs by alternating the first con-
sonant of the stem of the transitive verb.) In the Gilyak
language "to know" and to "get old" derive their origin
from the same stem and this is understandable for in the
case of primitive man knowledge came with experience and
so with age. We have thus explained the origin of hajm in
the word hajmnar: hajm is derived from the intransitive
form of the stem which, in this form, means 'to get old.'
-ja is the suffix which transforms verbs into nouns. We
already know the meaning of ar. Thus the word hajmnar
means 'the knowing male' or 'old man.' The Amur form is,
of course, the same as hajm-^ in the Sakhalin dialect which
change considerably in the Amur dialect. The disappearance
of -n is understandable for the Amur dialect drops its
final -'s as against the Sakhalin dialect which does not. For
instance, 'horse' is mur in the Sakhalin dialect and mur in
the Amur dialect, 'dog' is ga in the Sakhalin dialect and
gan in the Amur dialect. At present we find it difficult to
explain why hajm became hem in the Amur dialect, con-
trary to the rules which would lead us to expect hajm as
the counterpart of hajm; thus, hajmr instead of hemar.
At any rate it is incontestable that hemar and hajmnar have
the same meaning (Ayvatel'skii, Aleutskii, Aleutskii, means a
'knowing female' or and 'old female.' It is possible that
at one time or another the Gilyaks meant by ar not only male
but also man. This is quite probable for at present they use
two words for man: azmzi in the Sakhalin dialect and uku in
the Amur dialect.
Hemanr, sat in squatting position at the trough containing
252 237 the heads of the sivuchs. The skin was taken off the heads of
the sivuch right down to the level of the eyes. The skin on the
snout was scached. The old woman cut out the brain and put it in a separate
trough, the old woman separated the lower jaw, tied the plant
252 piskor around its middle and put it in the kettle to cook.

252 cutting in half the skin on the snout of the sivuch, she peeled
237 it off. The skin peeled off the snout in the same way as the door
where it stays until, as the Gilyaks say, it is "lost". After
taking out the eyes, the old woman cut them and poured their
content into the cup containing the whiskers. Then she turned
the eyes inside out and cut out first the lens and then the pupil
afterwards, she cut off the nozzak and put it in a separate
cup since it is eaten in raw form.
This done, she cut the meat covering the skull. If the
skull was broken by the strikes, she picked the bone splinters,
sucked them one by one and put them in a separate vessel.
Subsequently, the splinters together with the heads are thrown
into the sea.
262 [95] If the skull was whole the old woman broke it with a
784 stone. I asked the old woman why she would use a stone rather
412 than an axe to break the skull, to which she replied that it is
252 a sin to use an axe just as it is a sin to cook the brain, for it
has to be eaten raw. Brains are not the only items consumed
by the Gilyaks in raw form, others are: the back, the heart,
the intestines, the kidneys, the wind pipe and the nozzak.
411 To watch the old woman break the heads of the sivuch with
177 a stone, also "knowing male" or "old man," the Amur form is,
252 her mouth with a sob-like sound, I felt returned for a second
to the stone-age by time machine. In fact, it we disregard
the recently acquired by the Gilyaks, and iron which they
also recently learned to work into the knives using Japanese
kettles as the starting material, spear tips, arrows and
harpoons, we are back to the stone tip on the harpoon shaft
and on the arrow, the stone axe, which is still remembered
in their language (1) and we find no Japanese iron kettle. It

1. Cf. our paper - "Ghilaiskiie chisllitel'nyie" ("Gilyak Numerals"). Published by Nauchno-issledovatel'skii Assotsiatsii Instituta Narodov Severa TSIK SSSR, p.10, 1932.

then becomes clear to us why the old woman uses a stone in breaking the head to get at the brains and why the Gilyaks eat the brains as well as the meat taken from the animal's back, the heart, the intestines, the kidneys, the wind pipe and other parts of the animal - raw. It is then that we see all of the Gilyak mode of life in an entirely different light.
252 Having taken out the brain and having put it in a separate
trough, the old woman separated the lower jaw, tied the plant
piskor around its middle and put it in the kettle to cook.

2 Then she pressed tubers of dry sarana into the openings for
the eyes and nose of the sivuch and put the head into the
kettle.

3 When the heads were cooked, Xitkun, his son and other
7 hunters started to eat. They were served meat on flat
8 wooden dishes. At the same time they were given a small
4 bottle with salt and a tiny cup containing finely cut cheremsha.
While one may eat cooked meat with salt, one must not
cook meat or fish with salt. In former times the Gilyaks
had no salt. They learned the use of salt from the Chinese.
In 1926 I was told in the village Chayvo that the ancient
Gilyaks used a solution of ashes instead of salt. I was told
the same thing in 1931, in the village Kul. According to my
informants the ancient Gilyaks burned boughs and stems of
trees thrown up by the sea. They dissolved the ashes of
those trees, saturated with the salts contained in the sea,
in water taken from a well or river. When the ashes settled
at the bottom there remained, as the Gilyaks of Chayvo put
it, "water as clear as alcohol." It is this water which they
used instead of salt. I brought from the village Kul to the
Muzeĭa Antropologii i Etnografii a wooden plate of the an-
5 cient Gilyaks, black with age. This plate, which was sold
3 to me by old man Tujun, was specially made for seal meat.
In the sides of this "plate" were carved two tiny cups which
as Tujun informed me, would be filled with salt water for
dipping pieces of meat in it.

2 On the following day, after the meat was taken off the
2 heads, the Gilyaks prepared them for throwing in the sea.
5 The heads are dumped in the sea by women and not by men-
hunters. As we shall see, it is also the women who bring
pay to the fire. Xitkun prepared tiny white, thin shavings
of qosk-ʔəks 'rowan.' These shavings are called iugrusps.
He handed the shavings to his wife Hemanγ. The old woman
stuck the shavings in the nasal openings in the heads of the
two sivuchs and smeared them with cowberry juice. Then
she tied the lower jaws to the heads of the sivuchs using
stalks of burdock-pəs. In a row with the skulls lay jugular
vertebrae (maʔt) and bone splinters from the broken skulls.
The heads were placed on a board. The other wife of Xitkun
took the board with the heads and the mug containing the
eyes and went towards the sea. I followed her. Standing at
[95] the very edge of the water she threw the heads of the
sivuch into the sea as far away from the shore as possible.
next she threw the contents of the mug into the sea as far
as possible and then she threw into the sea the skull

food of the dogs.

31 The Gilyak eats meat relatively infrequently. Besides
52 hazel grouse and duck, they have the meat of the elk, rein-
62 deer, dog, and bear. Fowl is usually cooked, the rest is eaten raw at times, and sometimes it is cooked. Roasting is hardly customary. Bear meat is considered a particular delicacy and it is eaten either raw or slightly roasted. When ever they have an opportunity, the Gilyak eat dog meat. Thus, old dogs that are no longer useful as draft animals must yield their flesh and their pelt to their masters. (2) The Gilyak

2. The fondness of the Gilyak dogs for their masters is inconsistent with the "wild and troublesome behavior" which dogs are supposed to show toward dog-eaters. (Philosophie des Unbewussten. 1878, page 85.)

are very fond of the fat house-dogs which they occasionally beg from the Russians.

62 They love fat, especially seal blubber by itself or with cranberries, and this is a favorite dish of everyone. Withal, we must consider that this blubber has such a penetrating, offensive odor that a civilized nose even finds the odor of the boots which the Russian common people grease with seal blubber, unbearable even at a distance. The taste, of course, corresponds to the odor. The fat of the fish and other animals is often eaten by itself. The blubber of the dolphin is also considered a great delicacy, but it is hard to get.

They are very fond of eggs, and seek out and rob birds'
2 nests. It does not occur to them to raise chickens or ducks.
2 [111] Milk was unknown to the Gilyak before the Russians
5 occupied the country (1) except, of course, mother's milk. If

1. The Chinese and Koreans do not milk a single one of their domestic animals. The Koreans use their cows as riding animals.

they are occasionally treated to milk, they manifest pleasure. Worms, insects, etc., are not eaten; with the exception of the louse. It is an ordinary sight to see them pick a louse out of their hair, put it between their teeth, and swallow it.

262 Of farinaceous food, they eat only

*262 While the men land enormous quantities of these salmon, espe-
251 cially the latter species, in nets and boats, the women occupy
252 themselves with skinning them and cutting them up: a longitudi-
[462] nal cut is made from the head to the tail near the spine on either
[412] side and on the belly side with the uchomauwa, a knife with a
[226] long and narrow blade (Pl. XXXI, Fig. 6, and Pl. XXXII, Fig. 1).[1]
and then a transverse cut from top to bottom just behind the head;
then the skin is pulled off from the side with one jerk each, the
meat is removed from each of them in one piece, and each of them
is cut into two long strips, each of which has a cut made in its upper
end, whereupon the strips of flesh are strung on a cord and hung on
[192] the above-mentioned drying racks near the summer yurts. This is
the jukola (2), chiefly intended for the people and only in small

2. As is well known, jukola is the term, probably originally stemming from Kamchatka, customary among the Russians throughout Siberia for cut-up and dried fish.

part for the dogs, the ma of the Gilyak, the makoré of the Olcha and
Goldi. The head with the backbone and the flesh remaining on it,
which is provided with transverse cuts along the latter for drying
it more readily, furnishes the jukola used exclusively as food for
the dogs, the chark of the Gilyak, the dalong of the Olcha and
● [258] Goldi. Oil is boiled out of the especially fatty belly pieces, which
provides a most important foodstuff and is stored in seal bladders
and stomachs. The entrails and the milt, rejected with horror
by the Gilyak on principle, are given to the dogs, but the roe
is eaten and is used with various foods, though it is not especially
*262 prized. Apart from the two kinds of salmon mentioned, jukola
252 is also made out of other fish, for example, Salmo lycaodon Pall.
825 (Gilyak well), which comes up the Amur somewhat before the
[222] keta salmon), Salmo callaris Pall. (Gilyak longr[sch]), Salmo
leucomaenis Pall. (Gilyak ssawong), etc. The jukola made out
[3] [See Category 116, pp. 1011-1012 respectively—Analyst]

252 Then she pressed tubers of dry sarana into the openings for
the eyes and nose of the sivuch and put the head into the
kettle.
263 When the heads were cooked, Xitkun, his son and other
177 hunters started to eat. They were served meat on flat
● 258 wooden dishes. At the same time they were given a small
314 bottle with salt and a tiny cup containing finely cut cheremsha
While one may eat cooked meat with salt, one must not
cook meat or fish with salt. In former times the Gilyaks
had no salt. They learned the use of salt from the Chinese.
In 1926 I was told in the village Chayvo that the ancient
Gilyaks used a solution of ashes instead of salt. I was told
the same thing in 1931, in the village Kul. According to my
informants the ancient Gilyaks burned boughs and stems of
trees thrown up by the sea. They dissolved the ashes of
those trees, saturated with the salts contained in the sea,
in water taken from a well or river. When the ashes settled
at the bottom there remained, as the Gilyaks of Chayvo put
it, "water as clear as alcohol." It is this water which they
used instead of salt. I brought from the village Kul to the
Muzeĭa Antropologii i Etnografii a wooden plate of the an-
415 cient Gilyaks, black with age. This plate, which was sold
263 to me by old man Tujun, was specially made for seal meat.
In the sides of this "plate" were carved two tiny cups which
as Tujun informed me, would be filled with salt water for
dipping pieces of meat in it.
462 On the following day, after the meat was taken off the
782 heads, the Gilyaks prepared them for throwing in the sea.
225 The heads are dumped in the sea by women and not by men-
hunters. As we shall see, it is also the women who bring
pay to the fire. Xitkun prepared tiny white, thin shavings
of qosk-ŋaks 'rowan.' These shavings are called iugrusps.
He handed the shavings to his wife Hemany. The old woman
stuck the shavings in the nasal openings in the heads of the
two sivuchs and smeared them with cowberry juice. Then
she tied the lower jaws to the heads of the sivuchs using
stalks of burdock-pəs. In a row with the skulls lay jugular
vertebrae (ma·t) and bone splinters from the broken skulls.
The heads were placed on a board. The other wife of Xitkun
took the board with the heads and the mug containing the
eyes and went towards the sea. I followed her. Standing at
[95] the very edge of the water she threw the heads of the
sivuch into the sea as far away from the shore as possible.
next she threw the contents of the mug into the sea as far
as possible and then she threw into the sea the skull

224 traps begin. This is perhaps the most interesting season in the
manifold yearly activities of the Gilyak. He leaves his home
for several weeks and betakes himself to his inherited sable stream
to watch for the valuable little beasts. During the daytime he
inspects his snares and traps, shooting birds and any kind of ani-
mal that he meets along the way; for the night he betakes him-
self to his little balagan. He must live through some difficult
moments in this little balagan. Here, in the wild taiga, amidst the
gloom of night, the silence of the wilderness, or the howl of a
snowstorm, to the lonely savage, cooped up at his minuscule
hearth or vainly trying to warm himself /27/ at the temperature of
the freezing of mercury, each rustle, each strange sound, each
snap of a tree, howl of the wind, moan of a night bird, and,
finally, the hallucinations of his own frightened imagination de-
pict in all their terrible reality all the horrors of the Gilyak demon-
ology. The devils and ogres of all the elements in the imagry
of the Gilyak appear to him, to cause his destruction. And the
terrible exhaustion after his labors, the lack of food -- all this
aggravates the horror of the situation, bringing sickness often even
death. Sable hunting, however, promises more than just terrors
and adversity. A successful catch, gay company, a triumphal re-
turn home with the catch, stories about experiences, all this fully
rewards the hunter worn out with suffering. But, on the whole,
the Gilyak is not a hunter. Hunting with dogs is unfamiliar to
him, the risky pursuit of bears, of which the Tungus are so fond,
[262] does not attract the Gilyak. By and large he is an ichthyophagist,
and someone has very correctly said about him that he lives by
frutti di mare /the fruits of the sea/.
221 The winter months are the gayest ones in the year. The
supplies of fish have not yet been exhausted. On the earnings from
the catch, tea, tobacco, rice, and buda were stored up, and the
[574] Gilyak cares little about the future. Endless visiting begins, and
[996] listening to the storytellers at night, and, beginning in February,
[538] there are the bear festivals, the happiest days in the life of the
● [261] Gilyak. In March, however, the results of the winter extravagance
[164] begin to tell, and there come the hard days of hunger and some-
ooo times scurvy, which carries away dozens of flourishing lives. In

/69 cont./

796 825 beast in the notion of the bear as a dog of the "master."
We should remember that the genesis of the cult of animals rests on the /70/ worship of the animal as such, without any allegorizing. "The reason of the universe," said the Avesta a long time ago, "is governed by a dog." But, as we have already seen, according to the subsequent evolution of the cult of the bear, in this last there may be concealed a "mountain man," a clansman of the "master of the mountains," or even a Gilyak's own kinsman turned into a "mountain man." Therefore one must show every courtesy to the one killed, feed its head, generously supply it for its journey with various kinds of provisions, not defile its body, not spill its blood upon the ground, and so forth -- all these are the inevitable consequence of viewing the bear as a higher creature. The importance of the holiday, however, is not exhausted with this display of respect for the higher creature. The soul of the slain bear journeys to its master, that master on whom the welfare of man depends. It is the most apt occasion for sending to this distant lord various presents, such as dogs, arrows, bows, viands, and so forth. All this is repayed a hundredfold. Moreover, the bear itself, pleased by all the honors and the food, may turn out to be useful in petitioning for various favors from the master of the mountains.

796 782 825 [114] From this it can be seen that the killing of the bear during the winter festival is not a sacrifice to the gods, as, for instance, Lang, a famous investigator of primitive religion, believes it to be, but merely provides an occasion for the sacrifices. The best proof is the fact that the Gilyak sacrifices to each god only that which the god himself does not have, and the master of the taiga has an abundance of bears. He needs dogs, fish, tobacco, sugar, thongs, and arrows -- and it is these objects that are given to him by the Gilyak; the bear is merely the honored envoy who carries them. It is a deity itself, albeit a small one, and therefore cannot itself

796 825 261 be a sacrifice. Finally, there is another important moment in the holiday -- eating the body of the bear. As a general rule, the greater part of the meat is given to the narkh'i, i.e., to the clan of the son-in-law /zyat'/ of the master of the

/70 cont./

796 825 182 775 774 slain bear, but the head is always respectfully divided among the clansmen to whom the bear belongs. This eating must
261 [562] be looked upon, not as a simple act of eating, but as taking into one's body the mighty qualities of the bear. A woman, for instance, cannot partake of the heart of the bear, which imparts courage, a quality completely useless to her, and therefore such eating, as aimless, must be offensive to the bear.

796 825 182 775 774 Thus the religious significance of the bear festival amounts to the following: 1) feeding the bear gives /71/ the settlement security and protection from evil spirits -- a very important matter if we take into account the views of the Gilyak with regard to the origin of sickness and death (see below); 2) eating the "deity" imparts strength; 3) the soul of the slain animal, pleased by the honors, may independently and through its "master" do good things for man; 4) it -- and this is of the utmost importance -- is an envoy, a transmitter of all kinds of gifts to the "master of the mountains," on whom

796 825 614 775 the welfare of the Gilyak depends. With regard to the last point, it is important to remember what we said about clan gods. Every clan has clansmen among the "mountain people," i.e., clansmen who sometime in the past fell in a fight with a bear and were then taken into the clan of the "master of the bear." Every such clansman in turn becomes a small "master," a god-protector of his clan. Actually, every clan receives its catch, not directly from the "master of the mountains" himself but from this, his clan god, who specifically resides in the hunting territory of his clan. Thus, the presents sent through the bear are actually sent, not to the supreme "master," but to the nearest "master of the mountains" -- clansman.

796 614 That is why the celebration of the festival is purely a clan affair. This also perhaps explains two extremely characteristic, but puzzling facts concerning the bear festival. In the first place, not only is no member of the clan arranging the festival allowed to kill the bear, but even the clansmen of women who are wives of the members of that clan are not allowed to, in a word, none of the agnates in either the male

/91 cont./

000 504 688 392 795 very great sin; one might die." It is a sin not to be hospitable, not to share edibles. And the reason is clear: the gods, as we have seen, are the ones that "feed" man, and principally the clan gods, who provide for not one man, but the whole clan, which brings them sacrifices and which is bound to them by clan ties; to eat, therefore, without sharing with a clansman who is present and, in general, not to feed him, is a "sin" and a direct risk of losing the benevolence of the gods-sustainers. It is not by chance that in all this the "hearth" plays a great role. In the fire of the hearth lives the "master and mistress of the fire," a clansman or even an ancestor, who does not miss a single thing that takes place in the house; they, as we have seen, are the intermediaries between the clan and its clan gods, and there is nothing more natural than that the gods of the hearth should above all be the guardians of the principle of hospitality.

*614 433 476 But the ties of the clansmen, living by the favors of their gods-clansmen, are not delimited by reciprocal "regaling" alone, but by the real, most extensive principle of the community of earthly benefits. If this does not find expression in a purely communistic form, it is only because there is no necessity whatever for it. Life is so simple, the conditions of acquiring food are so simple, the gifts of nature lie so widely and freely before each person, that there is no necessity for communistic production and distribution. Yet

*614 476 the principle is in full force. In the communal hunting for sea animals, for example, in one boat, it is the owner of the boat who is generally also the most skillful hunter, but he receives no more than the last adolescent rower, and, in addition, a part of the catch is distributed to those families whose members for one reason or another could not participate

*614 476 261 [262] in the hunting. Dried fish, the principal food of the Gilyak, is regarded almost as communal property, and anyone whose supplies have run out takes some from his neighbor without any objections. At any rate, no one goes hungry as long as any clansman has provisions. All the hungry individual has

/91 cont./

476 *614 261 [261] to do is to move to the yurt of a well-off clansman, or even simply visit him two or three times a day, and they will share with him without a murmur their last yukola, their last handful of tobacco.

/92/ With respect to luxury articles, such as valuable spears, sabers, fabrics, fur coats, etc., there is more individualism, introduced by more recent conditions of exchange, but in cases of real necessity, such as the purchase of a wife, the payment of blood money, funerals, and so on, everyone considers it his direct obligation to sacrifice his individual wealth for the objectives of the whole clan.

*614 428 This same principle of the communality of the material goods of the clansmen is the basis of the right of inheritance, the basic rule of which is -- the property of the clansman must not go out of the clan. In this respect, the well-known thesis of the Twelve Tables is literally in effect among the Gilyak: Si suos heredes non habet, gentiles familiam habento.[2] In the absence of members of the family, in which the "workers" are also classed, the property passes to the agnate clansmen, no matter how distant, excluding even the closest cognates. The latter, according to the will, can obtain only the so-called shagund (1), and only

[422] [556] 1. "Treasures" -- a property sui generis, consisting of unused objects, designated only for exceptional cases: bride price, dowry, ransom, funerals. It is divided into 1) the iron "shagund" -- large cast-iron kettles, spears decorated with silver inlays, valuable Japanese sabers, coats of mail, and so forth, used chiefly for the bride price; 2) the fur, consisting chiefly of expensive fur coats, used principally for dowry; 3) the silk -- Chinese silk materials and garments, which are

/342 cont./

197 The Tymovsk and the Okhotsk Gilyak have one language.

/343/

823 773 A legend about three brothers-cliffs in Aleksandrovsk on Sakhalin. Three Heng brothers went with a bear to look at a cast-up whale (kem), and then all of them turned into stone. Two jags -- moth and daughter -- look after them.

825 761 A rat must not be killed with an ax; a stick is necessary. Nakhvun's wife is dying because her father killed a rat with an ax; his son died for the same reason, and now his daughter is dying.

825 The attitude toward incest among dogs. According to the words of the Gilyak, among dogs a brother and sister do not copulate; exceptions are rare and are attributed to the milk. Dogs are killed for this; otherwise this heavy sin falls on the master; he will be punished with sickness and so forth. Father and daughter among dogs frequently have intercourse, but they are not killed for this.

302 Hair may be thrown away in any place.

752 825 [782] A person who has been rescued from death by a bear sacrifices chukh-chugynd -- a dog -- to Pal-n'igyvyn. No one may look at a person wounded by a bear; only an old man or an old woman binds his wounds. His bed is curtained off with a sail.

704 782 825 261 In need they sometimes eat a bear that has died, and they treat him like a killed one. When they set off somewhere (hunting) or in general on important business, they always take along their favorite ymgi (son-in-law).

703 In Mil'kvo one Gilyak had two women. Once his daughter with the grandchildren came to visit him. She went to gather berries while the men went out to hunt seals. Then

291 wear huge pewter ear-rings, five centimeters wide, which
301 are decorated with colored glass beads. Pewter and beads
531 are bought from the Chinese, but they make the ear-rings themselves. Around their necks the women wear beads of colored glass, on these are sometimes hung little wooden amulets representing human figures.

177 Pipes and tobacco pouches are so much a part of the Gilyak
276 personality that I am tempted to give them space here. Their
531 pipes are of Chinese origin and have the uniform shape of the Manchurian pipes. The stem is about an ell long, made of black horn which has been turned with a lathe; the mouth piece is of jade. The cup-shaped brass bowl of the pipe is no larger than a hazel nut. On their belts they wear a bone spike, ornamented with scrolls, which is used as a pipe cleaner. Their tobacco pouch is tied with strings to a disk of walrus tusk which is also decorated with curlicues, and this is fastened to the upper button of the jacket. As soon as they have finished their smoke, they stuff their pipe and tobacco into the slit in their jacket.

V. Food and Diet

261 If the Gilyak is short on provisions he eats only twice a day. He endures hunger relatively easily, he can hunt or pursue other activities for two days without any kind of food, only on the third day does he feel weakness and discomfort. On the other hand, as soon as the hour of plenty is at hand, he undoubtedly eats five times a day.

It would be difficult to say how much nourishment a Gilyak takes but in general they are blessed with a good appetite. From an eye witness I learned that once two Gilyak on a winter journey consumed one pood (about 16 kilograms) of frozen sturgeon in one day [110]

251 Their staple diet consists of fish: sturgeon, various types
262 of carp, whiting, but particularly salmon and mainly kita (salmo longocephalus) and gorbusha (salmo gibbosus). A freshly-caught fish is eaten raw, but the greater part of the salmon catch is dried for the cold season. For this purpose the fish are cut lengthwise and are hung about six feet from the ground; by means of air currents they become a dried non-rotten substance. This is the so-called sukola. The kita provides the bulk of these winter stores, and the fish appears at the end of summer. The fish caught in winter are stored in a frozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

563 general precautions. Nevertheless, it happens that now
609 and then one of these unfortunates is shot down in the woods
177 by Gilyaks, even though the majority of them would not think of concerning themselves with such a disgraceful hunt.

181 XIII Economic and Social Conditions.

671 Among Gilyak there is no question of a body of laws, to say nothing of written statutes. Nevertheless, common law which functions in place of fixed statutes is equitable and just. The shadow of a prerogative may be felt only where it is accompanied by real qualities. But even the preponderance of natural talents is very modest; the race consists of individuals among whom the capabilities as well as the assets which are given them by nature are pretty evenly distributed.

556 There are "rich" and "poor" Gilyak, but these terms must
595 be interpreted in a very limited sense. A wealthy man who is in a position to support three to four wives is a rare exception. The "rich" man, besides having a greater number of wives, possesses objects which have a certain value, such as "beautiful" clothes [230], many and good dogs, etc. and sometimes quite useless objects which are kept merely for effect, as, for instance, lengths of cloth of gold (which in Greek churches are used for various decorations). The above-mentioned clumsy lances belong to such luxury articles. There are many rich men who keep on hand a couple hundred silver rubles in a box.

735 Contrariwise, there are very few Gilyak who are not
438 capable of supporting a single wife or even themselves.
556 Such individuals are either sick or alcoholics, for there are
261 no actual reasons for external poverty: fish, game, wood, berries etc., are everywhere to be found, but of course one must obtain them with one's own efforts. A scarcity of fish is a rare exception among the Amur-Gilyak. It happens in those years in which the kita is scarce (this usually coincides with very high water). The Sakhalin-Gilyak often have reason to complain of a scarcity, for there the various species of salmon, even in ordinary years, do not come up the rivers in such numbers. On the other hand, they have more bears, and thus the island Gilyak are in a position to trade young bears for dried fish with their mainland kinsmen.

If there are not enough fish, the Gilyak eats cedar nuts, berries, game, etc. All these are of course only a poor substitute, but in any case we cannot speak of actual "famines" here.

262

262 DIET--staple and other foods consumed; seasonal changes in diet; proportion of various foods in diet; group differences in diet (e.g., by age, sex, social class); discriminations between edible and harmful foods; food preferences and avoidances, food taboos; etc. See also:

000 to it. In spite of the fact, however, that the material presented by
* 114 Shternberg convincingly testifies to the rudiments of class differentia-
565 tion among the Gilyak, he did not discover this, because he looked through the spectacles of the Populists and saw in the appearance of class differentiation the manifestation, not of the immanent economic laws of every society, but merely the effect on the Gilyak of their neighbors -- the Russians.

* 114 A significant part of the monograph is devoted to the re-
797 ligion of the Gilyak. /xxx/ Here the conceptions of Shternberg
614 about the masters, first stated by him in "Sakhalinskie giliaki," are unwound in all their breadth. "Each element has its 'master'
[076] who is a 'god,' but, just as in each clan there are outstanding persons, wealthy men, of whom one is the richest ('the master,' according to the everyday terminology of the Gilyak), so are there 'masters' among the spirits, who, according to the beliefs of the Gilyak, also live in clans. With this concept Shternberg stresses the reflection of the social structure in the religious views. The views of Shternberg on the relationship of totemism to clan society also deserves attention. According to Shternberg, "... it was not totemism, i.e., not belief in descent from one or another form of animal, that created the clan gods, which is the accepted way of thinking, but the other way around: the clan gods created totemism.
• [262] One cannot explain the interdictions among the totemists against using the meat of totems in their food by anything except a fear of killing some kind of clansman turned into a totem animal."

* 114 Shternberg contests the opinion that fear created god and
[797] advances his own understanding that the cult of a number of ani-
[825] mals (e.g., the bear and swallow) is caused by their seemingly protective relationship to man.

[956] In "Giliaki" Shternberg also, for the first time, formed his opinion that the shaman is divinely selected.

* 114 "Obraztsy materialof po izucheniiu giliatskogo yazyka i
797 fol'klora" and Materialy po izucheniiu giliatskogo iazyka i fol'klora constitute the second group of Shternberg's works on the study of the Gilyak; included here also is the summary of a paper at the Fourteenth Congress of Americanists in Stuttgart, "Bemerkungen

/25 cont./

000 man was possible at a very remote time. As a matter of fact,
226 these fish that travel in masses upstream to spawn even now serve
• 262 as the basis of life for the Gilyak and his only domestic animals,
[231] the dogs. The fish, caught and dried in the sun by the tens of
[251] thousands, /26/ are stored in pile storehouses and, in the literal sense of the word, replace bread for the Gilyak during the long winter. The fresh local fish that he catches all year round are merely an addition to this daily bread of preserved salmon. The countless schools of the fish that travel in masses upstream to spawn provide food not only for the Gilyak. No smaller packs of all kinds of pinnipeds and cetaceans follow the schools of fish,
225 pursuing the abundant food. After the fish, the pinnipeds consti-
262 tute the second source of the food supply of the Gilyak. In early
[221] spring, at the first signs of the opening of the ice, the famished native comes out to hunt seals, which are happy for the opportunity to breathe the fresh air on the ice floes which are breaking up.

225 In favorable places these animals are hunted all through the
146 summer by means of a very long harpoon which is thrown from a boat. Besides their skins, which are quite indispensable in the Gilyak economy, seals also provide supplies of fat, which serves as a seasoning for the hard yukola, and also as an independent food product that is extremely important for the life of the Gilyak. The effect of the fat on the organism of the native is striking. Here it is the end of winter. The famished Gilyak, if he has not been brought down by scurvy, can hardly walk. But the seal need only appear, and he is momentarily transformed. He greedily throws himself on the melted fat, drinks it in all forms, with tea, with fish, and even just as it is, and in a few days he becomes unrecognizable: his cheeks become pink, his body gains weight, and vitality expresses itself in his every movement.

224 In autumn, after the end of the run of fish, an active and
[221] happy season of hunting begins. Bears in abundance come down to the banks of the streams to regale themselves on salmon, and the Gilyak lies in wait for them with gun and spear. Every bear killed is an occasion for communal festivities and celebrations. Before the season for fish and bear has come to an end, the sable has put on his dark coat, and it is time to hunt him. Now the setting up of snares at the crossing of rivers and the building of

/26 cont./

224 traps begin. This is perhaps the most interesting season in the manifold yearly activities of the Gilyak. He leaves his home for several weeks and betakes himself to his inherited sable stream to watch for the valuable little beasts. During the daytime he inspects his snares and traps, shooting birds and any kind of animal that he meets along the way; for the night he betakes himself to his little balagan. He must live through some difficult moments in this little balagan. Here, in the wild taiga, amidst the gloom of night, the silence of the wilderness, or the howl of a snowstorm, to the lonely savage, cooped up at his minuscule hearth or vainly trying to warm himself /27/ at the temperature of the freezing of mercury, each rustle, each strange sound, each snap of a tree, howl of the wind, moan of a night bird, and, finally, the hallucinations of his own frightened imagination depict in all their terrible reality all the horrors of the Gilyak demonology. The devils and ogres of all the elements in the imagry of the Gilyak appear to him, to cause his destruction. And the terrible exhaustion after his labors, the lack of food -- all this aggravates the horror of the situation, bringing sickness often even death. Sable hunting, however, promises more than just terrors and adversity. A successful catch, gay company, a triumphal return home with the catch, stories about experiences, all this fully rewards the hunter worn out with suffering. But, on the whole, the Gilyak is not a hunter. Hunting with dogs is unfamiliar to him, the risky pursuit of bears, of which the Tungus are so fond,
• [262] does not attract the Gilyak. By and large he is an ichthyophagist, and someone has very correctly said about him that he lives by frutti di mare /the fruits of the sea/.

221 The winter months are the gayest ones in the year. The supplies of fish have not yet been exhausted. On the earnings from the catch, tea, tobacco, rice, and buda were stored up, and the
[574] Gilyak cares little about the future. Endless visiting begins, and
796 listening to the storytellers at night, and, beginning in February,
[538] there are the bear festivals, the happiest days in the life of the
[261] Gilyak. In March, however, the results of the winter extravagance
[164] begin to tell, and there come the hard days of hunger and sometimes scurvy, which carries away dozens of flourishing lives. In
000

/65 cont./

796 On this day, however, no one is allowed to taste the pre
574 bear meat. This takes place on the next day, which is c
the day of treating the narkh'i (narkh-arin-ku). The nar
seat themselves ceremoniously along the plank beds, whi
host solemnly walks among the rows and distributes piece
[576] bear meat. More gracious hosts feed their guests with t
own hands, sticking into their mouths /66/ a huge piece
the guest bites off a piece, leaving it to his neighbor to f
• [262] what he has started. Only the narkh'i are allowed to eat
[614] meat; and his clan are denied this right; they are allow
eat only a soup of rice or buda with the fat from the bear
carcasses. This soup is prepared and consumed in enorm
quantities.

796 It is considered the greatest honor for the host to fee
264 guests to satiety. His graciousness goes so far that when
576 guest who has eaten too much of the fatty soup begins to
it, the host respectfully offers his mouth and drinks the v
It would be hard to imagine more refined graciousness.
intervals between feasting, dog races, games, fencing w
sticks, and circle dancing are arranged.

796 All day the girls take turns playing music on the susp
533 log and accompany their primitive music with humorous
273 times very frivolous songs. Not the least role in the feast
played by Russian vodka or Chinese grain vodka, which l
[554] the gaiety of the feasters to its apogee. To make one's g
drunk is considered the greatest honor. "At my house yes
the narkh'i got drunk two times," the master of a bear or
boasted to me.

796 Finally the last day of the festival comes, the day of
parture of the narkh'i. Carcasses of bear meat and all ki
of viands prepared for their families and clansmen are pla
[782] on their sleds. At the last moment the narkh'i lead seve
dogs into the yurt and tie them around the plank bed of h
to the bear's skull. In addition, as a present, they put a s
a thong, and other such items next to the head of the ani
or stuck into it. Again, in farewell, the nark'i are lavish

Ainu AB2

/452 cont./

2. (cont.)
from the glossaries and dictionaries of the Ainu language (Klaproth, Asia polyglotta, pp. 305, 313; Dobrotworskij, op. cit., pp. 326, 327), it seems to me that the possibility of a misunderstanding in the above information by Lopatin, caused by insufficient knowledge of the Ainu language, is not to be excluded.

After this digression, upon returning to the discussion of the food of the Amur peoples and passing from the Gilyak to their closer and more distant neighbors, I must first state that with reference to them I shall confine myself chiefly to pointing out the deviations and differences among them, in contrast to the food of the Gilyak, as such are caused by different natural conditions, a different way of life, and by different relations with the neighboring civilized peoples.

The closest neighbors of the Gilyak on Sakhalin, the Ainu, are in general no less pronounced ichthyophagi than they, but the significant circumstance with regard to food, which is conditioned by the nature of their region, is that they do not have a single large river in their area on which the population could concentrate in the interior of the region, but rather they only dwell more or less directly on the coast everywhere. In point of fact, of the two largest rivers of Sakhalin, the one, the often mentioned, fish-rich Tymy River, belongs wholly to the Gilyak, and of the other, the Plyi or Poronai (i.e., in Ainu, Great River), the Ainu occupy only the mouth, and this only in common with the Orok and Gilyak. Apart from a couple of somewhat larger rivers that empty into Aniwa Bay, such as the Ssussuja and Truotaga, there are only small coastal rivers in the whole Ainu territory of Sakhalin. /453/ Thus, the actual habitation area of the Ainu on Sakhalin consists

/457 cont./

various places on the Amur and especially on the Ussuri and have small gardens and farms. Apart from the dog and the house cat occasionally present among the Goldi, Olcha, and Gilyak /458/ and treated merely as a luxury item (1), the first domestic animal

1. Concerning the distribution of the house cat in the Amur region and its position among the Amur peoples, see what is said in the first volume of this work, pp. 98-100.

met among the Amur peoples, going upstream, is the pig. As was discussed in detail in the first volume of this work (p. 155), individual specimens are found even among the Olcha (2), but

2. There was none among the Gilyak in my time. Later, when there were pigs raised by the Russians in Nikolayevsk, the Gilyak occasionally bought some in order to consume them in festive fashion (Vostochnoe Pomor'e, 1866, p. 59).

a regular breeding of pigs is found first among the Goldi, up the Amur from about Ssargu and Naiche on and along the Ussuri. The animals, fed on fish, are sold by the Goldi to their countrymen or to Chinese traders, through whose mediation they reach the Olcha farther downstream. The Goldi get the breeding animals, however, in part from the Man-dse (Chinese) along the upper Ussuri (3), but for the most part from the Sungari region

consideration, repaired at the slightest damage, and dried in the sun after every fishing expedition. For this purpose they are spread out over special racks taller than a man, and superstition requires that if the drying nets are in a person's way he must always go around them, never underneath them. And, finally, not until the nets are completely dry may they be used again. Treated in this fashion a net lasts for several years among the Gilyak and rewards many times over the care and labor used in making it.

/535/ What has been said in the preceding about Gilyak fishing may in general be applied to the Tungusic peoples of the lower Amur region more or less neighboring them, although with a few qualifications and modifications, which are determined in part by the way of life and the character of these peoples and in part by the distribution of those species of fish principally caught. First of all it must be emphasized that, with regard to fishing, all the Tungusic peoples of the lower Amur region differ from the Gilyak, not so much by practicing it by means of any new methods unknown to them as by the essential, crucial fact that none of them is ichthyophagous to the extent that the Gilyak are or is dependent on fishing for its entire economy like the Gilyak, and therefore none of them practices fishing to the extent and with as much constancy, care, and energy as the latter. Among all these peoples, and not excepting the Olcha, who are closest to the Gilyak in all their external behavior and way of life, hunting, as a means of directly and immediately satisfying the urgent needs for food and clothing, plays a far more important role than among the Gilyak, and, to be sure, this is more and more generally the case the farther one goes upstream and into the side valleys of the Amur River. Consequently, it must take up more time and labor, or rather must take this away from fishing. In particular it cuts heavily into winter fishing. In no season of the year does the basic difference in character between the Gilyak and the Tungusic peoples of the lower Amur region appear more clearly than in winter, in that the former remain the same sedentary fishermen, despite various

2: Schrenck--880 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/562 cont./

as a rule when an old she-bear with its one or two-year-old cubs is found in the lair. In this case, the all too dangerous battle to capture the old animal is usually not even undertaken, but rather it is enough to stab it at once, and only the cubs are fettered and led into captivity. The bears killed in the wilderness in this or some other way are, to be sure, likewise eaten by the Gilyak, /563/ but, as far as I know, without special festivities, and this is not merely because the processions, so very essential in this connection, which are conducted with the imprisoned bears, must naturally be omitted, but rather perhaps also because the slain bear does not by far have the tastiness for a Gilyak palate and does not have the thick layer of fat of the animal kept imprisoned for some length of time and fattened on a fish diet. Along the coast of the Sea of Okhotsk Middendorff (1)

1. Reise, etc., Vol. IV, p. 1381.

learned of another method of the Gilyak for capturing bears alive, which, however, could scarcely occur in the Amur region and on Sakhalin, with different natural conditions. It consists in putting, at places where deeply cut game-trails lead down from the heights of the steep coast to the sea and between two trees standing close to each other, on the latter large strap-nooses, in which the bear, since it does not find another path either to the right or left, must inevitably be caught. I do not know of any such localities in the Amur region, and, accordingly, I have never heard of such a method of catching bears there.

Many superstitious beliefs and customs are certainly associated with the hunting of bears among the Gilyak, and their observance is considered necessary in order to undergo the dangers of the fight with it successfully and to master the mighty animal unharmed, but to be able to escape the revenge of its manes in case of its death. But I cannot agree at all with the statement by Nordmann that "lovely songs" are first delivered by a few shamans to the bear tracked down in its lair, which are supposed to induce

/696 cont./

like them it stands upright in combat, etc. In spite of all this, however, the Gilyak is not willing to forgo the great enjoyment which bear meat and fat provides for his palate, and he longs for it especially if the bear first lived in captivity for a time and was fed on fish, for this food adds a fishy flavor to its meat and fat, which is especially agreeable to the Gilyak. Moreover, a person may /697/ then indulge in the enjoyment of these savory morsels quite without danger and without punishment, for, in order to achieve this, according to Gilyak belief, a long series of preliminary act is necessary, all of them aimed at outwitting the bear during its lifetime by attestations of esteem and to deceive it, as it were, about everything that is done with it, but, after its death, to pacify the angered spirits of revenge of the mighty beast by paying homage even to the manes of the slain animal.

The attestations of esteem begin immediately with the leading of the bear into captivity. If the bear has been discovered in its lair and safely shackled following a successful battle, it is taken, as has been said (1), on two sleds put side by side and tied

1. See p. 878-880 above.

together, in a triumphal procession to the place from which the hunters set out, and it is received there with loud shouts of jubilation from young and old. The same thing happens when a Gilyak returns from a trading trip to Sakhalin and in the central space of his boat brings with him one or a couple of young bears bought on the island (2). In the Gilyak villages there is usually

2. See p. 960 above.

never a lack of lodging for putting up the bear, but if need be a new one is erected for it. This consists of a square box made of beams, open at the top, with a small, heavily barricaded door and an even smaller, always open window. The bear is forced to climb into it and, after it has been unfettered, is prevented from escaping its prison by a layer of boards spread over it, fastened with poles, and weighted with stones. From now on

/708 cont./

796 in the rear let themselves be taken in tow by the bears and dragged
23 up the hill. During the whole procession the women again drummed incessantly on their beam. A short pause followed, during which a few games were played in front of the house, such as the above-mentioned roundelays, the competitive jumping, sometimes on one leg, sometimes on two, which I had previously seen among the Goldi, and then the popular leading of the bears, never tiring the Gilyak began again and continued far into the
513 night. For during this night immediately preceding the killing of the bears no one among the Gilyak may sleep; the men spend it alternately leading and feeding the bears, while the women prepare the foods for the feast that is to take place on the following day. Let us therefore now turn to these for a moment.

796 In a previous section (1), it has already been pointed out
262
197

1. See pp. 676 ff. above.

that the foodstuffs used in connection with the bear festival are primarily of a vegetable nature and in particular consist of the cereals and legumes of Manchu-Chinese, Japanese, and Russian origin named there. This is especially true of the great feast held shortly before the killing of the bears and, as we shall see in the following, of the one during which, sometimes at a much later date, the bear itself is eaten. Aside from these two, I might almost say official feasts, which are held in a more or less opulent manner in all or at least most of the houses of the village where a bear festival takes place, and which sometimes are even repeated for a certain length of time, the Gilyak also eat their regular fish diet even during the bear festival, but in an irregular fashion, during the intervals between the individual festive events and generally in accordance with the requirements of the individuals. Considering the large number of people invited to the festival or taking part in it generally, however, the consumption of fish on such an occasion is always very considerable, and I was amazed at the colossal quantities of hausen and sturgeon which were used, in addition to the regular jukola diet of the Gilyak, in Judin's house alone.

/720 cont./

796
825

Bears' head-bands with figure of toad and agate balls.

796 conceivable that they are trying to imitate this Buddhist forehead
197 swelling likewise on the head of the bear venerated by them in
194 superstitious fear and likewise regarded to some extent as divine,
825 and that they do this with the agate balls which are furnished
776 them for this purpose by the Chinese themselves. Thus, according to Gilyak ideas, the bear is to some extent moved up among the divinities and therefore a formal bear-cult is practiced.

*796 With the putting on of the snout and head bands, or the
574 toad and agate-ball bands, all the honors imaginable have been
415 shown to the bear and now, in the awareness of their complete
576 innocence, the Gilyak may, with a clear conscience, give themselves up to the pleasures of the table. A great number of wooden bowls were immediately brought into the house on a sled and arranged on the floor around the bears, while the participants in the feast took their places, sitting cross-legged, on the bench
•[262] of honor. First, a ski, which probably was one of the sacred utensils since it /721/ had been propped up against the étagère the whole time, was used to present pieces of frozen sturgeon to the guests. While they were still eating it simple circular

/721 cont./

*796 wooden bowls, or, more correctly, large plates (Gilyak aam-
574 ngir) (1), were filled with a dish which consisted of cooked beans,
•262
415
576

1. See p. 683 above.

a kind of groats, fish oil or seal oil, and chopped leeks, and the serving of which was done with the greatest formality. At each
796 side of the étagère a man was busy lifting one plate after another
574 from the floor and bringing it to the server of the food, who sat
576 on a sled in the front part of the yurt. The latter, with a large hemispherical iron ladle (Plate XXXIII /p.1013 /, Fig. 5), scooped the aforementioned mush from a trough and served it on the plates which were then immediately taken back again to their places. This was repeated three times with each plate, whereupon the server got up, stepped up to each plate, and added some mush and a piece of frozen sturgeon to the already huge portions. From each side two men now stepped forward to the row of plates, placed a decoratively carved spoon in each of them, and handed them to the guests, one plate to each one, beginning with the two sitting in the middle of the bench and going from there to the ends. What was left over from the superhuman portions was poured
[562] back into a trough. The women were totally excluded from the feast, indeed, none of them was even present during it. Everyone then rose from his seat, the plates were taken to the other house where the medium-sized bear was displayed, and an identical
[742] meal took place there. In both cases, however, this was only a meal in advance of the actual feast, for no bear meat or fat had yet been consumed, and this would not take place until the following day.

796 This day (January 31) began in much the same way as the
574 previous ones, with the cutting up of the bear meat and fat in the
262 presence of the bears' heads. Numerous guests had already ap-
576 peared early in the forenoon. They were put on the bench of honor behind the bear rack without further ado and, strangely enough, were fed without all the ceremony that had been observed so strictly the day before: each guest was given a fir branch and

576 /721 cont./
*796 on it raw and cooked bear-meat and several strips of bear fat, as
574 well as a small heap of fine wood-shavings (zach). This was the
•262 first bear meat that was eaten. The portions were very ample, and
[562] gradually everybody present in the house or newly arrived partici-
[855] pated in the meal, indeed, even the women and children re-
[415] ceived their share of it, in that a few young people walked among the diners with bowls of a special shape (Pl. L /p.1250 /, Fig. 5, and Pl. LI /p.1251 /, Fig. 1-- called ans-tymyk (2) in Gilyak)

[104] 2. The s in this word is to be pronounced soft, like the French z. The bowl is called ans-tymyk because of its similarity to a hand (tymyk).

and collected contributions to be divided among the women and children. The quantity of bear meat and fat consumed that day was therefore very great. What was left over of the portions /722/ that the guests had, they wrapped up in the fine wood-shavings and fir branches and took home -- a package that the Gilyak are said to call mōps (1).

[114] 1. A designation which I myself did not hear.

The gnawed bones, on the other hand, were put back into the kettle from which the cooked meat had been distributed. As the meal came to a close, an old man with a fir branch in his hand stationed himself at the door of the house and, gently striking each one, drove out everyone passing through it who had eaten bear meat and fat -- an act which was supposed to be a sort of
[857] punishment for the misdeed committed against the bear. Once outside, however, those who came out were less gently treated,
[533] for here they were greeted with a cross fire of snowballs with which the boys pelted them, while the women drummed vigor-
[184] ously on the suspended beams. An identical meal with a similar aftermath also took place in the house where the owner of the third bear lived. Here, too, just as before, quantities of small individual heaps of food -- sturgeon, mossj, etc. -- were put out

/722 cont./

796 in the snow on either side of the path in front of the house for
574 departing guests, to be taken along by those driving by -- onl
•262 bear meat and fat were missing, for they had already received
576 in their mōps as provisions for the trip.

Because of the feast, the feeding of the dogs and the d
*796 races did not take place until shortly before noon. In the afte
53 however, for the first and only time the women actively partic
562 pated in the festive entertainments, in that they executed a da
171 to the drum music which resounded in a very strange and wild rhythm. At any one time only one dancer was in motion, hol in her hands either fir branches or castanet-like wooden clapp and the dance actually consisted of only the craziest postures contortions of the upper body in relation to the lower part. It vividly reminded Ditmar of the bear dance of the Kamchatka women, and even the music was similar, except that here it w drummed, likewise by women, on a swinging beam with cudge and sticks, whereas in Kamchatka the dancers and the spectato jointly sing. Incidentally, I must note that such an outburst of
796 merriment among the Gilyak women is probably very rare, bec
562 in general they are even more serious and se e than the men
157 and are always much busier than the latter at all sorts of work activities. And it could by no means have been the result of h
[203] spirits induced by liquor, for this is, or was at the time of my among the Gilyak, absolutely prohibited during the bear festiv a measure, as has been mentioned (2), prompted by cool reas

2. See p. 719 above.

796 and evidence of their great strength of character. Another fac
756 much more surprising and much more difficult to explain, nam that no shamanistic activities are permitted in a house where a bear festival is being celebrated. The reason for this may be t in the eyes of he Gilyak the uncanny art of the shaman would disturb the festive mood and, through the power that it exerts the spirit world as well as over the human spirit, would cause bewilderment and misfortune among the participants in the fes

/67 cont./

796 sixth sticks a sharp stick in its rectal opening to prevent ex-
782 cretion from the intestines. When the dogs are strangled, they are laid down on the snow with the same ceremony and in the same pose as the bears. A fire is ignited; they skin the killed animals and throw the meat into a kettle.

796 All participate in the feast of dog meat, both men and
[262] women, but only clansmen.

[766] The following day the head of the bear and his bones, as well as the vessels, the arrows, the thongs, and so forth -- everything is transported to a traditional storehouse which
796 serves as a sepulcher for the remains of the sacred beast. At
774 this moment the soul of the bear finally sets out on the
825 journey to its "master." Burdened with the presents given to it and accompanied by the souls of the slain dogs friskily running alongside and by the souls of the sharpened sticks (inau), it reaches the highest mountain where its "master" lives, who is also the master of the taiga -- Pal'-yz'.

796 What is the genesis of this strange festival which offers to many an amazing riddle.

796 In order to understand the idea of it, we must first of all
224 consider the fact that the bear festivals are celebrated not only on the occasion of killing a domestic bear, as people usually erroneously think, but every time that a Gilyak succeeds in killing a bear while hunting. True, in these instances the dimensions of the festival are less /68/ grandiose, but the essence remains the same. When the skin and the head of a bear killed in the taiga are brought into the village, a triumphal welcome is given with music and a solemn cere-
[782] monial. The head is placed on a sacred platform, is fed, and is given the same sacrificial offerings as upon the killing of a domestic bear; the narkh'i are similarly called together.
[766] Dogs are similarly sacrificed; the bones are preserved with the same ceremony and in the same place as the remains of a
796 domestic bear. Consequently the ceremonial of the great
825 winter festival is only the widespread ritual performed at every killing of a bear, logically stemming from that respectful attitude toward the bear which I mentioned earlier.

/71 Cont./

796 or the female line; the only kinsmen allowed to kill are the
614 "zyat'ya" /sons-in-law, brothers-in-law/, i.e., persons married to women from this clan, persons whose blood was
796 never mixed with the celebrating clan. In the second place,
614 the entire carcass of the bear, with the exception of the meat
262 of the head, is given to a different clan, the clan of "narkh'i" and, on the other hand, forbidden to the clan to whom the bear belongs. Once perhaps even the head was also prohibited for the celebrating clan. Are these prohibitions not caused by the totemistic caution against killing and eating the body of a clansman? After all, could not the slain bear accidently turn out to be a clansman of the mountain-man clan and therefore a clansman of those who are celebrating the holiday? In such a case killing him and eating his meat would be criminal and fatal for the given clan.

But for a different clan, i.e., the clan of the "narkh'i" this is permitted, because /72/ another "master" sends bears to it, its own clansman, so that it is completely safe for them to eat the meat of the bear of an alien clan.

614 The coexistence of such norms as, on one hand, the
262 permission to kill a bear, though not personally, and to eat
171 its head and, on the other hand, the prohibition against the rest of the meat may seem a strange and irresolvable contradiction. Among totemistic tribes, however, we often meet such contradictions. The Samoans, for example, on solemn occasions kill owls and honor them as their deified ancestors, while at the same time they do not dare to touch the meat. In the works by Spencer and Gillen we read that among the tribes of central Australia, among whom it is normally prohibited, for example, to kill kangeroos and to use them for food, on a certain solemn day two or three of the forbidden animals are killed, and pieces of the meat are distributed among the clansmen. There are many such examples.

/72 cont./

G 796 171 262 Gi 796 171 262 773

An indirect confirmation of our hypothesis as to the origin of the above-mentioned prohibition among the Gilyak is to be found in an interesting legend of the Orochi and the Orok, whose religious views are very similar to those of their Gilyak neighbors. According to this legend, a certain Orochi woman was once abducted (in other words, eaten) by a bear and bore two children by him. The woman was subsequently often encountered by the Orochi in the forest in the form of a she-bear who warned them not to shoot her. It happened, however, that she was shot by accident. That it was actually she was clear from the fact that women's ornaments were found in her viscera, a bracelet and so forth. Dying, she requested in her testament to the Orochi who killed her that in the future, upon killing a bear, the ritual that is usually observed now during the festival be observed, for any bear that is killed may turn out to be her descendant and, consequently, a clansman of the Orochi.

G 776

Let us return to the gods. Up until now I have mentioned the gods that are beneficial to the Gilyak. Besides these, however, there are other supernatural beings who are evil and harmful to him. These devils are "mil'k'i" and "kinr'y." These beings appear in all kinds of forms and are classified according to their degree of harmfulness. They appear sometimes in the shape of a Gilyak, sometimes in the shape of animals, from the bear to the toad and lizard. They are encountered on dry land and in the sea, under the ground and in the sky.

/73/ Some of them constitute special clans of insidious creatures, destroyers by their very nature. Others are individual degenerates, "the prodigal sons" of the clans of beneficient beings, who only in exceptional cases become enemies of man. The first, of course, offer the most danger.

G 776 761 753

Some devote themselves exclusively to robbing the Gilyak on the road (the spirits of loss -- ger-nivukh'i); others ravage storehouses, snares, and traps and harm him in all sorts of ways, while still others make attempts on his very

/80 cont./

764

those around him should be gay, jest, and laugh. Silence in the house of the deceased is a sin. When all the preparations are finished, the deceased is tied with thongs to a dog sled and his favorite dog is placed over him. For some time the little soul of the deceased will live in this dog. The dog will subsequently be tied to the place where the deceased slept and will be fed the best dishes, and after several months, when the small soul is once again settled in its place, the dog is sold.

Finally, the deceased is brought to that place where his remains will stay forever. Here his last bed on earth awaits him -- a high, symmetrically arranged pile of wood, on which he is carefully placed with his face toward the west. For the last time the wife, the husband, the mother, if the deceased is young, the wife of the elder brother, if the deceased was unmarried, climb up to him and weep, and then, making a sacred fire by means of friction, they set fire to the platform from all sides. When the fire reaches the body of the deceased, everyone hastens to pay their last tribute to him by throwing pieces of firewood into the fire. Even small children take part in this. Four men stand on the sides and, with long poles, readjust the firewood and poke the body so that it will burn faster and better. At the same time they [774] break the sled, kettles, and spears and kill the dogs, which frees the souls of these objects to follow the deceased... The ashes are covered with birch bark, and of the deceased there remains only ashes, in the literal sense of the word.

[824] /81/ A tree torn up with the roots is placed over the spot where the deceased was burned.

[262] After this the people seat themselves around the kettles containing the meat of the slain dogs, part of which is eaten and part thrown in all directions. On the way back, they drop in for only a short time at the yurt of the deceased to taste the viands placed there, and then disperse.

/91 cont./

000 very great sin; one might die." It is a sin not to be hospitable,
574 not to share edibles. And the reason is clear: the gods, as
688 we have seen, are the ones that "feed" man, and principally
372 the clan gods, who provide for not one man, but the whole
795 clan, which brings them sacrifices and which is bound to them by clan ties; to eat, therefore, without sharing with a clansman who is present and, in general, not to feed him, is a "sin" and a direct risk of losing the benevolence of the gods-sustainers. It is not by chance that in all this the "hearth" plays a great role. In the fire of the hearth lives the "master and mistress of the fire," a clansman or even an ancestor, who does not miss a single thing that takes place in the house; they, as we have seen, are the intermediaries between the clan and its clan gods, and there is nothing more natural than that the gods of the hearth should above all be the guardians of the principle of hospitality.

* 614 But the ties of the clansmen, living by the favors of
433 their gods-clansmen, are not delimited by reciprocal
476 "regaling" alone, but by the real, most extensive principle of the community of earthly benefits. If this does not find expression in a purely communistic form, it is only because there is no necessity whatever for it. Life is so simple, the conditions of acquiring food are so simple, the gifts of nature lie so widely and freely before each person, that there is no necessity for communistic production and distribution. Yet
* 614 the principle is in full force. In the communal hunting for
476 sea animals, for example, in one boat, it is the owner of the boat who is generally also the most skillful hunter, but he receives no more than the last adolescent rower, and, in addition, a part of the catch is distributed to those families whose members for one reason or another could not participate
* 614 in the hunting. Dried fish, the principal food of the Gilyak,
476 is regarded almost as communal property, and anyone whose
26 supplies have run out takes some from his neighbor without
[262] any objections. At any rate, no one goes hungry as long as any clansman has provisions. All the hungry individual has

Sakhalin

/350 cont./

125 Manchu reached them also and installed elected starosti. There
167 was such a starosta, for example, in Tangak. It was from the
648 Manchu that the Gilyak used to obtain all those objects which they could not produce themselves.

174 I shall not at this time enter into the question of how long
167 the Gilyak have inhabited the island. I shall only say that when they first appeared there they must have been in possession of the entire economic inventory which they possess at the present time (with the exception, naturally, of firearms). Needless to say, the Gilyak could not have existed on Sakhalin without sleds and boats, without trained sled dogs, and without iron tools, etc. His first cultural products must have been made in areas which were especially favorable, at least with regard to fishing. It may be that the Amur River was such a cradle.

177 The Sakhalin Gilyak, like their fellows on the continent,
41 have taken many very basic things from their civilized fellows.
325 They have replaced the bow with the gun, their dishes made of
342 wood and birch bark with metal kettles. They forge iron and
354 artfully work with carpenters' and cabinetmakers' tools. They
291 build yurts in the Manchu style and make stoves and tremendous
292 chimneys of stone. They master Japanese sabers and they preserve
262 expensive spears decorated with silver inlays. They wear robes
244 and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of groats). They have finally begun to plant potatoes. In the near future they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

177 Of all the borrowings made by the Gilyak, the use of iron
325 is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to process ores, but are even incapable of making tools. Until recently iron itself was very expensive among them. Their boats and sleds do not contain a single iron nail, though the Gilyak

Goldi RX3

/383 cont./

dwellings of the successive peoples in this direction. One need only compare the Gilyak summer-house, made of beams and resting on piles, with the dauro of the adjacent Tungusic peoples. Moreover, if the dauro of the Olcha, Negda, and Samagir, even though only made out of light /384/ materials, wooden poles, some of them perhaps of somewhat greater thickness, birch bark, etc., are nevertheless rather spacious and resemble a house on the outside, those of the Goldi shrink to small tents made of willow switches and birch bark and easily transported from place to place, and the dauro of the Orochi do not even go beyond the roof shape, the simplest of all tent forms. In the upper Amur region, among the nomadic Birar, Manegir, and Orochon, tents of conical form again appear, to be sure, but these are wholly adapted for a nomadic life, and often, for a temporary stay at a place, are limited to merely a few poles and a bark mat wrapped around them. Moreover the winter dwelling constructed on the Chinese pattern has not penetrated to these peoples or to the Orok on Sakhalin at the diametrically opposite end of the Amur region, though it has spread throughout the area in between and is customary among the Gilyak on the Sea of Okhotsk and on the northern tip of Sakhalin, and the tent with only a hide covering, in spite of the severe climate, is also their winter dwelling.

In these housing conditions of the indigenous Amur peoples it is evident that there is a feature fundamentally different between the anciently sedentary, Paleo-Asiatic Gilyak and the Tungusic peoples surrounding them, who wandered in later, indeed, in part even at a time not very long ago, and remained inclined toward the wandering, nomadic life. The differences in dwellings discussed above are closely linked to the total way of life and subsistence of the peoples mentioned. The Gilyak are predominantly fishermen and, along the seacoast, also seal hunters; correspondingly, they are almost exclusively ichthyophagous, as is their only domestic animal, the dog. Now, in order to support themselves and their many dogs, required both for making the many winter trips and trade journeys and for procuring the customary winter clothing, during the period when fish are scarce, they need a considerable supply of fish, and this is

/444 cont./

114 certainly a wholly correct one, "that all those peoples who live
263 almost exclusively on animal food -- hunters, fishermen, nomads
171 (and the Gilyak belong among them) -- either are not familiar with salt, or, if they are familiar with it, detest it, whereas peoples nourishing themselves predominantly on vegetable foods have an irresistible desire for it and regard it as an indispensable food" -- an attitude that on the basis of his excellent explanations from the chemico-physiological point of view has been fully
263 confirmed (1). With respect to the Gilyak, however, I find myself

[113]

1. Cf. also his Lehrbuch der physiolog. und patholog. Chemie /Textbook of Physiological and Pathological Chemistry/ Leipzig, 1887, pp. 109 ff.

induced by the above-mentioned explanations by Dr. Bunge to make a few remarks concerning the use, or rather the non-use,
263 of salt among them. The bear festivals are the only occasions
796 at which the Gilyak, as is to be seen from the above statements,
114 eat plant food, and, to be sure, cereals and legumes, in large
262 quantities. Is it therefore not surprising that at that time the Gilyak distaste for salt not only does not disappear, but, quite the contrary, is especially noticeable, for during a bear festival it is regarded as uitsch (unlucky) merely to add salt to the dishes? Yet, this does not seem to me to contradict Dr. Bunge's final conclusion and its chemico-physiological proof. For, first of all, the bear festivals take place for only a short time here or there, which does not alter the very predominantly animal character of the Gilyak diet on the whole; secondly, the amount of plant food eaten at them is considerable only in case the host is a very prosperous man who trades with Chinese, Russians, or Japanese, and otherwise, and in general, it is likely to fall behind the amount of animal food, especially bear meat and fat; thirdly, and finally, the bear festivals are an ancient national custom permeated, as we shall see, with a number of deep-rooted superstitions for the Gilyak, among whom any innovation would meet especially stubborn resistance.

/350 cont./

177 themselves give a reason other than the scarcity of iron for this.
325 As recently as a generation ago a steel was a valuable thing, /351/
372 and sometimes an entire clan possessed a single communal steel.
Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in
177 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 Even at the present time, the basic food of the Gilyak is
241 the ready products of nature -- fish, fowl, berries, roots; he
181 is as yet incapable of helping nature along and accelerating her
492 creation of foodstuffs. He does not plant or sow, or raise domes-
252 tic animals for meat. This is the fundamental feature of a
415 "savage" state. Moreover, Gilyak traditions of times when
323 water was boiled in troughs by means of hot stones and their
174 memories of wooden dishes coated with clay, and the absence
173 of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

/For information on the various items entering into the Gilyak diet, see category 116, pp. 645-679./

/728 cont./

produced in part by veneration for the mighty beast, in part by superstitious fear of it and its spirits of revenge. it is given the place of honor in the house, the people appear to act only with its permission, reluctantly and out of sheer necessity, as it were, and finally, all guilt and responsibility are shifted from them. On the other hand, scarcely anything of the sort is noted among the Olcha: the only superstitious conceptions referring to the bear and the bear festival which I found among them consisted in the fact that they did not want to sell me any bear meat and that they regarded it as ulisch (an idea which they have likewise received from the Gilyak) to go outside with fire taken from the hearth during the bear festival, which, they said, was by no means forbidden at any other time. In contrast to the fearful, superstitious, and, as it were, religiously colored conception of the Gilyak, the second and most important part of the bear festival has degenerated into mere ceremonial among the Olcha, a series of pedantically observed formalities, such as one might expect from the millennium-old Chinese, but not from a primitive people. Perhaps this degeneration of a custom originally foreign to the Olcha, which does not have its roots in the people, has indeed come about under Manchu-Chinese influence. Among them, too, all the foods served at the festival, with almost the sole exception of bear meat and fat, are of Manchu-Chinese /729/ origin, whereas among the Gilyak, in accordance with ancient tradition, sturgeon and hausen meat and mossj prepared from species of salmon play a prominent role at the festival. It can be observed, incidentally, that the eating of foreign, Manchu-Chinese foods is always done with greater formality even among the Gilyak, which can be explained by the fact that it automatically lifts primitive man out of his everyday routine and puts him in an elevated festive mood. The greater number of Manchu-Chinese foods at the bear festival of the Olcha in comparison with the Gilyak is undoubtedly due to the fact that their sources for these products are closer and more numerous as a result of both the permanent residence of Chinese traders in the habitation areas of the Olcha and Goldi and the more frequent and active intercourse between these peoples and the Chinese on the Sungari.

/729 cont./

After this insertion on the bear festival of the Olcha, which seemed to me necessary for a comparison with the same festive act among the Gilyak, let us again take up the thread of our description of the bear festival of the Gilyak. We still lack any knowledge of its final act: what happens to the skull and bones of the animal after the fat, meat, and internal organs of the bear have been eaten? Unfortunately I was not an eyewitness here, and I can only report what I heard from the Gilyak and what must follow from other facts. Ditmar left Tebach before this final act. He concludes his notes from there with the remark that his further presence there would apparently offend Judin and other Gilyak, and that the repeated assertions by the former that he could not wait for the end of the festival because it would drag out for a long time yet showed only too clearly the desire that he speed up his departure. On the day before, when the first bear-meat was eaten, the bear heads were still untouched and bore their snout and head bands. When I arrived among the Olcha in Uda, I did not see these heads; if they are used at all by the Olcha, they had already been removed; the skull and the lower jaw had been removed from the skin and were, as was said, set before the guests for the consumption of the meaty parts. The former was not split, and I saw nothing of the brain parts. It is not likely, however, that they would forgo these especially tasty morsels. But in order to get at them, they must split the skull. From this one may surely conclude that the teachers of the Olcha, the Gilyak, do likewise and, after the other parts of the bear have been eaten, finally skin the head and split the skull. But this final blow directed against the bear, the splitting of its skull, may be one of the acts that are preferably done in secret, or at least not in the presence of strangers, and therefore Ditmar's departure from Tebach was especially desired. Just like the removal of the bear head from the skin, so most probably is the splitting of the skull done in the house, where immediately or soon afterward its meat and the brain parts are eaten. Arguing in favor of this is the circumstance that the instrument with which the skull of the bear is split is brought into the house at the very beginning of the second act of the festival. /730/ It is a pickax (Gilyak

/730 cont./

mytsching), which is illustrated on Plate LI /p. 1251 /, Fig. 5, from a specimen that lay on the bear tack in Judin's house during the festive period. Judging by its general shape, but especially by its handle and the way the blade is attached to it, this pickax is unmixakably a specimen from ancient times and certainly in former times had a stone blade, which was later replaced with an iron one (1). Finally, when the brain of the bear has been eaten,

1. To this day the club pictured on the same plate, Fig. 4, and the sturgeon and hausen has a stone end-piece (see above, p. 806). The caption on Plate LI should be corrected accordingly.

the skull and the rest of the gnawed and assembled bones of the bear, together with the skin, are carried out of the house to a place not far from it in the forest — an act which, according to the Gilyak, is likewise carried out with a certain solemnity by the oldest people of the village. All the bones, with the exception of the skull, are buried in the ground there or simply covered with earth. The skull of the bear, however, is treated differently, in a manner about which I had no accurate knowledge until after I had had some experiences with the neighboring peoples. The above-mentioned pickax, apparently from the Stone Age, is also used for a similar purpose by the Goldi, to judge from traces of blows. They do not, however, split the skull of the bear, but content themselves, forgoing eating the brain, with beating a hole through the crown and hang it by one of the zygomatic arches on a specially selected tree. Near Buri, in the vicinity of the mouth of the Usuri, I saw such a tree with numerous bear skulls hanging on it. When I climbed it in order to bring down the best preserved specimens (2), I noticed that each of them had a large hole piercing

2. Among them was the largest (450 mm. long) of all the skulls of Ursus arctos known up to now, which has been discussed in detail in the first volume of this work (pp. 8-16).

/734 cont./

I was present at the bear festival in Tyk when the meat of the animal was already being eaten, that is, toward the end of the second act. Parts of the dismembered animal were still lying on the bear rack, and among them the skull already cleaned of the muscle meat, which I tried to buy, in vain, of course, from the owner of the animal. Several Gilyak busily eating their portions still sat on the benches, others were either crowding around them or in the passageways between the hearth and the benches, each one trying to snatch a piece of meat here or there with his knife. One of the members of the household was collecting contributions from the diners in a little trough in order to give them to the women and children, and similar troughs with pieces of bear meat were carried to the other yurts of the village. Even among the Amur Gilyak, when this time comes during the feast, formalities usually cease, and here not a trace of them remained -- everybody milled around informally in the narrow space. A meal of Manchu-Chinese products, cereals and legumes, such as it customarily served to guests in the Amur villages in lavish amounts, seemed not to have preceded the eating of the meat, since the host and owner of the bear evidently was not one of the well-to-do and only a little of these products reach Sakhalin, and that only through the Amur Gilyak and Olcha. Under these circumstances it was understandable that in Dui, where soon thereafter a bear festival was celebrated amid a great conflux of participants, a subsequent celebration took place immediately afterward for the gratification of the latter, or which, lacking other food, dogs were eaten, as has already been mentioned above (1) in connection with the discussion

1. See pp. 661 and 662.

of cynophagy among the Gilyak.

It struck me that on Sakhalin there was nothing to be seen of any of the collateral entertainments, such as dog races, all kinds of games for young and old, etc., which customarily accompany the bear festival among the Amur Gilyak. In summing up, one may conclude that among the Sakhalin Gilyak, especially, in the region with earth yurts exclusively, that is, along the

/767 cont./

them in order to sew a fur coat (for the widow) from the skins. The meat of these sacrificial animals, however, is not eaten, but left on the place of the sacrifice and naturally becomes the booty of crows and also of the other hungry dogs of the village. (2 S.R.I, pp. 10-14.)

49. Goldi. In the village of Chongar (on the right bank of the Amur), while I was passing between two yurts that were some distance apart, I was startled by human wailing that came out of the grass, which was higher than a man's height. I investigated and saw two women who sat there hunched together and wailing, starting at the sky. I watched her for a while and then inquired as to the reason for her mourning. She said in reply, buiive, that is, "dead," then stood up and explained to me that her husband had died in the next village and she was lamenting it. She did not seem to mind the interruption, and when I left, in order not to disturb her in her grief, she likewise went off (probably calmed by the interruption), giving up her lamentation, in the other direction toward the yurt (***). (1 S.R. IV, p. 17.)

*** See Appendix 38 /p. 1219/, 48 /p. 1227/.

Tombs

50. Gilyak. I learned from Jutschin the following concerning the burial of corpses among the Gilyak. The corpses are cremated, and the ashes are buried in a vessel in the ground, /768/ over which a little burial hut (raff) is erected (*). The

* See the divergent statement in Appendix 48, p. 1227.

small points on the roof of the raff, as shown in the illustration Plate LXVIII /p. 1268 /, Fig. 1) are called kargha (the r pronounced with a burr). In the interior of the raff there is a small linen-covered or cloth-covered board, pierced in the center and equipped with a peg, as a sign that a corpse is buried under the ground.

/770 cont./

the village. The raff, then, is a memorial erected for the deceased.

The cremation site was very simply marked: the ashes scraped together, enclosed in an elongated frame formed by four boards set vertically, and this covered with boards; around the boards of the frame, however, little sticks with zach were placed (see Plate LXV /p. 1265 /, to the right in the middle distance).

There was no pittysej in Gilyak. I learned that such is set up for a deceased person only if no snow has yet fallen at the time of death, otherwise it would be uitch to set up a pittysej. (2 S.R. I, pp. 4-6.)

57. Gilyak. According to Sergin's report, not every deceased person is given a raff. If a very small infant dies, the corpse is not cremated, but simply wrapped and buried in the ground, and no raff is erected for it, for the soul of such a child does not wander, but goes to heaven. If larger children die, the corpses are cremated, and one raff is erected for two of them. Each adult gets a raff, men and women. The corpse of a person who has drowned is cremated, but no raff is erected over the ashes; rather, a stick is stuck in the ground and a boat is placed next to it. If a Gilyak dies /771/ from being wounded by a bear the corpse is not cremated, but deposited in a structure which is especially erected out of beams crossing at the ends. Such a burial house is called tschchyf(*)-ngych and usually is located in

* Tschchyf--the bear.

the forest where the deceased fell in the fight with the bear. The soul of such an unfortunate person does not go to heaven. The burial house has a small opening through which all kinds of foods are deposited for the deceased, such as berries, fish, groats, etc. Inasmuch as these these articles lie next to the corpse, they acquire a strong curative power against various sicknesses, and ailing Gilyak customarily go to such a burial house and eat some of the food deposited there, which cures them at once. The depositing of food in such a structure goes on for months and years, and consequently also the visits to it for a cure.

/771 cont./

years, and consequently also the visits to it for a cure. The corpse of a person killed by an ati (tiger and leopard) is taken to a similar burial house, supplied with food, and the latter is used as a remedy. (Bm. I, pp. 54-56.)

58. Gilyak. Between Holk and Kalm (on the right bank of the Amur), I passed on the bank the tomb of a Gilyak who had met misfortune in the river. Here stood a small low house, in the manner of all Gilyak graves, surrounded by birch-bark baskets and bowls of various sizes, which were strung on the adjacent brush. This is the usual general custom of the Gilyak for designating the grave sites of persons and animals (bears, etc.). Next to the tomb lay a boat, probably the one in which the accident had occurred (**). (1. S.R. I, p. 7.)

** Cf. Pl. LXVII /p.1267 /.

59. Gilyak. The inhabitants of the villages of Kuk, Hokk, and Tschlivl (on the right bank of the Amur) are said to inter their corpses, but the others, including those of Taur-wo and the villages up to Chiare (incl.), cremate them and erect raff for them. I personally saw many raff in Chiare. In the villages named, however, the population is in part Tungusic. (2 S.R. I, p. 8.)

60. Gilyak. Near My (on the Amur-Liman) I saw a fresh Gilyak grave. The raff was not yet erected, the ashes (of the cremated corpse) were covered with boards set vertically and horizontally, and at each of their two ends there was wood shavings (ai-ch). (2 W.R. II, p. 38).

61. Gilyak. If a Gilyak is murdered, his corpse is likewise (like all others) cremated, but no raff is erected over the ashes in the forest; instead, a wagn is set up (***). It is made out of a

*** See Appendix 22 /p. 1206/.

tree trunk which is dug out of the soil with the roots. The various root-branches serve to represent the head, arms, and legs of the

[184] presented. In southern Sakhalin, individual families live in the village of [185] Tarar, Purronaysk Raion.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Tokhtinskiy Okruga of Khabarovskiy Kray.

[187] The Nivkhi language is usually classed with the group of paleo-[188] Asiatic languages. But among the languages of this group, it has a distinct [189] place.

[190] In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal [191] and verbal elements (kun-dog; pil'e-ŋun-dog). The agglutinating [192] features include the addition of affixes (kun-gu-dogs). The phonetics [193] of this language are very complex. The language has the following parts of [194] speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives [195] have many similarities with verbs. The Nivkhi nouns are not differentiated [196] in the Nivkhi language, there are no numerals common to all objects, [197] instead, there are various groups of numerals for the counting of: 1) [198] long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; [199] 3) large, round, cylindrical objects and objects of indefinite shape; 4) [200] thin, flat objects; 5) animals and insects; 6) people and manlike spirits; [201] 7) animal objects. For example, 1) q'e-ŋ'ak-ŋun (tree), k'ev'-k'e-ŋun (bullet); tyw'-ŋkkl'-ŋun (house; tamish-r'ciŋk-ŋun (tobacco leaf); kkan-s'yŋ-ŋun (dog; nivkhe-q'ŋ-ŋun (person; mas-'ŋun (man; tyw'-k'e-ŋun (sled; and 2) s'ŋ-ŋun (mushroom, etc.).

[202] The Nivkhi language has close ties with the Tungusu-Manchurian [203] peoples, the Nivkhi language contains a large number of words in common [204] with the languages of these peoples.

[205] In the Lower Amur Basin, the Nivkhi are composed of two dialects. [206] There are enough grounds to consider them the most direct descendants of [207] the neolithic population of this territory. The population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic vessels, decorated with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. [208] There are different points of view as to who is the older one of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur [209] peoples, Nikolaevskiy L. Shevek, held that Sakhalin was the original home of [210] the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Sternberg, who insisted on the continental origin of the [211] Nivkhi and their considerably later migration to Sakhalin. Historical data [212] indicate a larger northward distribution of the Nivkhi along the coast of the [213] Sea of Okhotsk in the past. It is also beyond question that the Nivkhi occupied further up the Amur than they do today. According to Chinese sources, [214] tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th [215] century. There, in every respect, they could be identified with the Nivkhi.

[216] The first Russian dots on the Nivkhi date to the 17th century. According [217] to these data, the Nivkhi did not pay tribute to China. The first Russian to [218] travel down to the mouth of the Amur was the "writing clerk" Vasiliy [219] Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Sugdan, [220] the boyar's son Ivashkin, the officer Stepanov and others. In the Cossack [221] reports of the 17th century, both the Nivkhi and the Ulchi are referred to [222] as "Gilyak peasants." According to these reports, they lived in large vil-[223] lages in wooden winter houses, flankedby barns, raised on hanging fish net-[224] ting structures for bears. The Nivkhi are engaged in fishing and hunting [225] seals; they kept many dogs, engaged in fishing, and their diet consisted [226] mainly of fish. They traded with the Chinese, Ainu and Yukagir.

[227] of a small board equipped with harpoon-tip, attached to a stick from 10 to [228] 20 meters long. The jobb was invented in the nineteenth century, but has found [229] nearly its full use on the shore. When he caught sight of his quarry, the [230] hunter carefully approached the boat and harpoonedthe seal at close range.

[231] As compared with its role among other Amur peoples, hunting played a [232] smaller part among the Nivkhi. The hunting season began in autumn, after [233] the end of the fish-runs. At this time bears come down to rivers to treat [234] themselves to the delicacy of fish, and the Nivkhi awaited them with bows or [235] guns. Sometimes they set crossbows for them. In winter, they hunted bears [236] with spears. The bear season was followed by the sable-hunting season. [237] Sable and certain other fur animals (otter, lynx and marten) played an important part in the economy of the Nivkhi. The Amur hunters, and every adult [238] man in their large, heavy boats made of boards, to hunt sable in Sakhalin, returning from there only in early spring. This hunt was the mainstay of sable [239] on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees [240] which served the sables as crossings.

[241] The main weapon in hunting was the gun, which in the early 20th century [242] replaced the compound bow and the spring-operated crossbow. The gun was primarily used in the hunt for sea otter and in children's games. Squirrel and [243] bears were hunted with a bow. Crossbows were used for small birds and large [244] animals.

[245] Domestic already began to appear among the Nivkhi in the middle of [246] the 19th century, when they first acquired domestic animals. Individual families had owned goats in the past and hired out for work in other families.

[247] The Nivkhi language contains a large number of words in common [248] with the languages of these peoples.

[249] In the Lower Amur Basin, the Nivkhi are composed of two dialects. [250] There are enough grounds to consider them the most direct descendants of [251] the neolithic population of this territory. The population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic vessels, decorated with spiral [252] ornament. Such pits have been found both along the Amur and in Sakhalin. [253] There are different points of view as to who is the older one of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur [254] peoples, Nikolaevskiy L. Shevek, held that Sakhalin was the original home of [255] the Nivkhi, whence they spread to the continent. The opposite viewpoint was [256] expressed by L. Ya. Sternberg, who insisted on the continental origin of the [257] Nivkhi and their considerably later migration to Sakhalin. Historical data [258] indicate a larger northward distribution of the Nivkhi along the coast of the [259] Sea of Okhotsk in the past. It is also beyond question that the Nivkhi occupied further up the Amur than they do today. According to Chinese sources, [260] tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th [261] century. There, in every respect, they could be identified with the Nivkhi.

The Nivkhi

[262] The Nivkhi widely employed silver and copper inlay on spear-tips. The [263] Nivkhi used spears from two and three-pronged, built dogs and dog-harness. [264] Men's work included fishing, hunting, making the tools required in these [265] occupations, including boats and means of transportation, preparation and [266] transportation of firewood, and blacksmithery. The women processed the [267] skins of fish, and sewing, made fish-skin clothes for their various uses, sewed and [268] ornamented clothing, made birchbark utensils, gathered plant products, did [269] the housework, and took care of the children.

[270] By the time the Far East was Sovietized, community relations were quite [271] strong among the Nivkhi. Most aspects of the old forms of collective [272] production and distribution had almost entirely disappeared under the impact [273] of social pressure. Some elements of the old communal organization still [274] lacked the necessary grip: were compelled to hire out as lumberjacks and [275] other hired laborers, transport goods, etc. The smallness of the income [276] from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Nivkhi. The Nivkhi lived in small, white whale and sea lion wooden sheds to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. [277] Workers were also hired, on a half-share basis. Some Nivkhi worked during [278] the fishing on hired tractors, processing the fish.

[279] Fishing was also highly important among the Nivkhi. Salmon was [280] obtained in large quantities, and also sturgeon, herring, smelt, cod, etc. [281] The last couple of the Nivkhi was always fish, most often perhaps, [282] took the place of bread. Bread was eaten rarely. Bread was prepared with

[283] With the Chinese. After the appearance of the Russians in the Amur region, [284] the Nivkhi began to use small quantities of bread, sugar and salt.

[285] The immemorial, and until recently the only, domestic animal of the [286] Nivkhi was the dog. It served as a draught animal and provided for fur [287] clothing and meat for food; it was widely used as a form of exchange [288] and played an important part in religious ideas and rituals. The number [289] of dogs in a household was an index of wealth. As a rule, every household [290] had 20-30 dogs, which demanded considerable care. They were fed chiefly [291] on fish and fish meal, but also on bones and sometimes on meat. When dogs were used most as draught animals.

[292] The dog sled, which the Nivkhi was still found in use by Shrek in [293] the middle of the 1st century, was the only means of transport in winter. [294] The sled was made of birch, and sometimes he raised himself and ran in [295] his place on the sled. The dogs were harnessed to the lowing strap alternately on [296] one side or the other. The harness was a wooden yoke, which was placed on the dog pulled with the neck.

[297] Until more recently, the Nivkhi used sled of the bear festival; in these, the Nivkhi used the old sled and the old type of harness. The harness [298] was the sled which people used when they first arrived in Sakhalin. The Nivkhi had retained goods in the past and hired out for work in other families.

[299] The Nivkhi language contains a large number of words in common [300] with the languages of these peoples. Chinese, and later Russian metal articles for their own needs; the Russians also acquired and [301] adopted by wood-carving, arrowheads, tips for harpoons, spears, and so [302] forth. The Nivkhi adopted the Russian plow, and shaft-bellows. Placed at [303] massive chunks preserved from the past speak of the high skill of the old [304] smiths.

[305] The Nivkhi widely employed silver and copper inlay on spear-tips. The [306] Nivkhi used spears from two and three-pronged, built dogs and dog-harness. [307] Men's work included fishing, hunting, making the tools required in these [308] occupations, including boats and means of transportation, preparation and [309] transportation of firewood, and blacksmithery. The women processed the [310] skins of fish, and sewing, made fish-skin clothes for their various uses, sewed and [311] ornamented clothing, made birchbark utensils, gathered plant products, did [312] the housework, and took care of the children.

[313] By the time the Far East was Sovietized, community relations were quite [314] strong among the Nivkhi. Most aspects of the old forms of collective [315] production and distribution had almost entirely disappeared under the impact [316] of social pressure. Some elements of the old communal organization still [317] lacked the necessary grip: were compelled to hire out as lumberjacks and [318] other hired laborers, transport goods, etc. The smallness of the income [319] from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Nivkhi. The Nivkhi lived in small, white whale and [320] sea lion wooden sheds to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. [321] Workers were also hired, on a half-share basis. Some Nivkhi worked during [322] the fishing on hired tractors, processing the fish.

[323] Fishing was also highly important among the Nivkhi. Salmon was [324] obtained in large quantities, and also sturgeon, herring, smelt, cod, etc. [325] The last couple of the Nivkhi was always fish, most often perhaps, [326] took the place of bread. Bread was eaten rarely. Bread was prepared with

Means of transportation and hauling:
1—river boat made of boards; 2—old dogsled; 3—club for killing seal; 4—kayak (seals used in steering sled), 5—old dog-harness; 6—fishing with nimes.

Fish was prepared with flour, fish-oil or seal-fat. A favorite delicacy was mos', prepared with fish-oil or seal-fat, herrins, rice, and sometimes crumbled yukola. Another favorite dish was talka—a salad of raw fish, garnished with wild garlic. The Nivkhi also became acquainted with rice, millet and tea from the Russians who they traded with.

[327] In 1951, the Nivkhi collective "Chir-Unef" collected 200 tonnes of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area has increased by 30%.

[328] Along with agriculture, the "Chir-Unef" collective engages in animal husbandry. In the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

[329] As scientific prerequisites for the successful organization and development of collective farms was the sufficiency of small villages, formerly scattered and fragmented into large collective farms. Before, Nivkhi villages often consisted of no more than 3-5 households. But now, the Nivkhi have begun to settle in large, well-organized villages. The old villages are being razed and the construction of new populated centers more rapidly. Nivkhi collective farmers are moving into new houses, which are more spacious, more comfortable, well-planned, and laid out in streets. In the building of new villages, primary attention is given to selecting suitable sites, and to the fact that before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and moved into the new houses, they were forced to learn how to construct the Manchu-Chinese fanza.

[330] There is a widespread of the new dwellings in the Nivkhi dwelling house. Next the houses of the collective members are various barns, sheds, etc. Every collective farm has a club, a library, a medical station, a school, a reading room, a club, an administrative building, and buildings devoted to economic needs: a collective farm grange, a dairy, a vegetable storehouse, cattle-yards, etc. Almost every collective-farm village has a bathhouse—something the Nivkhi never saw in the past. Today, more individual collective-farm families build their own private bathhouses.

[331] The material furnishings of the Nivkhi dwellings have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi dwellings, usually on the contingent, one often sees photograph and chromoxylated walls, or walls covered with wallpaper, and a variety of bought furniture, including tables and chairs. Flowers in the windows are not uncommon. There are very fond of pictures, and adorn the walls of their homes with illustrations, postcards and photographs.

[332] Today, the Nivkhi widely wear bought clothing of the Russian type. They wear also sealskin boots, which was entirely unknown in the past. Women wear traditional Nivkhi wear silk-type cloth, felt boots, high overshoes, and some footwear of rubber. The Nivkhi prefer bought clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok [333] reindeer herders. Nowadays, they have to purchase the clothing and traditional cut and materials. Many Nivkhi women make their own clothing [334] on factory-made sewing machines. In other respects, the clothing of Nivkhi, there and there, one encounters the ancient national costume. On holidays, [335] the young people love to wear robes made of fabric and richly ornamented, such robes are made even today. Clothing of fishskin is almost discontinued, as are the ancient birchbark hats.

[336] Substantial changes have taken place in the Nivkhi diet. There is greater [337] variety, more meat, more bread, and less fish. The frequency of occurrence [338] of the occurrence of illness, and particularly of tuberculosis, which had been a widespread scourge, has decreased sharply as a result of the fact that in the [339] Nivkhi dwellings, in schools and the wide network of medical institutions, [340] Already during the early years of the Soviet regime, hospitals and medical and economic centers were opened for the Nivkhi, but wide educational work was needed to overcome the Nivkhi's fear of these institutions for medical aid. Not medicine rapidly won the confidence of the Nivkhi.

782 they keep for a long time. When some one is
225 drowned the Gilyaks arrange a boat race, fight, and
765 run. In this connection I wish to note that in the
418 valleys Chayon, on the Okhotsk shore of the
Sakhalin peninsula, where I studied the cult of
drowned men in great detail, no felicitations are
allowed when a man is drowned.

7: Kreinovich--15 E-5 (1931) 1934 Gilyak

782 (Men for these troughs is prepared by men). Next, man
is emptied out of the tol-ir ('sea troughs') for which it is
prepared, as is also the sivuch. When the feasting is
completed, the troughs are turned around so that their "eyes"
are directed to the houses instead of to the sea. (3) Next,

3. The troughs are in the form of animals. As I
have already stated, the tol-ir is prepared in
the quarry in connection, this sivuch is regarded as being not
a trough, but an animal. Therefore, the "eyes" are cut
from the facts given below. True - as I was informed by a
Gilyak, the tol-ir habitu only if the sivuch have been killed. Without drawing final conclusions as to the possibility of the pile
asserting his title to an animal sivuch or to his share of the
quarry - for this we do not have sufficient data - we wish to
emphasize at this junction two incontestable circumstances.
The pile asserts his ownership of the sivuch only if he is a
hunt; second - This appropriation is effected under the guise
of a religious ceremony.

This latter circumstance clarified for me the essence of a
number of taboos among the Gilyaks.

Thus, for example, among hunters as well as women are
supposed to observe a number of taboos in connection with the
bear festival. At the same time women are not not observe
those taboos. This is not the place for the enumeration of the
taboos parts of the animal which the young hunters (as well
as women) are supposed to observe. I wish to point to the
explanations given by the Gilyaks concerning some of the in-
junctions. Thus, for instance, the young hunter must not eat
the heart of a bear, otherwise he will sustain a heart affliction
as soon as he comes on a track of a bear. And one cannot go
hunting bears with a heart so afflicted. The young hunter must
not eat the tongue of a bear, otherwise the bear will beat him
with a tongue. The young hunter must not give old men only
can eat. These instances illustrate the manner in which the
taboos are supposed to operate.

It would be ridiculous to look for special meaning in all
these taboos and explanations. The meaning of these taboos
and their interpretation is simple--the taboos serve to keep

7: Kreinovich--15 E-5 (1931) 1934 Gilyak

784 from young hunters and women the fact that the old hunters
225 who play a leading part in the hunt appropriate the tastiest
782 parts of the quarry under the guise of religious interdictions.
225 Taboos regulate the relations between the old and young
784 hunters as well as the relations between the male and female
182 parts of the clan.
8-8 Thus, in the very same year of 1931, in the village Carvu,
183 (Charbah), the old Gilyak Kosin and G'ak (Agiska) informed
775 me of interesting taboos connected with the killing of the first
sivuch.) The pila cuts the breast of the sivuch and smears
the mouth of the figurines with blood taken from the heart of
the sacrificial sivuch. The figurines were so made as to smear all
of the face of a figurine, the latter could not "see." After
performing the ceremony, the figurines were to be regarded as
belonging to the pila. However, as far as the distribution of
the quarry is concerned, this sivuch is regarded as being not
a trough, but an animal. Therefore, the "eyes" are cut
from the facts given below. True - as I was informed by a
Gilyak, the tol-ir habitu only if the sivuch have been killed. Without drawing final conclusions as to the possibility of the pila
asserting his title to an animal sivuch or to his share of the
quarry - for this we do not have sufficient data - we wish to
emphasize at this junction two incontestable circumstances.
The pila asserts his ownership of the sivuch only if he is a
hunt; second - This appropriation is effected under the guise
of a religious ceremony.

This latter circumstance clarified for me the essence of a
number of taboos among the Gilyaks.

Thus, for example, among hunters as well as women are
supposed to observe a number of taboos in connection with the
bear festival. At the same time women are not not observe
those taboos. This is not the place for the enumeration of the
taboos parts of the animal which the young hunters (as well
as women) are supposed to observe. I wish to point to the
explanations given by the Gilyaks concerning some of the in-
junctions. Thus, for instance, the young hunter must not eat
the heart of a bear, otherwise he will sustain a heart affliction
as soon as he comes on a track of a bear. And one cannot go
hunting bears with a heart so afflicted. The young hunter must
not eat the tongue of a bear, otherwise the bear will beat him
with a tongue. The young hunter must not give old men only
can eat. These instances illustrate the manner in which the
taboos are supposed to operate.

It would be ridiculous to look for special meaning in all
these taboos and explanations. The meaning of these taboos
and their interpretation is simple--the taboos serve to keep

252 cutting in half the skin on the snout of the sivuch, she peeled
237 it off. The skin peeled off the snout is hung over the door where it stays until, as the Gilyaks say, it is "lost". After taking out the eyes, the old woman cut them and poured their content into the cup containing the whiskers. Then she turned the eyes inside out and cut out first the lens and then the pupil Afterwards, she cut off the noz-nak and put it in a separate cup since it is eaten in raw form.

This done, she cut the meat covering the skull. If the skull was broken by the striker, she picked the bone splinters, sucked them one by one and put them in a separate vessel. Subsequently, the splinters together with the heads are thrown into the sea.

262 [94] If the skull was whole the old woman broke it with a
784 stone. I asked the old woman why she would use a stone rather
412 than an axe to break the skull; to which she replied that it is
252 a sin to use an axe just as it is a sin to cook the brain, for it has to be eaten raw. Brains are not the only items consumed by the Gilyaks in raw form, others are: the back, the heart, the intestines, the kidneys, the wind pipe and the noz-nak.

411 To watch the old woman break the heads of the sivuch with
177 a stone, sink her fingers in each bloody brain and draw it into
252 her mouth with a sob-like sound, I felt returned for a second to the stone-age by time machine. In fact, if we disregard guns recently acquired by the Gilyaks, and iron which they also recently learned to work into the knives using Japanese kettles as the starting material, spear tips, arrows and harpoons, we are back to the stone tip on the harpoon shaft and on the arrow, the stone axe, which is still remembered in their language (1) and we find no Japanese iron kettle. It

1. Cf. our paper - "Gilîatskîe chîslîtel'nyîe" ("Gilyak Numerals"), Published by Nauchno-issledovatel'skuî Assotsiatsii Instituta Narodov Severa TSIK SSSR, p. 10, 1932.

then becomes clear to us why the old woman uses a stone in breaking the head to get at the brains and why the Gilyaks eat the brains as well as the meat taken from the animal's back, the heart, the intestines, the kidneys, the wind pipe and other parts of the animal - raw. It is then that we see all of the Gilyak mode of life in an entirely different light.

252 Having taken out the brain and having put it in a separate trough, the old woman separated the lower jaw, tied the plant piskar around its middle and put it in the kettle to cook.

91 wear huge pewter ear-rings, five centimeters wide, which
01 are decorated with colored glass beads. Pewter and beads
31 are bought from the Chinese, but they make the ear-rings themselves. Around their necks the women wear beads of colored glass, on these are sometimes hung little wooden amulets representing human figures.

77 Pipes and tobacco pouches are so much a part of the Gilyak
76 personality that I am tempted to give them space here. Their
31 pipes are of Chinese origin and have the uniform shape of the Manchurian pipes. The stem is about an ell long, made of black horn which has been turned with a lathe; the mouth piece is of jade. The cup-shaped brass bowl of the pipe is no larger than a hazel nut. On their belts they wear a bone spike, ornamented with scrolls, which is used as a pipe cleaner. Their tobacco pouch is tied with strings to a disk of walrus tusk which is also decorated with curlicues, and this is fastened to the upper button of the jacket. As soon as they have finished their smoke, they stuff their pipe and tobacco into the slit in their jacket.

V. Food and Diet

61 If the Gilyak is short on provisions he eats only twice a day. He endures hunger relatively easily, he can hunt or pursue other activities for two days without any kind of food, only on the third day does he feel weakness and discomfort. On the other hand, as soon as the hour of plenty is at hand, he undoubtedly eats five times a day.

It would be difficult to say how much nourishment a Gilyak takes but in general they are blessed with a good appetite. From an eye witness I learned that once two Gilyak on a winter journey consumed one pood (about 16 kilograms) of frozen sturgeon in one day [110]

51 Their staple diet consists of fish: sturgeon, various types
62 of carp, whiting, but particularly salmon and mainly kita (salmo longocephalus) and gorbusha (salmo gibbosus). A freshly-caught fish is eaten raw, but the greater part of the salmon catch is dried for the cold season. For this purpose the fish are cut lengthwise and are hung about six feet from the ground; by means of air currents they become a dried non-rotten substance. This is the so-called sukola. The kita provides the bulk of these winter stores, and the fish appears at the end of summer. The fish caught in winter are stored in a frozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

251 fish. It is cut into small chips and known as
262 stroganina.

food of the dogs.

231 The Gilyak eats meat relatively infrequently. Besides
252 hazel grouse and duck, they have the meat of the elk, rein-
262 deer, dog, and bear. Fowl is usually cooked, the rest is eaten raw at times, and sometimes it is cooked. Roasting is hardly customary. Bear meat is considered a particular delicacy and it is eaten either raw or slightly roasted. Whenever they have an opportunity, the Gilyak eat dog meat. Thus, old dogs that are no longer useful as draft animals must yield their flesh and their pelt to their masters. (2) The Gilyak

2. The fondness of the Gilyak dogs for their masters is inconsistent with the "wild and troublesome behavior" which dogs are supposed to show toward dog-eaters. (Philosophie des Unbewussten. 1878, page 85.)

are very fond of the fat house-dogs which they occasionally beg from the Russians.

262 They love fat, especially seal blubber by itself or with cranberries, and this is a favorite dish of everyone. Withal, we must consider that this blubber has such a penetrating, offensive odor that a civilized nose even finds the odor of the boots which the Russian common people grease with seal blubber, unbearable even at a distance. The taste, of course, corresponds to the odor. The fat of the fish and other animals is often eaten by itself. The blubber of the dolphin is also considered a great delicacy, but it is hard to get.

They are very fond of eggs, and seek out and rob birds'
262 nests. It does not occur to them to raise chickens or ducks.
272 [111] Milk was unknown to the Gilyak before the Russians
515 occupied the country (1) except, of course, mother's milk. If

1. The Chinese and Koreans do not milk a single one of their domestic animals. The Koreans use their cows as riding animals.

they are occasionally treated to milk, they manifest pleasure. Worms, insects, etc., are not eaten; with the exception of the louse. It is an ordinary sight to see them pick a louse out of their hair, put it between their teeth, and swallow it.

262 Of farinaceous food, they eat only buda (millet). It is
439 bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

Cedar nuts and berries are their favorite dainties. Cranberries, raspberries and black alder berries are gathered for the winter. In bad years, when the salmon catch was poor, they gather and consume great numbers of berries and especially cedar nuts, as a substitute for more substantial nourishment.

272 Tea the Gilyak love almost as much as spirits. They use, of course, only the commonest variety, that is, brick tea which is sold in the form of compactly pressed bricks but has nothing added. They do not, however, drink it regularly, because they often do not have the money or the opportunity to buy it. If they also have sugar for their tea, these people are utterly happy.

263 As a condiment and spice they use practically only the leek
827 of the cherenesha. On the island of Sakhalin, according to Schrenk, the senecia pseudoarnica is also put into the soup. Salt is now regularly used. Some Gilyak maintain that since they have been eating salt, their sense of smell is no longer so acute, and that formerly they could tell what animals had passed through the bush (?).

273 Like all savages, they love spirits above all; it is also the
439 bait by which all kinds of itinerant merchants entice them. Liquor which is smuggled in from China (suli or chanshina) is very high in raw alcohol and the drunken state which it induces [112] often has elements of near-insanity. The Gilyak do not know any other intoxicating beverages.

276 Tobacco is the best-loved indulgence of young and old of
439 both sexes. It comes from neighboring Manchuria and is not very strong. Children of six to eight years already smoke, although not all adults permit this.

They do not smoke opium, probably because it is very expensive. After this general account of the various articles of nourishment and intoxication, I should like to add something about the methods of preparation of the food.

252 During the day the food is mostly eaten cold; cooking is done
264 toward evening. The cold food is at the same time usually raw.
415 Roasting is almost unknown, and the number of cooked dishes is small. They consist mostly of millet porridge and soup. One kind of soup is worth describing because of its odd manner of preparation. The assembled company put dried fish into

15: Pilsudski--4 E-5 (1895-1905) 1910 Gilyak

844 The mouth of the newly born child is cleaned of the
853 mucus with the help of a finger, whereupon the child is given the mother's breast for nursing immediately. The next day the mother washes the child with cold water, but she does not pour it directly on the body of the child, but takes it into her mouth first and only then applies it to the child, which, of course, raises the temperature of the "bath". In this way the child is washed twice a day for two years.

856 If the newly born child has a defective limb nobody tries to mend the damage. It is also not a custom among the Gilyak to form the soft head of the baby.

846 It is recommended that young women walk around a
844 great deal after they have given birth to a child, while
262 sitting is recommended for older women. Women of
273 all ages are advised to move around as much as possible before they give birth to a child.

Women are strictly forbidden to drink cold water during a period of ten days before and after the delivery. If there is no tea at hand the sick woman is given cooled boiled water if she is thirsty. During that period she is not allowed to eat red-meat-fish (salmon); salted food is forbidden as well as eating a black berry that grows in the tundra (empetrum nigrum). Taking hard liquor before giving birth to a child is considered harmful, but later on it is considered to be healthy. In general liquor is consumed very rarely, and the Gilyak on Sakhalin consume very little alcohol compared to other inhabitants of this island.

843 Miscarriages.

Natural miscarriages (ryrnnd) occur very frequently among the Gilyak; they are considered quite harmless and not even looked at as an illness. I was told that there was scarcely a woman who had not experienced one or two miscarriages in the course of her life. But not a single inhabitant with whom I discussed it knew of a woman who always miscarried and was not able to carry the fetus in her abdomen throughout the normal period of pregnancy. I do not intend to state the causes of the frequent miscarriages among the Gilyak for lack of sufficient [759] data. I will, therefore, leave the answer to this question to the

20: Bush--89-90 T-2 (1865) 1871 Gilyak
116, 226, 251, 262

"The river [LSS: the Amur] at this point is nearly a mile in width, and flows through extensive plains of meadow-land burdened with a rank growth of tall grass, beyond which on either hand, in the distance, faint blue hills limit the vision. Patches of woodland dot the plains, and, in many places, extend to the river-bank, where, beneath the thick clusters of foliage, the tasty though filthy Gilaks erect their picturesque habitations near the sandy beach. One of these we came upon shortly after leaving Marinsk. In front of each house, upon the beach, were drawn up their odd-shaped canoes, with elevated, fancifully-carved prows, and all along the shores we could see the bare-legged natives toiling at their long seines, and strewing the banks with hundreds of fine salmon, that glittered in the sunlight like heaps of silver. These fish are afterward split, and suspended on light poles under bark or straw-covered shelters to dry, where they remain until required for use, they being here, as in Kamtchatka, intended for the sustenance of both men and dogs during the long winter months. Fish and berries, with the bark and roots of various trees, constitute almost the only food of the inhabitants, and, though many of the more hardy vegetables could be had at the expense of a little toil, they content themselves with the food that nature showers upon them.

The river at certain seasons of the year is literally alive with salmon, and so little effort is required to capture them [90] that they are considered almost valueless. Fish that would adorn banquets in many places are here thrown to the dogs by hundreds."

oil, which is given the form of cakes or small loaves of bread
about one span long and equally wide and decorated on the uppe
side with some figures.

The number of roots which the Gilyak use as food is not inconsiderable. Unfortunately, I am not in a position with regard to many of them to give the taxonomic names of the plants
[137] to which they belong (3). Most of the roots, especially those

[113]

3. The names given in the following are based on the findings that were made by Maximowicz in working up his "Primitiae florae amurensis," St. Petersburg, 1859 (Mém. prés. à l'Acad. Imp. des sc. par divers savants, Vol. IX), and Fr. Schmidt for the botanical part of his "Reisen im Amur-Lande und auf der Insel Sachalin," 1868 (Mém. de l'Acad. Imp. des Sc. de St. Pét., VIIth series, Vol. XII, No. 2, p. 212), on the basis of the material collected by him and Glehn.

of various bulbous plants, are eaten cooked in fish or seal oil, for example, in particular the bulbs of Fritillaria kamtschatkensi Gawl. (Gilyak kark) and of Lilium spectabile Link. (Gilyak nork which one sees strung on cords and hanging in their storage chambers; likewise the roots of Corydalis ambigua Cham. (Gilyak tschjurk), Heracleum dissectum Led. (Gilyak ryghr), and many other roots with which I am not familiar, such as tuks udalak, /441/ mryu, plim, a(r)sj, etc. Some bulbs, such as tho

137 seasonings, and likewise the chopped and dried leaves of some

/441 cont./

263 species of leeks (Gilyak hagi), for the most part from Allium
252 schoenoprasum L. on the mainland and from Allium victoriale L.
137 on Sakhalin, are put in the broths to make them tastier, for which the Gilyak provide themselves with a considerable supply of them for the winter (1).

[103]

1. Presumably because of the quantity of this natural product one of the small islands in the southern part of the Amur-Liman was given the name of Hagi-mif (mif means land in general)by the Gilyak, a designation which the Russians have extended to the entire archipelago embracing eight small islands.

*262 The young leaves and peeled leaf stalks and stems of a
252 number of other plants are used for food by boiling them with fish or seal oil into a soup, for example, Cacalia hastata L. (Gilyak pytk), Epilobium angustifolium L. (Gilyak tschola), and, according to Glehn, also Polygonum weyrichii Schm. (Gilyak haps), Heracleum barbatum Led. (Gilyak nukr), Senecio pseudo-arnica Less. (Gilyak kengs), and Petasites japonicus S. et Z. (Gilyak löllu and tol-achs) (2). The first plant in particular seems to be

2. Glehn, op. cit., pp. 212-214,

used a great deal. I have seen it eaten by the Gilyak in the village of Tyk even in winter, after a very protracted and complicated preparation. First, the leaves were plucked off the dried plant, gathered in the summer to be stored, and cooked in water in a kettle. Then the contents were poured into a wooden trough and cooled, whereupon the water was wrung out of the leaves as out of a piece of laundry. The longish bundles of leaves thus
[264] produced were then cut into very small pieces with the large fish-knife, stirred with lyghi-tscho roe, and the whole again cooked in water to a thick soup, which was in part eaten with a spoon and in part drunk out of wooden bowls. A few days later I saw the same dish

/443 cont./

*262 animal food, and especially fish food, on the whole, constitutes the basis and mainstay of the existence of the Gilyak.

263 A noteworthy circumstance in connection with the diet of the Gilyak must still be considered here. It is the fact that they do not use any salt at all with their food and, indeed, even have a certain aversion to it. I am taking the liberty of repeating here what I wrote several years ago in a letter to Dr. Gustav Bunge (1).

1. At that time a docent in Dorpat, now a professor in Basel.

which has also been published by him (2). Despite my long stay

[113]

2. In his article "Ethnologischer Nachtrag zur Abhandlung über die Bedeutung des Kochsalzes und das Verhalten der Kalisalze im menschlichen Organismus /Ethnological Supplement to the Discussion on the Significance of Cooking Salt and the Effect of Potassium Salts on the Human Organism/" (Zeitschrift für Biologie, Vol. X, Munich, 1874, p. 115).

among the Gilyak and many an observation of their food and the preparation of dishes, I never saw them add salt to any dish or eat it in any other way. I was never asked for any by them and do not know /444/ that they ever asked for it in Nikolayevsk, where it
114 was sold. The following experience gave me further evidence of
263 how little it is required by them: since toward the end of my journey in the winter of 1856 my salt was exhausted, I asked for so in every Gilyak village that I passed through on the west coast of Sakhalin and along the Amur-Liman, but always in vain, until Pronge, on the mouth of the Amur, a hazelnut-sized lump of salt wrapped in a dirty rag, which its owner had once happened to get and had kept as a worthless curiosity, was finally brought to me. The Gilyak repeatedly expressed their repugnance for it when they saw me eat salt. From the numerous similar reports on the use or
[171] non-use of salt by various peoples Dr. Bunge draws the conclusion,

/444 cont./

rtainly a wholly correct one, "that all those peoples who live
most exclusively on animal food -- hunters, fishermen, nomads
nd the Gilyak belong among them) -- either are not familiar
th salt, or, if they are familiar with it, detest it, whereas
oples nourishing themselves predominantly on vegetable foods
ve an irresistible desire for it and regard it as an indispensable
od" -- an attitude that on the basis of his excellent explanations
m the chemico-physiological point of view has been fully
nfirmed (1). With respect to the Gilyak, however, I find myself

1. Cf. also his Lehrbuch der physiolog. und patholog. Chemie /Textbook of Physiological and Pathological Chemistry/ Leipzig, 1887, pp. 109 ff.

luced by the above-mentioned explanations by Dr. Bunge to
ke a few remarks concerning the use, or rather the non-use,
salt among them. The bear festivals are the only occasions
which the Gilyak, as is to be seen from the above statements,
plant food, and, to be sure, cereals and legumes, in large
antities. Is it therefore not surprising that at that time the
yak distaste for salt not only does not disappear, but, quite the
ntrary, is especially noticeable, for during a bear festival it is
garded as uitsch (unlucky) merely to add salt to the dishes? Yet,
s does not seem to me to contradict Dr. Bunge's final conclu-
n and its chemico-physiological proof. For, first of all, the
r festivals take place for only a short time here or there, which
es not alter the very predominantly animal character of the
yak diet on the whole; secondly, the amount of plant food eaten
them is considerable only in case the host is a very prosperous man
o trades with Chinese, Russians, or Japanese, and otherwise,
in general, it is likely to fall behind the amount of animal
d, especially bear meat and fat; thirdly, and finally, the bear
ivals are an ancient national custom permeated, as we shall
, with a number of deep-rooted superstitions for the Gilyak,
ong whom any innovation would meet especially stubborn
istance.

/444 cont./

000 resistance. It certainly existed among them long before they be-
263 came acquainted with salt, as can be seen from the fact that
101 they do not have any independent designation for it, but only a some-
[796] what modified foreign one. For the Gilyak designation taftsch for
[192] salt was probably /445/ borrowed from the Manchurian dabssun
(Mongolian: dabassu) (1). On the basis of this etymology, I would

[113] 1. Klaproth, Asia polyglotta, p. 298; Sprachatlas /Linguistic Atlas/ p. XXXXVI.

also presume that the Gilyak first became acquainted with salt at the time when a Manchu tribe, the Djutscheren, engaged in agriculture, livestock-breeding, and the like, lived along the lower Amur from the mouth of the Sungari to below the mouth of the Ussuri, from where they were transplanted to the Churcha in the middle of the seventeenth century upon orders from the Chinese government (2).

2. See p. 318 above.

In the two centuries since then salt has found no acceptance among the Gilyak -- certainly proof that there was no physiological need for it.

Whereas the Gilyak aversion to salt is so pronounced and
263 general, sugar (Gilyak ssäta), on the other hand, finds great ap-
439 proval among them, and to be sure, in the form in which they
became acquainted with it from the Russians (3). The Chinese

[192] 3. Could it not be that the Gilyak designation given for it was borrowed from the Russian ("ssachar")?

sugar already known to them earlier, brown in color and only faintly sweet in taste, had no attraction for them, and since, moreover, it is to be had only for a high price and only by way of exception from the Chinese traders along the Amur, who usually carry with them only small quantities of it for their own use,

/445 cont./

263 few Gilyak are familiar with it (4). On the other hand, they are
439
000

4. Mamia Rinsô (Siebold, Nippon, VII, p. 193) says that the Gilyak (Smerenkur) on Sakhalin found the Japanese sugar that he gave them to try very tasty, but did not ask for more of it.

123 On the other hand, they are
263 very avid for Russian sugar; at the time of my stay there, next to tobacco, it was the main object of their frequent and very importunate begging, during which, as a rule, they pushed the children forward and, to arouse sympathy, pretended that they had an eye disease, maintaining that it could be cured only with sugar.
439 Not infrequently they also bought some in Nikolayevsk in order to
250 add it to their dishes, especially to the aforementioned flour-cakes
263 and to those prepared with cranberries or bilberries and the like. They even declared that they would not hesitate to do this to the dishes prepared for the bear festival, if it were available in sufficient quantity, which shows their entirely different attitude toward sugar and salt.

128 To conclude our statements on the food of the Gilyak, there
415 follows here a brief discussion of their most important implements and utensils used for holding the foodstuffs, as well as for the preparation and consumption of the dishes. First, only the ordinary objects of this kind used in daily life will be mentioned, while the special utensils used in connection with the bear festivals will be
312 discussed later at the proper place. As was already stated above,
415 close to the entrance of the yurt there is a bucket made of birch
[824] bark and filled with water, on which hangs a couple of bowls for dipping and drinking. The water for this and for the other house-
[182] hold needs is brought from the river by the women in pails, likewise made of birch bark, hung on a shoulder yoke /Pl. XXXIII, Figs. 1 and 2/. Gilyak dshamda and kormulk, respectively). /446/ Similarly
415 consideration has been given above to the large iron kettle (Gilyak
197 ormotsch-wunj) which in the winter house is embedded in each of
[See category 116, p. 1013--Analysis]

322 /717 cont./

*796 even on the lower end of the spoons which are used by the Gilyak
412 at the bear-festival feasts. I succeeded in bringing back to our
415 museum quite a number of bear-festival bowls and spoons which
532 had belonged to the distinguished Gilyak, Ssogin in Kuik, and
[126] came into my hands only through a lucky accident. At the time of my visit the Gilyak refused any offer, however high, for a utensil used in connection with their bear festival, with the assertion that such a transaction would be too greatly uitsch. If one examines these carvings more closely, one discovers that they attempt to depict the bear in all the various situations and positions in which it is put during the bear festival: on Plate L /p.1250 /, Fig. 1, for instance, it is shown with the neck and body band; on Plate L, Fig. 3, and Plate LII /p. 1252 /, Figs. 3 and 5, attention is called to the revolving ring on the upper side of its body band. Plate LII, Fig. 4, shows it eating from the bear spoon; Plate LI /p. 1251 /, Fig. 6, shows how, led on a chain, it defends itself against its attackers, and the same figure, as well as Fig. 5 on Plate LII, shows the bear's head in the lásng and later looking down from the rack in the house. The most interesting, however, is the spoon illustrated on Plate LI, Fig. 6, not only because it can be regarded as a masterpiece of Gilyak wood-carving, but also because it alone shows almost all those situations of the bear at the festival held in connection with it and, in addition, by linking the bear's head looking down from the rack in the house with the toad depicted in the bowl of the spoon, it shows the latter as the spiritual initiator of the whale bear festival. These bowls and spoons are always made only during the bear festival, and here in /718/ Tebach two Gilyak sat on the floor in front of the bears busily occupied with the carving of such implements.

*796 In the afternoon of the same day new quantities of bear
252 meat were brought from the storage chambers and placed on the
263 floor covered with fir branches in front of the bears. As before,
784 the kettle was filled with snow, and the cooking now proceeded more energetically -- but always without any salt, the use of which is strictly forbidden, not only in the preparation of bear meat and broth, but also for all other foods during the bear festival,

/718 cont./

*796 just as it would be extremely uitsch if one wanted to fry, not only
252 bear meat, but any meat at the one or the other hearth, for the
[784] bear would hear the sizzling of the frying meat and would be
[263] shocked. When it was thought that the bear meat was done, the broth was scooped into the aforementioned bowls and drunk, but the meat was placed upon fir branches under the étagère and covered with the same. Not until evening was it put into the trough hanging in front of the bears' heads. Moreover, toward
[182] evening, six of the largest sturgeon and hausen, one of which was about eight feet long, were brought into the house and placed in front of the bears, they were offered to them as a sacrifice and were intended for the forthcoming feast.

*796 In the morning of the following day (January 29) the old
[887] men resumed their work in front of the bear hearth. The young
[251] people were likewise busy, with some of them bringing in additional firewood, others going into the nearby mountain forest in order to bring from a storehouse for bilberries, which the women had erected there in the fall, the supply required for the festival.
*796 In the meantime the dogs were fed, except for those 14 animals
231 which Judin had selected for a bravura ride on the river. They
541 were decorated with the above-mentioned red-tasselled collars and harnessed to a small, prettily decorated sled which was driven by its owner himself. The drive, amid loud drumming by the women, proceeded at top speed, first down the steep bank to the river and then on a leveled course along the latter, and ended without a mishap amid the wild applause of the assembled throng. Only then were these dogs given their meal in the house, while the people enjoyed the bear-meat broth.

*796 In the afternoon, the old men began to cut the bear fat
252 into long strips which, decorated with wood shavings (zach) and fir branches, they likewise hung in front of the bears' heads, and not until shortly before complete darkness did they take them down again to put them in a small trough decorated in the same way and placed on the floor in front of the bears. In the meantime, more life and commotion had entered into these preparations for the feast: some young men began to cut up the six

/716 cont./

anging in front of the bears so that they taste them first. Besides
he elders, only a dog remained in the house, and, to be sure, so
t appears, only to lick clean the implements used in the cooking
nd the transfer to the trough.

Early in the morning on the following day (January 28) the
ld men started their work of cutting up and cooking the meat,
hich was interrupted only by the usual feeding of the dogs in the
ouse and a race beforehand with specially decorated animals
ragging behind them only the tail of a fox or dog, as was men-
ioned above. Next, a number of articles were brought in from
he storehouses, /717/ all of which were hung or otherwise attached
o the bear rack in colorful confusion pieces of fur and the skins
f paws of previously killed bears, the chains on which they were
ed while alive, dried bear-penes wrapped in birch bark, knives
hich at the point of attachment of the blade have a bundle of
air from the bear's penis region around them, the so-called uing-
shakko of the Gilyak, with which it is uitsch to cut anything other
han bear meat and fat (see Plate LI /p. 1251/, Fig. 3), and a
umber of nicely carved spoons and peculiarly shaped bowls. The
atter were put to use immediately, being filled with the broth ob-
ained from the bear meat, which was sipped either directly or with
he help of the spoons. This service, used by the Gilyak only when
onsuming bears, is very interesting and deserves a more detailed
iscussion.

The bowls called nichyry-ngir or nichyry-ngith, i.e., bear-
poon bowls, by the Gilyak after the bear spoons (nichyr), are always
arved out of a single, often quite long piece of wood, which about
n the middle or near the one or the other end has either a rather
eep or only a shallow oval hollow (Plate L /p. 1250/, Figs. 1 and
). The former are specifically intended for eating the bear-meat
roth, the latter (the same place, Fig. 3) for the bear meat or fat.
hat makes these bowls especially interesting, however, is that
ometimes the one, sometimes the other end of the piece of wood,
nd sometimes both the front and the handle ends, are provided
ith various carvings referring to the bears and the bear festival.
he latter are also found in profusion on the handles and sometimes

262 Of farinaceous food, they eat only buda (millet). It is
439 bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

Cedar nuts and berries are their favorite dainties. Cranberries, raspberries and black alder berries are gathered for the winter. In bad years, when the salmon catch was poor, they gather and consume great numbers of berries and especially cedar nuts, as a substitute for more substantial nourishment.

272 Tea the Gilyak love almost as much as spirits. They use, of course, only the commonest variety, that is, brick tea which is sold in the form of compactly pressed bricks but has nothing added. They do not, however, drink it regularly, because they often do not have the money or the opportunity to buy it. If they also have sugar for their tea, these people are utterly happy.

263 As a condiment and spice they use practically only the leek
827 of the cherenesha. On the island of Sakhalin, according to Schrenk, the senecia pseudoarnica is also put into the soup. Salt is now regularly used. Some Gilyak maintain that since they have been eating salt, their sense of smell is no longer so acute, and that formerly they could tell what animals had passed through the bush (?).

273 Like all savages, they love spirits above all; it is also the
439 bait by which all kinds of itinerant merchants entice them. Liquor which is smuggled in from China (suli or chanshina) is very high in raw alcohol and the drunken state which it induces [112] often has elements of near-insanity. The Gilyak do not know any other intoxicating beverages.

276 Tobacco is the best-loved indulgence of young and old of
439 both sexes. It comes from neighboring Manchuria and is not very strong. Children of six to eight years already smoke, although not all adults permit this.

They do not smoke opium, probably because it is very expensive. After this general account of the various articles of nourishment and intoxication, I should like to add something about the methods of preparation of the food.

252 During the day the food is mostly eaten cold; cooking is done
264 toward evening. The cold food is at the same time usually raw.
415 Roasting is almost unknown, and the number of cooked dishes is small. They consist mostly of millet porridge and soup.

252 their mouths and chew it. Each person spits out what he has
264 chewed into an individual small basket made of birch bark.
415 The contents of all the little baskets are then gathered and put into a pot; to this are added fresh, unsalted fish, berries, cedar nuts, flour and seal blubber, and the whole is then cooked. The soup is not eaten with spoons but drunk out of wooden mugs; from these they also eat their porridge. They eat with their fingers; instead of plates and bowls for dry food they use small wooden boards with legs. Both sexes eat together; they sit crosslegged on benches on which also the bowls and little trays stand about.

VI. Dwellings

343 Gilyak villages lie along the river banks in low places
361 which, however, are usually not reached by flood waters.
417 The houses stand in a row, usually three in number, seldom 12 or more. The front of the village is usually more or less hidden by the high scaffolding on which the fish are dried. The only out-buildings are small storage houses. Neither stalls nor places to house their idols, neither kitchen gardens nor cultivated fields are to be seen around such a village. (1) The scaffolds consist of high perpendicular poles

1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the dogs are usually assembled. Some Gilyak villages have separate bear houses, a small square made of beams where a bear is kept and fattened.

333 Their house (2) somewhat resembles a common farm house,
342
354

2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has no glass at the windows, and no smoke vent in the roof. It consists of only one room. The walls are made of thin fir beams. The cracks are stuffed with moss and smeared over with clay. The floor consists of pressed clay, the roof of birch bark or coarse dried grass (calamagrostis purpurae) on which earth is sprinkled; the roof is also sometimes

439 with the Chinese. After the appearance of the Russians in the Amur region,
262 the Nivkhi began to use small quantities of bread, sugar and salt.
● [263] The immemorial, and until recently the only, domestic animal of the
231 Nivkhi was the dog. It served as a draught animal and provided for fur
clothing and meat for food; it was widely used as a medium of exchange
and played an important part in religious ideas and rituals. The number
[550] of dogs in a household was an index of wealth. As a rule, every household
[422] kept 30-40 dogs, which demanded considerable care. They were fed chiefly
fish and seal-fat; feed had to be stocked for the whole winter, when dogs
were used most as draught animals.

493 The old sled of the Nivkhi, which was still found in use by Shrenk in
[175] the middle of the last century, was so narrow that the driver sat astride
it, resting his feet on small skis; sometimes he raised himself and ran in
this position on skis. The runners of this sled were curved both in the back
492 and in front. The dogs were harnessed to the towing strap alternately on
either side, rather than in pairs. The harness was a simple collar, so that
the dog pulled with the neck.

492 Until quite recently, dog races were still a part of the bear festival; in
493 these, the Nivkhi used the old sled and the old type of harness. The harness
and the sled which appeared among the Nivkhi in the beginning of the 20th
[526] century were considerably different from the old type. They were of the
so-called Eastern Siberian type; the sled was of greater capacity and
[171] equipped with a vertical shaft-bow and paired harness, not in collars but in
yokes, which the dogs pulled with the chest.

177 The development of the carting trade brought with it a new type of sled.
492 Its greater size and stability permitted the transportation of up to 200 kg
493 of goods. It was usually drawn by 9 to 11 dogs. The best trained and most
valuable dog was the leader. The driver—kayur—usually called out his
directions to this dog. The dogs were stopped with a shouted order and a
brake pole. Dogs were sometimes also harnessed to a boat on a longer
tow strap.

492 The horse as a draught animal appeared among the Nivkhi relatively
177 recently.

In addition to dog transportation, winter travel on land was done by
281 skis—bare skis without fur lining, or skis lined with seal fur. The former
were used for short trips; the latter, for distant expeditions during the fur-
hunting season. The Nivkhi skis were distinguished by the wooden strips
nailed over the fur.

Travel along the rivers (particularly in Sakhalin) was in light hollowed
50 boats made of poplar. These dugouts were so light that they were carried
[824] by hand across barriers (shallows and isthmuses). They were propelled
with oars or poles (usually employed for upstream travel). For long-
[171] distance travel, the Nivkhi had a large boat similar to that of the Ul'chi,
Nanays and Orochi. It was made of three wide cedar boards, of which
[824] the bottom one was bent upward in front, projecting like a spade. It was
rowed with 2 to 4 pairs of oars, by lifting alternately the right and the
left ones.

361 The Nivkhi villages were usually situated near the mouths of spawn-
ing-rivers, and seldom exceeded 20 dwellings. Until recently, the dwell-
ings of kinsmen were set side by side. Some 40 to 50 years ago, the
342 Sakhalin Nivkhi still widely used the dugout house. It was made by dig-
175 ging a pit some 1.25 meters deep, over which a wooden framework was
built of thin logs, and covered on the outside with earth. The smoke vent
[354] served as a window as well; the hearth was built in the center, and
[352] plank beds were set around the walls. At the end of the 19th century,

7: Kreinovich--26 E-5 (1931) 1934 Gilyak

252 Then she pressed tubers of dry sarana into the openings for
the eyes and nose of the sivuch and put the head into the
kettle.

● 263 When the heads were cooked, Xitkun, his son and other
177 hunters started to eat. They were served meat on flat
258 wooden dishes. At the same time they were given a small
314 bottle with salt and a tiny cup containing finely cut cheremsha
While one may eat cooked meat with salt, one must not
cook meat or fish with salt. In former times the Gilyaks
had no salt. They learned the use of salt from the Chinese.
In 1926 I was told in the village Chayvo that the ancient
Gilyaks used a solution of ashes instead of salt. I was told
the same thing in 1931, in the village Kul. According to my
informants the ancient Gilyaks burned boughs and stems of
trees thrown up by the sea. They dissolved the ashes of
those trees, saturated with the salts contained in the sea,
in water taken from a well or river. When the ashes settled
at the bottom there remained, as the Gilyaks of Chayvo put
it, "water as clear as alcohol." It is this water which they
used instead of salt. I brought from the village Kul to the
Muzeĭa Antropologii i Etnografii a wooden plate of the an-
415 cient Gilyaks, black with age. This plate, which was sold
263 to me by old man Tujun, was specially made for seal meat.
In the sides of this "plate" were carved two tiny cups which
as Tujun informed me, would be filled with salt water for
dipping pieces of meat in it.

452 On the following day, after the meat was taken off the
782 heads, the Gilyaks prepared them for throwing in the sea.
225 The heads are dumped in the sea by women and not by men-
hunters. As we shall see, it is also the women who bring
pay to the fire. Xitkun prepared tiny white, thin shavings
of gosk-pas 'rowan.' These shavings are called iugrusps.
He handed the shavings to his wife Hemanɣ. The old woman
stuck the shavings in the nasal openings in the heads of the
two sivuchs and smeared them with cowberry juice. Then
she tied the lower jaws to the heads of the sivuchs using
stalks of burdock-pas. In a row with the skulls lay jugular
vertebrae (maɣt) and bone splinters from the broken skulls.
The heads were placed on a board. The other wife of Xitkun
took the board with the heads and the mug containing the
eyes and went towards the sea. I followed her. Standing at
[95] the very edge of the water she threw the heads of the
sivuch into the sea as far away from the shore as possible.
next she threw the contents of the mug into the sea as far
as possible and then she threw into the sea the skull

262 Of farinaceous food, they eat only buda (millet). It is
439 bought from itinerant Russian or Chinese merchants and
eaten as a porridge or in soup. They love potatoes and
bread, but both are more expensive than millet and therefore
they seldom have either.

Cedar nuts and berries are their favorite dainties. Cran-
berries, raspberries and black alder berries are gathered
for the winter. In bad years, when the salmon catch was poor,
they gather and consume great numbers of berries and espe-
cially cedar nuts, as a substitute for more substantial nour-
ishment.

272 Tea the Gilyak love almost as much as spirits. They use,
of course, only the commonest variety, that is, brick tea
which is sold in the form of compactly pressed bricks but
has nothing added. They do not, however, drink it regularly,
because they often do not have the money or the opportunity to
buy it. If they also have sugar for their tea, these people are
utterly happy.

● 263 As a condiment and spice they use practically only the leek
827 of the cherenesha. On the island of Sakhalin, according to
Schrenk, the senecia pseudoarnica is also put into the soup.
Salt is now regularly used. Some Gilyak maintain that since
they have been eating salt, their sense of smell is no longer
so acute, and that formerly they could tell what animals had
passed through the bush (?).

273 Like all savages, they love spirits above all; it is also the
439 bait by which all kinds of itinerant merchants entice them.
Liquor which is smuggled in from China (suli or chanshina)
is very high in raw alcohol and the drunken state which it
induces [112] often has elements of near-insanity. The Gilyak
do not know any other intoxicating beverages.

276 Tobacco is the best-loved indulgence of young and old of
439 both sexes. It comes from neighboring Manchuria and is not
very strong. Children of six to eight years already smoke,
although not all adults permit this.

They do not smoke opium, probably because it is very
expensive. After this general account of the various articles
of nourishment and intoxication, I should like to add something
about the methods of preparation of the food.

252 During the day the food is mostly eaten cold; cooking is done
264 toward evening. The cold food is at the same time usually raw.
415 Roasting is almost unknown, and the number of cooked dishes
is small. They consist mostly of millet porridge and soup.
One kind of soup is worth describing because of its odd manner
of preparation. The assembled company put dried fish into

755 softly or whispers magic formulas, walks back and forth
534 like a pendulum, far into the night. Sometimes he leaps
over a burning pile of wood, or he makes the sick person
755 run about if he is able. Some shamans impress their public
786 with more difficult tricks. They appear laden with chains,
778 whirl about like mad, and in a state of ecstasy may hurl
themselves into the fire and make believe it does them no
harm. Narcotic drinks are not given, but the sick person
sometimes gets certain herb infusions from which the
shamans expect healing effects. The magic feats are
corroborated with various prescriptions relative to the
spirits. For instance, an idol in the shape of a human being
is placed next to the sick person, its face smeared with
cranberry juice, and the sick person himself has wood chips
hung around his neck, etc. Or the shaman orders that the
clothes of the sick person be hung out in the woods and that
he be [244] dressed in others. This is done in order to
outwit the kobold who saw him only in his old clothes.

755 This medical magic is usually begun in the evening, at
789 twilight, when the imagination is more active and also when
deception can be more easily concealed. The shamans also
seek to consolidate their authority by means of various
magic tricks that otherwise have no practical meaning. For
instance, they swallow knives and needles. Not long ago
there lived a celebrated magician near Sofiyskoye who
gouged out his eyes and thrust a knife into his belly, which
was afterwards excreted. He was later exposed in these
juggling tricks by an itinerant Russian merchant. It was
shown that the knife blade, instead of penetrating his belly,
disappeared into his pants and passed into a receptacle.
After that the magician was completely discredited.

789 Finally, there are a few superstitious practices we must
372 mention. If a Gilyak goes on a journey he must drink some
● 271 water in the yurt shortly before he leaves; he does the same
thing as soon as he has returned. The hearth fire is also
to a certain extent sacred for the Gilyak; it is not carried
outside and the Gilyak do not like to have a traveler light
his cigar at it and then leave the house.

177 This chapter is also the place to say a few words about the
797 baptized Gilyak. There are not many of them, but no one
knows exactly how many, first of all because many of these
"Christians" let themselves be baptized several times, in
the city, for instance, as well as by their village divine.

272

272 NONALCOHOLIC BEVERAGES--drinking of nonalcoholic beverages (e.g., tea, coffee, lemonade, milk, blood); special techniques of preparation (e.g., boiling, percolating); consumption (e.g., quantities, occasions); food values and physiological effects; drinking etiquette; etc. See also:

Dairying	234	Meals	264
Cultivation of tea, coffee, and cacao	245	Utensils	415

/65 cont./

796 On this day, however, no one is allowed to taste the prepared
574 bear meat. This takes place on the next day, which is called the day of treating the narkh'i (narkh-arin-ku). The narkh'i seat themselves ceremoniously along the plank beds, while the host solemnly walks among the rows and distributes pieces of
[576] bear meat. More gracious hosts feed their guests with their own hands, sticking into their mouths /66/ a huge piece of fat; the guest bites off a piece, leaving it to his neighbor to finish
[262] what he has started. Only the narkh'i are allowed to eat bear
[614] meat; and his clan are denied this right; they are allowed to eat only a soup of rice or buda with the fat from the bears' carcasses. This soup is prepared and consumed in enormous quantities.

796 It is considered the greatest honor for the host to feed his
264 guests to satiety. His graciousness goes so far that when a
576 guest who has eaten too much of the fatty soup begins to vomit it, the host respectfully offers his mouth and drinks the vomit. It would be hard to imagine more refined graciousness. In intervals between feasting, dog races, games, fencing with sticks, and circle dancing are arranged.

796 All day the girls take turns playing music on the suspended
533 log and accompany their primitive music with humorous and at
273 times very frivolous songs. Not the least role in the feast is played by Russian vodka or Chinese grain vodka, which lifts
[554] the gaiety of the feasters to its apogee. To make one's guests drunk is considered the greatest honor. "At my house yesterday the narkh'i got drunk two times," the master of a bear once boasted to me.

796 Finally the last day of the festival comes, the day of departure of the narkh'i. Carcasses of bear meat and all kinds of viands prepared for their families and clansmen are placed
[782] on their sleds. At the last moment the narkh'i lead several dogs into the yurt and tie them around the plank bed of honor to the bear's skull. In addition, as a present, they put a spear, a thong, and other such items next to the head of the animal or stuck into it. Again, in farewell, the nark'i are lavishly

/374 cont./ YeT

562 loaded down with work as she is, sometimes profoundly unfortunate, with an aged and blind husband, purchased and sold, she is
[264] nevertheless not a slave. She is not shut up, as in the East; she
[593] eats at the same table with her husband and children, she participates in the conversation, and she is treated with respect as a wife and mother. The children treat her with respect. They are ready
[765] to exact vengeance for her. When she dies, they will cremate her with the same solemnity as her husband; as a sign of mourning they will undo their braids, not infrequently for life, and an occasional inconsolable husband will lay violent hands on himself out of grief for his wife. Although married, she does not sever her
[574] bonds with her former family and clan. She, along with her husband and children, visits them frequently, and in a year of misfortune she and her husband and children will find assistance and a hearty welcome there. If her husband should offend her without cause, she will find protection in the family of her father, and true protection: they will return the bride price and take her back.

595 Polygamy is found to a limited extent. The causes of polygamy lie in part in the above-mentioned conjugal rights of
[589] brothers. It is not by chance that there are so many bachelors among the Gilyak, /375/ frequently without special reasons, such as poverty, etc. Then, again, barren wives, as well as the desire to have a young healthy worker in his old age, impel the Gilyak to provide himself with two or three wives, whom he gradually acquires. It is noteworthy that in the settlements closest to the Aleksandrovsk post, even in such a large settlement as Arkyyvo, I did not encounter a single case of polygamy.

595 This is explained, of course, by the influence of the Rus-
177 sians. Polygamy often produces quarrels between wives, and the husband, of course, most frequently takes the side of the favorite wife, yet that division into lawful wives and concubines, as in the Eastern harems, does not exist among the Gilyak.

831 Two words concerning sexual morality. In their talk the Gilyak are not very irreproachable. Young maidens allow themselves to use words and expressions that are not tolerated by the

/426 cont./

of these and on occasion many other fish is so inferior both qualitatively and especially quantitatively to that obtained from the two first-named kinds of salmon that it is not very important next to that one, and therefore by "ma" the Gilyak simply refer as a rule only to the former one and differentiate it, according to the kind of fish from which it comes, as lyghi-ma and tengi-ma, always giving preference to the former over the latter. Ma, then, is the chief food of the Gilyak, their bread, so to speak (3) --

3. Steller (Beschr. von dem Lande Kamtschatka /Description of the Country of Kamchatka/, p. 157) designated the jukola, and likewise chiefly the one obtained from Salmo lagocephalus, as the "true Kamchadal bread."

the basis /427/ of their households and the red thread running through their entire dietary system. When a newly arrived Gilyak enters a yurt and has taken a seat on one of the sleeping benches, a small tray (Gilyak chach-tschitsch, Pl. XXXIV, Fig. 4)[1] with several strips of ma and a bowl of fish oil (Gilyak tom), as well as a small wooden spoon (Pl. XXXIV, Fig. 7), is immediately given to him by one of the women. With the small tray on his lap, he cuts up the jukola on it with his belt-knife and eats it in such a way that he first dips each piece into the oil, or alternatively spoons up the latter, or he dips the end of the strip of jukola in the oil, seizes it with his teeth and cuts the bite off from below upward, immediately in front of the mouth, with his knife close to the lips and passing by the tip of the nose, as has been observed among so many other primitive peoples (1). When a Gilyak

1. Thus, for example, among the Eskimo (Cranz, Hist. von Grönland /History of Greenland/, Vol. I, 192; Parry, Sec. Voyage, etc., p. 506; Seemann, Reise um die Welt /Voyage around the World/, Vol. II, p. 66; Klutschak, Als Eskimo

1. (cont.)

unter den Eskimos /As an Eskimo among the Eskimo/, p. 232), the Buryat (Radde, "Ozero Baikal" /Lake Baikal/," Viestn. Geogr. Obshch., Part 21, 1857, Sec. on Res. and Mat., p. 140; Raev", "Buriaty /The Buryat/," Viestn. Geogr. Obshch., Pt. 24, 1858, Sec. on Res. and Mat., p. 10), the Ostyak (Pallas, Reise durch versch. Prov. des Russ. Reichs /Travels through Various Provinces of the Russian Empire/, Vol. III, p. 46), the Samoyed (A. G. Schrenck, Reise nach dem Nordost. des europ. Russlands /Travels to the Northeastern Part of European Russia/, Dorpat, 1848, Vol. I, p. 311; Islavin", Samoiedy /The Samoyed/, St. Petersburg, 1847, p. 35; Abramov", "Opis. Berezovsk. kraia /Description of the Berezov Region/," Zap. Russk. Geogr. Obshch., Pt. XII, 1857, p. 354; Middendorff, Reise, etc., Vol. IV, 1453), and others. The Tungusic tribes of the Amur region do the same thing. The Nertscha /Nercha/ Tungus call it "to eat from the knife" and maintain that meat so eaten is much tastier than if it is first cut in pieces (Usol-tsev", "Putesh. po dolinie rieki Nerchi /Journey along the Valley of the Nercha River/," Viestn. Imp. Russk. Geogr. Obshch., 1857, I, p. 76).

* When a Gilyak undertakes a long trip, though he can be sure of finding a hospitable reception for himself and his dogs in every village of his countrymen, he nevertheless takes along a bundle of jukola just in case bad weather should force him to spend the night under the open sky, in which case the ma, warmed or slightly roasted over the campfire, will serve him very well.

226 2. (cont.)
February, 1856, thought that it occurred only along the coast of Sakhalin, without going up into the rivers.

221 The
222 mainland Gilyak, upon returning home from Sakhalin, not infre-
262 quently bring some pieces of choi-tscho to the Amur as a special delicacy.

Finally, with regard to those Gilyak who have their habita-
226 tion sites directly on the seacoast where there are no river deltas
262 or only small, insignificant streams, although their situation is
[361] worse inasmuch as most of the above-named fish are lacking for them and they /430/ can prepare only small stores of fish, nevertheless even in winter the sea supplies them with fresh fish.
Of greatest importance to them is a fish which is insignificant in itself and not very tasty, but which, at a time when their supplies are running short, appears in shoals directly under the ice in the vicinity of the shore and can be caught in quantity with the most primitive methods. It is the aforementioned kangi-tscho, Gadus wachnja Pall. In February and March, 1856, I saw the people and dogs living almost exclusively on this fish in Nyi on the east coast of Sakhalin and even more in Duĭ, Arkai, Tangi, and other
252 places on the west coast. It is only eaten raw and the treatment is
262 always the same, in that first a thin slice with the three dorsal fins
[231] is cut out along the back and thrown away, and then the meat is cut from either side with one slice and is eaten; the remaining head with the backbone furnishes the kangi-chark, some of which, together with the rest of the scraps, is immediately cooked into a soup for the dogs and some is stored as food supplies for them, but, of course, it is far inferior to the laghi-chark and tengi-chark. Because of the importance of the kangi fish for the coastal Gilyak, more superstitions are connected with the preparation and eating
[264] of it than with the use of most other fish. Thus, it must be eaten without any accompaniments, placed on the sleeping bench of the yurt in only an open container, a bowl or a basket, etc. Moreover,

*262 (Gilyak tym-als), is eaten with relish and in great quantities, but
[139] does not replace the former two in the mossj. Other berries, too, such as Rubus idaeus L. (Gilyak kelam), R. chamaemorus L. (Gilyak edeni-als), etc., are occasionally eaten, but are not important.

The fruit of the wild rose, Rosa cinnamomea L., called
[192] tityrsch and tsebi in Gilyak on the mainland, and on Sakhalin pilj-als, i.e., "large berry" (1), provides a tasty dish for the

[113] 1. Likewise on Sakhalin the fruit of the Rosa rugosa Thbg., according to Glehn called pilja-latsch by the Gilyak there; see Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin /Travels in the Amur Region and on Sakhalin Island/" (Mém. de l'Acad. des sc. de St. Pétersb., seventh series, Vol. XII, No. 2, pp. 213, 215).

[251] Gilyak. The hips, gathered for storage in the fall, are, as I
[252] repeatedly saw in Tyk on the west coast of Sakhalin, put in the kettle still frozen, heated, pounded, and stirred with seal oil to a mush which is eaten with spoons.

*262 The excellent teeth and powerful chewing apparatus of the
252 Gilyak are characterized by the use that they make of the fruits
● 264 of Prunus padus L. and of the cedar or cembra nuts (Gilyak tohrs),
[142] a primary product of Sakhalin (2). I have seen them eat both by
[139]

[192] 2. Among the Gilyak the corresponding trees are called tassj (Prunus padus) and chim (Pinus cembra, pumila).

handfuls, like the softest berries, without first crushing the
252 kernels or the nuts, and removing the shells. The latter is like-
*262 wise not done when a kind of cake is made out of them. In this
[192] connection the fruits of the black alder are merely crushed and, with the help of a little flour and train oil, shaped into a cake,

263 species of leeks (Gilyak hagi), for the most part from Allium
252 schoenoprasum L. on the mainland and from Allium victoriale L.
137 on Sakhalin, are put in the broths to make them tastier, for which the Gilyak provide themselves with a considerable supply of them for the winter (1).

[103] 1. Presumably because of the quantity of this natural product one of the small islands in the southern part of the Amur-Liman was given the name of Hagi-mif (mif means land in general) by the Gilyak, a designation which the Russians have extended to the entire archipelago embracing eight small islands.

*262 The young leaves and peeled leaf stalks and stems of a
252 number of other plants are used for food by boiling them with fish or seal oil into a soup, for example, Cacalia hastata L. (Gilyak pytk), Epilobium angustifolium L. (Gilyak tschola), and, according to Glehn, also Polygonum weyrichii Schm. (Gilyak haps), Heracleum barbatum Led. (Gilyak nukr), Senecio pseudo-arnica Less. (Gilyak kengs), and Petasites japonicus S. et Z. (Gilyak löllu and tol-achs) (2). The first plant in particular seems to be

2. Glehn, op. cit., pp. 212-214,

used a great deal. I have seen it eaten by the Gilyak in the village of Tyk even in winter, after a very protracted and complicated preparation. First, the leaves were plucked off the dried plant, gathered in the summer to be stored, and cooked in water in a kettle. Then the contents were poured into a wooden trough and cooled, whereupon the water was wrung out of the leaves as out of a piece of laundry. The longish bundles of leaves thus
● [264] produced were then cut into very small pieces with the large fish-knife, stirred with lyghi-tscho roe, and the whole again cooked in water to a thick soup, which was in part eaten with a spoon and in part drunk out of wooden bowls. A few days later I saw the same dish

415 the two hearths to the right and left of the entrance, but in the
199 earth yurt and in the summer yurt is placed on the platform of the hearth on top of three stones. It is always of Chinese origin and is used for the preparation of the fish broth for the dogs and some of the dishes for the people. In addition, however, the Gilyak also have smaller kettles which they use, depending on the circumstances, in the earth yurt or summer yurt in the hunting tent or, when camping, in the open, and which are in part likewise of Chinese, in part of Japanese origin, like those illustrated on Plate XXXIII, Figs. 4 and 3: matsch-wunj (i.e., small kettle) and kughi-wunj (i.e., Ainu kettle). To stir and ladle the broth
[412] made in the large kettle large wooden spoons (Pl. XXXIV, Figs. 5 and 6; Gilyak myich and mityr) are used, and for smaller kettles, smaller ladles of iron (Pl. XXXIII, Fig. 5, Gilyak komb).
415 To prepare and serve mush-like dishes, such as the above-mentioned groats and the like, the Gilyak, according to need, use larger or smaller wooden troughs (Gilyak odong and orong), which are quite similar in form to those out of which the dogs
[531] are fed and are sometimes used for this. A specimen of this kind from the village of Tebach, decorated at the ends with carved arabesques, is illustrated on Plate XXXIV, Fig. 1. I saw other
[824] foodstuffs and dishes, such as the above-mentioned flour-cakes,
[531] beans, various berries, etc., served in low, roughly square bowls made of birch bark, whose bottoms and rims were decorated with various arabesques; they are the so-called tottangr in Gilyak (Pl. XXXIII, Fig. 8). Like these vessels, which, in accordance with their use, one might designate as the bowls of the Gilyak service, so also do the vessels intended for the use of individuals as cups and plates differ in accordance with the nature of the dish to be
● 264 served. If it is only a matter of a few strips of jukola, it is suf-
415 ficient, as was already mentioned (1), to have a small wooden tray

1. See p. 647 above.

(chachtschitsch), on which they are cut up in order to be dipped in fish oil and consumed. Liquid foods, like the above-mentioned
[See category 116, P. 1014 -- Analyst]

/446 cont./

264 415 broths, are eaten from wooden bowls, Gilyak mumk-ngir (2) (Pl.

2. Ngir means bowl in general.

XXXIII, Fig. 6), and, to be sure, more often noisily drunk than eaten with a spoon. For the enjoyment of solid food, fish, meat, blubber, and the like, rectangular shallow bowls, Gilyak es-ngir (3)

[104] 3. The s is soft in this word and is to be pronounced like the French z.

415 (ibid., Fig. 7), are used. Also used for the same purpose are wooden, circular, rather shallow bowls or plates (Pl. XXXIV, Figs. 2 and 3), about a foot in diameter, which among the Gilyak bear the name aam-ngir, ring bowls or thumb-ring bowls, obviously on account of their round form similar to the above-mentioned thumb-

[439] ring (aam) (4). The Gilyak, however, do not make them them-

[192] 4. Among the Olcha they are called kota.

selves, but obtain them from the Goldi, who occupy themselves

415 with turning them. At the bear festivals they are used in great

531 numbers by the Gilyak, as well as by the Olcha, in particular for

796 eating the above-mentioned kinds of groats, though they are not by any means /447/ implements used exclusively in connection with these festivities, as might be concluded from their exotic origin and the complete lack of any ornamentation and carving. I myself saw the Gilyak use them often enough in their everyday life. In contrast to these mass-produced, undecorated bowls turned by the Goldi, all the other above-mentioned vessels made freehandedly by the Gilyak themselves always stand out because of all sorts of decorations put on them, which, however, remain far behind the artistic carvings which we shall discover on the implements used exclusively

322 at the bear festivals. For the manufacture of all the vessels pre-

412 sented above, bowls, spoons, etc., for the execution of the carvings on them and on other utensils, the Gilyak use, in addition to the

/473 cont./

481 The small ski of the Gilyak consist of two thin boards without a fur covering. They are about four and a half feet long and five to six inches wide, and are completely flat and level except for the more or less sharply tapering front end gently curving upward. Depending on the degree of this tapering at the front end, several forms of the small ski may be distinguished among the Gilyak in certain regions. Thus, the form with a gradual tapering of the tip, illustrated on Plate XXXV /see p.1015/, Figs. 1 and 2 prevails along the Amur River as far down as Wair. Below Wair, at the mouth of the Amur, along the Liman, and along the opposite coast of Sakhalin, the ski have the form shown in Fig. 3, with a more abrupt tapering, and, finally, on Sakhalin there is a third form with an even more abrupt tapering of the front end, but unfortunately, I had no opportunity to get an illustration of it. These small ski are an absolutely indispensable /474/ item for the Gilyak, and in winter it is almost only inside the yurt that he is seen without them. Not only does he need them for even the shortest walk, but he also keeps them on his feet when traveling sitting astride his sled, both so that he can get off and take a few steps in the snow if necessary, say, for example, to adjust the harness of the dogs, and also in order to facilitate the movement of the sled, to which I shall come back

481 later. Once he has reached the spot where he plans to spend the

484 night in the open, the ski, with its rear and level end, serves him

412 as a shovel for readying the campsite as required (1) and for filling

516

● 264 1. See p. 559 above.

with snow the kettle hung over the fire, and, finally, when he sits down on the fir branches in front of the blazing fire, his legs crossed under him, a ski placed across his knees serves as a tray, taking the place of the chachtschitsch in the yurt (2), for eating

2. See pp. 647 and 683 above.

the evening meal.

/639 cont./

462 since the house, which has cooled off during the night, must be heated again in the morning, the fish broth cooked for the dogs, and the latter fed in order for them to be ready for possible ex-

[251] cursions by the men. The storing of all food supplies and the

[252] preparation of food for the occupants of the house likewise fall, of course, entirely on the women. In the morning and during the day, however, the Gilyak usually eat only cold food. The

462 main meal, for which hot foods, too, are to be prepared, does

● 264 not take place until toward evening, for that is when the men

[574] return from their outside activities and when persons traveling through who have ties of hospitality with one of the occupants of the house and claim shelter for the night may arrive. Moreover, through the preparations for this meal the yurt is heated to the temperature which the Gilyak finds agreeable for the night.

294 Making the clothing for the whole family occupies the women

462 even more than the preparation of food for the human beings and dogs. First of all, this involves procuring or putting into proper

[281] condition the materials used for it: to dress the animal pelts and skins; to clean, pound, and dry the fish skins, which, besides being used for clothing, also replace window glass; to prepare the sewing thread from nettle fibers or from animal and fish skins, and so forth. This is followed by the cutting, /640/ sewing, and quilting of the various articles of clothing, which, as we have seen, are provided, in accordance with Gilyak taste, with all sorts of colorful, intertwined embroidery and other decorations

462 and embellishments. There are still other domestic duties, such as making household utensils, bowls, baskets, buckets of birch bark, sewing blankets and large and small bags and pouches out of cloth or animal pelts or skins for various uses, and the like.

462 Thus one literally never sees a Gilyak woman without work

411 even for a moment, whereas the man, upon his return from hunting

[517] or fishing, spends much time in rest and idleness and at home he has nothing to do but to make the implements needed for his own activities. Since these are very numerous and complicated, in that, among other things, they include all the varied and in part artistic wrought-iron lances, knives, harpoons, and the like, one

/710 cont./

*796 amid the drumming of the women, some of the dog races of the

[541] day before were repeated; the best runners, each equipped with fox tail or the tail of a black dog, were let loose down at the riv

● [264] and were recaught above at the house. A short informal breakfa on the leftovers of the feast concluded this interlude, whereupon the important schedule for the day began.

From all the houses of the village the people congregated

*796 around the place where the bears stood tied to their stakes. Thre

824 Gilyak carried in their hands insignia of a peculiar kind. They consisted of a straight young fir tree (Picea ajanensis) from which all the branches had been removed except the crown and the uppermost branches closest to it, which were pressed up around the crown and tied with a string. A boa (Gilyak tolp) made of

[291] squirrel tails, such as the Gilyak wear around their heads and ne

[239] or a fox tail was wound around the crown of the little tree twice in serpentine-fashion and then also fastened. Two of these peculiar banners were of the first type, the third was of the latte type. The three banner-bearers were joined by a fourth, who, as far as I could see, had only a plain long stick in his hand, bu he carried it as erect as the others their banners. While everybo now stood assembled around the bear place, the three men with their insignia entered the enclosure, went directly around the bears several times, always returning to the path that led to it a there turning around again, and, finally, planted one of their insignia in front of each of the bears. This was, so to speak, th signal for the departure: the bears were freed from their stakes and led out of the kadhra.

*796 Before going any further, the neck and body bands on the

231 bears had to be examined as to their strength. For the large bea this had been done the day before, and the animal had been pro vided with new auxiliary bands. Everything was likewise in orde on the medium-sized bear. The especially bad-tempered and stubborn small bear, however, definitely seemed to need to hav his fetters strengthened, and this is always a very dangerous exper

[156] ment. Chusisin, Judin's only son, a young and strong man who evidently still had not had enough during the days of goading th

55 softly or whispers magic formulas, walks back and forth
84 like a pendulum, far into the night. Sometimes he leaps
over a burning pile of wood, or he makes the sick person
55 run about if he is able. Some shamans impress their public
86 with more difficult tricks. They appear laden with chains,
78 whirl about like mad, and in a state of ecstasy may hurl
themselves into the fire and make believe it does them no
harm. Narcotic drinks are not given, but the sick person
sometimes gets certain herb infusions from which the
shamans expect healing effects. The magic feats are
corroborated with various prescriptions relative to the
spirits. For instance, an idol in the shape of a human being
is placed next to the sick person, its face smeared with
cranberry juice, and the sick person himself has wood chips
hung around his neck, etc. Or the shaman orders that the
clothes of the sick person be hung out in the woods and that
he be [244] dressed in others. This is done in order to
outwit the kobold who saw him only in his old clothes.

55 This medical magic is usually begun in the evening, at
89 twilight, when the imagination is more active and also when
deception can be more easily concealed. The shamans also
seek to consolidate their authority by means of various
magic tricks that otherwise have no practical meaning. For
instance, they swallow knives and needles. Not long ago
there lived a celebrated magician near Sofiyskoye who
gouged out his eyes and thrust a knife into his belly, which
was afterwards excreted. He was later exposed in these
juggling tricks by an itinerant Russian merchant. It was
shown that the knife blade, instead of penetrating his belly,
disappeared into his pants and passed into a receptacle.
After that the magician was completely discredited.

89 Finally, there are a few superstitious practices we must
72 mention. If a Gilyak goes on a journey he must drink some
71 water in the yurt shortly before he leaves; he does the same
thing as soon as he has returned. The hearth fire is also
to a certain extent sacred for the Gilyak; it is not carried
outside and the Gilyak do not like to have a traveler light
his cigar at it and then leave the house.

77 This chapter is also the place to say a few words about the
97 baptized Gilyak. There are not many of them, but no one
knows exactly how many, first of all because many of these
"Christians" let themselves be baptized several times, in
the city, for instance, as well as by their village divine.
From this we may see how much they really understand of
their new religion. We have said before that they regard

272

272 NONALCOHOLIC BEVERAGES--drinking of nonalcoholic beverages (e.g., tea, coffee, lemonade, milk, blood); special techniques of preparation (e.g., boiling, percolating); consumption (e.g., quantities, occasions); food values and physiological effects; drinking etiquette; etc. See also:

/350 cont./

175 Manchu reached them also and installed elected starosti. The
167 was such a starosta, for example, in Tangak. It was from the
648 Manchu that the Gilyak used to obtain all those objects which
could not produce themselves.

174 I shall not at this time enter into the question of how lo
167 the Gilyak have inhabited the island. I shall only say that wh
they first appeared there they must have been in possession of
entire economic inventory which they possess at the present ti
(with the exception, naturally, of firearms). Needless to say,
the Gilyak could not have existed on Sakhalin without sleds
and boats, without trained sled dogs, and without iron tools, e
His first cultural products must have been made in areas which
were especially favorable, at least with regard to fishing. It
be that the Amur River was such a cradle.

177 The Sakhalin Gilyak, like their fellows on the continent
41 have taken many very basic things from their civilized fellows
325 They have replaced the bow with the gun, their dishes made o
342 wood and birch bark with metal kettles. They forge iron and
354 artfully work with carpenters' and cabinetmakers' tools. They
291 build yurts in the Manchu style and make stoves and tremendo
● 292 chimneys of stone. They master Japanese sabers and they pres
262 expensive spears decorated with silver inlays. They wear robe
244 and shirts made of Chinese and Russian fabrics. They drink te
and boil rice and buda (a special variety of groats). They hav
finally begun to plant potatoes. In the near future they may,
haps, completely adopt the culture of their civilized neighbors
On what did they stop in their own independent cultural develo
ment?

177 Of all the borrowings made by the Gilyak, the use of iro
325 is the most important and the oldest. Because of their remote
from the centers of civilization, however, it has come to them
in an extremely limited form. They not only do not know ho
to process ore, but are even incapable of making tools. Until
cently iron itself was very expensive among them. Their boa
and sleds do not contain a single iron nail, though the Gilyak

T /462 cont./
Gi salt with their food than do those of the lower Amur. We found
263 a pronounced aversion to it among the Gilyak. The Goldi and
T the Orochi only use very little of it (1). Of the Manegir, however,

pp. 76-89.

2. "Opis. Kamchatki /Description of Kamchatka/" (Poln. sobr. uchen. putesh. po Rossi, Vol. I, pp. 308 ff.).

Gi I came across just as little of
292 anything of the kind among the Olcha and Goldi (3). Even tea,
293

T 3. I am thinking here only of beverages for
[292] pleasure, but not medicinal potions. Among
[298] the Manegir on the upper Amur I saw a moss
[222] that they gather in the forest and call mogo
[439] drying in the sun on birch-bark mats. As far as I could learn from them, they take it to the city of Aigun, where they are paid well by the inhabitants, to be drunk in an infusion, like tea. Presumably, however, this infusion is used only as medicine for some ailment.

Gi Even tea
292 which these peoples must have known for a long time through
179 their association with the Chinese (4) and which they were able
439

G 4. The Gilyak have the designation pyncht
[292] for it.
[192]

to buy in Nikolayevsk as well as in Mariinsk since the Russian occupation of the region (in the fifties), had not found acceptance among them at the time of my stay in the Amur region (5).

Gi 5. Poljakof (Putesh. na ostr. Sakhalin",
114 pp. 88-90) reported that in 1881 the Orok
179 on Sakhalin prized tea highly and, if there
292 were any, drank it regularly toward evening. But this could have appeared only since the

251 fish. It is cut into small chips and known as
262 stroganina.

food of the dogs.
231 The Gilyak eats meat relatively infrequently. Besides
252 hazel grouse and duck, they have the meat of the elk, rein-
262 deer, dog, and bear. Fowl is usually cooked, the rest is eaten raw at times, and sometimes it is cooked. Roasting is hardly customary. Bear meat is considered a particular delicacy and it is eaten either raw or slightly roasted. Whenever they have an opportunity, the Gilyak eat dog meat. Thus, old dogs that are no longer useful as draft animals must yield their flesh and their pelt to their masters. (2) The Gilyak

2. The fondness of the Gilyak dogs for their masters is inconsistent with the "wild and troublesome behavior" which dogs are supposed to show toward dog-eaters. (Philosophie des Unbewussten. 1878, page 85.)

are very fond of the fat house-dogs which they occasionally beg from the Russians.
262 They love fat, especially seal blubber by itself or with cranberries, and this is a favorite dish of everyone. Withal, we must consider that this blubber has such a penetrating, offensive odor that a civilized nose even finds the odor of the boots which the Russian common people grease with seal blubber, unbearable even at a distance. The taste, of course, corresponds to the odor. The fat of the fish and other animals is often eaten by itself. The blubber of the dolphin is also considered a great delicacy, but it is hard to get.
They are very fond of eggs, and seek out and rob birds'
262 nests. It does not occur to them to raise chickens or ducks.
272 [111] Milk was unknown to the Gilyak before the Russians
515 occupied the country (1) except, of course, mother's milk. If

1. The Chinese and Koreans do not milk a single one of their domestic animals. The Koreans use their cows as riding animals.

they are occasionally treated to milk, they manifest pleasure. Worms, insects, etc., are not eaten; with the exception of the louse. It is an ordinary sight to see them pick a louse out of their hair, put it between their teeth, and swallow it.

273

273 ALCOHOLIC BEVERAGES--types of alcoholic beverages used (e.g., beer, wine, spirits); techniques of preparation (e.g., brewing, distilling); apparatus (e.g., stills); consumption (e.g., users, quantities, occasions); drinking etiquette; craving for liquor; prevalence of drunkenness and behavior under intoxication; associated beliefs and practices; social and legal controls; etc.

/65 cont./

796 574 On this day, however, no one is allowed to taste the prepared bear meat. This takes place on the next day, which is called the day of treating the narkh'i (narkh-arin-ku). The narkh'i seat themselves ceremoniously along the plank beds, while the host solemnly walks among the rows and distributes pieces of [576] bear meat. More gracious hosts feed their guests with their own hands, sticking into their mouths /66/ a huge piece of fat; the guest bites off a piece, leaving it to his neighbor to finish [262] what he has started. Only the narkh'i are allowed to eat bear [614] meat; and his clan are denied this right; they are allowed to eat only a soup of rice or buda with the fat from the bears' carcasses. This soup is prepared and consumed in enormous quantities.

796 264 576 It is considered the greatest honor for the host to feed his guests to satiety. His graciousness goes so far that when a guest who has eaten too much of the fatty soup begins to vomit it, the host respectfully offers his mouth and drinks the vomit. It would be hard to imagine more refined graciousness. In intervals between feasting, dog races, games, fencing with sticks, and circle dancing are arranged.

796 533 273 All day the girls take turns playing music on the suspended log and accompany their primitive music with humorous and at times very frivolous songs. Not the least role in the feast is played by Russian vodka or Chinese grain vodka, which lifts [554] the gaiety of the feasters to its apogee. To make one's guests drunk is considered the greatest honor. "At my house yesterday the narkh'i got drunk two times," the master of a bear once boasted to me.

796 Finally the last day of the festival comes, the day of departure of the narkh'i. Carcasses of bear meat and all kinds of viands prepared for their families and clansmen are placed [782] on their sleds. At the last moment the narkh'i lead several dogs into the yurt and tie them around the plank bed of honor to the bear's skull. In addition, as a present, they put a spear, a thong, and other such items next to the head of the animal or stuck into it. Again, in farewell, the nark'i are lavishly

/383 cont./

422 673 delicacies and edibles, and the Gilyak, like almost all barbarians, regard such transgressions indulgently. During my journeying to the north of Sakhalin, I had the opportunity to observe this characteristic of the Gilyak. They took without permission, or asked me for, dried crusts, sugar, or tobacco, but never once did they 673 762 try to take objects of much greater value. Theft is a sin among the Gilyak, and he who commits it covers himself with disgrace. And disgrace and shame are a great punishment to the Gilyak. The Gilyak who is convicted of doing something shameful goes out into the taiga and lays hands on himself (hangs himself). Never does a Gilyak commit suicide out of fear of poverty, which, in view of the custom of mutual assistance, is a cause of fear to no one. Nor will any physical sufferings impel him to such an act, but he will yield to the feeling of shame or strong personal grief and take his life.

674 177 526 152 273 Murders among the Gilyak are very rare and never have a mercenary motivation. Murders are committed principally in the heat of passion and frequently under the most inconsequential circumstances. For example, the Gilyak have a habit of wrestling, and sometimes during the fighting the opponents grow so heated that they take to their knives. In general the Gilyak reaches for his knife at the first feeling of irritation, but he is by far not as prone to resort to weapons as the southerner. Fear of Russian justice has had a beneficent influence on him in this respect. The Gilyak youths, fearing being borne away by passion, have begun to throw down their knives before beginning to wrestle. But Russian vodka has caused frequent slayings among Amur Gilyak in an intoxicated condition. I shall not discuss the murders committed deliberately to satisfy the demands of clan vengeance or conjugal honor. Such murders are regarded by the Gilyak as lawful, although with the settlement of the Russians they have begun to disappear.

683 Insults by word or deed are also an infrequent phenomenon among the Gilyak and end in either a reconciliation or a duel. In the first case, the offending party, recognizing his guilt, atones for it, voluntarily presenting the injured party with dogs, a robe,

T Gi 263 /462 cont./ salt with their food than do those of the lower Amur. We found a pronounced aversion to it among the Gilyak. The Goldi and T 263 554 the Orochi only use very little of it (1). Of the Manegir, however,

2. "Opis. Kamchatki /Description of Kamchatka/" (Poln. sobr. uchen. putesh. po Rossi, Vol. I, pp. 308 ff.).

Gi 272 273 I came across just as little of anything of the kind among the Olcha and Goldi (3). Even tea,

T 272 278 222 439 3. I am thinking here only of beverages for pleasure, but not medicinal potions. Among the Manegir on the upper Amur I saw a moss that they gather in the forest and call mogo drying in the sun on birch-bark mats. As far as I could learn from them, they take it to the city of Aigun, where they are paid well by the inhabitants, to be drunk in an infusion, like tea. Presumably, however, this infusion is used only as medicine for some ailment.

Gi 272 177 439 Even Tea which these peoples must have known for a long time through their association with the Chinese (4) and which they were able

G 272 192 4. The Gilyak have the designation pyncht for it.

to buy in Nikolayevsk as well as in Mariinsk since the Russian occupation of the region (in the fifties), had not found acceptanc among them at the time of my stay in the Amur region (5).

Gi 114 177 272 5. Poljakof (Putesh. na ostr. Sakhalin", pp. 88-90) reported that in 1881 the Orok on Sakhalin prized tea highly and, if there were any, drank it regularly toward evening. But this could have appeared only since the

"Our tent, being new and of very thin material, leaked badly--so much so that we could keep nearly as dry, and certainly much warmer, walking outside. We tried a small fire within, but in a few moments the smoke became unbearable, and for want of better refuge Swartz and myself fled to our Gilak neighbors. Their only shelter consisted of birch-bark, sewed together in long narrow strips about two feet in length, and spread over a frame of light poles sloping to the ground and forming a shed-like covering, open in front and at each end. This was erected upon the beach, facing the high wooded bank, which served as a protection from the wind.

As we came up, one of the women was in the act of preparing the noonday meal over a small fire in front of the camp. A small pot contained several fine trout, near which was hanging a good-sized copper tea-kettle (a rare article among the Gilaks, who are, as a general thing, unable to indulge in tea). On this occasion we furnished them, in exchange for fish. [123]

Beneath the shed several deer-skins were spread over a thick layer of green boughs, upon which half a dozen humans and about as many dogs lay twisted and coiled into almost every conceivable shape. The group presented a curious, if not interesting tableau, which I will endeavor to portray in a few words, as it conveyed to us a very complete idea of the internal workings of a Gilak domicil, as well as some of their occupations."

Gilyak Men

heir mouths and chew it. Each person spits out what he has hewed into an individual small basket made of birch bark. 'he contents of all the little baskets are then gathered and ut into a pot; to this are added fresh, unsalted fish, berries, edar nuts, flour and seal blubber, and the whole is then ooked. The soup is not eaten with spoons but drunk out of ooden mugs; from these they also eat their porridge. They at with their fingers; instead of plates and bowls for dry ood they use small wooden boards with legs. Both sexes eat ogether; they sit crosslegged on benches on which also the owls and little trays stand about.

VI. Dwellings

Gilyak villages lie along the river banks in low places hich, however, are usually not reached by flood waters. he houses stand in a row, usually three in number, seldom or more. The front of the village is usually more or less dden by the high scaffolding on which the fish are dried. he only out-buildings are small storage houses. Neither alls nor places to house their idols, neither kitchen rdens nor cultivated fields are to be seen around such a llage. (1) The scaffolds consist of high perpendicular poles

1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

which are cross bars. Below and around [113] these the gs are usually assembled. Some Gilyak villages have parate bear houses, a small square made of beams where bear is kept and fattened.

Their house (2) somewhat resembles a common farm house,

2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

t it is shabbier and gloomier; it is broader and lower, has glass at the windows, and no smoke vent in the roof. It nsists of only one room. The walls are made of thin fir ams. The cracks are stuffed with moss and smeared over th clay. The floor consists of pressed clay, the roof of rch bark or coarse dried grass (calamagrostis purpurae), which earth is sprinkled; the roof is also sometimes ighted with stones, to offer resistance to the wind. The few

2 Of farinaceous food, they eat only buda (millet). It is
9 bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

Cedar nuts and berries are their favorite dainties. Cranberries, raspberries and black alder berries are gathered for the winter. In bad years, when the salmon catch was poor, they gather and consume great numbers of berries and especially cedar nuts, as a substitute for more substantial nourishment.

2 Tea the Gilyak love almost as much as spirits. They use, of course, only the commonest variety, that is, brick tea which is sold in the form of compactly pressed bricks but has nothing added. They do not, however, drink it regularly, because they often do not have the money or the opportunity to buy it. If they also have sugar for their tea, these people are utterly happy.

3 As a condiment and spice they use practically only the leek
7 of the cherenesha. On the island of Sakhalin, according to Schrenk, the senecia pseudoarnica is also put into the soup. Salt is now regularly used. Some Gilyak maintain that since they have been eating salt, their sense of smell is no longer so acute, and that formerly they could tell what animals had passed through the bush (?).

3 Like all savages, they love spirits above all; it is also the
9 bait by which all kinds of itinerant merchants entice them. Liquor which is smuggled in from China (suli or chanshina) is very high in raw alcohol and the drunken state which it induces [112] often has elements of near-insanity. The Gilyak do not know any other intoxicating beverages.

6 Tobacco is the best-loved indulgence of young and old of
9 both sexes. It comes from neighboring Manchuria and is not very strong. Children of six to eight years already smoke, although not all adults permit this.

They do not smoke opium, probably because it is very expensive. After this general account of the various articles of nourishment and intoxication, I should like to add something about the methods of preparation of the food.

2 During the day the food is mostly eaten cold; cooking is done
4 toward evening. The cold food is at the same time usually raw Roasting is almost unknown, and the number of cooked dishes is small They consist mostly of millet porridge and soup. One kind of soup is worth describing because of its odd manner of preparation. The assembled company put dried fish into

/716 cont./

hanging in front of the bears so that they taste them first. Besides the elders, only a dog remained in the house, and, to be sure, so it appears, only to lick clean the implements used in the cooking and the transfer to the trough.

Early in the morning on the following day (January 28) the old men started their work of cutting up and cooking the meat, which was interrupted only by the usual feeding of the dogs in the house and a race beforehand with specially decorated animals dragging behind them only the tail of a fox or dog, as was mentioned above. Next, a number of articles were brought in from the storehouses, /717/ all of which were hung or otherwise attached to the bear rack in colorful confusion pieces of fur and the skins of paws of previously killed bears, the chains on which they were led while alive, dried bear-penes wrapped in birch bark, knives which at the point of attachment of the blade have a bundle of hair from the bear's penis region around them, the so-called uĭng-dshakkò of the Gilyak, with which it is uĭtsch to cut anything other than bear meat and fat (see Plate LI /p. 1251/, Fig. 3), and a number of nicely carved spoons and peculiarly shaped bowls. The latter were put to use immediately, being filled with the broth obtained from the bear meat, which was sipped either directly or with the help of the spoons. This service, used by the Gilyak only when consuming bears, is very interesting and deserves a more detailed discussion.

The bowls called nichyry-ngir or nichyry-ngith, i.e., bear-spoon bowls, by the Gilyak after the bear spoons (nichyr), are always carved out of a single, often quite long piece of wood, which about in the middle or near the one or the other end has either a rather deep or only a shallow oval hollow (Plate L /p. 1250/, Figs. 1 and 2). The former are specifically intended for eating the bear-meat broth, the latter (the same place, Fig. 3) for the bear meat or fat. What makes these bowls especially interesting, however, is that sometimes the one, sometimes the other end of the piece of wood, and sometimes both the front and the handle ends, are provided with various carvings referring to the bears and the bear festival. The latter are also found in profusion on the handles and sometimes

262 Of farinaceous food, they eat only buda (millet). It is
439 bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

412 origin, or, on the mainland, Chinese, with a rather long, straight
177 handle and a thick blade almost equally broad to the end, as is shown on Plate XXX in the hand of a Goldi boy. At that time there were practically no Russian axes, with a short, somewhat sloping handle and a blade broadening greatly toward the end.
342 Thus, in the shortest time, there arose a lodging which offered the Gilyak sufficient protection against the weather and in form and construction reminded one strongly of their earth yurts. Like the former in the snow, the latter are sunk into the ground to insure protection against wind and weather. Perhaps /325/ this was how the idea of erecting earth yurts such as we find among the Gilyak arose. In any case their complete similarity with these emergency tents in form, ground plan, and construction speaks for their quite primitive character.

342 As simple and primitive as the Gilyak earth-yurt is, it never-
354 theless offers many advantages, especially when its dimensions
521 are somewhat larger. The location of part of it in the ground, the carefully built, tightly closed roof provided with a thick layer of snow on the outside, and the absence of any window openings give the cold outer air, with even the strongest wind, no lateral entry into the inner part of the yurt, provided that the door is closed, and the fire maintained continually on the hearth warms and venti-
[352] lates the small room and makes a sojourn in it cozy. At the same time the hearth located in the center of the yurt gives it a unified character: the entire company is gathered around the blazing fire which is equidistant from all three benches; all face one another, all receive warmth and light from the same source. This inevitably
[276] leads to greater communicativeness, to a mutual exchange of adventures, views, and experiences, and I have often seen the Gilyak sitting this way in general conversation around the fire far into the night and the tobacco pipe passing from hand to hand, often partici-
342 pating in their conversation myself insofar as possible. But aside
354 from these advantages the earth yurt has many drawbacks. The most unpleasant of these is the frequent, severe, and rapid change of temperature to which it is exposed. Whenever the door is opened, a cold stream of air comes into the yurt and moves along the floor. To be sure, it is lessened by the roofed-over passageway

, one may safely assume that, like the Daur and Manchu ngari region, the tribal relatives of the Manchu who were distributed from the Sungari along the southern Amur far below the mouth of the Ussuri, approximately to the oldi village of Dondon, the Djutscheren, who lived in ming and livestock-raising villages (4), also cultivated

4. See pp. 316 ff. above.

among other things. Finally, it must have also spread Sungari and from Korea to the upper Ussuri and down this he Amur. There can be no doubt but that even before an military expeditions in the seventeenth century the d become acquainted with tobacco and its cultivation Manchu (Djutscheren) neighboring them, indeed, in part ng mixed in with them. Even today, tobacco is culti- t only by individual Chinese living in the area, but also themselves, on the Ussuri as well as on the Amur, and tter, strangely enough, exactly as far as the dwelling he Djutscheren formerly extended. For, going upstream, the first Goldi cultivation of tobacco in the village of ch lies on the right bank of the Amur, opposite the above- ed Dondon located on an island. Like the Goldi, the ving on the sources and tributaries of the Ussuri also ob- bacco in this way. Furthermore, the other peoples of Amur region, the Olcha, Samagir, Negda, and Gilyak, t with the Goldi as well as with the Manchu and Chinese mur and Sungari, must have also become acquainted with as early as the seventeenth century even though tobacco be cultivated among them because of climatic and sons. Finally, through the Gilyak and Olcha of the tobacco also reached their countrymen, the Gilyak of Sakhalin, whereas the third people of the island, the obably received it from /468/ another source, directly Japanese (1). Later, after the Manchurian tobacco had

1. The designation for tobacco, as among

G Gi /468 cont./
276 17 192 SS [192]

1. (cont.)
the Manchu (dambagu) and Mongols (tamachi), is always the same, with very minor variations, among all the Amur peoples, too; thus, among the Goldi and Olcha damche, tamche, and tamache, among the Gilyak tam(a)ch, among the Ainu tambaku, etc.

G Gi SS 276 439

Later, after the Manchurian tobacco had already spread among all the Amur peoples and had become an indispensable necessity for them, Russian tobacco entered the Amur region from the west and north, both as a result of the constant intercourse maintained by the Russian Cossacks, hunters, and traders with the Orochon, Manegir, and other tribes of the upper Amur region, and through the Yakut merchants who in part followed these nomads and in part visited certain trading points at which they established relations with them as well as with other peoples of the lower Amur region (2). Nevertheless, up

2. See pp. 160-166 above.

until the Russian occupation of the Amur region in the fifties, Manchurian tobacco was definitely predominant among all the peoples there, and it was only after this event that the Russian (Circassian) tobacco began to replace it very rapidly, first and especially of course, among those peoples who did not cultivate tobacco themselves, hence among the Gilyak, Olcha, etc. What made it especially popular among them is its much greater strength or acridness in comparison with the Manchurian tobacco, as well as its being far cheaper. The great popularity of Russian tobacco and the general and heavy demand for it among the peoples named soon made it the most important and most necessary article of trade in dealing with them.

G SS 276 177

Like tobacco, the Gilyak and the other peoples of the Amur region also adopted from the Manchu the form of the pipe (Gilyak tai), which is also widespread throughout China and consists of two metal pieces connected by a thin, black-colored,

G SS 276 177 /468 cont./

wooden piece. The lower piece, bow-shaped, runs into a small bowl-shaped head, which is turned upward. The upper piece, o mouthpiece, is of metal (brass) only for a common man; every

G [554] [321]

well-to-do Gilyak strives to imitate the Chinese and to procure his pipe a stone mouthpiece made of jadeite or perhaps even of chalcedony, carnelian, or nephrite, such as are made in the Sungari region (3), especially in Tsitsikar and other places (4).

3. Barabash", "Sungarsk. eksp." (Voen. Sborn., 1874, No. 2, p. 351).

G 276 192

4. The lower metallic piece, with the bowl, is called kott in Gilyak, the mouthpiece ilmf, the wooden middle piece connecting them twamdasir.

A 276 439

The greatest correspondence prevails among all the peoples of th Amur region in the form of the pipe, since the parts making it up always come from the Sungari region, where they are factory made. Only the Ainu on Sakhalin have differently shaped pipes, because they get them from another source, from the Japanese. I saw pipes of two forms among them: one with a very small head, squared off at the top, into which the tip of the little finger scarcely fitted, and then also one with a larger, bowl-shaped head. In addition, however, they /469/ also make their own pipe heads from the wood of the Hydrangea paniculata Sieb. et Zucc., which are used by the women in particular (1).

A [824]

A [171] [127]

1. Fr. Schmidt, to whom I owe this information, adds that he saw these pipe heads in use even in Kussunai and Manue, even though the Hydrangea paniculata occurs only in Aniwa Bay and on the west coast of Sakhalin south of Notosama. See his "Reisen im Amur-Lande und auf der Insel Sachalin" (Mém. de l'Acad. Imp. des sc. de St. Pétersb., VII Th. Series, Vol. XII, No. 2, p. 99).

A [113]

/464 cont./

made out of willow switches and lined on the inside with strong paper, or in square chests made of six boards and likewise with paper stuck on the inside, on which an opening, closable by a bolt, is found on top on one of the edges (4). One of the purposes

of a Sungari journey by the Gilyak, Olcha, or Goldi is to buy such a chest (Gilyak kylmr-wakke) (5) of araki, for the liquor

5. Wakke means box or chest in general.

is naturally much cheaper at the place of production than among the Chinese retail merchants along the Amur.

Along with the liquor the Gilyak and the other peoples of the lower Amur region have also adopted the manner of drinking it from the Chinese. Like them, they always drink it warm (6) out

6. Marco Polo already remarks that the Chinese do not drink the "rak" (arrack) until after they have first heated it (Marco Polo's Reisen, the German by Bürck, p. 341, note 284).

of tiny porcelain bowls which they likewise buy from the Chinese for the purpose, just like the metal can in which the liquor is heated beforehand by putting the can into hot water or in the hot ashes of a basin filled with glowing coals always kept handy for this purpose as well as for lighting the pipe (7). This is how the Chinese

7. The Chinese way of drinking liquor has often been described, for instance, by Huc (L'Empire Chinois, Paris, 1854, Vol. II, p. 390) and others.

G SS /464 cont./ This is how the Chinese
273 merchant on the Amur does it as he deals with his customers
177 and offers them an occasional sip from his little bowl; this is
439 how he is imitated by all well-to-do Goldi, Samagir, Olcha, or Gilyak who are able to provide themselves with the precious beverage and the utensils required for drinking it, and this is precisely how Mamia Rinsô describes the manner in which the Smerenkur on /465/ Sakhalin drink their "arka" brought from the Amur. I also saw the libation preceding the drinking, which consists of first moistening the tips of the thumb and forefinger with liquor and a few drops are sprinkled to the right and to the left, up and down, and toward one's own chest, more or less carefully executed, just as by the Manchu and Chinese on the Amur, also by the Gilyak, Olcha, Goldi, and even Orochi in Hadshi Bay. Thus, the enjoyment of liquor among these peoples is done in a definite way sanctioned by usage, from peculiar foreign utensils required for it, and with the observance of certain formalities prompted by superstition. Undoubtedly this circumstance, besides the others mentioned above, the procurement of the liquor from a great distance and its high price in the retail business of the Chinese merchants on the Amur, must have had a beneficial effect on the consumption of liquor among the Amur peoples in impeding and limiting ways and trained them to moderation in the enjoyment of it. In fact, I must testify to such moderation among them, and especially among the Gilyak, whom I knew best, during the time of my stay in the Amur region. Despite the fact that with the settlement of the Russians along the lower Amur, in Nikolayevsk and Mariinsk, a new and very close source for this prized and popular drink opened up for them, there was nevertheless so little drunkenness among them during the first few years afterwards that I never came across a single case of it, despite my many contacts with them, not even during the numerous bear festivals which I attended. This last seems especially striking to me, but is explained by the fact that, according to their own statements, the drinking of spirits during the bear festival is regarded by them as uitsch (unlucky) -- a conception which may owe its origin to the feeling for the

G 273 982 171 / G 273 (170) / G 273 439 / G 273 796

/465 cont./

273 preservation and augmentation of their property, which is peculiar
796 to the Gilyak to a high degree; for with the large number of participants at such festivals the host's expensive supply of araki would be gone in no time, apart from other dangers. Furthermore, thanks to this characteristic of the Gilyak and the rare energy of their character, there appeared at the very beginning of their relations with the Russians a phenomenon which may hardly be equaled in the history of the relations between primitive and civilized peoples: instead of being exploited by the Russians through liquor and losing everything, they, on the contrary, knew how to win many an advantage from the Russian sailors and Cossacks with their small supplies of Chinese liquor. Their moderation and power of resistance were also greatly aided by the fact that during the first years of the Russian occupation of the Amur region only very little liquor was imported, while the number of the Russian consumers of it grew rapidly (1). Later, however, after

159 273 439 648

1. For instance, in 1855 the crews of several war vessels from Kamchatka and several detachments of Cossacks from Transbaikalia were added to the previous garrison of the lower Amur region.

the end of the Crimean War, when the importation of liquor into Nikolayevsk, handled by many and in particular North American and Hamburg trading ships, /466/ greatly increased, and, simultaneously, the ancient, original ways of life and views of the Gilyak were more and more undermined and began to disappear under the impact of Russian immigration and colonization, it was also the end of their moderation and power of resistance to alcohol, and as early as the sixties one could read in the local newspapers, as well as in the reports of returning travelers and other eyewitnesses, of the ever increasing drunkenness and gluttony among the Gilyak, especially during their bear festivals and other celebrations (1).

[113] 1. Cf., for instance, Arth. Nordmann,

"Ueber den Fischfang und die Jagd der am Amur wohnenden Giljaken /On the Fishing and Hunting of the Gilyak Living on the Amur/" (Bullet. de la Soc. Imp. des Natural. de Moscou, Vol. XXXIV, Part II, 1861, p. 254); also Vostochnoe Pomor'e, 1866, p. 59 and elsewhere.

SS 276 19

Tobacco smoking is common among all the peoples of the Amur region, and, indeed, both men and women smoke, and even the children are given the opportunity to become accustome to it at an early age. It seems obvious to me where these people first learned about the tobacco plant and its use. As is well-know Manchuria is the country from which China, at least the northern part, obtained the tobacco plant and the custom of smoking tobacco, and, indeed, this is said to have happened only about two and a half centuries ago when the now reigning Manchu dyna ascended the throne (1644), upon whose orders the introduction o tobacco into China took place (2) and under whose protection the

3. Under Emperor Kia-king (1796-1820)

439 /599 cont./
435 pieces for elegant women's caps -- but rather because they want
291 them for trade with the Japanese -- a matter that I shall come back to in the following and which gives the best proof for their outstanding talent for trade.

439 5) Something similar is the basis for their very high evalua-
●273 tion of the liquor (araki /arrack/) in the barter trade with the
435 Chinese. One would be very much mistaken if he concluded from this evaluation of the liquor that they were strongly addicted to drinking it and therefore readily let themselves be plundered by means of it. To be sure, they do not reject liquor, but they used it, as was pointed out above (1), in moderate fashion at the time

1. See p. 719 above.

of my stay among them. On the other hand, their gaze, constantly looking for advantages and profit, could not miss the value of so generally popular a commodity in the trade relations with both their own countrymen living farther away from the source of supply and in particular their less energetic Tungusic neighbors. Thus, their genius for trade also proved itself with respect to liquor and, as has already been mentioned, with the help of it they were even able to obtain many an advantage in their barter with the Russian Cossacks and sailors.

435 6) The articles that they themselves make for their household and the rest of their life and activities, such as utensils of all kinds, pieces of clothing, etc., however neatly made and adorned with decorations they might be, are not very highly valued by the Gilyak, unless they contain a precious material acquired from the Chinese, such as bows covered with buffalo horn, or the lances furnished with inlaid figures of silver, etc. It is not the fineness and beauty of the work or the time and labor spent on them, but the bit of silver or horn that gives these objects their high value in the eyes of the Gilyak.

*796 /722 cont./
594 in the snow on either side of the path in front of the house for the
262 departing guests, to be taken along by those driving by -- only
596 bear meat and fat were missing, for they had already received this in their mōps as provisions for the trip.

*796 Because of the feast, the feeding of the dogs and the dog
53 races did not take place until shortly before noon. In the afternoon,
562 however, for the first and only time the women actively partici-
171 pated in the festive entertainments, in that they executed a dance to the drum music which resounded in a very strange and wild rhythm. At any one time only one dancer was in motion, holding in her hands either fir branches or castanet-like wooden clappers, and the dance actually consisted of only the craziest postures and contortions of the upper body in relation to the lower part. It vividly reminded Ditmar of the bear dance of the Kamchatka women, and even the music was similar, except that here it was drummed, likewise by women, on a swinging beam with cudgels and sticks, whereas in Kamchatka the dancers and the spectators
*796 jointly sing. Incidentally, I must note that such an outburst of
562 merriment among the Gilyak women is probably very rare, because
[157] in general they are even more serious and sedate than the men and are always much busier than the latter at all sorts of work and
●[293] activities. And it could by no means have been the result of high spirits induced by liquor, for this is, or was at the time of my visit among the Gilyak, absolutely prohibited during the bear festivals, a measure, as has been mentioned (2), prompted by cool reasoning

2. See p. 719 above.

*796 and evidence of their great strength of character. Another fact is
756 much more surprising and much more difficult to explain, namely, that no shamanistic activities are permitted in a house where a bear festival is being celebrated. The reason for this may be that in the eyes of the Gilyak the uncanny art of the shaman would disturb the festive mood and, through the power that it exerts over the spirit world as well as over the human spirit, would cause bewilderment and misfortune among the participants in the festival.

9: Hawes--276 T-3 (1901) 1903 Gilyak
116, 177, 273 Russia
636.27

"Many of the peoples of these northern climes make intoxicating beverages, as for instance the Yakuts, who manufacture a spirit from toadstools. The Gilyaks may be considered an exception. There is, however, a decoction, but little heard of, made by them from the 'burrs' of birch-trees. These exude a black juice so strong that a piece of the wood, of the size of a lump of sugar, is sufficient to make a big cauldron of the beverage. The decoction is sweet to the taste, and has a welcome softening effect on the organs of respiration.

To-day Russian vodka, though prohibited by the Government, is eagerly sought after and frequently obtained."

Russian colonization of the island, therefore only quite recently -- was by no means the case at the time of my travels on it, or Schmidt's and Glehn's.

'hey did not know coffee at all and considered it, when they saw ne drink some, "very strong tea." On the other hand, liquor 'as, of course, generally known in the Amur region, and, to be ure, to the Gilyak as well as to the other peoples of the mainland, nder the name (of Malayan-Chinese origin) araki or arki, also ustomary among the Manchu and among all the Tungusic, longolian, and Turko-Tartaric peoples of Siberia (6). Undoubtedly

6. See the glossaries for the above-named peoples in Klaproth's Asia polyglotta. There are, for course, many modifications of this general designation applied to grain and to milk spirits, such as araka, araku, airaki, etc.

ndoubtedly
equaintance with liquor among the Amur peoples dates from the me of their earliest contact with the Chinese and has spread pidly since then. Through the trading trips of the Goldi, Olcha, nd especially the Amur-Gilyak to Sakhalin, Chinese liquor must ave soon been introduced to the Gilyak there. The latter, to be ure, had an opportunity to become acquainted with liquor from nother direction, from the Japanese, from whom the Ainu obtained eir liquor, the so-called ssaki, and even learned how to make weak ssaki themselves (7); but the stronger and presumably cheaper

in 1808 that the Smerenkur (Gilyak) on Sakhalin hardly know of the Japanese ssaki at all, to say nothing of /464/ making it themselves, but, on the other hand, "obtain a type of it, called arka, from the Man-kôs (Amur-dwellers), which in taste is very similar to the Japanese sôtsu." Like all products of civilization, liquor, too, is supplied to the Gilyak and all the other peoples of the lower Amur region chiefly from the Sungari region, where there are numerous and some very large distilleries established and run by Chinese (1) and in part also from the Ussuri, where the production

of liquor is likewise carried on by the Chinese, and, to be sure, exclusively for trade. The liquor made by them varies in quality depending on the grain from which it is made, either from kao-ljan, i.e., Sorghum vulgare, which is especially used for this purpose (2), or from one of the species of millet cultivated by the

3. For more details concerning the Chinese liquor and its preparation, especially in the Ussuri region, see Nadarof, Sieverno-Ussur. krai, pp. 105 ff.

pending on the quantity and the place of destination, the liquor is sold by the Chinese either in large bottles inclosed in wickerwork

Of farinaceous food, they eat only buda (millet). It is bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

Cedar nuts and berries are their favorite dainties. Cranberries, raspberries and black alder berries are gathered for the winter. In bad years, when the salmon catch was poor, they gather and consume great numbers of berries and especially cedar nuts, as a substitute for more substantial nourishment.

Tea the Gilyak love almost as much as spirits. They use, of course, only the commonest variety, that is, brick tea which is sold in the form of compactly pressed bricks but has nothing added. They do not, however, drink it regularly, because they often do not have the money or the opportunity to buy it. If they also have sugar for their tea, these people are utterly happy.

As a condiment and spice they use practically only the leek of the cherenesha. On the island of Sakhalin, according to Schrenk, the senecia pseudoarnica is also put into the soup. Salt is now regularly used. Some Gilyak maintain that since they have been eating salt, their sense of smell is no longer so acute, and that formerly they could tell what animals had passed through the bush (?).

Like all savages, they love spirits above all; it is also the bait by which all kinds of itinerant merchants entice them. Liquor which is smuggled in from China (suli or chanshina) is very high in raw alcohol and the drunken state which it induces [112] often has elements of near-insanity. The Gilyak do not know any other intoxicating beverages.

Tobacco is the best-loved indulgence of young and old of both sexes. It comes from neighboring Manchuria and is not very strong. Children of six to eight years already smoke, although not all adults permit this.

They do not smoke opium, probably because it is very expensive. After this general account of the various articles of nourishment and intoxication, I should like to add something about the methods of preparation of the food.

During the day the food is mostly eaten cold; cooking is done toward evening. The cold food is at the same time usually raw. Roasting is almost unknown, and the number of cooked dishes is small. They consist mostly of millet porridge and soup. One kind of soup is worth describing because of its odd manner of preparation. The assembled company put dried fish into

548 On Sakhalin it happened that the Gilyak meant to kill such
837 a Helen who lived with a Russian soldier and bore him
684 a child.

Sodomy, onanism and similar perversions seem to be un-
839 known among the Gilyak. Those whom I questioned about them regarded me with astonishment and did not know what I was talking about.

514 As for modesty, it varies according to the type referred
834 to. In sexual matters it is not very pronounced, as we have already pointed out. First of all, the crowded way in which people live together does not permit such delicacy; however the Gilyaks try to hide their love-making from strangers. Their natural functions they do not exactly perform in the open, but they are not particularly ashamed in front of members of the opposite sex. Men as well as women squat in urinating. Women, at any rate younger women, guard against exposing their bodies before strange men. I had some difficulty in persuading them to do this when I was taking body measurements.

177 It is impossible to study the more subtle expressions of
437 modesty in all their forms, but it seems that the Gilyak are
183 most of all ashamed of being taken for thieves and cowards.
576 Their entire character and cycle of habits is such that fawning and self-degradation are foreign to them. They do not make much of genuflection, but do it largely when they are forced to. Thus those Gilyak who decide to travel up the Sungari to the Chinese with their fur must, as a matter of course, bow before the Chinese officials. And probably the Chinese are responsible for teaching them such humiliating expressions of veneration. [227]

735 Begging is practically non-existent among the Gilyak. The
273 only specimen one can see begging is the so-called Vanika-Gilyak, a degenerated half-idiot who goes begging along the streets of Nikolayevsk-na-Amure and who long since has deserted his countrymen. He is also the only one who can be seen in a drunken state, swaying and noisily roaming about. In general drunkenness has not taken root to such an extent that there are professional alcoholics, and this is probably partly because Gilyak cannot have spirits whenever they want, for it necessitates a trip to the Russians. But they love liquor very much, and unfortunately it is to be foreseen that this habit will become wide-spread.

623 XII. Councils, Jurisdiction, Duels, Prosecution
681 of Criminals

Meetings and councils are seldom held. If they are, they

844 The mouth of the newly born child is cleaned of the
853 mucus with the help of a finger, whereupon the child is given the mother's breast for nursing immediately. The next day the mother washes the child with cold water, but she does not pour it directly on the body of the child, but takes it into her mouth first and only then applies it to the child, which, of course, raises the temperature of the "bath". In this way the child is washed twice a day for two years.

856 If the newly born child has a defective limb nobody tries to mend the damage. It is also not a custom among the Gilyak to form the soft head of the baby.

846 It is recommended that young women walk around a
844 great deal after they have given birth to a child, while
262 sitting is recommended for older women. Women of
273 all ages are advised to move around as much as possible before they give birth to a child.

Women are strictly forbidden to drink cold water during a period of ten days before and after the delivery. If there is no tea at hand the sick woman is given cooled boiled water if she is thirsty. During that period she is not allowed to eat red-meat-fish (salmon); salted food is forbidden as well as eating a black berry that grows in the tundra (empetrum nigrum). Taking hard liquor before giving birth to a child is considered harmful, but later on it is considered to be healthy. In general liquor is consumed very rarely, and the Gilyak on Sakhalin consume very little alcohol compared to other inhabitants of this island.

843 Miscarriages.

Natural miscarriages (ryrnnd) occur very frequently among the Gilyak; they are considered quite harmless and not even looked at as an illness. I was told that there was scarcely a woman who had not experienced one or two miscarriages in the course of her life. But not a single inhabitant with whom I discussed it knew of a woman who always miscarried and was not able to carry the fetus in her abdomen throughout the normal period of pregnancy. I do not intend to state the causes of the frequent miscarriages among the Gilyak for lack of sufficient [759] data. I will, therefore, leave the answer to this question to the

1. (cont.)
de St. Pétersb., VIIth series, Vol. XII, No. 2, p. 99).

Among the Gilyak, the tobacco, chopped fine on a special board (Pl. XXXIV, Fig. 8)[1] and, when dry, disintegrating almost to powder, is kept in a pouch, which, adopted everywhere in the Amur region, seems to be of one and the same Manchu-Chinese form: long and narrow and provided with a lateral slit close to the upper end, by means of which the pipe is stuck in, in order to be filled with tobacco inside the pouch. It is always carried in this position, together with the pouch, which as a rule is fastened to one of the top buttons of the fur coat or the shirt and hangs down from there over the chest. Usually it is ordinarily made of fish skin, leather, or a piece of fur, bordered with Chinese cotton or silk along the edges, decorated at the top with some embroidered or painted arabesques, and occasionally made out of one of these fabrics.

The Gilyak likes to share the pleasure of smoking tobacco with others. This is never done, however, by passing the pipe around among all the persons sitting around the hearth or a fire burning outdoors. This is prohibited simply by the small size of the pipe, as well as by the social or moral differences usually existing between those present. As a rule, however, one sees the pipe go back and forth between two persons sitting side by side. In particular, if a newcomer appears in the yurt, the host, after he has taken a seat beside him, hands him his newly lighted pipe, which the latter, after he takes a puff from it, returns again to the former, receives it from him again, and so forth, until the pipe is finished, whereupon the guest pays him back in the same way. This is always a sign of friendly welcome and of good understanding, or of a certain esteem and equal footing. I often saw the Chinese merchants on the Amur do this with the natives who entered the yurt and approached them, which undoubtedly was for the purpose of winning them over by such advances, very flattering to them, and putting them in a more favorable mood for the business dealings.

G 276 824 If the Gilyak run out of tobacco, they seize upon various substitutes for it. The most common of these makeshifts is fine dry wood shavings from any kind of wood, but always from a soft type, presumably willow by preference. Such shavings are even mixed with the tobacco when it is beginning to get low. When it is all gone, the wood shavings mixed with tobacco oil are smoked G 276 415 in place of it. For this purpose the tobacco oil is scraped out of the pipes from time to time and stored in a special small pouch (Gilyak niryghsis), which /470/ is made of a few scraps of leather fastened between two pieces of sealskin (Pl. XXVIII, Fig. 6).[1] on which the tobacco oil is smeared and, when required, is scraped G 276 824 off, mixed with the wood shavings, and again returned to the pipe (1). Moreover, the Gilyak use some of their native herbs as

G [191]

1. The very same tobacco substitutes is also used by the Chukchee, who, however, obtain it by putting the wood shavings in the tube, much wider on their pipes, above the pipe bowl, where it is gradually saturated with nicotine from the smoke passing through it (Bush, Reindeer, dogs and snowshoes, London, 1872, p. 429; Dall,

tobacco substitutes, for example, an herb that they named for me in Allof on the Amur as tschomr, in Tyk on Sakhalin as wurpi, and which, judging by the dried fragments that I saw, seemed to be a G 276 824 fern. Among the Goldi in Kõurmi on the Amur I likewise saw hanging bundles of an herb which they called toina and used as a substitute for tobacco. For the present the taxonomic names of these plants must remain unknown.

SS 276 The taking of snuff and tobacco-chewing are not found at all among the Amur peoples, at least in the lower Amur region (2).

SS [191]

2. Among the Aleut, who became acquainted with tobacco through the Russians, it is mostly chewed, taken as snuff very little, and not

Gilyak household equipment: 1 -- wooden trough for serving food; 2 -- large wooden bowl; 3 -- the same from below; 4 -- portable tables; 5, 6 -- wooden ladle and scoop; 7 -- ordinary eating spoon; 8 -- board for cutting up tobacco; 9 -- board to put under a child's cradle.

291 wear huge pewter ear-rings, five centimeters wide, which
301 are decorated with colored glass beads. Pewter and beads
531 are bought from the Chinese, but they make the ear-rings themselves. Around their necks the women wear beads of colored glass, on these are sometimes hung little wooden amulets representing human figures.

177 Pipes and tobacco pouches are so much a part of the Gilyak
276 personality that I am tempted to give them space here. Their
531 pipes are of Chinese origin and have the uniform shape of the Manchurian pipes. The stem is about an ell long, made of black horn which has been turned with a lathe; the mouth piece is of jade. The cup-shaped brass bowl of the pipe is no larger than a hazel nut. On their belts they wear a bone spike, ornamented with scrolls, which is used as a pipe cleaner. Their tobacco pouch is tied with strings to a disk of walrus tusk which is also decorated with curlicues, and this is fastened to the upper button of the jacket. As soon as they have finished their smoke, they stuff their pipe and tobacco into the slit in their jacket.

V. Food and Diet

261 If the Gilyak is short on provisions he eats only twice a day. He endures hunger relatively easily, he can hunt or pursue other activities for two days without any kind of food, only on the third day does he feel weakness and discomfort. On the other hand, as soon as the hour of plenty is at hand, he undoubtedly eats five times a day.

It would be difficult to say how much nourishment a Gilyak takes but in general they are blessed with a good appetite. From an eye witness I learned that once two Gilyak on a winter journey consumed one pood (about 16 kilograms) of frozen sturgeon in one day [110]

251 Their staple diet consists of fish: sturgeon, various types
262 of carp, whiting, but particularly salmon and mainly kita (salmo longocephalus) and gorbusha (salmo gibbosus). A freshly-caught fish is eaten raw, but the greater part of the salmon catch is dried for the cold season. For this purpose the fish are cut lengthwise and are hung about six feet from the ground; by means of air currents they become a dried non-rotten substance. This is the so-called sukola. The kita provides the bulk of these winter stores, and the fish appears at the end of summer. The fish caught in winter are stored in a frozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

/557 cont./

224 Finally, the Gilyak also set out poisoned pellets in order to
278 catch foxes and wolves, and the poison seems to be strychnine,
192 which they buy for the purpose from the Chinese for a high price
439 and, in accordance with the use that they make of it, call
käkch-ocht, i.e. fox poison (3).

3. Among the Gilyak ocht means "substance" in general -- a meaning which we shall encounter on several occasions in the following, but also "medicine" and in the present case probably "poison" -- a naïve-instinctive identification of curative and deadly agents, medicine and poison!

41 When I was among the Gilyak, firearms were not used at all,
177 though they were acquainted with them, and, to be sure, from tw
439 directions: in the first place by way of their northern and western neighbors, the Russian Tungus, Negda, and Samagir, among whom, thanks to Yakut traders, one of the well-known, small-caliber, Russian-Siberian rifles (a so-called pea-shooter (4) is

4. Accordingly, among the Samagir on the Gorin, the powder also had a name borrowed from the Russian (póroki"): póroke.

occasionally found, and, on the other hand, by way of their southern neighbors, the Olcha and Goldi, to whom, though likewise only rarely, one of those often-described, long and clumsy
000 Chinese matchlock penetrated (5). The Gilyak also have their

[113] 5. According to Barrow (Reise durch China im Gefolge der grossbritannischen Gesandtschaft in den Jahren 1793 und 1794 /Journey through China in the Retinue of the Ambassador of

"Coughs, colds, and pulmonary complanints are very prevalent, and the methods of healing scarcely adequate. For a sore throat, a concoction of moshun-tomash (field camo mile) is swallowed, and for inflammation of the lungs, a diluted exusion from the gungi of trees is drunk in place of tea.

Whether these herbal remedies are dictated by experience and the Gilyak knowledge of medicinal herbs, which is said to be considerable, or is anything more than Shamanistic lore and a series of charms, I cannot say. The treatment adopted for other ailments, such as toothache, swellings, earache, and ulcer, is certainly of the latter kind. For the first they apply some of the down of a hazel-grouse (Tetrao bonasia) to the cheek; for the second and third, the squirrel's tail (olf-rega) and a piece of its ear (tul-noss) are respectively tied to the parts affected; and for the last, gazhu, i. e. a piece of a wasp's nest, is placed on the ulcer."

224 For the bear festival (see below) live young animals are
527 sought and are raised in a special enclosure. If they cannot be caught in any other way (1), they are sought out together

1. Sometimes young bears roam about so far from their mamas that they can be easily caught.

with the mother bears. The Gilyak wait for winter and then seek out a bear cave. On the appointed day 10-12 Gilyak set out for the cave with lances, hatchets, straps, and several empty dog sleds. They begin to irritate the bear by thrusting long sticks into the cave. Whereupon bruin begins to roar tremendously and starts to leave his cave. At this instant the bravest and strongest of the Gilyak takes his stand close to the entrance with his pelt coat on backwards, and as soon as the bear appears he hurls himself with his chest against the bear's head. The others hurl themselves on their leader and thus the alarmed bear is felled by the combined impact and is soon bound. If he is strong and raging so that he cannot be handled, he is immediately killed. Sometimes a noose is also put around his neck as soon as he appears. If the prisoner was a female with cubs, they are all taken home in sleds.

136 The elk is not found in the lower Amur region, that is, in
224 the vicinity of Nikolayevsk-na-Amure, but is seen somewhat farther up at the Amgun river. It is usually hunted in winter because, like the horse, it can travel only with difficulty in the deep snow, and the Gilyak on his snow shoes can easily overtake it and kill it with his lance. In summer time the animal is killed with rifles. Its meat is very popular and its skin is used for shoes, straps, etc.

The reindeer is also hunted chiefly in winter in the same manner. Occasionally the lance is also thrust at some distance from the target.

The wild boar does not occur on Sakhalin and the lower Amur; however, it appears 40-50 versts above Nikolayevsk. It is hunted with lances and with rifles. Its meat is very popular, its skin, among other things, is used for the shaman drums.[122]

224 The fox is preferably poisoned with the vomic nut which
278 the Gilyak buy from the Chinese. But this poison is not very
439 strong; much faster, in fact almost instantaneous, is the effect of its alkoloid, i.e., strychnine, which Russian fox hunters use but which the Gilyak seldom get hold of. But

224 even this hunt is not as easy as one might think. First of
278 all, the preparation of the bait requires great caution;
439 furthermore, the hunting ground where the bait is left lying about must be frequently visited on snow shoes, for countless crows are usually on the look-out and as soon as the fox succumbs, they pounce on him and his pelt can soon become eaten away.

224 Sometimes cross-bows are set up to catch the fox, but these are not as effective for this animal as for the sable.

Up to now the sable has been one of the most important sources of income for the Gilyak, although the Amur sable is less valuable than that which comes from the Okhotsk and Kamchatka. The sable is hunted in fall and winter. In fall numerous snares are laid; for instance, horse hair among willow shrubs along the rivers. Or a snare is set up in a certain calculated manner. For, the sable, when it wants to cross a small stream never fails to use a log that has fallen across it, if he can find one. Now, such logs are purposely prepared for him, and snares as well.

With the first snow fall he is pursued by dogs and killed with buck shot; the pelt is thus little damaged, for two or three grains of shot suffice to kill the animal.

A method commonly used and one that can be applied all winter long, consists of setting up cross-bows, the mechanism of which is cunningly devised. The shaft stands on a stake; behind the arrow there is a sort of cock made of a knee-shaped piece of wood; on the latter is a trigger from which a long thread leads diagonally forward and down and is fastened somewhere on the ground. As soon as the sable in passing touches the thread, the shot is fired.

136 The tiger is known to the Gilyak and they have a word for
224 it in their language, but it is not hunted, because it occurs
825 only rarely in the Gilyak country, and not at all on Sakhalin, and because they regard it as something more than a wild animal. This fear has probably [123] been passed on to them by the Manchurians and the Goldi. The tiger of the Amur-Ussuri country is of the mightiest and most powerful of its kind, as well as extremely cunning; but for humans, especially for Europeans, it is not nearly as dangerous as it is in India, because it finds more food. (1) Only when man

1. During my annual trips through the coastal area I also came through regions that abounded in tigers and I heard a great many tiger stories. But I

854 Nursing infants are bathed twice daily, but, on the othe
515 hand, larger children are seldom bathed. Adult Gilyak
302 consider bathing a luxury, some never do it and leave
chance, if they are caught in the rain or fall in the wat
some, however, wash occasionally, even with soap wh
they buy from the Russians. They comb their hair wit
wooden (Chinese) comb and at the same time rub it wit
and hunt for lice. They do not by any means comb thei
hair every day.

854 Children nurse for about two years. Tiny babies are
in a cradle which stands on the floor, but as soon as th
three to four months old they are placed in a trough-lik
The little trough is open at one end and somewhat point
on the other end it has a hole in the bottom. The [130]
is laid with its back against the bottom, its head agains
open end; it is tied down and the whole thing is hung up
wise. The hole serves as a conduit. When the mother
leaves the house for a longer time, she ties this cradle
her back.

368 When the Gilyák lad no longer needs his mother's ca
76 he begins to accompany his father on trips and thus gra
47 learns what he needs for his life. Many children even
but all fathers do not permit this. (1)

1. The disciples of a one-sided etiology of disease might cite the Gilyak as living examples of the harmlessness of tobacco:this race is on the average healthier than civilized man, their teeth are white and strong, and yet both sexes smoke from childhood. Nevertheless, this would be a false inference: a single given cause always has a different effect according to the mode of living in general. Thus, for instance, the effect of a strong cigar is very different if one smokes outside in cold weather or sitting in a warm room doing head work. In the latter case it will soon lead to nervous palpitation. Furthermore, the organic constitution with which a person is equipped must be taken into consideration. Civilized man would have to live through the tests which the Gilyak endures at birth in order to be compared with him

55 The parents are tender and indulgent with their child

2 Of farinaceous food, they eat only buda (millet). It is
9 bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

Cedar nuts and berries are their favorite dainties. Cranberries, raspberries and black alder berries are gathered for the winter. In bad years, when the salmon catch was poor, they gather and consume great numbers of berries and especially cedar nuts, as a substitute for more substantial nourishment.

2 Tea the Gilyak love almost as much as spirits. They use, of course, only the commonest variety, that is, brick tea which is sold in the form of compactly pressed bricks but has nothing added. They do not, however, drink it regularly, because they often do not have the money or the opportunity to buy it. If they also have sugar for their tea, these people are utterly happy.

3 As a condiment and spice they use practically only the leek
7 of the cherenesha. On the island of Sakhalin, according to Schrenk, the senecia pseudoarnica is also put into the soup. Salt is now regularly used. Some Gilyak maintain that since they have been eating salt, their sense of smell is no longer so acute, and that formerly they could tell what animals had passed through the bush (?).

3 Like all savages, they love spirits above all; it is also the
9 bait by which all kinds of itinerant merchants entice them. Liquor which is smuggled in from China (suli or chanshina) is very high in raw alcohol and the drunken state which it induces [112] often has elements of near-insanity. The Gilyak do not know any other intoxicating beverages.

6 Tobacco is the best-loved indulgence of young and old of
9 both sexes. It comes from neighboring Manchuria and is not very strong. Children of six to eight years already smoke, although not all adults permit this.

They do not smoke opium, probably because it is very expensive. After this general account of the various articles of nourishment and intoxication, I should like to add something about the methods of preparation of the food.

2 During the day the food is mostly eaten cold; cooking is done
4 toward evening. The cold food is at the same time usually raw.
5 Roasting is almost unknown, and the number of cooked dishes is small. They consist mostly of millet porridge and soup. One kind of soup is worth describing because of its odd manner of preparation. The assembled company put dried fish into

/327 cont./

reduced as much as possible. The house is provided with windows (4) on all four or at least three sides, and, to be sure, the two longitudinal walls and the rear transverse wall each have two, the front transverse wall one. Even in the most spacious Gilyak houses I never saw more than these seven windows (1); very often,

1. I did encounter this among other Amur peoples, but I shall speak about that later.

however, the window in the front transverse wall is absent, as, for example, in the Tebach house standing in the Pogromnaia on Plate XI, and not infrequently the other transverse wall and the rear longitudinal wall have only one window each, which is then always placed approximately exactly closer to one or the other corner of the house; in fact, in the smaller houses even the window in the rear longitudinal wall is absent, so that the number of windows in them is reduced to three. Nevertheless, even there, because of their considerable size, light the interior of the house sufficiently. The windows are sometimes square, three to four feet in size, sometimes rectangular wider than high, or vice versa. They have no crossbars, but instead only a number of vertical little sticks equidistant from one another, and fish skins take the place of glass between them. In particular these are skins from Salmo Jagocephalus (Gilyak: ḫgibi-ṅcho, or, on Sakhalin, ḫaghi-ṅcho) (3),

2. Known by the Russians throughout Siberia under the name ḫetĭ.

the most common kind of salmon in the Amur River, made as thin and transparent as possible by scraping and pounding, and then sewed together in such a way that the seams form many longitudinal lines and a few transverse lines running in a zigzag. The windows do not open, but are only lifted out with the whole frame. The floor inside the house consists of stamped clayey material. To the right and left of the entrance are the two hearths (2, Gilyak: ḫchenṅ) made of clay. They are fed through square

/388 cont./

1. (cont.) characters on it — no matter whether written or printed — I hoped that perhaps through him I would succeed in learning the possible diaries or other written notes of a Dzhaldzhin. But despite the high monetary reward that I offered the Gilyak for them, only a few scraps of one of Dzhaldzhin's maps of China were brought to me by their after the lapse of some time, when I had already again returned to the Nikolayevsk post.

/139 cont./

[illegible] the house, which has cooled off during the night, must be heated again in the morning, the fish broth cooked for the dogs, and the latter fed in order for them to be ready for possible excursions and in [illegible] the starting of all kind of sleighs. The preparation of food for the occupants of the house likewise fall, of course, entirely on the women. In the morning and during the day, however, the Gilyak usually eat only cold food. The main meal, for which hot foods, too, are to be prepared, does not take place until toward evening, for that is when the men return from their outside activities and when persons are gathering through who have ties of hospitality with one of the occupants of the house and who live in small huts, sometimes in rather great distance. Moreover, through the preparation for this meal the yurt is heated to the proper temperature which the Gilyak finds agreeable for the night.

Dried meat recently, dog meat — still a part of the bear festival; in there, the Nivkhs used the old steel-and-the old type of harness. The harness and the sledge which Grewingk saw in the Nivkhs in the beginning of the century were considerably different from the old type. They were of the same construction as another Tungus, namely, the Orochi, and were provided with a vertical shaft with the chief. The harness was made of a new type of steel.

The harness used the Gilyak trade wagon with a new type of steel. Its greater size and mobility permitted the transportation of up to 200 kg of goods in a single journey drawn by 11 to 12 dogs. The Gilyak also had valuable dog was the leader. The driver—kayar—usually called out his directions to his dog. The dogs were imported from Sakhalin and cost a brisk price. Dogs were sometimes also harnessed to a long or a longer sledge.

The Gilyak to a strength unknown to other peoples, especially in the Amur region, and, on the other hand, look as sturdy as they were made of a fine yellowish-white leather. This contrasts especially sharply with the wide black edging with which the body of the robe is front, above and below, as well as the sleeves at the shoulders and hands is provided with the above-mentioned color by means of paint. Various kinds of embroidery is put on in the interveining spaces, and the back in particular is distinguished by pretty, intertwined arabesques embroidered with different colored threads, as they are shown on Plate XXIII, Figs. 2, 3 and 4. The above-mentioned ornaments, however, too, are never lacking on them.

[illegible] 1895 г. 498—494 [illegible]

with the Chinese. After the appearance of the Russians in the Amur region, they began to use small quantities of tobacco, sugar and tea.

The immersion, and until recently the only, domestic animal of the Nivkhs was the dog. It served as a draught animal and provided for fur clothing and meat for food; it was widely used as a medium of exchange and was considered as a sacrificial animal. The Nivkhs also kept a few dogs in a household sense, as, for example, in a yurt, or in a fish-drying shed, or in a fish-drying shed, or in a fish-drying shed

/402 cont./

beveled at one end and, needless to say, is provided with some
[494] sinew attached to the upper side and on the handle, as well as at the
[531] tip (Pl. XXIX, Fig. 3).

/402 At first glance it seems very surprising that the Gilyak,
[494] who are so skilled in all kinds of handicrafts and achievements
[183] and despite the fact that they know how to make thread out of
[171] the fibers of a native plant and to make string and fishing nets out of it, do not know how to use this material to make a line for clothing, in other words, that the art of weaving seems to be so completely unknown to them. This is all the more strange as their nearest Paleo-Asiatic neighbors, the Ainu on Jesso /Yesso/, Sakhalin, and the Kuriles, are dressed in materials that in part they weave themselves out of the fibers of the nettle and the bast of trees (1), and one comes across this art, and, to be sure,

(150) Moreover, in China, from where so much cultural influence reached the Gilyak and other Amur peoples, one type of nettle (Urtica nivea) is even cultivated in fields for use in weaving (3).

3. Barrow, Reise durch China im Gefolge

/531 cont./

226 stuck in the snow behind him and leaned against a sled turned
[223] sideways served as protection from the wind. There were several
[107] other fishermen sitting on the ice in this manner at some distance
[113] from one another. As soon as a considerable quantity of fish had been caught, they were carried away on the sled. It is bound to be surprising that the Gilyak do not use a more appropriate method for catching this fish; even a simple net would undoubtedly be far more successful. It seems, however, that the many impertinsions associated with the kangi fish, as mentioned above, among them, for example, the one that they may not be put in a bag, makes them persist in the ancient and traditional way of catching them.

286 In conclusion, it remains for me to say a few words about
[223] the making of fish nets by the Gilyak. The material for them is
[107] provided by a nettle, Urtica dioica L. (Gilyak chisk, Olcha and
[824] Goldi pikta), growing luxuriantly, along with artemisia as tall as a man and other plants common to rubbish heaps, around their dwellings on soil fertilized by refuse of all sorts. Their stems are cut in the fall and retted in water; in winter they are dried and tied into bundles, and the preparation of thread and twine begins early in the spring, as does the plaiting and repairing of the nets, for which there is a great need in summer. The first
[142] part of the work, the preliminary stripping of the nettle stems and the preparation of the thread, falls to the women, the twisting of the /532/ string, however, and the knotting of the nets are, as a rule, done by the men. On April 18/30, 1855, I witnessed the preparation of the thread in the village of Nivkhi, with the help of a smooth, wooden knife /Falzmesser/ pointed at the end, called chukka in Gilyak, the dried stems are pressed flat, split lengthwise, and broken on one place, whereupon the skin is stripped off and soaked until it is completely reduced to fibers and all the woody parts removed. With the help of hand-spindles this fiber is spun into a fine thread, part of which is allotted to the women themselves for their sewing work, but the other and larger portion is used for making cord of varying thickness (Gilyak pukin) for the nets. Mr. Maximowicz had an opportunity to watch

/559 cont./

286 which also bears fine silver decorations on the specimen illus-
[223] trated. Sometimes used for this purpose are thin plates from
[153] Chinese buffalo horn, which for this reason the Gilyak call
[107] "kangi-ngai" (kangi, horn; ngai, or from the name-piece of the
[113] Rhinoceros tichorhinus, which presumably reaches the Amur region by way of the Tungus and Yakut. The bowstring (Gilyak
411 kich) is twisted out of fine strips of the skin or gut of the white
[183] whale. A case made out of fur or fish-skin (Gilyak punnch-chal)
[223] is used to protect the bow, especially on trips. The arrows (ho)
[148] have wooden shafts with vanes from the tail feathers of the fish-
[113] ing eagle (Haliaëtus albicilla) set in the lower part of two opposite sides (Pl. XLV /see p.1025/, Fig. 4) (4) and points of various forms,

the cord is wound on as many spindles as the cord is to have strands; the spindles are set up firmly on the yurt bench, a piece of thread is led from each of them, through a ring fastened in a roof beam, and almost down to the ground, and the rest of the thread is wound on the spindles; the threads are then and tied into bundles, and the preparation of thread and twine begins early in the spring, as does the plaiting and repairing of the nets, for which there is a great need in summer. The first part of the work, the preliminary stripping of the nettle stems and the preparation of the thread, falls to the women, the twisting of the /532/ string, however, and the knotting of the nets are, as a rule, done by the men. On April 18/30, 1855, I witnessed the preparation of the thread in the village of Nivkhi, with the help of a smooth, wooden knife /Falzmesser/ pointed at the end, called chukka in Gilyak, the dried stems are pressed flat, split lengthwise, and broken on one place, whereupon the skin is stripped off and soaked until it is completely reduced to fibers and all the woody parts removed. With the help of hand-spindles this fiber is spun into a fine thread, part of which is allotted to the women themselves for their sewing work, but the other and larger portion is used for making cord of varying thickness (Gilyak pukin) for the nets. Mr. Maximowicz had an opportunity to watch

4. By this characteristic alone they are essentially different from the simple shafts of the arrows used on the self-firer and, accordingly, have a special designation in that they are called uch, but the latter winnyr (winter); and summer arrows, the vilyal are called kyla-ngar in Gilyak; the notch at the lower end of the shaft, used for setting the arrow on the bowstring, is called korm.

depending on the animals for which they are intended. In my time among the Gilyak iron arrow points (Gilyak luch) were almost the only ones used, but there were also some of bone and
411 horn. Of the latter I have seen specimens of the sing leg bones of the
[183] musk deer in particular. Some of these iron arrow points intended
[192] for larger animals, elk, reindeer, and the like, and equipped on either side with a more or less sizable barb and in most cases also with a series of smaller barbs and notches, are illustrated on Pl. XLV /see p.1025/, Figs. 1-2. The two-pronged point (kor) used on the arrows for both the bows and the self-firer for killing smaller animals, sable, otter, fox, etc., has already been discussed above. An arrow with a very special shape, called

Economy and Everyday Life

(223) The Nivkhi's basic occupations were fishing and sea hunting. The most
[224] important fishing activities involved runs of the salmon species—Siberian
[225] salmon and humpback salmon. These were caught in "zayezdki," sets sea
[226] salmon, or "zayezdki" was at its peak when the fish were taken and target
[227] set at right angles to the shore with the transverse bar along the outcrop.
[228] On this bar, the Nivkhi set up a drawnet, near which they kept watch in a
[229] boat. The fish, going in a solid mass along the shore, hit the wall of the trap
[230] and turned and swam into the net. Sometimes they saw the movement of the
[231] ropes, the fisherman lifted the net and emptied it into the boat. By this
[232] method, seven "zayezdki" produced 400,000 fish, or more than 2 tons. The Gilyakis
[233] needs of the fisherman. The "zayezdki" was usually built jointly by several families.

The salmon, fairly small in size, were formerly made of nettle fibers
[234] They were pulled by two or three fishermen, one of whom was standing in the
[235] shore, while the other two were in a boat. Later, the Nivkhi learned from
[236] the Russians to sew together large salmon. Sedges and sturgeon were caught
[237] with harpoons and hook-tackle—the hooks at the end of short cords, attached
[238] to a long rope anchored in the water.

Very important to the Nivkhi was fishing for (ungu-an-ma), carried
[239] on throughout the year. These were caught with fishing rods, fixed nets
[240] (winter and summer), floating nets (summer) and seines (during the spring
[241] and summer). The seines were used in the shallows.

The Nivkhi living in Sakhalin and in the mouth of the Amur made a point of sea
[242] hunting. They hunted sea lions and seal. The former were caught in large
[243] fixed nets. Seal were hunted in early spring, at the time of the first signs of breaking ice.
[244] They were killed with harpoons and clubs and dragged into the summer as well, in
[245] seiren on the ice floes. Seal-hunting was also pursued into the summer as well, in
[246] open waters, they were hunted with a floating harpoon (ykh). This consisted

Sewing together a seine.

225 throws them into the sea. Each of the hunters has with him
226 a special gift: the pim, throws into the sea together
786 with his own gifts. If the hunters go past Ui,-ker, then they
782 throw their offerings into the sea from the first line at which
they stop. The Gilyakis believe that on every cape (kr,-) there
lives a ·tik- an old woman. These old women must also be
given something at the time of the sea voyage. It is believed
that ytax-·lik, 'the old woman of the mouth of the river,' who
lives in the mouth of the river Kal helps during the hunt.
225 [83] In the past the Gilyaks would go as far as T'uurf
(Bay of Tugursk) during a seal hunt. They would sometimes
spend the entire summer and engage in fox hunting. The Gilyaks
told me that their ancestors apparently did not go to kuvr-
mkl (Shantar Islands) (1) At present they do not go beyond

1. According to the account of Schrenck, the Gilyaks
go to Shantar Islands (On the natives
of the Amur region), v. II, p. 288.

Lo·ri. In former times the Gilyaks would put out to sea when
the ice began to break. They would hunt at sea until the end
of the summer and then they would return to the village to
fish salmon. When the ice was gone and, consequently, seal
hunting on floes ceased, they would hunt seals by means of
tsia-k'e, a heavy drag net.

At present the Gilyaks put out to sea for short periods not
exceeding one or two months. Thus, for instance, Nosp put
out to sea with the hunters on July 8 and returned from the
hunt on August 2. In 1930 two boats of hunters hunted seals
off cape Lisse and stayed there for two months.

The Gilyaks of today also hunt by means of a drag-net,
411 225 tsia-k'e. (2) Tsia-k'e is made of heavy rope called locally
283

2. The very old seal-hunting implements in the
village Kul, a very large floating harpoon tia is
completely out of use. It was made out of a few long
sticks turned of the trunk of a larch. I got acquainted
with its structure and I observed how it is being used
in the village Chayvo. This harpoon is sometimes 18
kilometers in length.

maksuna. The rope is 45 ruchnyk (makhovyk) sagenes long.
Each of the meshes is large enough for the head of a stretch.
Tsia-k'e is set not far from the shore. The upper cord of the
tsia-k'e is called ·taki 'back.' The shore-end of the set is

411 called ymlrus and the sea-end is called ·zs-bax-puka
225 'master's stone tie.' To this end, which is lowered into the
283 sea, is tied ·zs-bax 'master's stone' or 'masters stone,'
which, according to the Gilyaks, weighs two poods. This
stone, the Gilyaks explained to me, forms the anchor of the
seine. In place of plummets stones are attached to the bottom
of the seine. They are called tstr-pay . Large wooden floats
(vas,) are fastened to the upper cord of the seine, and
a stretch gets caught in the net, the stretch starts to
flounder; at times so violently that it throws the lower edge
of the seine together with the plummets over the upper edge and
finds itself literally in a sack. Sometimes dolphins fall into
the seine. The seals pryt are shrewd and are seldom caught
in the net.

In the past as well as at the present time the Gilyaks of
the village Kul set the tsia-k'e at Kôvt-yain, Ks-ymu, Vilk
Lo·ri, and at.

According to old man Virp, some claims in the village Kul
225 owned seal hunting places in the past.
423 Thus Clan Qayjuy owned: 1. Lulvyz-pax, 2. Qayaqi,
424 3. Ir.
411 Lulv. -p·r and ·a,ryaqi are names of rocks sticking out
of the water. Seals crawl out of the water onto these rocks.
It is a small island close to which there is another such rock.

3. In fog the hunters come alongside of the shore
or of the small island ·r. Then the young hunters
amuse themselves and play. There are only two
tsagr-pak stones for a game: "who can lift it and
who cannot." Close to the rocks there is a flat
place where the Gilyaks compete. The competition
consists in jumping on one foot (ta,lut ferd).

Clan Tsauuuy owned: 1. Mat,-lotri, 2. Tp·ri-yr·x, 3. Zom
v.r.

The first two places form parts of the shore and are
resting places for seals. The third is a rock.
Clan Kezop owned the shore off Vilk, a resting place for
seals and Hapsa-vir - a stone.
225 [84] Once at sea, the hunters take a number of measures
552 to ensure a successful hunt. Thus, in conversation, they
198 substitute prearranged names for the usual names of certain
825 objects. This prearranged language is an echo of a distant
789 past when hunters used it to keep their plans from animals

dominantly of a practical disposition and are not fond of
hination. Moreover, they do not yet have firm beliefs
their prophets, the shamans, often misuse their imag-
tion so boldly that their assertions contradict those of
er shamans or of everyday experience. From conversa-
ns, from customs and actions, we may conclude that the
yak believe in a supreme being, in many lesser spirits,
n good and bad, and in immortality, but they have not
erged from fetishism.
od (Kush or Kur) made everything, he lives in heaven and
er appears. He is held to be good, but otherwise nothing
aid of his characteristics. In one village, however, I
rd that God is very angry if a shaman is put to death. In
we may already see something like priestly self-glorifi-
ion. Kush is not worshipped, in fact, one does not bother
ch about him, only now and then something is sacrificed
im, but it is questionable whether this is meant for him
or his subordinate spirits. For instance, when a Gilyak
sses a dangerous passage on his journey, he pours a
l of spirits on the earth or in the waters: this is the
rifice to God. Sometimes one of the best dogs is
rificed to him, whereupon it is eaten. Near a village a
ke is sometimes rammed into the earth and beneath it
let or fish are buried, or tobacco and such things [240]
tied on top, - all this is meant to be for the supreme
g. Such a stake remains standing until it rots.
he bear usually appears as the executor of divine
inances, and he punishes the bad people during their life-
e. As a matter of fact, there are a number of superstiti-
s ideas connected with the bear, and thus he may be
arded as a "sacred" animal, but nobody regards him as
d or demigod.
he Gilyak do not bother much about the tiger, for they
om encounter him. But the Goldi and Manchurians re-
d him as much more than a wild animal. He is regarded
aving some mysterious power, he is spoken of with a
ain caution and referred to as "the honorable colored
". (1) It is also said of him that he only attacks bad

342 /327 cont./ They are fed through square
354 openings (f) on their front side and on top have /328/ a round
[415] hole (g) for the large kettle, in which the fish broth for the dog
and under certain circumstances even food for human beings ar
342 prepared. Directly adjacent to the hearths are the sitting and
352 sleeping benches or plank beds (h, Gilyak: tikky) which bend i
354 very little and are somewhat low, about one and a half feet hi
and one fathom deep, and run all around the walls. Their chi
characteristic is that they are warmed from below by means of
wooden pipes (i) lined with clay, which come out from both
hearths, run under the benches, and join in the corner of the
house diagonally across from the entrance. From here the sing
pipe serving the two hearths and at the same time as an outlet
for the smoke runs out of the house underground and opens not
far away into an identically-shaped, vertical, high chimney (
Gilyak: kla) usually higher than the house. The benches are
342 covered with mats usually plaited by the Gilyak themselves ou
352 of a kind of reed, with only the edge of the bench left uncover
● [285] and not infrequently the walls, too, are covered with such mat
places. In the center of the house, between the two posts sup-
342 porting the ridge, there is a large, heavy table (l), about two
352 fathoms long and half as wide, on which the dogs are fed, and
231 which I shall therefore simply call the dogs' table (Gilyak: kyl
The top of it, which along its longitudinal edges usually projec
out in crudely carved, pyramidal, cone or hook-shaped contin
tions, rests upon four posts (m) firmly rammed into the ground
and, if necessary, when more space is needed in the house, du
ing the bear festival, for instance, can be lifted off of them.
Above the two ends of the dogs' table two cross-sticks hang dow
from the central longitudinal beam of the house, and a long po
can be stuck between them, to which the dogs are tied during
the feeding. Our Plate XII, 3/4 which shows the feeding of the do
to be discussed later, also gives some insight into the nature of
the interior of a Gilyak winter-house; I must mention, howeve
that the dogs' table on it is drawn a little too small and, on the
other hand, the space between it and the plank bed is too wide
Subsequent pictures which are to illustrate the bear festival and
the mourning ceremonies among the Gilyak give more accurat

294 412 531 beveled at one end and, needless to say, is provided with some decoration on the upper side and on the handle, as well as at the tip (Pl. XXIX, Fig. 3).[1]

/403/ At first glance it seems very surprising that the Gilyak, 286 283 171 who are so skilled in all kinds of handicrafts and achievements and despite the fact that they know how to make thread out of the fibers of a native plant and to make string and fishing nets out of it, do not know how to use this material to make a fabric for clothing, in other words, that the art of weaving seems to be so completely unknown to them. This is all the more strange as their nearest Paleo-Asiatic neighbors, the Ainu on Jesso /Yesso/, Sakhalin, and the Kuriles, are dressed in materials that in part they weave themselves out of the fibers of the nettle and the bast of trees (1), and one comes across this art, and, to be sure,

/532 cont./

286 uniform in shape. Nevertheless, as we shall see in a moment, only a few, about four, can be distinguished among them as the most important and most practicable sizes on the basis of the principal types of fish. But before we discuss them in more detail, consideration must be given to one instrument which is used by the Gilyak for knotting all nets, no matter how fine or coarse they may be, for an uninterrupted and an even flow of the work. This is the so-called pork (Pl. XLI /see p.1021/, Fig. 7) -- a wooden reel revolving around its axis, with two arms at the top and at the bottom, on which the cord for the net is wound and which is hung by its lower handle-end on a ceiling beam of the /533/ yurt or elsewhere, so that the threads required as the work progresses always run smoothly and unchecked to the knotter.

[192] The two most important tools used by the Gilyak for net-knotting are a peculiar netting-needle, Gilyak kilks (1) (Pl.

1. Among the Olcha it is called ssarpol, and among the Goldi ssarfo.

XLI /see p.1021/, Figs. 1-4), and a rectangular wooden board called kiwu (2) (ibid., Figs. 5 and 6). The former consists of

[104] 2. The w in this word is pronounced like the English w. Among the Olcha the kiwu is called keror or kerul.

a long, narrow, and thin wooden plate, the lower end of which is two-pronged as a result of the cutting out of a section, while in the upper half two long cutouts running parallel to the edges and meeting just short of the tip, leaves a long prong in between reaching almost to the tip, which I shall call the upper prong to distinguish it from the two on the lower end. The cord to be used for making the net, unwinding from the above-mentioned reel, is wound around these three prongs, and, indeed, in such a manner that it is alternately slung around the one and the other of the two lower prongs and, in between, always around the upper prong.

/533 cont./

286 192 Wound in this manner, the kilks, like a shuttle, moves from one side to the other and back again, providing the material for the net and at the same time, knotting its meshes. But in order to make the latter and at the same time give them a certain uniform size, the kiwu is used, a rectangular little board, straight and horizontal at the top and bottom and indented at the sides, with two, approximately triangular cutouts, which, however, seem to be there only for stringing these boards on a cord, like a bunch of keys, and thus making it easier to store them.

286 192 226 [225] The larger the meshes of a net are to be, the larger must be the instruments used in making it, the kilks and the kiwu. The net used for catching hausen (patch-tscho) and occasionally also for seals -- Gilyak patch-kä -- has the largest meshes and, correspondingly, is made out of the thickest cord. Therefore to make it the largest instruments are used: the netting needle, Fig. 4, called patch-kä-kilks by the Gilyak (also tolles-kilks and kerwagn-kä-kilks), and the corresponding mesh-board, patch-kä-kiwu, Fig. 6 on the plate cited. Then, according to size, the equipment used for the knotting of the sturgeon net, Gilyak tukki-kä, follows: tukki-kä-kilks (also jaghsin-kä-kilks), Fig. 3, and tukki-kä-kiwu, Fig. 5 of the plate named. The next smaller, third netting-needle, Fig. 2, called anga-kä-kilks or also nokn-kä-kilks, is used for making the nets with which such fish as pilengat (Cyprinus carpio), mimk (Hypophthalmichthys dybowskii), kych, etc. are caught. A fourth, even smaller netting-needle, Fig. 1, was designated for me by the Gilyak as myrch-kä-kilks, that is, as the needle which serves for making the bag net (myrch-kä) used in the above-mentioned salmon weirs. They added, 286 226 however, that nets knotted with this needle were also used for catching the tengi, S. proteus. /534/ From this one may conclude that the bag nets of the salmon weirs used chiefly, or indeed, as far as I could see, exclusively, for catching S. lagocephalus are relatively fine-meshed, for even fish much smaller than S. lagocephalus, such as S. proteus in particular, do not require finer nets. And that is probably the result of learning by experience that with larger meshes in a bag net the fish entering it in

/534 cont./

226 286 great multitudes and heavily crowding one another could easily slip through, which would considerably reduce or even bring to naught the mass catch of the most important of all fish aimed at by erecting the myr. Furthermore, this bag net need not be made out of a very thick cord, because, when filled, it is immediately dragged to the not very distant bank. I did not see the mesh-board which go with the latter two netting-needles, and which of course, are likewise of correspondingly smaller size in comparison with those mentioned earlier. Since the Gilyak have even finer nets than the myrch-kä, such as, for example, the bag nets used in the smaller river-branches and lakes for catching crucians and smaller fish, they must certainly have even smaller netting-needles and mesh-boards than the last-named ones, even though always of the same form; but these are of so much less importance that, when I inquired about them, they were neither able to show me any nor give me special names for them.

286 Now when the knotting of a net with the instruments described is being done, a special wooden fork designed for this purpose is fastened to the bench in the yurt, on the edge of the boat, or wherever the work is to be done, and one of its prongs is used to hold the net being knotted, while over the other one are hung the pieces already completed (1). After the knotting

[192] 1. The Gilyak designation for this fork remains unknown to me; according to Maack (op. cit., p. 130), the Goldi call it chalang.

is completed, the net is edged all around with cord twisted out of willow bast and is provided with a second cord of this kind at the upper and lower ends on the outside, running close to the first one and connected with it only at individual points. While 227 fishing, small stones or the above-mentioned wooden or bark floats are fastened between these two cords as required. The [286] nets of the Gilyak are always handled with great care and

G /534 cont./
227 consideration, repaired at the slightest damage, and dried in
• [286] the sun after every fishing expedition. For this purpose they
[784] are spread out over special racks taller than a man, and super-
stition requires that if the drying nets are in a person's way he
must always go around them, never underneath them. And,
finally, not until the nets are completely dry may they be used
again. Treated in this fashion a net lasts for several years among
the Gilyak and rewards many times over the care and labor used
in making it.

G Gi /535/ What has been said in the preceding about Gilyak
226 fishing may in general be applied to the Tungusic peoples of the
433 lower Amur region more or less neighboring them, although with
a few qualifications and modifications, which are determined in
part by the way of life and the character of these peoples and in
G part by the distribution of those species of fish principally caught.
Gi First of all it must be emphasized that, with regard to fishing,
[262] all the Tungusic peoples of the lower Amur region differ from
the Gilyak, not so much by practicing it by means of any new
methods unknown to them as by the essential, crucial fact that
none of them is ichthyophagous to the extent that the Gilyak are
or is dependent on fishing for its entire economy like the Gilyak,
and therefore none of them practices fishing to the extent and
with as much constancy, care, and energy as the latter. Among
G. all these peoples, and not excepting the Olcha, who are closest
Gi to the Gilyak in all their external behavior and way of life,
[224] hunting, as a means of directly and immediately satisfying
the urgent needs for food and clothing, plays a far more im-
portant role than among the Gilyak, and, to be sure, this is
more and more generally the case the farther one goes upstream
and into the side valleys of the Amur River. Consequently,
it must take up more time and labor, or rather must take this
away from fishing. In particular it cuts heavily into winter fish-
G. ing. In no season of the year does the basic difference in
Gi 226 character between the Gilyak and the Tungusic peoples of the
221 lower Amur region appear more clearly than in winter, in that
the former remain the same sedentary fishermen, despite various

Economy and Everyday Life

226 The Nivkhi's basic occupations were fishing and sea hunting. The most
[433] important fishing activities involved runs of the salmon species—Siberian salmon and humpback salmon. These were caught in "zyyezdki," nets and seines. A "zayezdok" was an L-shaped barrier of thick stakes and twigs, set at right angles to the shore with the transverse bar along the current. On this bar, the Nivkhi set up a drawnet, near which they kept watch in a boat. The fish, going in a solid mass along the shore, hit the wall of the trap and turned and swam into the net. When they saw the movement of the signal ropes, the fisherment lifted the net and emptied it into the boat. By this
[433] method, several days' fishing produced 4000-5000 fish, which quite filled the
[496] needs of the fishermen. The "zayezdok" was usually built jointly by several families.

The seines, fairly small in size, were formerly made of nettle fiber.
227 They were pulled by two or three fishermen, one of whom walked along the
[283] shore, while the other two were in a boat. Later, the Nivkhi learned from
[177] the Russians to sew together large seines. Beluga and sturgeon were caught with harpoons and hook-tackle—the hooks at the end of short cords, attached to a long rope stretched in the water.

Very important to the Nivkhi was fishing for (single-net fish), carried on throughout the year. These were caught with fishing rods, fixed nets (winter and summer), floating nets (summer) and seines (during the spring and autumn seasons).

225 The Nivkhi living in Sakhalin and in the estuary did a good deal of sea hunting. They hunted sea lions and seal. The former were caught in large fixed nets. Seal were hunted in early spring, at the first sign [illegible] breaking ice. They were killed with harpoons and clubs as they climbed up to warm themselves on the ice floes. Seal-hunting continued into the summer as well. In open waters, they were hunted with a floating harpoon (lykh). This consisted

3. (cont.)
der Gross-brit. Gesandtsch. in den J. 1793 und 1794, transl. from the English by Hüttner, Vienna, 1805, Vol. I, p. 88. Bazin, Chine moderne, ou descr. hist., geogr. et littér. de ce vaste Emp., Part II, Paris, 1843 (L'Univers), p. 610. Huc, L'Emp. Chinois, Paris, 1854, Vol. I, p. 317. Itier, Journ. d'un voyage en Chine en 1843-1846, Paris, 1848, Vol. III, p. 389. The latter tried to acclimate Urtica nivea along with other, similar plants in France and stated that it has the advantage over all of them in that it needed the least care. According to Richthofen (Zeitschr. der Berl. Gesellsch. für Erdkunde, Vol. V, p. 321), the Koreans also have clothing materials which, judging by their lustre, seem to have been woven out of the fiber of a nettle-like plant.

286 194 191 [126] [114] I therefore conjecture that formerly the Gilyak, like the Ainu, knew how to weave crude clothing fabric out of the fibers of the nettle, and an old specimen plaited out of cords and interlaced whalebone fibers, a sort of mail shirt (Pl. XLIV, Fig. 1), which I acquired from them in the village of Ssabach and which will be discussed later, corroborates me in this conjecture. But whereas [199] the Ainu, generally held back and hurt by pressure and exploitation on the part of the Japanese, persisted, often out of poverty and necessity, in wearing their locally made, crude garments, the independent Gilyak, in contact with the Chinese, very soon learned how to obtain their finer clothing material through barter, and since /404/ there was no lack of material for such trade, in view of the wealth of their region in precious furs, they naturally gave up entirely the manufacture of their own, more laboriously made and nevertheless cruder and poorer, weaving

/531 cont./

226 stuck in the snow behind him and leaned against a sled turned sidewise served as protection from the wind. There were several other fishermen sitting on the ice in this manner at some distance from one another. As soon as a considerable quantity of fish had been caught, they were carried away on the sled. It is bound to be surprising that the Gilyak do not use a more appropriate method for catching this fish: even a simple net would undoubtedly be far more successful. It seems, however, that the many superstitions associated with the kangi fish, as mentioned above, among them, for example, the one that they may not be put in a bag, makes them persist in the ancient and traditional way of catching them.

286 283 [824] In conclusion, it remains for me to say a few words about the making of fish nets by the Gilyak. The material for them is provided by a nettle, Urtica dioica L. (Gilyak chisk, Olcha and Goldi pikta), growing luxuriantly, along with artemisia as tall as a man and other plants common to rubbish heaps, around their dwellings on soil fertilized by refuse of all sorts. Their stems are cut in the fall and soaked in water; in winter they are dried and tied into bundles, and the preparation of thread and twine begins early in the spring, as does the plaiting and repairing of the nets, for which there is a great need in summer. The first [462] part of this work, the preliminary readying of the nettle stems and the preparation of the thread, falls to the women; the twisting of the /532/ string, however, and the knotting of the nets are, [114] as a rule, done by the men. On April 18/30, 1855, I witnessed the preparation of the thread in the village of Kuik. With the help of a smooth, wooden knife /Falzmesser/ pointed at the end, called chukka in Gilyak, the dried stems are pressed flat, split lengthwise, and broken on one place, whereupon the skin is stripped off and stroked until it is completely reduced to fibers and all the woody parts removed. With the help of hand-spindles this fiber is spun into a fine thread, part of which is allotted to the women themselves for their sewing work, but the other and larger portion is used for making cord of varying thickness (Gilyak puksj) for the nets. Mr. Maximowicz had an opportunity to watch

/532 cont./

286 283 this work and describes it as follows (1). "The thread intended f

[113] [114]

1. Bullet. de la Classe phys.-math. de l'Acad. Imp. des sc., Vol. XV, p. 230, note 5; Mél. biolog., Vol. II, p. 501, note 5. The observations were made by Mr. Maximowicz on a voyage in the lower Amur region between the Nikolayev and Mariinski posts; to be sure, it is not said whether he was among the Gilyak or among the Olcha, but it may be safely assumed that the work discussed is done in precisely the same way among both of these peoples.

the cord is wound on as many spindles as the cord is to have strands; the spindles are set up firmly on the yurt bench, a piece of thread is led from each of them, through a ring fastened in a roof beam, and almost down to the ground, and the rest of the thread is protected against unwinding. The threads running through the ring are tied to a suspended spindle, which is kept in rotating motion until the cord is firmly twisted together sufficiently, and, as a consequence of this, the rotating spindle has been forced almost up to the ceiling. The firmly twisted piece of cord is now wound on the suspended spindle and protected against unwinding. Then new thread is released from the stationary spindles, the rest is made fast, and the work continues in the same way." The cords obtained in this manner are in no way inferior in tightness and uniformity to good types of our hemp cords.

286 [227] In view of the considerable variation in size of just the principal fish that the Gilyak catch, say, from the smaller cyprinoids or the tengi-tscho, Salmo proteus, to the colossal hausen, the nets used for catching them are also made with meshes varying greatly in size and out of cord of various thicknesses. And, correspondingly, the instruments used by the Gilyak for knotting their nets are of widely varying sizes, while

5. In the seventeenth-century tale from the great Amur River (Viestn. Imp. Russk. Geogr. Obshch., Part VII, 1853, Sec. II, p. 20) it is said that the Gilyak on the large island facing the mouth of the Amur wore sable and fox fur clothing.

A F.J. Gi 101

The situation is different with regard to the customary Japanese name for /118/ the Amur dwellers from Tungusic tribes who come from the mainland to Sakhalin for trade. I must note at once that they are not only Olcha, but in like measure Goldi, who, however, are not distinguished by the Ainu and Japanese, but rather are covered by the collective name "Santan" or "S'janta." And then the region inhabited by them, the Amur region, is designated by the same name, after the people (1). Mamia Rinsô's predecessor, the Japanese

During his visit to the island of Jesso /Yesso/ (1792), Adam Laxmann heard the Japanese speak of the "Sandan-aino" (Sandan people), who came to Sakhalin to trade; he, however, took them for Koreans (cf. Polonskii, "Kurily." -- Zap. Imp. Russk. Geogr. Obshch. Po Otd. Etnogr., Vol. IV, 1871, pp. 493, 541). Krusenstern was quite erroneously told by the Japanese on Jesso and on Sakhalin that this latter island, or, as he heard in Aniwa, even only its northern part, was called "Sandan" by the Ainu

F.J. A 114 103 113

4 sled is 70-80 rubles.
2 The chief value of the dog as a draft animal is the fact that he does not sink in so far in deep, loosely packed snow as the horse, and in general is much more agile, so that a dog-sled finds its way without a road where horses sink in up to their chests and cannot move from the spot. Moreover, one can [118] take along food for the dogs and thus visit uninhabited regions. 13-15 dogs can draw a man and about 30 pood of baggage. However, this applies more to Russian teams, for the Russians feed their animals better (1) and their dogs pull

1. They regard the hind part of the salmon as the best dog food. In drying the salmon, they divide it into three parts: the back and two sides.

with their chests.
1 As is well known, snow shoes are used for walking on the loose snow, for one's foot does not sink in very far. The Gilyak snow shoe consists of a board of larch wood about two arshin long. On the bottom it is covered with seal-skin, the hair of which is turned in such a way as to prevent the shoes from slipping back.

VII. Trades and Occupations

5 These consist of hunting, fishing, and the indispensable tasks connected with housekeeping, clothing, etc.
Fishing. Smaller fish such as carp, whiting, etc., are caught with nets. The net is made of nettle thread or hemp fiber. (2) The dried plant is exposed to the frost for a time,

2. Only wild hemp is used.

then it is unraveled and the fibers are spun. The spindle is like that used by the Russians. The long, lower end of the shaft is taken between the legs, the disk is set into motion and at the same time one end of two long strands is tossed over the head of the spinner, while the other end is pressed against the spindle shaft, turned, and wound up. The net is braided with wooden needles. Both tasks are the duties of the women, but sometimes the men also condescend to do them.
5 Carp, pike and whiting are sometimes caught with a fishing rod. Fish roe is used as bait. In places along the coast haddock is also plentiful that there is a special kind of hook used for it. The end of the line is studded with a number of hooks which face in all directions; in winter such a line

462 takes trips on various business matters, and so forth; he also takes care of fishing. The woman spins, makes nets and clothing, cooks, takes care of the children and the dogs.
286 Weaving is entirely unknown to the Gilyak, artificial ma-
326 terials, such as twine and needles are bought; the latter,
463 moreover, they formerly fashioned in a very primitive manner. In general it can be said that every Gilyak man and woman knows how to do all the work necessary for their existence, although not in the same degree. For instance, with respect to metal work: everyone knows how to make a knife, not everyone can make a hatchet, and only a few, finally, concern themselves with the making of a jew's harp (to be described below) and the more intricate weapons, as for example lances with silver decorations.
572 This is the place for us to say something of fire-making. The Gilyak customarily wears a pouch on his belt, containing flint, steel and tinder. The birch fungus is used as tinder, flint is found in abundance on the banks of the Amur. If they should lack fire tools they make fire, just as other primitive peoples do, by friction. A dry stick, on both ends of which is tied a bit of fungus, is put into a groove on a block of wood; one person holds the stick upright, another winds a string around it, takes the ends of the string in his hands and makes a sawing motion back and forth. Usually fire is produced after a half hour.

IX. Weapons

411 The Gilyak customarily carries no other weapon except his knife which is seldom used for defense. The knife consists of a pointed blade and a wooden handle. The blade and half the handle are carried in a leather sheath which is worn on the belt. To the actual weapons belong lances, bows and arrows and at present also the gun which many of them have obtained.
The bow is made of wood but has an underlayer of whale bone which is glued to the wood with fish glue. They like best to use ash wood (frax. mandshurica). On the inner, i. e., the whale bone side not far from the ends there are two [125] small grooved strips for the bow string. The unstretched bow is bent so that the whale bone faces outward, but in use it is on the inside, otherwise it might be damaged. The string consists of intertwined sinews of rope. It requires some effort to stretch the bow, and the shot is powerful. The arrow has three small feathers at one end, the other end is somewhat thicker and has an iron point which is barbed, but

/24 cont./

157 for whom the outward severity is only a mask concealing a nature that is acquainted with passions.

291 /25/ The winter clothing of the Gilyak, of both men and women, consists of a fur coat of dog skins, the fur outward, and fur leg coverings and boots of sealskin in the Chinese fashion. Besides this, the men wear skirts of sealskin descending from the belt to the knees, not for the sake of adornment, but to protect the fur coat from wear and damage while sitting on the ice, in the snow, etc. The winter costume is very imposing. In a black coat of dog fur fitted at the waist, against whose dark background the pale-gray skirt made of the skins of young seals stands out in gentle contrast, in finely sewed boots with narrow toes, in a hat of fox paws and with earlaps, in fur gloves covering the sleeves -- the Gilyak makes a fine, dashing impression.

[178] In summer the national costume of the Gilyak (now falling completely out of use) consists of a peasant's cloth coat, armyak, made out of fish skins and trimmed on the edges with designs. In recent times a summer garment of colored daba or American drel' has come into style. The women's summer garment is much more imposing: light and flowing dresses made of colored imported materials, mostly red in color, with beautiful decorations along the edges, cockle shells sewed on, and all sorts of rattles which sound at the least movement. Only the large boots completely disproportionate to the length and size of the legs and tightly stuffed with hay, which replaces stockings, spoil the lightness of the figure of the woman, giving her a heavy, awkward look.

136 Now a few words about the material conditions of life of the Gilyak. A remarkable affair. The very condition that has such a [133] fatal influence on the nature of Sakhalin, namely, the cold northern current, this ruinous condition has made human existence [226] possible in this rugged country. It is this that in certain seasons and with astronomical precision brings masses of salmon and other fish that travel in masses upstream to spawn, filling the rivers and streams to such a degree that one can obtain the fish in any amount by means of a simple, sharpened stick, a method to which I myself resorted during hungry intervals in my travels. This [172] abundance of fish and the ease of obtaining them explains the strange fact that -- as the marks of the excavations made eloquently show -- in this rugged country the existence of primitive man was possible at a very remote time.

/254 cont./

832 826 609 It is noteworthy that they do not evaluate beauty only from their own racial viewpoint. Men and women both liked /255/ Russian women. Of male Europeans, the Gilyak women even liked types unfamiliar to them, such as redheads or blonds. Thus, for example, my friend Bronislaw Pilsudski, reddish-blond, enjoyed great admiration among the Gilyak, not only because of his sympathetic attitude toward them, but in particular on account of his attractice appearance. They referred to him only as poch urakhrā -- "handsome man," literally -- "beautiful in face," and when he left Sakhalin, the Gilyak women as a farewell present dictated to him songs of declarations of love.

832 826 533 In their love songs they sing not only about beauty, but also about "white skin, like the bark of a birch tree," luxuriant hair (a braid reaching to the waist, hair made sleek), gracefulness of gait ("with her head inclined to the side, smiling she walks," "with a six-foot stride he walks"), physical strength or size (his trunk is an arm-spread, "his legs go into the ground up to the shin").

832 291 533 Of course, elegance in clothing also plays no minor role in the aesthetic appreciation of one's sweetheart. In their love songs they sing about women's clothing embroidered with finery, about a great number of copper rattles sewn on, and so forth; they sing about men's black dog-skin fur coats, shirts made out of variegated sealskins, rich headbands of fine squirrel skins, etc. Women's summer clothing that is black in color is considered the most beautiful; men play the dandy in shirts that are sewed half of red and half of white or dark blue material. But along with outward beauty, moral qualities are also valued.

832 577 Women like in men the traits of manliness and reliability ("thy voice is like the voice of an urdla n'ŕvukh'a, i.e., respected man"), or the talents of a conversationalist -- jester, singer, Aside from outer beauty, men admire in women the [867] traits of femininity, which Gilyak women possess to a great degree both by nature and also due to early training; from

Sakhalin

/350 cont./

175 169 648 Manchu reached them also and installed elected starosti. There was such a starosta, for example, in Tangak. It was from the Manchu that the Gilyak used to obtain all those objects which they could not produce themselves.

104 160 I shall not at this time enter into the question of how long the Gilyak have inhabited the island. I shall only say that when they first appeared there they must have been in possession of the entire economic inventory which they possess at the present time (with the exception, naturally, of firearms). Needless to say, the Gilyak could not have existed on Sakhalin without sleds and boats, without trained sled dogs, and without iron tools, etc. His first cultural products must have been made in areas which were especially favorable, at least with regard to fishing. It may be that the Amur River was such a cradle.

179 41 325 342 354 291 292 262 244 The Sakhalin Gilyak, like their fellows on the continent, have taken many very basic things from their civilized fellows. They have replaced the bow with the gun, their dishes made of wood and birch bark with metal kettles. They forge iron and artfully work with carpenters' and cabinetmakers' tools. They build yurts in the Manchu style and make stoves and tremendous chimneys of stone. They master Japanese sabers and they preserve expensive spears decorated with silver inlays. They wear robes and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of groats). They have finally begun to plant potatoes. In the near future they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

179 325 Of all the borrowings made by the Gilyak, the use of iron is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to process ore, but are even incapable of making tools. Until recently iron itself was very expensive among them. Their boats and sleds do not contain a single iron nail, though the Gilyak

Section 5

G
291

External Appearance: Clothing, Hair Style, Ornaments, Tattooing

The clothing of primitive peoples, even more than the dwelling, is intimately bound up with their total way of life and means of subsistence. For insofar as the materials required by them for clothing are not obtained through barter with a civilized people, they secure them from the same source as their food, whether this be fishing, hunting, or the raising of domestic animals used for food or for transport, and give them a style suitable to their life and activity, their crafts and occupations.

G
22
231
175
439

As for the Gilyak, with whom we shall again begin our discussion, it must first of all be repeated that fishing and seal-hunting are their chief occupations, whereas hunting takes only second place among them; furthermore they keep only one domestic animal, the dog, but this in large numbers as draft animals; and finally, as the oldest reports that the Russians had about them said (1), they maintain constant trade with the

439

Chinese. Accordingly, their principal materials for clothing, besides cottons, which since ancient times they have obtained from the Chinese and at the present time also from the Russians (Gilyak, possj; Russian-Siberian, dabá), are the skins of dogs and seals and fish skins, while the furs of forest animals, fox, otter, sable, squirrel, etc., are used only for trimmings or for smaller articles of clothing, such as caps, gloves, scarves, etc., but otherwise

/386 cont./
represent the principal articles in the trade with the Chinese. Since in connection with it, the Gilyak receive in exchange, besides various fabrics both in solid colors and patterned, many ready-made articles of clothing, this trade has a very great association with this civilized people next to them, easily explain the influence of Chinese customs and Chinese taste discernible in their clothing in the shape, cut, and the type and arrangement of embroidery and other decorations.

/387/ The clothing worn not to the body by the Gilyak consists of drawers, which are sometimes cut in a single piece, tunnies (Gilyak [illegible]), an under and an outer skirt (Gilyak [illegible]) reaching to the knees and sometimes to the ankles, and a short shirt. These articles of clothing are always made out of Chinese, for nowadays also of Russian, blue or gray cotton material, and sometimes also of white, which, however, they do not wear when wash their clothing, very soon turns a more or less dirty gray.

As a rule, no outer garment is needed during the summer, but if unfavorable weather, not infrequent even in this season, requires it, a winter garment, in particular the dog-fur coat to be described later, is used. High boots of seal leather and fur always wore as footgear. As a rule, the lower part of the boot (Gilyak [illegible]) and the sole are made of the skin of Phoca barbata (Gilyak [illegible]), tightened and highly polished. Sometimes, in the case of older specimens, it thicker and more durable than that of the other type of seal very common in the waters of the Amur region (2). Summerboots (Gilyak [illegible] and [illegible]-[illegible]) (3) and

1. See my Beis. und Forsch. im Amur-Lande, Vol. I, pp. 180 ff. Lengr simply means "seal."

for this purpose deprived of its hair. In accordance with the foot structure of the Gilyak, the lower part of the boot is small and graceful, with a high back and sharply bent toe, and the pointed end, turned somewhat upward and back, shows unmistakably the influence of the Chinese pattern. The legs of the boots, broad

/388 cont./
Chinese origin (1). To make the fish-skin tunnies they also

1. During my stay in the Amur region, among such decorated several little bran crosses with the inscription "Souvenir de mission" on the back of the medallion, I found the picture of the Savior with a Chinese (?) inscription were found on a woman's robe from the village of Wai or one of the nearby villages. In the Amur region, these pieces come from the French missionary, de la Brunière, who in 1864, after he had left the mission station in Wai, was murdered and robbed by the Gilyak. His colleague Venaut, who by order of the governor-general of Manchuria made a journey in 1880 from Aike-bo on the Sungari to the station of Wai, found in a Gilyak house, in one, saw many of their children wearing such crosses and medallions (Comte, Adrien de Gerlaz, Voyages, fifth series, Vol. XXX, 1882 (Vol. III), p. 228). In my ethnographic objects collected by Venaut concerning the kilting of ice in Brunière, I found a little cross and medal of pewter that it took place, according to what I learned from the Gilyak, on the left bank of the Amur, between the villages of Wai and Sadach, at the point where the mole in a savage pate-like formation come close to the river. I visited it during my winter journey on March 29 (April 10), 1856. The already aged Gilyak in whose house I stayed in the village of Wai was amazed to see me as one of the Chinese. The moderen. He evaded or declined to adhere to questions concerning the Gilyak. Since, however, the Gilyak consider it bad luck (ulkuch) to destroy a piece of paper with

/389/
The footgear of the Gilyak women is the same as among the men, namely, "Chinese make the man." Which is special, for the women wear, not only occasionally, have legs likewise of fish skin instead of leather, as the men of Chinese. Besides from Gilyak [illegible]-[illegible], also from Saime [illegible] (Gilyak [illegible]-[illegible]), which women also wear, and which, as the Chinese is in regard to the equivalent of two other skins or 10 sable skins (1), but

1. Merely two leg-pieces from a lynx skin and the tail are worth as much as two sables.

there are even more expensive furs, such as black fox, for example, which in trade is equal to 15 to 20 sables, and yet it is not rare among the Gilyak, and, as a rule, only the rich can obtain it. As a table to be presented below, on the values given by the Gilyak to various articles of clothing, there are also a number of things in the household which they value even more than a lynx coat and which cost much more than a lynx skin. Such articles are the [illegible] and the [illegible] and attention as the lapter does. Conceptions of product and that therefore come into play here. In view of the active, commercial relations of the Gilyak with the Chinese, they could not fail to know in what high honor the skin of the tiger, or, the Chinese, [illegible] [illegible] [illegible]

/394 cont.

the neck or head, or with the fur cap (see Pl. XIX), and in which they continue to sit, even after throwing off the fur cap, inside the yurt. Furthermore, in order to keep the chest and abdomen in the area of the pit of the stomach free, they are flap lined with fur, the so-called koch-pani, it were there under the shirt, on the naked body, hung round the neck with a small head and at the bottom knotted around the body by two cords. The example of the type pictured on Plate XXII, Fig. 3 which I saw in the possession of the Gilyak Justin in Tebach, was of Gold workmanship. In was of pentagonal shape, rounded off at the bottom, lined with fur, and adorned all around with the fur, and the pendant on the outside with multicolored and in part artistic embroidery on black cotton material, which I shall come back to below. Here there must still be mentioned a special form of pendant that I noticed in particular among the Tro Gilyak in Nyi, both among adults and on a boy about seven years old; this is a peach tied around the loins and of use to the male sex only. For the Gilyak sitting outside their huts it is especially important to protect the lower against wind and weather, and so the lower death (Gilyak pani) made of sealskin and tied around the leg below or above the knee serves for this purpose.

/395 The footgear has already been mentioned above. In the winter, for warmth, the Gilyak put on boots made of bear skin, or more or less all the northern primitive peoples do (1). According

/409 cont./

As is seen from the above description, the clothing of the Amur peoples, to be sure, offers much that is significant and original, but in no way such pervasive peculiarities and differences for the individual tribes that on the basis of it one could immediately /410/ recognize the affiliation of single individuals to this or to that people. The Gilyak, for instance, fundamentally different in origin and language from all the other Amur peoples, cannot be distinguished by their dress from their neighbors, the Olcha, and the latter in turn imperceptibly lead over to the Goldi, etc. Like climatic situations, like conditions with respect to food and subsistence, like ways of life, like cultural influences, and constant reciprocal intercourse have also in the course of time had a leveling effect on the clothing of these peoples and in part reduced and in part wiped out completely the differences that presumably were formerly present.

This is not the case with regard to another aspect of their appearance, the hair style. In this respect, quite the contrary, out of the uniformity that most probably formerly prevailed there developed in the course of time, as a consequence of certain political events, differences which today to a certain extent separate even closely related peoples of the Amur region and make it possible to recognize immediately the affiliation of single individuals to one or another of them.

The Gilyak wear long hair parted in the middle and plaited in one braid for the men or two for the women, which hang down over the back. If it is too short or too sparse to be plaited, it hangs down loosely from the head, which gives the individuals concerned an untidy appearance, and old women a witchlike appearance. A luxuriant growth of hair and a long braid are regarded as adornment, but I did not see the Gilyak artificially lengthen the braid, as the Chinese do, by plaiting in black silk. Baldness, on the other hand, is subject to ridicule. In order to promote the growth of hair, children are shorn from time to time, and occasionally, especially in the case of boys, a tuft of hair is left standing somewhere on the front of the head, tied or plaited, and at the tip provided with a beaded rosette hanging down over the forehead (1). Adults, however,

Gi /492 cont./

Gi 492 the river near the Gilyak village of Plub-wo, we saw in the willow
Gi 493 thickets along its bank three sleds harnessed to dogs, whose drivers
[114] had climbed down and were holding their dogs. They informed us
G. at once that an Orok reindeer-expedition was approaching and that
Gi we must likewise hold back our dogs. Two of the men could be
[291] recognized as Orok merely by their clothing, the reindeer-fur coat
caps, boots; the third was dressed like a Gilyak, in a coat of dog
fur, with sealskin boots and apron-like skirt (kossjkcha), the latter

Orok Sled

Gi 493 of which was not lacking on the other two. Their sleds differed
no less than their clothing: two of them could not be distinguished
from the Gilyak sleds, but the third, a national Orok reindeer-sled
was of an entirely different nature. The accompanying illustration
which was made from a hastily drawn sketch in my diary, may
give an approximate idea of it. In comparison with the Gilyak
sled, it was far shorter and somewhat wider, with the same height
the soles /runners/ were likewise wider than among them, triangular
in cross-section, and provided with a sharp edge at the top. Toward
the rear they were completely horizontal up to the blunt ends;
toward the front they gradually sloped upward to join the longitudinal
side-bars of the sled at an acute angle; but there was no
curved piece of wood connecting the soles and the longitudinal
bars on either side, so that from the front the sled seemed to gape
so to speak. Two of the waiting sleds were loaded with reindeer
Gi moss, the third contained some household utensils, ski, lances,
492 bows, etc. It was not long before the reindeer-expedition of the
493 Orok could be seen and passed by us in a curve. It consisted of
5-7 sleds of exactly the type described above. Each of them was
harnessed to one reindeer, which pulled the sled by one strap.
The guide-strap ran from the horns down under the neck and chest

/598 cont./

435 undoubtedly can be explained by their great quantity, by the
439 as yet still undiminished wealth of animals in the lower Amur region. Only two types of fur considerably surpass all the others with their high prices: the black fox and the lynx. The former owes its high price, not only to the absolute beauty of its fur, also recognized and highly appreciated by the Chinese, but certainly also to its far greater rarity. The lynx fur, on the other hand, as was pointed out above, has too high an imaginary value in the eyes of the Gilyak themselves to be marketed in great quantities.

2) Like the lynx fur, several other articles are distinguished
435 in the above table by their very high price, in no way corresponding to their real value. Among these in particular are the old Manchurian iron armor and helmets discussed above at great length and the Japanese kettles with three handles, which, unfortunately, I did not see, but these could hardly so greatly surpass in quality the kettles from there with two handles, or otherwise somewhat different from them in form, as to justify
[556] the great difference between them in price. The necessity for special marks of wealth and distinction, present even among the otherwise practical Gilyak, is expressed in these things.

825 3) The same motive, vanity, also explains the high value
556 of a live bear among the Gilyak. It brings its owner not only no material /599/ advantage, but, on the contrary, even disadvantages, for the killing and consumption of it can take place only in a festive fashion which entails expense for the owner and host; in return, however, it brings him the flattering reputation of a rich and renowned man.

435 4) Among the various clothing materials which represent
439 the principal barter item of the Chinese in dealing with the Gilyak, the latter most prize the colorful silk materials with
291 dragons and other Chinese patterns and often gold and silver interwoven through them, but not because they themselves take special pleasure in them and live in luxury with them -- instead, one sees them used among them almost exclusively in small

/599 cont./

439 pieces for elegant women's caps -- but rather because they want
435 them for trade with the Japanese -- a matter that I shall come
291 back to in the following and which gives the best proof for their outstanding talent for trade.

439 5) Something similar is the basis for their very high evalua-
273 tion of the liquor (araki /arrack/) in the barter trade with the
435 Chinese. One would be very much mistaken if he concluded from this evaluation of the liquor that they were strongly addicted to drinking it and therefore readily let themselves be plundered by means of it. To be sure, they do not reject liquor, but they used it, as was pointed out above (1), in moderate fashion at the time

1. See p. 719 above.

of my stay among them. On the other hand, their gaze, constantly looking for advantages and profit, could not miss the value of so generally popular a commodity in the trade relations with both their own countrymen living farther away from the source of supply and in particular their less energetic Tungusic neighbors. Thus, their genius for trade also proved itself with respect to liquor and, as has already been mentioned, with the help of it they were even able to obtain many an advantage in their barter with the Russian Cossacks and sailors.

435 6) The articles that they themselves make for their household and the rest of their life and activities, such as utensils of all kinds, pieces of clothing, etc., however neatly made and adorned with decorations they might be, are not very highly valued by the Gilyak, unless they contain a precious material acquired from the Chinese, such as bows covered with buffalo horn, or the lances furnished with inlaid figures of silver, etc. It is not the fineness and beauty of the work or the time and labor spent on them, but the bit of silver or horn that gives these objects their high value in the eyes of the Gilyak.

855 case of a small boy; but the obstinacy that the latter showed and the howls that he emitted proved all too clearly how unfamiliar and annoying the whole procedure was for him.

855 291 In spite of their unwashed faces and often also uncombed hair, the Gilyak children are, as a rule, dressed well and in winter very fully. In their garments, made for them as a copy of those of the adults, often down to the smallest detail and with all the ornaments and embellishments on a reduced scale, one can see that in this resp the mothers spare no toil or effort for the sake of their children and a probably not lacking in motherly vanity. The fact, however, that o 524 sees on many a small boy the fur coat and apron-skirt held together 273 a belt on which hang all the numerous implements carried by an adu ngawla- and yi-dshakko, fire steel, tinder box, pipe cleaner, etc., cept that they are all carved out of wood in miniature, shows that th fathers, too, in their leisure hours, do not disdain giving some time to their children and involuntarily arousing their imitative instincts.

855 861 Otherwise, one cannot speak of any education /645/ for the children, of any training in obedience, in respect toward the parents, and the like for them; they simply grow up, following the patterns that they have set before their eyes by parents, siblings, and others, without an one paying any attention to them.

524 The Gilyak children, like all children, enjoy imitating and mimicking in their games the activities; work, and amusements of parents and adults. One of the earliest, most common, and most popular games of Gilyak children is the moving back and forth of wooden figures which are supposed to represent dogs. It is noteworth that these figures, which do not remotely resemble a dog, are quite stereotyped among the Gilyak (see Pl. LX, Fig. 6 /see p. 1260 /) and only now and then vary in size. Whether they are made by the parer or by older brothers of the little ones, a copy of the shape of a dog is obviously never intended in producing them. The legs of the animal for instance, are not in the least even indicated -- rather it is simply the conventionally assumed representation of a dog as a toy. Or cou it perhaps be, as one might almost suspect from its general usage am the Gilyak, a fragment of an old conventional picture language amo them? Other animal figures allegedly likewise carved for the deligh

resettled. In southern Sakhalin, individual families live in the village of Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan—dog; pil'a-gan—big dog). The agglutinating features include the addition of affixes (kkan-gu—dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives have many similarities with verbs. The Nivkhi numerals are interesting: in the Nivkhi language, there are no numerals common to all objects. Instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and manlike spirits; 7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled; and n'a—one handbreadth, etc.

As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants. There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware—flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Shternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasiliy Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to as "Gilyak peasants." According to these reports, they lived in large villages in wooden winter houses, flanked by barns, racks for hanging fish and log structures for bears. The Nivkhi wore clothing of fishskins and animal pelts; they kept many dogs, engaged in fishing, and their diet consisted mainly of fish. They traded with the Chinese, Ainu and Tungus.

342

Mud hut.

342 175 the entrance to the hut was no longer from the roof, but through a long low corridor.

From about the period of the Ming dynasty, the Nivkhi dugouts began to give way to Manchu fanzas of the frame type, which spread over the entire Nanay territory and were taken over by the Nivkhi. The structure and lay-
[171] out of the winter dwelling were similar to those of the Ul'chi. In summer-time, the Nivkhi usually lived in summer dwellings built on piles some 1.5 m high. They usually consisted of two parts: the rear part, which served as living quarters and was lighted by an opening in the roof, and the front part, which served as a warehouse. The summer house was usually sur-
[171] rounded by racks for jerking fish and storehouses on piles for storing various products. The general appearance of the Nivkhi summer dwelling was similar to the Ul'chi summer storehouse.

• 291 The old summer dress of the Nivkhi men was similar in many features to that of the Nanays. It consisted of trousers (varsh), a robe, reaching to the knees and closing from left to right, footwear of sealskin, and a conical birchbark hat (kh'ifkh'akk). The trousers and robe were made of blue or gray cotton cloth. The women's summer robe of fishskin or fabric was longer, and was decorated along the edge with copper disks. In winter, an outer garment of dark fur, with the fur outside, was worn above the robe. During sled trips, the men wore a kilt of sealskin above the fur garment, to save it from wear (sealskin was not used for dressing the dead). The head
[531] was protected by earmuffs and a fur hat. Men's and women's clothing differed only in that the latter had more embroidery and appliqués, and was made of a greater variety of materials (silk, cloth, lynx-fur on the hat).
[439] Formerly, the Nivkhi obtained material for their clothes from Chinese and Russian merchants. Footwear, robes and overcoats were made of

Footwear, robes and overcoats were made of 291 287
specially prepared skins of carp, Siberian salmon and pike, as well as seal and elk skin, dog-fur, etc.

Before the Revolution, neither men nor women cut their hair; 302
they wore it braided—the men, in a single braid, the women, in two braids.

Social Relations and Religion

Problems of the ancient social order of the Nivkhi are particularly 114
interesting in connection with the study of the origins of the family and marriage. Thanks to the well-known works of the Russian ethnographer L. Ya. Shternberg, we have a detailed descritpion of the clan organization of the Nivkhi (or Gilyaks, as they were called in the past) at the end of the last century. Shternberg conducted ethnographic studies of the Nivkhi for a number of years, and collected materials which attracted the attention of F. Engels. Engels wrote about Shternberg's work in a special article, "A Recently Discovered Instance of Group Marriage" (first published in Die Neue Zeit, 1892, and later, as an appendix to "The Origin of the Family, Private Property, and the State").

The Nivkhi were divided into exogamous clans (kk'khal), of which there 614
were several dozen. Most of their names were taken from rivers, such as: Mybing, i.e., "those who live on the My River," Chombing—"those who live on the Chom River," and so on. Already in Shternberg's time, the Nivkhi clans no longer represented territorial and economic entities. A Nivkhi village was inhabited by members of various clans. However, the Nivkhi clan preserved many forms of social ties among clan kinsmen, expressed chiefly in family and marriage norms, and in religious rituals and customs.

The Nivkhi clan was patriarchal, with but a few relics of the more ancient matriarchal order. These relics included the special relationship
with the mother's brother, who took part in receiving ransom for the [60]
murder of his sister's son, and also the custom of sending gifts and a share of every catch to sons- or brothers-in-law—which may have been a remnant of matrilocal marriage.

The Nivkhi clan was a group of kinsmen along the male line, bound by strictly observed rules of clan exogamy: mutual duties in payment of blood-money (tkhusind), which replaced the vendetta among the Nivkhi; participation of clan members in the payment of bride-price and burial expenses; and the common clan cult (clan fire, clan organization of the bear festival, the clan storehouse for ritual objects, etc.).

In distinction to the Tunguso-Manchurian peoples of the Amur region, the Nivkhi took their wives, not from the clan to which they gave their women, but from a third clan. Thus, each clan was bound by marriage ties to at least two other clans. For example, the Khyyyegnung clan took its women from the Kegnang, the Kegnang from the Tykfing, and the latter from the Khyyyegnung. This was connected with the Nivkhi rule, which, in distinction to those of their Tunguso-Manchurian neighbors, permitted a man to marry the daughter of his mother's brother, but not the daughter of his father's sister. The clan from which men of a given clan took their wives was the former's akhmal'k (father-in-law); conversely, the clan to which the women of a given clan were given was called ymg'i (son-in-law). Hence, the Nivkhi themselves defined the clan as follows: "We have one (i.e., a common) akhmal'k (father-in-law), one ym'gi (son-in-law), one fire, one bear, one tkhusind (blood-money), and one sin."

amid the drumming of the women, some of the dog races of the day before were repeated; the best runners, each equipped with a fox tail or the tail of a black dog, were let loose down at the river and were recaught above at the house. A short informal breakfast on the leftovers of the feast concluded this interlude, whereupon the important schedule for the day began.

From all the houses of the village the people congregated around the place where the bears stood tied to their stakes. Three Gilyak carried in their hands insignia of a peculiar kind. They consisted of a straight young fir tree (Picea ajanensis) from which all the branches had been removed except the crown and the uppermost branches closest to it, which were pressed up around the crown and tied with a string. A boa (Gilyak tolp) made of squirrel tails, such as the Gilyak wear around their heads and necks, or a fox tail was wound around the crown of the little tree twice in serpentine-fashion and then also fastened. Two of these peculiar banners were of the first type, the third was of the latter type. The three banner-bearers were joined by a fourth, who, as far as I could see, had only a plain long stick in his hand, but he carried it as erect as the others their banners. While everybody now stood assembled around the bear place, the three men with their insignia entered the enclosure, went directly around the bears several times, always returning to the path that led to it and there turning around again, and, finally, planted one of their insignia in front of each of the bears. This was, so to speak, the signal for the departure: the bears were freed from their stakes and led out of the kadhra.

Before going any further, the neck and body bands on the bears had to be examined as to their strength. For the large bear this had been done the day before, and the animal had been provided with new auxiliary bands. Everything was likewise in order on the medium-sized bear. The especially bad-tempered and stubborn small bear, however, definitely seemed to need to have his fetters strengthened, and this is always a very dangerous experiment. Chusisin, Iudin's only son, a young and strong man who evidently still had not had enough during the days of goading the

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%.

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, placards and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical aid. Soviet medicine rapidly won the confidence of the Nivkhi.

9: Hawes--158 T-3 (1901) 1903 Gilyak
116, 177, 291

"In summer they used to dress in fish-skins, (1) and in winter in seal-or dog-skins.

1. Salmon (Salmo lagocephalus and S. proteus, which are known in Eastern Siberia as kita and gorbusha respectively).

Gradually Chinese cotton (ta-pu) has filtered in through Manchuria, and largely taken the place of fish-skins, though this material is still used for parts of the dress, especially of the Gilyak woman; and when visiting a Gilyak headman I found a mat of salmon-skins, stitched together, spread in my honour. In winter the men wear coats of dog-skins, but the women favour seal-skin, the short bristly hair being less in the way in their domestic occupations. The men add to their coat in winter a short petticoat of seal-skin. In summer they go bare-footed, except on journeys when, as in winter, they use mocassins of seal-skin, the hair on the outside of the leg portion only.

For underclothing, a ta-pu shirt, 'shorts,' and long gaiters, or spatter-dashes, like the Chinese, are worn by the men; and by the women long gaiters only, and a shirt or two of cotton or fish-skin. The outer tunic of the Gilyak woman, or rather frock, for it possesses sleeves, has Chinese cash coins strung round the border, which reaches just below the knees."

Child's cradle.

The Nivkhi clans could split up and settle in different places; they could also accept (adopt) people of other clans and tribes. When a clan divided, the Nivkhi broke the flint which was kept by the eldest in the clan (the flint was used to obtain ritual fire, such as the fire for cooking bear meat), and gave a piece to the part that split off. 614 [372]

Long ago, the Nivkhi had the institution of vendetta. All members of a clan were bound to avenge a murder upon all the men of the murderer's clan. Later, vendetta began to be replaced by blood-money (tkhusind). In reconciling clans through the payment of blood-money, the principal role was played by intermediaries of a neutral clan (khlay-nivkh). It was their duty to negotiate the size of the blood-money and to persuade the enemy 614 627

534
291
342

Playing a wooden percussion instrument.

The wooden religious sculpture was akin to that of the Orochi, Ul'chi 532
and Nanay. The figurines of bears on dippers and spoons used in the 322
bear festival were finely made and realistic in style. The bear dippers [171]
were often remarkable in their craftsmanship. Some of them were carved
with pictographs, relating the history of the hunt or rearing of a given
bear. The carvings on the dipper handles were also symbolic; they
indicated by a variety of symbols whether the bear was killed in a hunt
or reared in captivity, whether it was killed in the summer; and so
forth.

The musical culture of the Nivkhi was very poor. They played a 534
primitive one-string instrument (t'yngryng) and a lip jew's-harp (kkangga). [796]
During the bear festivals they used, instead of musical instruments, an
ordinary log, which the women struck with sticks.

Education was entirely lacking among the Nivkhi before the Revolu- 871
tion. The Nivkhi-Nanay alphabet written in the 1880's by the missionary, [212]
Protod'yakonov, was not used by the Nivkhi.

In 1895 an elementary school was opened in the city of Mariinsk; two
others were opened in 1899. By 1905 they were closed for lack of funds.
Only a few individual Nivkhi attended Russian schools.

Contemporary Life of the Nivkhi

In 1918, soon after the establishment of the Soviet government in the 175
Far East, this area, and especially the Amur Basin and Sakhalin, be- 648
came the scene of civil war and intervention. Guerrilla units were organized
to fight the White Guards and interventionists. The bitter fighting lasted
several years.

the leftovers of the least concluded this interlude, whereupon important schedule for the day began.

From all the houses of the village the people congregated ound the place where the bears stood tied to their stakes. Three lyak carried in their hands insignia of a peculiar kind. They nsisted of a straight young fir tree (Picea ajanensis) from which the branches had been removed except the crown and the permost branches closest to it, which were pressed up around e crown and tied with a string. A boa (Gilyak tolp) made of irrel tails, such as the Gilyak wear around their heads and necks, a fox tail was wound around the crown of the little tree twice serpentine-fashion and then also fastened. Two of these culiar banners were of the first type, the third was of the latter pe. The three banner-bearers were joined by a fourth, who, far as I could see, had only a plain long stick in his hand, but carried it as erect as the others their banners. While everybody w stood assembled around the bear place, the three men with eir insignia entered the enclosure, went directly around the ars several times, always returning to the path that led to it and ere turning around again, and, finally, planted one of their ignia in front of each of the bears. This was, so to speak, the nal for the departure: the bears were freed from their stakes l led out of the kadhra.

Before going any further, the neck and body bands on the ars had to be examined as to their strength. For the large bear s had been done the day before, and the animal had been pro- ed with new auxiliary bands. Everything was likewise in order the medium-sized bear. The especially bad-tempered and bborn small bear, however, definitely seemed to need to have fetters strengthened, and this is always a very dangerous experi- nt. "At 6 o'clock we went ashore near a Gilak settlement to make tea, and were soon surrounded by a group similar to the one of the night before. They wandered barefoote over the jagged stones on the beach as though their feet were soled with iron, while the cold seemed to have no effect on them whatever. Some of them presented a very amusing tableau as we pushed from shore. Near our fire was an old [105] stump of driftwood about six feet long, on which six of them sat, with their feet drawn up under their bodies, their heads resting on their hands, and their elbows on their knees. In the group was an old gray-headed man, the patriarch of the village; and from him down in both sexes, to a little boy hardly old enough to walk, who, however, imitated the attitude of the others with the greatest precision. I would not have believed it possible to roost so many humans on a log of that size, had I not seen it done."

22: Knox T-2 (1866) 1870 Gilyak

133 was in motion and evidently came from a descending steamboat. On another occasion we missed in these channels a boat our captain was desirous of hailing. Once while General Monravieff was ascending the river he was passed by a courier who was bringing him important despatches.

502 The pilot steers with a chart of the river before him, and relies partly upon his experience and partly upon the delineated route. Sometimes channels used at high water are not navigable when the river is low, and some are favorable for descent but not for ascent. In general the pilotage is far more facile than on the Mississippi, and accidents are not frequent.

609 The peasants always came to the bank where we stopped, no matter what the hour. At one place where we took wood
● 291 at night there was a picturesque group of twenty-five or thirty gathered around a fire; men and women talking, laughing, smoking, and watching the crew at work. The light of the fire poured full upon a few figures and brought them into strong relief, while others were half hidden in shadow. Of the men some wore coats of sheepskin, others Cossack coats of grey cloth; some had caps of faded cloth, and others Tartar caps of black sheepskin. Red beards, white beards, black beards, and smooth faces were played upon by the dancing flames. The women were in hoopless dresses, and held shawls over their heads in place of bonnets.

133 A hundred versts above Sofyesk the scenery changed. The mountains on the south bank receded from the river and were more broken and destitute of trees. Wide strips of lowland covered with forest intervened between the mountains and the shore. On the north the general character of the country remained. I observed a mountain, wooded to the top and sloping regularly, that had a curious formation at its summit. It was a perpendicular shaft resembling Bunker Hill Monument, and rising from the highest point of the mountain; it appeared of perfect symmetry, and seemed more like a work of art than of nature. On the same mountain, half way down its side, was a mass of rock with towers and buttresses

/325 cont./

764 Funeral ceremonies. After closing the eyes of the deceased with a hat they stretch him out and fold his hands across his stomach; they (wife, mother) let down their hair and that of the deceased. They try to lift the head, putting garments under it, or, in the case of the poor -- straw. Sometimes the wife or the husband cuts off a piece of the braid. Tobacco and a pipe are placed on the breast, and the guests come up one by one and smoke from this pipe into his mouth. The wife, or some other near relative, or, finally, /326/ an unrelated old man or old woman places at his head a small cup with food, vodka, and cold water; the relatives come up from time to time, eat what has been put there, and again fill up the cup.

764 292 The deceased should not be dressed in garments made of leather or of fish skin, for a drop of fat might fall into the fire, and that is a sin. Ornamented things, too, may not be given, for otherwise the deceased will lose his way. The garments for the deceased are sewed out of drel' and silk (pos") and provided in a multiple number, the rest in the singular. All the women [294] assemble for the sewing of the garments. The garments are sewed "lightly"; to sew strongly is a sin -- "uigyf." The deceased should not be washed.

764 292 192 The deceased is dressed in the following garments:

1. L'arkh, shirts, but unfailingly without wadding; no belt; no modesty pants.
2. Pan" -- leggings.
3. Ki -- boots of drel', of the same shape for men and women; the tops are short; the soles are also of drel'; they are put on the naked foot.
4. Hak: -- a hat also of drel'; the hat looks like a child's hat with the hood backwards.
5. Vamykh -- mittens with one finger, of any color; no sleeve coverings.
6. N'akh air -- glasses, i.e., eye patches of drel', three fingers in breadth. Earrings and bracelets are taken off.
7. Vigvyr -- a belt, a piece of simple drel', white in color, and with this only two pairs of scabbards (chek:okhal') of drel' (for

/326 cont./

764 a man) and one purse (mly) for tinder and flint.

[292] 8. Hontkh -- a tobacco pouch, also of drel', for both men and [192] women; tobacco is placed in the mly and the hontkh.

A husband dresses his wife, a wife her husband, parents their children, and vice versa. The deceased is given nothing more than the things enumerated. Shagund -- valuables -- are hung around outside and inside the yurt.

[574] Before the funeral guests are entertained from morning until night. Among the rich the entire village is entertained; they drink vodka and place vodka before the deceased. It is necessary to be gay, but they do not dance.

No news, or tales, or songs (are recited -- purind).

On the following day the men go to cut firewood for the [824] cremation of the deceased. They cut down larch and fir, and for children -- rose-willow; to cut larch or fir for children is a sin. One must select a good tree; otherwise it is a sin. They cut down one or two trees. The firewood is cut lengthwise and unfailingly a definite length: /327/ among some, up to a sagene in length (the clan of Pletunka); among others, one sagene less one hand. The roots are not touched, and the branches are thrown away. The logs are placed in three rows, lengthwise and crosswise.

During the second night, too, nobody sleeps; everyone feeds [782] the deceased (mu n'igyvyn achnind), but they do not put anything in his mouth. On the third day the yurt is cleaned -- tav mund, the floor is swept, then the fire is purified -- tugur mund, mos' is prepared, and tugur arnind is performed -- "they feed the fire" (the new master, or a clansman)-- mos' is thrown into a fire started with the branches of a fir, but nothing is said.

When all the preparations have been completed, they eat, drink vodka, and then bring in a dog sled. The deceased is placed on the dog sled, bound to it with thongs, and four men lift the dog sled and carry it on their arms out to the place of cremation. A "pryski" (dog) is tied to the place where its master slept. They walk around the future fire three times with the dog sled and the deceased, and they have a respite three times. After this the dogs and the dog sled are taken to the side, and the deceased,

628 614 682 [562] /356 cont./

every means to mask the sex of the newborn child. Only wom are excluded from acts of vengeance. It is understandable tha from the first moment of the murder there begins a painful, burdensome period for both clans. The clan of the murderer li under a true sword of Damocles, awaiting a stroke from any corner, at any time, and in any place. The clan of the slain feverishly tracks down its victim, who is on the lookout and in case does not intend to give up his life cheaply. At the same in the first minutes immediately after the fateful murder, the of the murderer sends some person from a neutral khal' (necess neutral; a clansman would be killed) to the clan of the murde man with apologies and an offer of ransom. But not always, a in any case not speedily, is accord obtained; sometimes years pass until, weary of the unsuccessful hunt, the clan of the aven consents to a reconciliation.

I shall describe one of the many variants of the procedur

614 628 682 539 reconciliation and ransom. Each of the hostile clans selects fr some neutral clan an able and eloquent /357/ man ("khlay-niv literally: orator -- from the verb "khlayndzh" -- to speak, an the noun "nivukh" -- man). These will be the intermediaries tween the parties. Each clan provides its khlay-nivukh with a

[292] gown, a cap of the same material, bow and arrows, a spear, a sometimes a Japanese saber. This is, so to speak, the official uniform of the intermediaries. One fine day, an armed deputa of khal'-nivukhi (clansmen), with the avenger and the khlay-nivukh at their head, appears near the hostile settlement. The somewhere in the nearby taiga or on the bank of some stream, new arrivals light a fire and, so to speak, make their camp. here the khlay-nivukh of the avengers sets out for the village o the murderer, where in one yurt his assembled clansmen khal' nivukhi), with their orator at their head, await the emissary. latter, having sat down and lighted his pipe (necessarily with h own flame), begins to set forth the demands for ransom. The role of the khlay-nivukh consists of stipulating as much as poss The clansmen of the murderer reply with excuses and with a pl for a reduction of the conditions of the ransom. But the khlay-

they masters. It is very strange that among these people who live on and along the water there are few good swimmers, and a goodly number, especially of the women, cannot swim at all. In general, the Gilyak is somewhat indolent and clumsy, and for this reason the energetic and nimble Tungus regards him with some disdain.

I did not conduct any particular experiments to test the sight and hearing of these people, but in general these senses may be said to be very keen. They distinguish colors well. The fact that their sense of touch is duller than that of the European could be deducted from a number of experiments. When I was taking their head measurements, I occasionally pulled a hair so violently that, according to our conception, it must have been painful; but the Gilyak did not mind it.

The characteristics here described apply also to the Sofiysk-Gilyak (Mangun), for they are more closely related to the pure-blooded Gilyak than they are to the Goldi. They have broader faces, coarser features and flatter noses than the Goldi, and they never shave their heads, whereas the Goldi shave a narrow strip of hair above the forehead. Furthermore, as we said, the Goldi women wear nose-rings. Also, the clothing of the Goldi is less primitive, more like that of the Manchurians.

IV. Clothing

In summer the clothing of the Gilyak consists mostly of a linen or cotton shirt, pants of the same material, and a wide, pyramid-shaped hat made of birch bark, which may be fastened under the chin with a little string. This hat is made of a single piece of bark. It is white and on it are sewed or pasted dark curlicues. Their feet are bare, or else they wear shoes or half-boots made of fish-or seal-skin. For this they use the skin of various fish, especially the kita, a species of of salmon. For this purpose the skin is beaten with a wooden clapper, in order to make it more flexible. They also have shirts and coats of fish skin, but these are no longer worn much. The shoes made of seal-skin are heavier and more durable. To make these, they use sharp iron instruments to scrape the fur from the skin; but the upper part of the boot often consists of unscraped [108] skin. Elkskin is also used, but more often by the Goldi.

In winter their foot covering (the torbassa) consists of longer boots made of unscraped seal-skin; between the boots and the upper part of the thighs their legs are stuck into

291 pipe-like pants (gari) made of seal-skin. The upper part of these are not fastened like regular pants but are held to a strap belt by a few thongs. In fall and spring some of them wear these gari made of padded Chinese cotton. Under the gari they wear a pair of regular linen pants which reach to the knees. Instead of wearing stockings, they stuff straw into their torbassa. Straw is a poor heat-conductor, and the same is true of seal-skin. These boots are also water-proof
177 if they are properly sewed. The Gilyak's bodies and arms
291 are covered with a short jacket made simply of dog skin with the fur on the outside. This jacket is sewed like a shirt and has a slit on the left side of the chest, which can be buttoned up. The shirt does not have a collar, the neck and back of the neck are covered by a cap. The color of the jacket differs with the color of the dogs, but the all-black ones are most sought after as gala attire. Sometimes this jacket consists of coarse gray Russian cloth, or only the upper half is of cloth and the lower half of unscraped seal-skin, but this type of jacket is worn more frequently between seasons. The jacket is tied with a belt on which hang various necessary implements, such as the knife, tinder, needle box, etc. Under this outer jacket they wear another, not cut like a shirt, made of blue Chinese cotton, fastened by means of bulbous, Chinese buttons. Under this, many of them wear a coarse linen shirt. Head, neck and back of the neck are covered with a cowl-shaped cap made of dog skin. In very cold weather they also wear fur gloves, with the fur on the inside, and the outside sewed with fish skin; these are fastened with a little band at the wrist.
294 They now sew their clothes with needles and a coarse
439 thread, both of which they buy from the Russians or the Chinese. Formerly they used home-made implements.
291 Women's clothes are very similar to men's. The Gilyak
301 women also wear gari made of skins, which are fastened
531 around the hips with straps. Their shirts, coats and jackets [109] are usually longer than those of the men. The hem of their coats are often sewed with intertwining figures made of sheet brass. They themselves make the figures with the aid of a file. Stylish ladies also wear bracelets which are soldered over an ordinary hearth fire fanned with a bellows. In general the women love to affect a certain neatness of attire. They have aprons for gala occasions, which also have brass ornaments. Their caps, fish-skin boots and torbassa are sometimes decorated with ornaments made of colored cloth, and particularly their gloves are thus decorated. They

huge pewter ear-rings, five centimeters wide, which decorated with colored glass beads. Pewter and beads bought from the Chinese, but they make the ear-rings selves. Around their necks the women wear beads of red glass, on these are sometimes hung little wooden ets representing human figures.

pes and tobacco pouches are so much a part of the Gilyak onality that I am tempted to give them space here. Their are of Chinese origin and have the uniform shape of the churian pipes. The stem is about an ell long, made of horn which has been turned with a lathe; the mouth is of jade. The cup-shaped brass bowl of the pipe is rger than a hazel nut. On their belts they wear a bone , ornamented with scrolls, which is used as a pipe er. Their tobacco pouch is tied with strings to a disk lrus tusk which is also decorated with curlicues, and s fastened to the upper button of the jacket. As soon as have finished their smoke, they stuff their pipe and co into the slit in their jacket.

V. Food and Diet

he Gilyak is short on provisions he eats only twice a He endures hunger relatively easily, he can hunt or e other activities for two days without any kind of food, on the third day does he feel weakness and discomfort. e other hand, as soon as the hour of plenty is at hand, doubtedly eats five times a day.

would be difficult to say how much nourishment a Gilyak but in general they are blessed with a good appetite. an eye witness I learned that once two Gilyak on a winurney consumed one pood (about 16 kilograms) of frozen eon in one day [110]

eir staple diet consists of fish: sturgeon, various types rp, whiting, but particularly salmon and mainly kita o longocephalus) and gorbusha (salmo gibbosus). A ly-caught fish is eaten raw, but the greater part of the on catch is dried for the cold season. For this purpose sh are cut lengthwise and are hung about six feet from round; by means of air currents they become a dried non- substance. This is the so-called sukola. The kita des the bulk of these winter stores, and the fish appears end of summer. The fish caught in winter are stored rozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

844 When the woman in labor goes to the place made
291 ready for her, she is clad in old soiled clothes. If the weather is cool she takes more clothes along. The only distinction in clothing worn during labor is that the woman in labor takes off the trousers, a garment that Gilyak women wear in summer and winter.

844 Usually an older woman who herself has gone
835 through several childbirths helps the woman in labor. If [757] such a midwife, called lanaven szauk, is not at hand the husband of the woman in labor can take her place; but under no circumstances may another male member of the family take this place, not even the younger brother of the husband, although, according to the customs of the Gilyak he has a right to the wife of his older brother and considers himself in a way her husband and certainly the second father of the child.

844 The Birth.

753 During the delivery the woman in labor sits and does not stretch her legs. The seat is erected at the same height as the bed in the yurt, that is about half a yard above the floor. During the whole period of delivery the woman in labor is supposed to keep quiet, not to strike out in pain, not to try to get up, not to lean over to one side or the other. If, during a hard delivery, the woman is not able to stay in the prescribed attitude by herself and starts writhing in pain, it is the duty of the midwife or husband to hold her up at her shoulders in order to prevent her from making the forbidden movements. The Gilyak believe that women who try to get up during the delivery contract a disease which causes a deformation of the spine. Once I was even shown a young woman who had become a cripple because she had not stayed quiet while in labor. Her spine was really deformed or, as the Gilyak say, broken (naski ts' onkrynd). She was not able to walk and died a few years later.

845 If the labor pains last too long and the woman suffers too badly, a piece of clothing is moved back and forth in front of her face and somebody blows down from above on the part in her hair.

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

/396 cont./

which runs around the neck and throat and from which two long tips, with beads sewed on them, hang down from the shoulders over the breast.

/397/ The winter headgear of the Gilyak women is peculiar and manifold in nature. The everyday cap, in which one sees them even at their domestic chores, when they fetch supplies from the storehouses, carry water from the river or firewood into the yurt, care for the dogs, etc., is the so-called tulv-hak, i.e., simply "winter cap" (Pl. XXI, Fig. 2).[1] It has a peculiar shape, with the high crown, usually provided with a cord clasp, and the extensions running down at the back and sides for the protection of the neck and ears, not unlike a helmet, a similarity to which the concentric or scalloped quilting on the outside, corresponding to the shape, to some extent contributes. This latter consists of single Chinese material, usually black or dark-blue cloth. On the inside the cap is lined with fox fur and trimmed on the edge with otter skin. The tscharp-hak, i.e., "silk cap" (Pl. XXI, Fig. 3), used on longer trips and on festive occasions, is more elegant. It is similar in shape to the fur cap of the men, but with a somewhat higher crown and extending down farther over the ears and the neck. Corresponding to the designation, it is made out of Chinese silk, on which gay-colored dragons and other figures, worked in here and there with gold thread, are represented (1). On the inside this cap is likewise lined with fox

1. It is well known that the dragon design on fabrics, furniture, and other articles is very popular among the Chinese, but only the emperor is said to be entitled to have five-clawed dragons on his clothing and utensils, whereas all other persons, from imperial princes and mandarins down, must content themselves with four-clawed dragons (Van-Braam, Voyage de l'Ambass. de la Comp. des vers l'Emper. de la Chine

en 1794 et 1795, publ. by Moreau de St. Méry, Paris, year VI, Vol. II, p. 237 [editor's note]. Girard, France et Chine, vie publ. et privée des Chinois anc. et modernes, Paris, 1869, Vol. I, p. 59). The dragons on the above-illustrated tscharp-hak belonging to a Gilyak woman from the village of Allof was of the latter type.

292 531 199 239 fur, which in a broad strip also goes around the front edge of the cap, trimmed at the bottom and in back with otter fur. The tscharp-hak, however, is still not the peak of elegance among the Gilyak women. The most elegant and distinguished piece of their entire winter wardrobe is the lynx cap (tschlyghi-hak, Pl. XXI, Fig. 4). It is made out of the head and tail pieces of a lynx skin. The former, with the upright, tufted ears of the animal, forms the crown of the cap. The shells of the ears are lined with red Chinese silk and on the edges are provided with small bunches or tufts of blue silk threads or of black sheep's wool (2). A row

2. The Gilyak designated the material of the black tufts to me as such, which, since the Gilyak themselves have no sheep, must likewise be of Chinese origin.

of such tufts also runs along the center of the headpiece, from the forehead to the tip of the snout. The fur of the lynx head is trimmed all around with a wide band of sable fur, which ends in an elongated tip at the bottom on either side to protect the ears. In the rear the lynx tail hangs down from the trimming to [301] the back, like a braid, and at its tip it is provided with a small ring or one of the pierced brass disks with which the women 292 customarily adorn the edging of their robes. Through such use 239 of the lynx-head /398/ fur and of the tail the tschlyghi-hak

291 skin undoubtedly affords better protection against cold, wind, and rain when the hair is on the outside than when it is turned to the inside, and if it were first tested in this position, it would be natural to add another layer of it or of another skin in the opposite position, with the hair on the inside, and thus, avoiding a foreign covering, to obtain that double fur undoubtedly giving the best protection, as one finds among all the northern and polar peoples.

291 The above-described or illustrated garments are sufficient
●292 to show that the Gilyak like to provide their clothing with all
531 kinds of variously shaped, gay-colored embroidery and other ornamentation. I have sometimes seen among them whole collections of embroidery designs, and I brought back some of them. These consist of fabric or fish-skin patches on which the designs are embroidered or on which various figures cut out of thin birch-bark and symmetrically arranged are pasted (Pl. XXIII and XXIV).[2] Among them, however, are also found larger pieces of fabric sometimes made up of several multicolored patches and not used for embroidery, but on which arabesques and animal figures of the most varied kinds are colorfully, but always symmetrically arranged beside or intertwined with one another (Pl. XXV-XXVII).[2] If for the moment, we disregard the latter, to which I shall come back later, particularly in connection with the animal figures, and if we consider only the designs to be embroidered on the articles of clothing previously discussed, we find in them a peculiar character and taste which fundamentally distinguishes them from those of the Siberian

531 peoples. Whereas among the Siberian Tungus, for instance,
[191] who likewise adorn their clothing with embroidery, the simplest patterns and motifs recur with great uniformity and often, for example, only rows of the same simple figures, small triangles, squares, circles, crude curlicues, and the like, running over or beside one another, are to be found (as the Tungusic specimens illustrated on Pl. XXIII, Fig. 1, and Pl. XXIV, Figs. 5 and 6 show), in the Gilyak designs and ornamentation beautiful, curved and interlaced lines, diverse arabesques artistically overlapping,

2. "Histor. Bericht," etc., p. 94.

became acquainted with one of the most distinguished Ainu, the aged Ssetakurero, upon whom, as an Ainu elder, the Japanese had conferred a saber. He still had in his keeping a document written in the Manchu language, which his father had received at one time from the Manchu superiors on the occasion of a tribute journey to Ssan-ssin on the Sungari, and through which
A he was appointed an elder of the Ainu. By means of this report
175 the accuracy of Mamia Rinsô's statements concerning the
114 tributary obligations of the Ainu to the Manchu at that time and
648 the manner in which they had to be met is placed beyond any doubt. But I cannot refrain from expressing the conjecture that on the basis of the above report there was some misunderstanding on the part of the reporter or the listener with regard to the place to which Ssetakurero's father made his tribute journey, in that this journey was not made to Ssan-ssin on the Sungari, but, as must be assumed from the dates, to Deren on the Amur. Such a misunderstanding could arise all the more easily since Ssetakurero, according to his own words, had himself never been in Manchu country.

.../

he character of an imitation of the whole animal. The ng of the lynx cap again consists of fox fur. Although ect to elegance and distinction the lynx cap of the , so to speak, a counterpart of the lynx coat of the men, ust stored away, but is actually worn, thanks to feminine d love of finery. On the occasion of a bear festival in saw them on two women, and the above illustration from one of these specimens (1). The lynx cap,

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%.

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse--something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, placards and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical

ula (2), and which is regarded in popular tradition, along with

2. According to Maximowicz /Maksimovich/ ("Primitiae florae amurensis," in Mém. prés. à l'Acad. des sc. de St. Pétersb., Vol. IX, 1859, p. 500), probably a Cyperaceae. According to R. Brown, the Eskimo of northwestern America and Greenland use Hierochloë alpina and similar types of grass for this purpose.

ginseng and the sable, as one of the three treasures of Ninguta (3).

3. U-tschen, in the translation by Wassiljef /Vasil'ev/: "Zapiski o Ningutie /Notes on Ningutie/" (Zap. Russk. Geogr. Obshch., Pt. XII, 1857, p. 95). The translator adds in a note that boots whose soles are stuffed with this type of grass are also sold in Peking.

I am unable to state whether the Gilyak use the same type or any specific type of grass for the purpose mentioned, but this much seems to me to be beyond doubt, that they do not act in this without making some sort of selection, for when, in the winter of 1855, I asked the owner of the yurt of Poghobi on Sakhalin to give me some of this grass, he refused my request with the remark that he himself had very little of it.

Finally, an important piece of Gilyak clothing is the belt, in particular as a holder for some of the implements always accompanying the Gilyak. First and foremost among them is a large knife, the so-called ngawla-dshakko, which is used both in eating and, if necessary, as a defensive or offensive weapon. Like almost all of the iron implements, it is always of Gilyak workmanship and usually simple, with a large blade and a short, wooden handle diagonally striped as a rule (Pl. XXXI, Fig. 1) (4), or sometimes wholly of iron with inlaid silver

4. The caption concerned, "ngawta-dshakko," should be corrected to ngawla-dshakko.

[See Category 116, P. 1011 -- Analyst]

/395 cont./

and copper arabesques and various engravings (ibid., Fig. 2). The sheath is always of thick seal leather (from Phoca barbata) adorned with various kinds of embossed arabesques, and it is very uniform in shape, widest in the middle, tapering toward the bottom, and not closed at the tip, but only provided with a bundle of leather lappets to protect the point of the blade (ibid., Fig. 3, and Pl. XIX) (5). Usually a second knife is also worn at

5. On Pl. XVIII the never absent, large belt-knife was omitted by mistake.

the belt: the yi-dshakko (Pl. XXXI, Fig. 4), quite indispensable to the Gilyak, with a small, pointed blade on a strong wooden handle, which, for greater firmness, is equipped with a bone ring at the lower end. It is always inserted in a firm sheath made of sturgeon skin, with a wooden or bone tip (ibid., Fig. 5). The yi-dshakko is used for cutting wood and making all kinds of crude as well as delicate articles out of it. It should be noted that the Gilyak always cuts toward himself, not away from himself, as Mamia Rinso points out about the Ainu, too, in contrast to the /396/ Japanese (1). Just as rarely lacking in a Gilyak's belt as

1. Cf. Mamia Rinsô, "Tô-tats ki ko," in Siebold's Nippon, VII, p. 188, besides the latter's note, p. 202.

the above-mentioned knife is the fire apparatus: a container for tinder and flint, and a steel. The former is either a small bag of sealskin leather (Gilyak tschondak, Pl. XXVIII, Fig. 5), usually similarly decorated with embossed arabesques or with small fur rosettes sewed on it (2), or a box (Gilyak mlo; ibid.,

2. In the village of Tyk on Sakhalin I saw a specimen of this kind that was decorated with small pieces of the fur of Otaria ursina, the first from this animal that I had encountered in the Amur region (see Vol. I, p. 189, of the present work).

[See Category 116, pp. 999, 998, 1011 & 1008 respectively -- Analyst]

293 /396 cont./
302 Fig. 4) that is very peculiar with regard to the material as well
412 as the form and arrangement. It is made out of the skin of a
[531] sturgeon that is softened beforehand for the purpose and later
[239] hardening like wood; on the Amur out of the skin of the tukki-
tscho of the Gilyak (Acipenser Schrenckii Brandt), on Sakhalin
out of that of an allegedly similar kind occurring in the
northern part of the Sea of Japan and called okras by the Gilyak.
The mlo consists of two quite similar pieces that may be in-
verted over each other and at their upper or lower edge are bent
into a spiral and attached to a leather strap in such a way that,
after pushing away a bone tube running on the latter, the upper
372 piece can be lifted off the lower one. Like the tinder box, the
293 steel, too, often hangs down from the belt on a long chain
(Gilyak kessj-kessj) equipped with various appendages (Pl. XXVIII,
Fig. 1 a/a and Pl. XXIX, Fig. 1) a/a Sometimes there is also found
293 on this a bent, little iron rod pointed at the bottom (Pl. XXVIII,
412 Figs. 1 and 2), which is also carried separately and serves for
all kinds of purposes, at one time for making a hole in a strap,
at another time for loosening a knot or cleaning the pipe, etc.
[32] This instrument (Gil. kedak) is not infrequently also made of
[531] horn or bone, and as insignificant and unessential as it is in
itself, nevertheless it is usually decorated with all sorts of carved
293 figures (Pl. XXVIII, Fig. 3). Finally, various other odds and
ends usually hang in the belt of the Gilyak as he happens to find
them, for instance, a boar's tusk or tooth, a piece of antelope
horn or deer antler, etc.
291 In winter, the Gilyak women also wear coats of dog fur,
237 which are made like those of the men; nevertheless they are
sometimes seen, though rarely, in coats of more precious furs.
In the winter of 1856, for instance, in Tangi on Sakhalin, I saw
one of the wives of the Gilyak Kombrein wrapped in a coat of
fox skins with the fur turned to the outside, under which two
under-coats of blue and of patterned Chinese material trimmed
with otter and sable furs were visible. On neatly dressed girls,
children of well-to-do parents, one sometimes sees on the dog-fur
coat a narrow fox-fur collar, the so-called mungrusk in Gilyak,
a/a [See Category 116, pp. 1008 and 1009 respectively--Analyst]

/567 cont./
114 On the other hand, I did have the opportunity of watching
325 the Gilyak forge iron in the village of Tyk on Sakhalin. The
326 smithy was set up in the very rear of the earth yurt, opposite the
192 entrance. For this purpose several boards from the sleeping
benches had been removed there, so that the earthen floor under-
neath was exposed. Here lay two longish bellows (Gilyak chigr)
made out of sealskin, whose long tubes converged toward the
ends into one common tube. In front of its mouth was set up a
semicircular block made of hard, dry clay (Gilyak chugn), which
on its lower side was provided with a cutout, the size of which
corresponded exactly to the mouth of the bellows tube, and im-
mediately in front of it was the fire, into which were thrust the
iron pieces to be forged. In order to keep the bellows tube im-
movably in place, the two arms were weighted down by several
longish and narrow boxes such as are used among the Gilyak,
placed on top of one another. A youth worked the two bellows,
alternately lifting the one and lowering the other, and another,
adult Gilyak, with a pair of tongs (Gilyak watsch) (3), took the

[104] 3. The w is pronounced here like the English w.

iron pieces to be forged out of the fire in order to hammer them
on a nearby small, triangular, iron anvil (Gilyak mik). These
tongs are of varying sizes depending on the size of the iron pieces
to be wrought. Made in my presence were a blade for an ordi-
[293] nary knife used for cutting wood, and the like, a so-called yi-
dshakko (4), and a second, finer piece, a so-called kessj-kessj,

4. See p. 590 above and Plate XXXI /see p. 1011/, Fig. 4.

that is, one of those chains, sometimes rather complicated /568/
which, equipped with various small pendants, an iron pipe-cleaner,
a steel for making fire, and the like, are worn at the belt by the

/568 cont./
114 Gilyak (1).
325
326
192
[293]

1. See p. 590 above and Plate XXVIII /see p.1008/, Fig. 1.

For this type of work among the Gilyak, in addition to
325 iron (Gilyak wytsch), other metals, as has been mentioned, are
326 also used, especially copper (Gilyak paghla, i.e., red), brass
[531] (Gilyak tussj), and silver (Gilyak totta) (2). The more of the
[435]

[192] 2. The quicksilver which they saw in my possession was totally new to them and caused great surprise among them, but they immediately gave it the characteristic designation of "totta-tschach," that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of
the piece. Since it is used only for this purpose or to make orna-
[439] ments, such as rings, ear pendants, clasps, and the like, they
prefer the Chinese silver above all others as the softest, because
pure, and therefore the easiest to use for their purposes (3).

[436] 3. A few words about the use of silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

[174] The high degree of skill that is expressed in the above-
mentioned Gilyak spears, knives, and the like indicates that the
forging of iron and other metals is an art practiced by the Gilyak
for a long time, and the above-mentioned report by Strahlenberg
325 stands in agreement with this. Undoubtedly, however, they have
197 borrowed this art from one of the two civilized peoples of East
174 Asia neighboring them. The only question is whether from the
Chinese or from the Japanese. The circumstance that their relations

/644 cont./
855 care of a small boy; but the obstinacy that the latter showed and the
howls that he emitted proved all too clearly how unfamiliar and an-
noying the whole procedure was for him.
855 In spite of their unwashed faces and often also uncombed hair,
291 the Gilyak children are, as a rule, dressed well and in winter very
fully. In their garments, made for them as a copy of those of the
adults, often down to the smallest detail and with all the ornaments
and embellishments on a reduced scale, one can see that in this respect
the mothers spare no toil or effort for the sake of their children and are
probably not lacking in motherly vanity. The fact, however, that one
524 sees on many a small boy the fur coat and apron-skirt held together by
285 a belt on which hang all the numerous implements carried by an adult,
ngawla- and yi-dshakko, fire steel, tinder box, pipe cleaner, etc., ex-
cept that they are all carved out of wood in miniature, shows that the
fathers, too, in their leisure hours, do not disdain giving some time
to their children and involuntarily arousing their imitative instincts.
855 Otherwise, one cannot speak of any education /645/ for the children,
861 of any training in obedience, in respect toward the parents, and the
like for them; they simply grow up, following the patterns that they
have set before their eyes by parents, siblings, and others, without any-
one paying any attention to them.
524 The Gilyak children, like all children, enjoy imitating and
mimicking in their games the activities; work, and amusements of
parents and adults. One of the earliest, most common, and most
popular games of Gilyak children is the moving back and forth of
wooden figures which are supposed to represent dogs. It is noteworthy
that these figures, which do not remotely resemble a dog, are quite
stereotyped among the Gilyak (see Pl. LX, Fig. 6 /see p. 1260/) and
only now and then vary in size. Whether they are made by the parents
or by older brothers of the little ones, a copy of the shape of a dog is
obviously never intended in producing them. The legs of the animal,
for instance, are not in the least even indicated -- rather it is simply
the conventionally assumed representation of a dog as a toy. Or could
it perhaps be, as one might almost suspect from its general usage among
the Gilyak, a fragment of an old conventional picture language among
them? Other animal figures allegedly likewise carved for the delight

164 The Gilyaks are unfamiliar with scurvy, although the
563 Russians suffer from it more than in Europe. I have
342 spoken in another connection (1) of the fact that I believe
362

1. St. Petersburg Med., Wochenschrift, No. 2-3. 1882.

this illness can be traced to earth miasmas, and particular-
ly to external ones rising up from the extensive marshes
and bogs, as well as house miasmas. The fact that the
natives are immune [248] may be attributed partly to habit,
(for Europeans suffer most from it when they first arrive)
and especially to the functional construction of the houses.
Russian barracks and private houses stand on frame work
which soon rots. Below the wood floor there is rotten wood
and damp earth which does not freeze even in winter. The
houses are badly ventilated and frequently have a definite
odor of mould. The Gilyak house has a solid floor of
pressed clay which does not let the earth miasmas penetrate;
it is well ventilated and is often filled with smoke whose
disinfectant qualities perhaps have an effect. Diet seems
to be only a limited factor in this question.
164 Another endemic disease, chronic stomach and intestinal
catarrh, occurs among the Gilyak, but relatively seldom
and soon disappears. It is usually accompanied by unbear-
able colic. This catarrh is also of miasmatic origin.
In spite of the constant fish diet, the Gilyak seldom suffers
from tape worm. Among Russians, too, it seems to come
mainly from pork, but the Gilyak rarely get this meat.
Bronchial catarrh occurs frequently, and pneumonia
seems the most frequent of the serious acute illnesses of the
Gilyak. The children of the Gilyak villages also suffered
from a whooping cough epidemic that was prevalent during
my time in Nikolayevsk-na-Amure.
Eye diseases occur more seldom than one would expect,
for in general, tribes that live in smoky houses frequently
suffer from them and present many one-eyed and blind
cases. The Gilyak houses are not always full of smoke, to
be sure, but so frequently that the relative absence of these
diseases must be attributed to a greater insensitivity of the
eye nerves. Actually, everyone who has been inside a
Gilyak house will be convinced that the natives can remain
calmly seated in smoke clouds that would immediately drive
164 a European out. However, the Gilyak do not escape entirely
293 unpunished. One finds among them people with chronic

164 conjunctivitis, corneal obscuration, and sty. Some cannot
293 stand a strong light and this is particularly noticeable in February and March because at that time, in the mid-day sun [249] the snow which is already partly melting on the surface, is intolerably blinding. These people, if they must go out during the day, wear spectacles of braided horsehair, which they make themselves. Among Gilyak women who do a great deal of fine needle work, nearsightedness occurs.

164 The infrequency of eye diseases seems to be partly connected with the non-prevalence of miasmatic and infectious diseases. (1) Soldiers also suffer little with their

1. Disguised ague and scurvy are to a certain extent exceptions.

eyes, in spite of the blinding snow. The abundant summer rain fall, the long, severe winter, and, finally, the sparse population account for the scarcity of miasmatic and infectious diseases, in spite of the widespread swamps.

But as for the febrile skin diseases, which among the Russians occur more seldom than in Europe, they are a veritable scourge among the natives. Whether they were known before the advent of the Russians is difficult to say, but one may assume that they were less frequent and permitted the population to recover. Now, however, they suffer more.

After several murderous epidemics of smallpox and measles, there remained gaps which will not be so easily filled. This seems to be the chief reason for the decrease in the native population.

164 The nervous and mental diseases which occur among the
158 European inhabitants more frequently than in Europe,
732 chiefly from causes of a social nature (nostalgia, alcoholism etc.) are not wide-spread among the Gilyak. I heard of epilepsy, but nothing of neuralgias, paralyses, and idiocy. I know of one case of chronic intermittent mania. However, diseases in this category will increase if whiskey-drinking should become prevalent.

752 External illnesses such as: burns, frost-bite, sprains, breaks, etc., of course occur, but I saw no case which resulted in permanent injury. From this one may conclude that the primitive methods of healing combined with the power of nature usually conquer such illnesses. [250]

164 Chronic skin diseases occur rather frequently. The chief cause of these is, of course, the lack of cleanliness, but it

764 Funeral ceremonies. After closing the eyes of the deceased hat they stretch him out and fold his hands across his stomach they (wife, mother) let down their hair and that of the decea They try to lift the head, putting garments under it, or, in t case of the poor -- straw. Sometimes the wife or the husban off a piece of the braid. Tobacco and a pipe are placed on t breast, and the guests come up one by one and smoke from t pipe into his mouth. The wife, or some other near relative, finally, /326/ an unrelated old man or old woman places at head a small cup with food, vodka, and cold water; the rela come up from time to time, eat what has been put there, an again fill up the cup.

764 292 The deceased should not be dressed in garments made leather or of fish skin, for a drop of fat might fall into the fi and that is a sin. Ornamented things, too, may not be giver for otherwise the deceased will lose his way. The garments the deceased are sewed out of drel' and silk (pos") and provi in a multiple number, the rest in the singular. All the wom [294] assemble for the sewing of the garments. The garments are "lightly"; to sew strongly is a sin -- "uigyf." The deceased not be washed.

764 292 192 The deceased is dressed in the following garments:

1. L'arkh, shirts, but unfailingly without wadding; no belt no modesty pants.

2. Pan" -- leggings.

3. Ki -- boots of drel', of the same shape for men and wo the tops are short; the soles are also of drel'; they are put o naked foot.

4. Hak: -- a hat also of drel'; the hat looks like a child's with the hood backwards.

5. Vàmykh -- mittens with one finger, of any color; no sl coverings.

6. N'akh àir -- glasses, i.e., eye patches of drel', three in breadth. Earrings and bracelets are taken off.

7. Vigvyr -- a belt, a piece of simple drel', white in col and with this only two pairs of scabbards (chek:okhal') of dre

/399 cont./

531 and snail-shaped spiral figures prevail throughout.

/400/ As on their garments, the Gilyak like to decorat all the other implements in their household and their lives wi all kinds of designs and ornamentation, as we noted on the ab mentioned implements worn at the belt and as we shall frequently have occasion to see below. The general character o these decorations is always the same, as is described in more tail above, whether the articles are made of wood, tree bark, leather, bone, or iron, and only the execution will be less ex and neat in the case of more brittle material, although with every type of object we shall come across some which testify the great skill and dexterity on the part of the Gilyak in the u of the simplest tools. The talent of the Gilyak for ornamenta 531 294 however, appears to us in its boldest and greatest developmen the embroideries for the decoration of their clothing, utilizin for this in particular, besides the easier reproduction of divers lines and figures, also the effects obtained by putting togethe various colors. And of this the Gilyak, as much as in general they prefer somber colors for their clothing, also popular amo the Chinese (1), a more or less dark blue or gray, make liber

1. Du Halde, Descr. de l'Emp. de la Chine, Vol. II, p. 82. Girard, France et Chine, vie publ. et privée des Chinois anc. et mod., Paris, 1869, Vol. I, p. 59.

but moderate and tasteful use in decorating their clothing, as [439] the above illustrations show. This is made possible by the variously colored silk and cotton thread obtained in trade fro the Chinese.

531 177 I have previously described the general character of Gil ornamentation as unique and completely different from that o the Siberian peoples. Also, no trace of Russian national influ ences, as are quite explicable among the latter as a result of centuries old, manifold, and constant intercourse with the Russians, is found among the Gilyak. On the other hand, mu of the Gilyak ornamentation, spiral-shaped coiled lines,

cont./
vide in comparison with the foot part, are made out of the
er and more pliable skin of the last-named species of seal,
the hair turned outward; they almost reach the knee and,
the ends of the trousers have been tucked in, are tied under
h a leather strap sewed to or on them. In view of the heavy
h of hair of the Gilyak, a head-covering is usually unneces-
during the summer. Nevertheless, for protection against
and sunshine, they wear a peculiar, rather shallow-conical
nade out of birch bark (Gilyak chib-hak, i.e., in literal
ation, "birch-bark hat"), which as a rule is decorated with
ent kinds of black and red arabesques arranged to radiate
round the tip and, likewise cut out of thin birch-bark,
d on the hat by means of fine catgut (see Pl. XVII and Pl.
Figs. 1 and 2) (2).

2. The colors (black and red) are not washed off by rain. I therefore suspect that they are produced by a mixture of Chinese ink or iron ocher with fish or seal train-oil.

The women wear quite similar undergarments, but a longer
reaching far below the knees, and over it a robe /Rock/ pro-
with sleeves, arranged in front for buttoning, and made
of similar material or of fish skins. Shirt and robe usually
a broad edging of material in a different color, over which
a decoration, especially on the robe, one or several rows
riously shaped brass disks of Chinese workmanship hanging
on little straps, or /388/ of the well-known Chinese copper
with a square hole, running all around (cf. Pl. XVII and Pl.
). As a result, all the movements of the women, every step
hey take, is accompanied by a clatter made by the striking
ner of the above-mentioned metal disks or coins. This
m, as the ornaments themselves reveal, is undoubtedly of

291 Chinese origin (1). To make the fish-skin robes the Gilyak use
30
000

175 1. During my stay in the Amur region,
301 among such decorations several little brass
797 crosses with the inscription "Souvenir de
291 mission" and a bronze medallion bearing
648 the picture of the Savior with a Chinese (?)
inscription were found on a woman's robe
from the village of Wair or one of the nearby
villages. In all probability these pieces came
from the French missionary, de la Brunière,
who in 1846, after he had spent the winter in
Wair, was murdered and robbed by the Gilyak.
His colleague Venault, who by order of the
Apostolic Vicar of Manchuria made a journey
in 1850 from Ashe-ho on the Sungari to the
Gilyak on the Amur to investigate the crime,
saw many of their children wearing such
crosses and medallions (Nouv. Annales des
Voyages, fifth series, Vol. XXX, 1852 [Vol.
II], p. 218). To supplement the reports col-
175 lected by Venault concerning the killing of
648 de la Brunière, it should be noted here in
797 passing that it took place, according to what
114 I learned from the Gilyak, on the left bank
of the Amur, between the villages of Wair
and Ssabach, at the point where the rocks in
a strange gate-like formation come close to
the river. I visited it during my winter journey
on March 29 (April 10), 1855. The already
aged Gilyak in whose house I stayed in the village
of Wair was named for me as one of the
murderers. He evaded or declined to answer
my questions concerning the details of the matter.
Since, however, the Gilyak consider it bad
luck (ultsch) to destroy a piece of paper with

/388 cont./
175 1. (cont.)
648 characters on it -- no matter whether
797 written or printed -- I hoped that perhaps
114 through him I would succeed in obtaining
possible diaries or other written notes of
de la Brunière. But despite the high
monetary reward that I offered the Gilyak
for them, only a few scraps of one of
D'Anville's maps of China were brought
to me by them after the lapse of some time,
when I had already again returned to the
Nikolayev post.

281 To make the fish-skin robes the Gilyak use
291 the most common species of salmon in the waters of the Amur
[136] region, Salmo lagocephalus (Gilyak lyghi-tscho, on Sakhalin
laghi-tscho). For this purpose the skins stripped from them hav
the scales removed, which is done by pounding the soaked skin
in a wooden vessel; then, by scraping, they are cleaned of the
adhering muscle and fatty parts, flattened and smoothed, and t
individual pieces sewed together. A material varying in qualit
is obtained, depending on how carefully these operations are pe
formed. On the robes intended for everyday use or for protecti
against rain, which are of a yellowish-gray color and usually
without any ornaments, the places where the scales were attach
to the individual skins can be clearly recognized (Pl. XVIII).
The more elegant robes, on the other hand, look as though the
281 were made of a fine yellowish-white leather. This contrasts
291 especially sharply with the wide black edgings with which the
53 of the robe in front, above and below, as well as the sleeves
at the shoulders and hands is provided with the above-mentione
color by means of paint. Various kinds of embroidery is put on
in the intervening spaces, and the back in particular is distingu
by pretty, intertwined arabesques embroidered with differently
colored threads, as they are shown on Plate XXIII, Figs. 2, 3 a
[301] 4. The above-mentioned metallic ornaments, too, are never
lacking on them.
[See Category 116, P. 998--Analyst]

/401 cont./

the Chinese, and reach their climax among the people farthest from the latter, the Gilyak. I think that the reason for this is not, say, in the natural disposition of the peoples concerned, but in political conditions. The Gilyak were able to keep themselves independent of Manchu-Chinese domination and to prevent direct visits and settlements of the latter in their territory (1).

1. See p. 144 above.

Since in this manner they escaped continuous exploitation by the Manchu officials and the Chinese merchants, they could attain greater affluence than the Tungusic Amur peoples subject to the Manchu-Chinese, and, secure in their possessions, they must have found greater joy in them and along with this felt a desire and an incentive to concern themselves, beyond acquiring the mere necessities, with decorating and beautifying their clothing and other equipment, in which they were furthermore lent a helping hand by the trade with the Chinese, conducted on their part with innate cunning and circumspection.

Returning specifically to the clothing of the Gilyak, I must mention a few tools customarily used among them for making it. For sewing and embroidering the Gilyak of today use only steel needles, which, on the mainland, they obtain from the Chinese, or, more recently, from the Russians, and on Sakhalin from the Japanese (2). The container for storing the needles(Gil. nugsis,

2. Steller's statement that the Kamchadal obtained steel needles from the Japanese and the erroneous explanation of their designation for them linked with it are discussed above (pp. 407 ff.) in detail.

from nug, "the needle"; see Pl. XXIX, Fig. 2),[2] worn by the women at the belt, is peculiar. It consists of a bone tube through which a strap provided with two stoppers runs and into which the needles are stuck; whereas the lower stopper is tied fast to the strap, the upper one can be moved along it; if one lifts the

[See Category 116, P. 1009--Analyst]

/401 cont./

latter and pushes it upward, the strap with the needles sticking in it can be pulled out of the tube at the lower stopper. This ingenious construction of the needle box is also /402/ found among the Eskimo: Dall saw it among the Innuit on Norton Sound (1).

1. Dall, Alaska and its resources, Boston, 1870, p. 142, with woodcut.

And all the Tungusic neighbors of the Gilyak have borrowed it from them, the Orok (2), the Olcha (3), and the Negda.

2. Through Mr. Poljakof, our museum obtained several Orok specimens of this kind, which completely correspond to the Gilyak specimens.

3. Maak", Putesh. na Amur" /Journey to the Amur/. Atl., Pl. 4, Fig. 9.

Middendorff saw it among the latter, and the illustration provided by him (4) shows exactly the same decorations on the bone

4. Reise in den äuss. Norden und Osten Sibiriens /A Journey in the Extreme Northern and Eastern Parts of Siberia/, Vol. IV, p. 1529.

tube as our Gilyak specimens bear. But I cannot agree with his opinion that these figures approximate those prevailing on the South Sea islands and are to be regarded as an offshoot of the death's-head form popular there, which is associated with cannibalism and the trophies of human skulls. Similar, quite crude and primitive representations of a human face by means of a couple of circles with a dot in the center, a vertical line in between, and a horizontal line under them, as eyes, nose, and mouth, are not infrequently found on the implements of the Gilyak and owe their origin, I believe, to the notion that by putting them

cont./
object the influence of any evil spirit involved will be
ed and the use of the tool will be accompanied by suc-
- a belief that I shall discuss in another place.
The thread with which garments are sewed varies accord-
the variety of material in them. Fish-skin robes, for
ole, and birch-bark hats are sewed with fish-skin yarn,
, fine thread cut out of fish skin, which the Gilyak call
k and distinguish, according to the type of fish from which
taken, as pilengat-mydisk, mimk-myd., kych-myd.,
5), fur coats and similar articles of clothing with the thread

5. Pilengat is Cyprinus Carpio L.; mimk -- Hypophtalmichthys Dybowskii Herz.; I do not know what type of fish the name kych refers to.

kuba) that the Gilyak know how to make from the ordinary
g nettle, and which is also used for making cord and fish-
ts (6). The garments made out of cotton or cloth are sewed

6. As is also known for the Siberian peoples, the ancient Kamchadal (Steller, op. cit., p. 83; Krascheninnikof, op. cit., Vol. I, p. 332), and others. The Gilyak method of making thread and cord from nettle fibers will be discussed in this work in a later section dealing with fishing.

hinese cotton thread, and for the various quiltings and em-
ries the Gilyak use either the latter or the silk thread like-
btained from the Chinese, depending on the delicacy of the
nd the elegance aimed for. I have never seen a Gilyak
n use scissors during her sewing and embroidering, although
now of them, thanks to the Chinese and have a special term
) for them; instead they only use a knife. For smoothing
ric they use a smoothed piece of wood (pam), which is

/402 cont./
294 beveled at one end and, needless to say, is provided with some
412 decoration on the upper side and on the handle, as well as at the
531 tip (Pl. XXIX, Fig. 3).*

/403/ At first glance it seems very surprising that the Gilyak,
286 who are so skilled in all kinds of handicrafts and achievements
283 and despite the fact that they know how to make thread out of
171 the fibers of a native plant and to make string and fishing nets out of it, do not know how to use this material to make a fabric for clothing, in other words, that the art of weaving seems to be so completely unknown to them. This is all the more strange as their nearest Paleo-Asiatic neighbors, the Ainu on Jesso /Yesso/, Sakhalin, and the Kuriles, are dressed in materials that in part they weave themselves out of the fibers of the nettle and the bast of trees (1), and one comes across this art, and, to be sure,

/639 cont./
462 since the house, which has cooled off during the night, must be heated again in the morning, the fish broth cooked for the dogs, and the latter fed in order for them to be ready for possible ex-
[251] cursions by the men. The storing of all food supplies and the
[252] preparation of food for the occupants of the house likewise fall, of course, entirely on the women. In the morning and during the day, however, the Gilyak usually eat only cold food. The
462 main meal, for which hot foods, too, are to be prepared, does
264 not take place until toward evening, for that is when the men
[574] return from their outside activities and when persons traveling through who have ties of hospitality with one of the occupants of the house and claim shelter for the night may arrive. Moreover, through the preparations for this meal the yurt is heated to the temperature which the Gilyak finds agreeable for the night.

294 Making the clothing for the whole family occupies the women
462 even more than the preparation of food for the human beings and dogs. First of all, this involves procuring or putting into proper
[281] condition the materials used for it: to dress the animal pelts and skins; to clean, pound, and dry the fish skins, which, besides being used for clothing, also replace window glass; to prepare the sewing thread from nettle fibers or from animal and fish skins, and so forth. This is followed by the cutting, /640/ sewing, and quilting of the various articles of clothing, which, as we have seen, are provided, in accordance with Gilyak taste, with all sorts of colorful, intertwined embroidery and other decorations
462 and embellishments. There are still other domestic duties, such as making household utensils, bowls, baskets, buckets of birch bark, sewing blankets and large and small bags and pouches out of cloth or animal pelts or skins for various uses, and the like.

462 Thus one literally never sees a Gilyak woman without work
411 even for a moment, whereas the man, upon his return from hunting
[517] or fishing, spends much time in rest and idleness and at home he has nothing to do but to make the implements needed for his own activities. Since these are very numerous and complicated, in that, among other things, they include all the varied and in part artistic wrought-iron lances, knives, harpoons, and the like, one

/766 cont./

764 bystanders to step somewhat farther back, and there a group of men, women, and children sat under a tree, watching the greedy flames which consumed their dead.

Nearby was the cremation site of an old woman from the same village, who had died not long before /767/ and beside it the raff belonging to it, still quite new (*). This was now to

* The little hut to the right on Plate LXV /p. 1265 /; between it and the pyre, the cremation site.

serve as the raff for the old man, and its door was opened so that the soul of the deceased, during the cremation of his body, would move into this domicile intended for it.

At the moment only the customary raff symbols, discussed below (53-55 /pp. 1233-1234 /), and a few bowls and vessels made of birch bark and wood stood in it. After the corpse is burned, however, and his soul has moved into the raff (for traveling on to Mlygh-wo), then the provisions of berries, fish, tobacco, and the like needed for it are also brought into the raff. -- When the fire had died down somewhat, the widow and a few men took long poles and pushed the burning wood closer together; they also threw on new wood in order to speed up the cremation. Soon nothing could be seen of the corpse except the charred stomach, which burned the slowest. The quantity of material burned and the fresh air of the forest prevented any unpleasant odor from being detected during the cremation of the body. The fire was maintained for a long time so that the body would burn completely to ashes, which are then scraped together and buried (on the spot). In the meantime the women, and among them the wife of the deceased, take up the slain dogs (**) and begin to skin

a peg, as a sign that a corpse is buried under

[241] In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949
[433] to 1951, the cultivated area increased by 30%.

Along with agriculture, the "Chir-Unvd" collective engages in animal
[231] husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

177 An essential prerequisite for the successful organization and develop-
648 ment of collective farms was the unification of small villages, formerly
474 scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages,
361 the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.

177 The most widespread of the new dwellings is the warm Russian log
648 house. Near the houses of the collective members are various barns, sheds,
474 etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings
36 devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a
[342] bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are
177 today similar to those of Russian homes. Some collective-farm villages
648 have electricity and radio. In the Nivkhi homes, especially on the conti-
474 nent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and
342 flowers in the windows. The Nivkhi are very fond of pictures, and adorn the
353 walls of their homes with illustrations, placards and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They
177 also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and
29 also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the
[294] traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays,
[292] the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

177 Substantial changes have taken place in the Nivkhi diet. There is greater
262 use of vegetables, bread, butter, tea, sugar and other purchased products.
758 The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions.
[043] Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical

291 pipe-like pants (gari) made of seal-skin. The upper part
of these are not fastened like regular pants but are held to
a strap belt by a few thongs. In fall and spring some of them
wear these gari made of padded Chinese cotton. Under the
gari they wear a pair of regular linen pants which reach to
the knees. Instead of wearing stockings, they stuff straw
into their torbassa. Straw is a poor heat-conductor, and the
same is true of seal-skin. These boots are also water-proof
177 if they are properly sewed. The Gilyak's bodies and arms
291 are covered with a short jacket made simply of dog skin with
the fur on the outside. This jacket is sewed like a shirt and
has a slit on the left side of the chest, which can be buttoned
up. The shirt does not have a collar, the neck and back of
the neck are covered by a cap. The color of the jacket
differs with the color of the dogs, but the all-black ones are
most sought after as gala attire. Sometimes this jacket con-
sists of coarse gray Russian cloth, or only the upper half is
of cloth and the lower half of unscraped seal-skin, but this
type of jacket is worn more frequently between seasons.
The jacket is tied with a belt on which hang various neces-
sary implements, such as the knife, tinder, needle box, etc.
Under this outer jacket they wear another, not cut like a
shirt, made of blue Chinese cotton, fastened by means of
bulbous, Chinese buttons. Under this, many of them wear
a coarse linen shirt. Head, neck and back of the neck are
covered with a cowl-shaped cap made of dog skin. In very
cold weather they also wear fur gloves, with the fur on the
inside, and the outside sewed with fish skin; these are
fastened with a little band at the wrist.

294 They now sew their clothes with needles and a coarse
439 thread, both of which they buy from the Russians or the
Chinese. Formerly they used home-made implements.

291 Women's clothes are very similar to men's. The Gilyak
301 women also wear gari made of skins, which are fastened
531 around the hips with straps. Their shirts, coats and jackets
[109] are usually longer than those of the men. The hem of
their coats are often sewed with intertwining figures made of
sheet brass. They themselves make the figures with the aid
of a file. Stylish ladies also wear bracelets which are
soldered over an ordinary hearth fire fanned with a bellows.
In general the women love to affect a certain neatness of
attire. They have aprons for gala occasions, which also have
brass ornaments. Their caps, fish-skin boots and torbassa
are sometimes decorated with ornaments made of colored
cloth, and particularly their gloves are thus decorated. They

291 represent the principal articles in the trade with the Chinese.
439 Since in connection with it, the Gilyak receive in exchange,
[177] besides various fabrics both in solid colors and patterned, many ready-made articles of clothing, this, as well as their general association with this civilized people next to them, easily explains the influence of Chinese customs and Chinese taste discernible in their clothing in the shape, cut, and the type and patterns of embroidery and other decorations.

291 /387/ The clothing worn next to the body by the Gilyak consists of drawers, which are not taken off even at night, trousers (Gilyak warsch), an under and an outer shirt (Gilyak larkch) reaching to the knees and buttoned from left to right at the neck and
[177] chest. These articles of clothing are always made out of Chinese,
[296] or nowadays also of Russian, blue or grey cotton material, and sometimes also of white, which, however, since the Gilyak never wash their clothing, very soon turns a more or less dirty gray. As a rule, no outer garment is needed during the summer, but if unfavorable weather, not infrequent even in this season, requires it, a winter garment, in particular the dog-fur coat to be described later, is used. High boots of seal leather and fur always serve as footgear. As a rule, the lower or foot part of the
[237] boot (Gilyak ki) and the sole are made of the skin of Phoca barbata (Gilyak kighitsch and kighitsch-langr), which, especially in the case of older specimens, is thicker and more durable than that of the other type of seal very common in the waters of the Amur region (Ph. nummularis; Gilyak pyghi and pyghi-langr) (1) and

1. See my Reis. und Forsch. im Amur-Lande, Vol. I, pp. 180 ff. Langr simply means "seal."

for this purpose deprived of its hair. In accordance with the foot structure of the Gilyak, the lower part of the boot is small and graceful, with a high back keel-shaped in the middle, and the pointed end, turned somewhat upward and back, shows unmistakably the influence of the Chinese pattern. The legs of the boots, broad

685 for your master!" And thus /305/ they go around the entire vil-
754 lage, meanwhile pulling on the tendon. Then the thief begins to suffocate from fright and confesses. A shout goes up; it happens that the thief dies from it.

687 An oath is taken also in controversial matters. Before the
695 court, in a balagan where the khlaj-nivukh sits, nothing is allowed to be boiled; they eat raw yukola.

A stick (kys') -- about an arshin in length with a human chkhnaj.

If the matter reaches the point of breaking the stick, then they pay more -- double. Both big and little assemble in the balagan of the khlaj-n'ivukh'a (the settlement of Karga, 1896).

881 Women, Childbirth, and Children. A maiden who has reached
30 sexual maturity makes two braids. Women pierce both ears in
178 order to put in earrings (mes'kh); formerly men also pierced their
881 ears. A wife who is a minor can be slept with only after she be-
585 gins to menstruate. During menstruation the woman puts on her
841 oldest clothes and does not sleep with her husband. Women wash
[302] themselves, but not with hot water, for otherwise the tugurmam (the mistress of the fire) takes offense.

171 Among the Kekhal (Orochi) a man who has two wives ac-
837 commodates a guest under one blanket.

843 A pregnant woman must not look at the Amur when it be-
823 gins to break up, in order not to slow up the opening of the river.

844 They give birth in the balagan (midwife -- langyv-mam). In winter the mother spends one and a half days in it, in summer three days.

84 One must not cry out during delivery -- a sin. The husband at this time does not go anywhere. If a child has died during birth, the woman must not travel on the river or sea for a whole year -- there would not be any fish. For a month before childbirth, it is not permissible to bind anything tightly or to drive in stakes; it is not permissible to repair anything for an alien.

[789] During difficult deliveries they open up boxes, tear off patches, and unscrew their rifles. The newborn baby is washed with cold water. The midwife is not paid. Until the umbilicus heals, the

171 among the Goldi, are in use throughout the Gilyak people
751 and are essentially the same as those discussed earlier
301 (Number XIII, p. 207) [see Goldi source 18: Genest--
Analyst]. The Gilyak on Sakhalin Island whose houses
372 Jakobsen entered were likewise highly indignant whenever
462 he left the house with a lighted pipe or when his companions
776 extinguished the fire burning in a hut by pouring water on it.
For in their opinion such things tended to conjure up destruction not only over the inhabitants of the one hut but over the whole tribe. The inhabitants of one house in the village of Varki below Nikolayevsk predicted the same result when Jakobsen was about to light a fire for making the tea, and they forced him to wait till the house-wife saw to this task, since, in their opinion, this was a job only to be performed by her. Plainly this conduct has its basis in the sacred position of fire. [380] Though this no longer leads to a personification of a fire god among the Goldi and the Gilyak, it no doubt existed among them at one time as it still does today among the Buryat.

776 The system of gods of the Gilyak is in no way behind that
171 of the Goldi in variety. Human and animal figures in color-
825 ful diversity serve as representations of celestial beings.
796 Here, too, there is a great similarity to the religious conceptions of the Goldi; the most important difference seems to me the one that was touched upon earlier (XIV, p. 223), [see Goldi source 18: Genest--Analyst] the fact that the Goldi pay zealous homage to the tiger while the Gilyak do honor to
796 the bear. It is true, though, that this homage is disastrous
415 to the bears since it means keeping a number of these
531 animals imprisoned in the cages in every village and killing
231 them at a bear festival. Before the festival the bears are fed plentifully for an extended time by means of large wooden spoons prepared especially for the purpose and decorated
796 with ingenious carvings. These bear festivals are usually held late in autumn and in winter and they are affairs of the greatest importance to their celebrators. I will now give the description of the festival that Jakobsen had the opportunity of observing in person.

796 On the 7th of February, 1885, the traveller arrived in
622 the early morning at the Gilyak village Vaida about 30 versts
574 above Nikolayevsk, where, as he had been informed, a festival was to take place on that day. From several other villages, some of which were considerable distances away large numbers of guests had come in already, and the whole place was astir in anticipation of the festival at hand. The opening of the bear festival is in the hands of the village

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotschai; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

302

302 TOILET--shaving and depilation; hairstyles (e.g., cutting, parting, arranging); care of the hair (e.g., washing, brushing); care of the nails (e.g., cutting, filing); body painting; use of cosmetics, ointments and perfumes; age, sex, and status differences in toilet; associated beliefs and practices; etc. See Also:

143 826 588 that he began to wear men's clothing, got married, and now is the foremost hunter of the vicinity. Normally he lives with his wife, but sometimes copulates with men. He considers the latter more pleasurable and speaks of himself with pleasure: "I have two chances, two joys." All treat him as an urdla n'ivukh. In all I was able to count five such cases among the Gilyak, the number that Bogoraz found among the Chukchee.

881 ● [302] The Gilyak have no special rites at the time of attaining sexual maturity. The only outward sign for a maiden who has attained sexual maturity is that she begins to plait her hair in two braids. The moment of the onset of sexual maturity for a maiden is considered the menstrual period, which ordinarily begins in the thirteenth or fourteenth year.

881 826 This moment is considered the beginning of marriageable age, although the proper term for a woman who has attained sexual maturity is the expression -- "a woman who has seen her body," i.e., whose breasts have grown to the point where she can see them. A similar term exists for men -- "a man who [302] has seen his body," but in this case the word "body" refers to the mustache.

881 867 Some time before the onset of menstruation the mother prepares her daughter for the approaching change in her life and instructs her in all the necessary rites and taboos connected with blood. The Gilyak, both men and women,

881 585 833 fully recognize the significance of menstruation as the mark of sexual maturity and do not have sexual intercourse before its onset. Adult Gilyak frequently marry little girls and from the first day sleep with them under one covering, but do not begin sexual intercourse until the wife informs her husband of the onset of the first menstruation.

/304 cont./

685 754 for your master!" And thus /305/ they go around the entire village, meanwhile pulling on the tendon. Then the thief begins to suffocate from fright and confesses. A shout goes up; it happens that the thief dies from it.

/342 cont./

197 The Tymovsk and the Okhotsk Gilyak have one language.

/343/

823 773 A legend about three brothers-cliffs in Aleksandrovsk on Sakhalin. Three Heng brothers went with a bear to look at a cast-up whale (kem), and then all of them turned into stone. Two jags -- mother and daughter -- look after them.

825 761 A rat must not be killed with an ax; a stick is necessary. Nakhvun's wife is dying because her father killed a rat with an ax; his son died for the same reason, and now his daughter is dying.

825 The attitude toward incest among dogs. According to the words of the Gilyak, among dogs a brother and sister do not copulate; exceptions are rare and are attributed to the milk. Dogs are killed for this; otherwise this heavy sin falls on the master; he will be punished with sickness and so forth. Father and daughter among dogs frequently have intercourse, but they are not killed for this.

● 302 Hair may be thrown away in any place.

752 825 [782] A person who has been rescued from death by a bear sacrifices chukh-chugynd -- a dog -- to Pal-n'igyvyn. No one may look at a person wounded by a bear; only an old man or an old woman binds his wounds. His bed is curtained off with a sail.

704 825 [261] In need they sometimes eat a bear that has died, and they treat him like a killed one. When they set off somewhere (hunting) or in general on important business, they always take along their favorite ymgi (son-in-law).

703 In Mil'kvo one Gilyak had two women. Once his daughter with the grandchildren came to visit him. She went to gather berries while the men went out to hunt seals. Then

/409 cont./

As is seen from the above description, the clothing of the Amur peoples, to be sure, offers much that is significant and original, but in no way such pervasive peculiarities and differences for the individual tribes that on the basis of it one could immediately /410/ recognize the affiliation of single individuals to this or to that people. The Gilyak, for instance, fundamentally different in origin and language from all the other Amur peoples, cannot be distinguished by their dress from their neighbors, the Olcha, and the latter in turn imperceptibly lead over to the Goldi, etc. Like climatic situations, like conditions with respect to food and subsistence, like ways of life, like cultural influences, and constant reciprocal intercourse have also in the course of time had a leveling effect on the clothing of these peoples and in part reduced and in part wiped out completely the differences that presumably were formerly present.

G
Gi
SS
302
171

This is not the case with regard to another aspect of their appearance, the hair style. In this respect, quite the contrary, out of the uniformity that most probably formerly prevailed there developed in the course of time, as a consequence of certain political events, differences which today to a certain extent separate even closely related peoples of the Amur region and make it possible to recognize immediately the affiliation of single individuals to one or another of them.

G
302

The Gilyak wear long hair parted in the middle and plaited in one braid for the men or two for the women, which hang down over the back. If it is too short or too sparse to be plaited, it hangs down loosely from the head, which gives the individuals concerned an untidy appearance, and old women a witchlike appearance. A luxuriant growth of hair and a long braid are regarded as adornment, but I did not see the Gilyak

G

artificially lengthen the braid, as the Chinese do, by plaiting
[142] in black silk. Baldness, on the other hand, is subject to ridi-
[826] cule. In order to promote the growth of hair, children are shorn
[856] from time to time, and occasionally, especially in the case of
● [301] boys, a tuft of hair is left standing somewhere on the front of the head, tied or plaited, and at the tip provided with a beaded rosette hanging down over the forehead (1). Adults, however,

A

and Goldi), and nowhere coincides with the boundary of such fundamentally different peoples as the Gilyak on the one hand and the Amur Tungus or Ainu on the other. Inasmuch as the degree of the dependence of the Amur peoples on the Manchu-Chinese or Japanese is of the greatest importance with regard to their whole existence and lives, however, this border line is also of great ethnographic interest.

G
● 301
171

Like the hair style, there is another aspect of the external appearance which to some extent characterizes individual peoples of the Amur region more than the clothing does -- it is the adornment worn on various parts of the body.

All the natives of the Amur region, and among them the Gilyak, have the use of earrings, or, more properly, ear pendants, in common. They consist either of only a silver or copper wire bent into a ring at the upper end and wound to a spiral shape at the lower end (small earring, Pl. XXIX, Fig. 7), 2 or of a silver wire bent into the shape of a large ring, on the upper and lower parts of which are strung large glass beads or circular disks of a grayish-white or greenish-white stone (jadeite) and pierced in the center (large earring, Pl. XXIX, Fig. 6). The men always wear only one earring in each lobe, the women, however, often two and three large pendants, sometimes several inches long, in each one, the weight of which distends the ear lobes far downward. Among Gilyak children I have occasionally seen, besides the metallic ring, a tuft of fox hair

G

worn at the ear lobe, which may serve as protection against the
Gi
[301] cold as well as adornment. It is noteworthy that, aside from the earrings, the /417/ Gilyak, Olcha, Orok, and, as far as I know, also the Negda wear no other ornament on a head or

Gi

facial part. Among the Samagir on the Gorin, the Goldi, and
301 the Orochi, however, there is a second and similar ornament, which, to be sure, is limited to the female sex (1), among /

1. Only once, quite as an exception, did Maack (Putesh. na Amur", p. 224) see this
2 [See category 116, p. 1009-- Analyst]

Gi /417 cont./
301 1. (cont.)
ornament on a male individual, a Goldi from Mylki. I did not come across such a case.

whom, however, it is never absent, so that by it one can immediately distinguish the women of these nationalities from
Gi [304] those of the Olcha and Gilyak. This is a nose ring shaped exactly
[515] like the small earring described above, but still smaller, which hangs down from the pierced septum to the upper lip -- a most peculiar, ugly ornament and one which in addition impedes cleanliness, in which all these peoples are so deficient anyway.
Gi [191] Finally, among the Orochi the same situation is found with re-
[184] gard to the kinds of ornaments discussed as with regard to the hair style: the northern Orochi, such as those on Kaiserhafen Hadshi Bay), correspond in this with the Olcha and Gilyak, but the southern ones, or Ta-dse, along the seacoast at least from Olga Bay downward (2) and along the right Ussuri tributaries, corre-

2. Olympiada Wassiljewa, op. cit., p. 67.

spond with the Goldi and Samagir, that is, the former wear only earrings, and the latter, those of the female sex, also nose rings. Moreover, one sees among the Orochi women or girls, and sometimes also among those of the Goldi along the Ussuri and on the Amur near the mouth of the Ussuri, just such a small ring in the
ooo right or the left nostril (3). From what has been said, it is readily

Gi [114] 3. According to Przewalski (op. cit., p. 105) in the right nostril; according to Nadarof (op. cit., p. 78) and Maack (op. cit., p. 179) in the one or the other nostril.

G From what has been said, it is readily
Gi seen that the custom of wearing nose rings, strangely enough, has
SS 301 spread among the peoples of the lower Amur region only as far as
302 the Manchu-Chinese hair style has been accepted by them; where
171 this has not been taken up by them, there are likewise no nose
177 rings in either the nostrils or the nasal septum. I would not know,

G
Gi
SS /417 cont./
302 however, how to explain such a coincidence of the Chinese hair
301 style and the unusual use of nose rings among the natives of the
171 lower Amur region, for, as is well known, the Chinese do not
177 wear such an ornament. Moreover, this coincidence is found only in the lower, not in the upper Amur region. To be sure, the
T Manchu-Chinese hair style has also spread into the latter, and
[302] even far more than in the former, and yet none of the tribes there
[301] wears nose rings, neither the Birar, the Manegir, nor the Orochon.
[171] Thus the custom is limited, on the whole, to only a few of the many Tungus tribes of the Amur region and may perhaps be regarded as only a remnant from an earlier time when it was presumably more widespread.

G A more common customary ornament among all the peoples
301 of the Amur region, in particular for the female sex, are silver
171 or copper finger rings, several of which are sometimes stuck on one finger, and bangles (Gilyak tyisj) made out of the same material or out of bone, /418/ which are worn above the wrist. On
G [531] Plate XXIX, Figs. 8 and 9, a few such bangles of Gilyak workmanship made out of copper with inlaid silver disks and small engravings are shown.

Another piece likewise generally widespread in the Amur region is more interesting -- it is the large and strong ring worn only by men on the thumb of the right hand. Among the Gilyak, who call it aam, it is of the shape and size shown on Plate XLV, 1 Fig. 5 /in the original work; the size of the figure has been reduced for the translation/, made of copper or lead, decorated with various figures that are engraved or consist of inlaid brass and silver and provided in the inner circumference with a silver hoop securely soldered and overlapping on the outside. This
Gi ring, by the way, is not merely adornment, but has a definite
[301] practical purpose. La Pérouse, who saw it among the Orochi
[464] (or Olcha) on de Castries Bay, was of the opinion that it serves them as a prop in skinning and cutting up fish (1). This work,
Gi however, is not done by the men, but by the women.

is used to draw the bow, to grasp the string better, and, in case of a strong pull on it, to protect the skin of the finger from
[554] injury as a result of severe abrasion (3). Aside from this practical

[113] 3. According to Anutschin /Anuchin/ (Luk" i striely, Arkheologo-etnograf. ocherk" /Bow and Arrows, an Archeological-ethnographic Essay/, Moscow, 1887, p. 35), this is the bow pull especially characteristic for the peoples of the Mongolian race, and, according to Morse, in his work, "Ancient and modern Methods of Arrow-Release" (Bullet. of the Essex Instit.), the so-called "Mongolian" method of drawing the bow.

purpose, however, the thumb ring is also a special ornament, since it is regarded as a sign of manliness and is associated with skill with the bow and arrow. No halfway adult Gilyak therefore lacks the aam, and it is the same among the other peoples.
[177] Indeed, even where the bow has in large part already been pushed out by firearms, Chinese matchlock guns, or Russian-Yakut rifles, as among the Manegir and Orochon, the thumb ring is still
[579] generally worn (4). Here, then, apart from its use in an occasional

4. Gerstfeldt, loc. cit., and Maack, loc. cit.

301 fist-fight, it is gradually becoming a mere ornament. And this
171

/418 cont./

is even more the case in China, where one sometimes sees it made with beautiful workmanship out of ivory, jasper, agate, etc. on the hands of high officials and mandarins (5). Undoubtedly

5. Davis, La Chine, trans. from the English by Pichard, Paris, 1837, Vol. I, p. 222. According to Neuhof (Die Gesandtschaft der Ost-Indisch.-Gesellsch. in den verein. Niederländern an den Tartar. Cham und nunmehr auch Sinischen Kaiser, Amsterdam, 1666, p. 64), the viceroy of Canton, at the time the Dutch embassy was there (1655), wore a thumb ring made of ivory. Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 303, 317) saw thumb rings of greenish-white jasper on two mandarins, one of whom belonged to the military forces in the city of Shanhai-Kuan on the seacoast close to the Great Wall. Freiherr von Hübner (Ein Spaziergang um die Welt /A Walk around the World/, second edition, Leipzig, 1875, Vol. III, p. 96) remarks that highly placed men in China always wear a large ring of white or green jade on the thumb.

/419/ the explanation for such regard and high esteem for the thumb ring may be found in its original purpose discussed above.

In concluding this section I must still raise the question as to whether and to what extent the custom of coloring, painting or tattooing, certain parts of the body is found among the peoples of the Amur region?

/594 cont./

solely decisive position which the former occupy in the trade with them. Among the Goldi, who live closest to the Sungari Chinese and have constant retail-trade relations with them, a tenth part and perhaps even a hundredth part of the ja or the silver ounce comes into consideration, which makes it necessary for them in giving a price to name also the pertinent unit of value (ja or dicha). For the more distant Olcha and Gilyak, however, who, as we shall see, obtain what they need in Chinese goods in larger quantities in Ssan-ssin on the Sungari, the tenth and the hundredth of the ja are no longer of any practical significance -- for they are concerned only with the whole unit of value and its multiples, and therefore there is no need among them to name it expressly in making appraisals, but rather it suffices to give only the number concerned. If I had made my investigations into this question, instead of from the Gilyak to the Goldi, in the opposite direction, going from the latter to the former, the unit of value upon which their evaluations are based would have been apparent to me without any difficulty, automatically, as it were. Incidentally, the unit of value borrowed from the Chinese, since it is not represented among the latter by any coin, is always only an imaginary quantity for the Amur peoples, and they are able to form only an approximate idea of it in terms of the number or quantity of the corresponding pieces of goods or other articles. As is well known, in China only the thousandth part of a silver ounce is current in the form of coins -- the round brass coins with a square hole in the center (Gilyak tschcha), which are usually strung ten and a thousand on a string. On account of their insignificant value, however, the Gilyak pay no attention to them, and, like the variously shaped brass lamellas, they are used only as decorations for women's skirts or occasionally also as shirt and belt buttons. In my time Russian coins, likewise called tschcha (that is, probably "coin" in general) by the Gilyak, were not accepted either by them or by the other natives of the lower Amur region, both out of complete unfamiliarity with their value and because the Chinese merchants likewise would not accept them (1). Through their association with the Russians,

291 pipe-like pants (gari) made of seal-skin. The upper part of these are not fastened like regular pants but are held to a strap belt by a few thongs. In fall and spring some of them wear these gari made of padded Chinese cotton. Under the gari they wear a pair of regular linen pants which reach to the knees. Instead of wearing stockings, they stuff straw into their torbassa. Straw is a poor heat-conductor, and the same is true of seal-skin. These boots are also water-proof
177 if they are properly sewed. The Gilyak's bodies and arms
291 are covered with a short jacket made simply of dog skin with the fur on the outside. This jacket is sewed like a shirt and has a slit on the left side of the chest, which can be buttoned up. The shirt does not have a collar, the neck and back of the neck are covered by a cap. The color of the jacket differs with the color of the dogs, but the all-black ones are most sought after as gala attire. Sometimes this jacket consists of coarse gray Russian cloth, or only the upper half is of cloth and the lower half of unscraped seal-skin, but this type of jacket is worn more frequently between seasons. The jacket is tied with a belt on which hang various necessary implements, such as the knife, tinder, needle box, etc. Under this outer jacket they wear another, not cut like a shirt, made of blue Chinese cotton, fastened by means of bulbous, Chinese buttons. Under this, many of them wear a coarse linen shirt. Head, neck and back of the neck are covered with a cowl-shaped cap made of dog skin. In very cold weather they also wear fur gloves, with the fur on the inside, and the outside sewed with fish skin; these are fastened with a little band at the wrist.

294 They now sew their clothes with needles and a coarse
439 thread, both of which they buy from the Russians or the Chinese. Formerly they used home-made implements.

291 Women's clothes are very similar to men's. The Gilyak
301 women also wear gari made of skins, which are fastened
531 around the hips with straps. Their shirts, coats and jackets [109] are usually longer than those of the men. The hem of their coats are often sewed with intertwining figures made of sheet brass. They themselves make the figures with the aid of a file. Stylish ladies also wear bracelets which are soldered over an ordinary hearth fire fanned with a bellows. In general the women love to affect a certain neatness of attire. They have aprons for gala occasions, which also have brass ornaments. Their caps, fish-skin boots and torbassa are sometimes decorated with ornaments made of colored cloth, and particularly their gloves are thus decorated. They

291 wear huge pewter ear-rings, five centimeters wide, which
301 are decorated with colored glass beads. Pewter and beads
531 are bought from the Chinese, but they make the ear-rings themselves. Around their necks the women wear beads of colored glass, on these are sometimes hung little wooden amulets representing human figures.

177 Pipes and tobacco pouches are so much a part of the Gilyak
276 personality that I am tempted to give them space here. Their
531 pipes are of Chinese origin and have the uniform shape of the Manchurian pipes. The stem is about an ell long, made of black horn which has been turned with a lathe; the mouth piece is of jade. The cup-shaped brass bowl of the pipe is no larger than a hazel nut. On their belts they wear a bone spike, ornamented with scrolls, which is used as a pipe cleaner. Their tobacco pouch is tied with strings to a disk of walrus tusk which is also decorated with curlicues, and this is fastened to the upper button of the jacket. As soon as they have finished their smoke, they stuff their pipe and tobacco into the slit in their jacket.

V. Food and Diet

261 If the Gilyak is short on provisions he eats only twice a day. He endures hunger relatively easily, he can hunt or pursue other activities for two days without any kind of food, only on the third day does he feel weakness and discomfort. On the other hand, as soon as the hour of plenty is at hand, he undoubtedly eats five times a day.

It would be difficult to say how much nourishment a Gilyak takes but in general they are blessed with a good appetite. From an eye witness I learned that once two Gilyak on a winter journey consumed one pood (about 16 kilograms) of frozen sturgeon in one day [110]

251 Their staple diet consists of fish: sturgeon, various types
262 of carp, whiting, but particularly salmon and mainly kita (salmo longocephalus) and gorbusha (salmo gibbosus). A freshly-caught fish is eaten raw, but the greater part of the salmon catch is dried for the cold season. For this purpose the fish are cut lengthwise and are hung about six feet from the ground; by means of air currents they become a dried non-rotten substance. This is the so-called sukola. The kita provides the bulk of these winter stores, and the fish appears at the end of summer. The fish caught in winter are stored in a frozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

/409 cont./

As is seen from the above description, the clothing of the Amur peoples, to be sure, offers much that is significant and original, but in no way such pervasive peculiarities and differences for the individual tribes that on the basis of it one could immediately /410/ recognize the affiliation of single individuals to this or to that people. The Gilyak, for instance, fundamentally different in origin and language from all the other Amur peoples, cannot be distinguished by their dress from their neighbors, the Olcha, and the latter in turn imperceptibly lead over to the Goldi, etc. Like climatic situations, like conditions with respect to food and subsistence, like ways of life, like cultural influences, and constant reciprocal intercourse have also in the course of time had a leveling effect on the clothing of these peoples and in part reduced and in part wiped out completely the differences that presumably were formerly present.

G
SS
302
191

This is not the case with regard to another aspect of their appearance, the hair style. In this respect, quite the contrary, out of the uniformity that most probably formerly prevailed there developed in the course of time, as a consequence of certain political events, differences which today to a certain extent separate even closely related peoples of the Amur region and make it possible to recognize immediately the affiliation of single individuals to one or another of them.

G
302

The Gilyak wear long hair parted in the middle and plaited in one braid for the men or two for the women, which hang down over the back. If it is too short or too sparse to be plaited, it hangs down loosely from the head, which gives the individuals concerned an untidy appearance, and old women a witchlike appearance. A luxuriant growth of hair and a long braid are regarded as adornment, but I did not see the Gilyak

G
[142]
[186]
[186]
[301]

artificially lengthen the braid, as the Chinese do, by plaiting in black silk. Baldness, on the other hand, is subject to ridicule. In order to promote the growth of hair, children are shorn from time to time, and occasionally, especially in the case of boys, a tuft of hair is left standing somewhere on the front of the head, tied or plaited, and at the tip provided with a beaded rosette hanging down over the forehead (1). Adults, however,

/410 cont./

302
[171]

1. I later saw something similar among the Daur in the village of Chormoldin: the hair was shaved off the boys and a tuft of hair was left standing only here and there, quite unsymmetrically, either on the crown or on one side, which gave them a very comical appearance. The Chinese presumably also do this.

Adults, however,
[153] never have their head or beard hair cut; indeed, among the
[161] Gilyak there prevails the belief that if an adult among them had his braid cut and his hair shorn, it would bring him sickness and
302 death. After death, however, the braid may be cut off and pre-
765 served by the relatives of the deceased. For instance, the Gilyak Kimrkan in Kalm showed me the braids that he had removed from his first wife and his daughter after their deaths, and which he carefully stored, wrapped in birch bark, in the small hut erected for the manes of the deceased, the so-called rakk,* which

*/HRAF note: According to the list of errata on p. 777 of the foreign text, rakk should be raff. An asterisk on the latter word refers to a footnote which reads "Noted later": see note * on p.1236./

302
515
136

will be discussed later. In caring for their hair, the Gilyak are just as untidy as in their clothing. Hence one often sees them hit their heads with the palms of their hands in order to check the annoying vermin, or scratch their heads, which characteristically is always done with the thumb while the other /411/

[151]

fingers rest on the head. Indeed, the Gilyak even regard the presence of vermin in the head hair as a sign of good health. Thus, during my stay at the Nikolayev post, it happened that a Gilyak boy was taken by a Russian for rearing in his house, but when the father visited the boy after a time and missed the vermin in his hair, he explained that he was worried about

515
825

his health and took him back again. In connection with this, the bad habit of cracking vermin from the head or clothing in the mouth prevails among the Gilyak, as among so many primi-

[123]

tive peoples. My disgust at this, occasionally expressed to them, seemed ridiculous to them, and to my question as to why they did it, since it could be neither for food nor for a delicacy, I was given the answer that they were paying back the little animals for what the latter were doing to them.

/411 cont./

ooo
G
302
191
ooo

animals for what the latter were doing to them.

Exactly the same hair style as the Gilyak have is found among their nearest neighbors, the Negda, Olcha, and their fellow tribesmen -- the Orok on Sakhalin (1). It may be pre-

1. Mamiā Rinsô ("Tôtats-ki ko," in Siebold's Nippon, VII, p. 189) has already noted for the Orok that they do not cut their hair, but let it hang down over the shoulders or wear it wound into a thick plait at the neck.

A
302
199

It may be presumed that formerly the Ainu, too, had the same or a similar, more or less natural hair style, until they fell under the rule of the Japanese, and under pressure from them, as a sign of submission, adopted their present hair style, essentially similar to the one of the Japanese. As is known, the Japanese shave the hair on the forehead and crown, and at the back of the head they do not let it grow as long as do the Chinese nor plait it in a braid, but cut it to a certain length all around and gather it into a lock which, tied with a ribbon, rests on the crown in the direction of the forehead. Now, with the exception of this last point, which for a primitive people would be too elaborate and inconvenient and also require too much attention and care (2),

2. For example, in order not to disarrange their hairdo when sleeping, the Japanese, instead of a pillow, use a small wooden bench that is hollowed out to conform to the shape of the head.

A
175
302
199

the Ainu imitate their rulers. As early as 1622, Father Hieronymus de Angelis reported that the natives of Jesso /Yesso/ shear their hair in front so that there is no hair at the temples, but in the back wear it as long as the Japanese (that is, without a braid hanging down) (3), and Vries added that the women

Goldi, etc. (1). These peoples therefore regard the unshaved and

1. Venault, "Excursion dans les parties intérieures de la Mandchourie, 1850" (Nouv. Annales des voyages, Vol. XXX, 1852[II], pp. 205, 214. Actually it is not difficult to recognize the Olcha villages of Adi, Pulu, and Uchtr in the Tschang-Mao-tse villages mentioned by Venault, "Aki," the first, going downstream, "Pulo," and "Ukuu." It has already been mentioned above (pp. 212 and 388, note 1) that the "Kili-mi" belonging to the Tschang-Mao-tse, who through the murder of de la Brunière gave rise to Venault's voyage, are the Gilyak. Venault also notes that in their physiognomy the Tschang-Mao-tse are closer to the European type than the Tuang-Mao-tse, which is absolutely correct for the Gilyak and Olcha in contrast to the Goldi, Orochi, etc. (See pp. 286 ff. /untranslated/ above.)

unshorn hair as a symbol of freedom, as the Ainu do with regard
G to the braid. This also explains the aversion, heightened to
302 superstition, of the Gilyak, who are especially proud of their
648 freedom from the Manchu-Chinese, against shearing their hair or even cutting the braid plaited with all of it.

Gi
302
191
177
[648]

How much the distribution of the Manchu-Chinese hair style among the Amur peoples depended on the expansion of the effective, not merely nominal rule of the Celestial Empire can be seen from the Orochi. In the southernmost part of their habitation area, where they, designated as Ta-dse, are under considerable pressure from the many Chinese (Mandse) living among them, they wear their hair exactly like the latter, except that, as is also very frequent among the Goldi and Samagir, it is not shaved on the front of the head, for lack of the necessary tools, but only cut quite short (2). Farther north, such as in

T
302
171
177
[131]

/415 cont./

southern part of their habitation area, along the eastern slopes of the great Chingan Mountains, around the tributaries of the Nonni, along the Nomin, Ganj, Gujuli, etc., where they live in complete dependence on the Daur and indirectly on the Chinese (4),

4. See p. 94 above.

they also certainly share the hair style of the latter, it gradually disappears going northward, and along the upper Amur and its northern tributaries, where, /416/ in spite of the Treaty of Nerchinsk, they have actually always remained under Russian influence and Russian rule, they have also retained their original and natural hair style, with the hair completely unshorn and either simply hanging down or tied up in a bunch on the crown (1).

T

177
648

Thus, the way of wearing the hair among all the indigenous peoples of the Amur region is a sign of their dependence on or independence of the Manchu-Chinese, or, on Sakhalin, the Japanese. The boundary up to which the Chinese, among the Amur peoples, or on Sakhalin the Japanese, hair style extends designates at the same time the boundary of the effective rule of the Manchu-Chinese or Japanese over these peoples. It is a political, not an ethnographic border line: in the western part as well as in the eastern part of the Amur region and Sakhalin it runs across the habitation area of the peoples concerned (Orochon, Orochi, and Ainu), only at certain points separates closely related tribes (for example, the Olcha from the Samagir

A
G
SS
T
302
191
177

/416 cont./

and Goldi), and nowhere coincides with the boundary of such fundamentally different peoples as the Gilyak on the one hand and the Amur Tungus or Ainu on the other. Inasmuch as the degree of the dependence of the Amur peoples on the Manchu-Chinese or Japanese is of the greatest importance with regard to their whole existence and lives, however, this border line is also of great ethnographic interest.

G
301
191

Like the hair style, there is another aspect of the external appearance which to some extent characterizes individual peoples of the Amur region more than the clothing does -- it is the adornment worn on various parts of the body.

All the natives of the Amur region, and among them the Gilyak, have the use of earrings, or, more properly, ear pendants, in common. They consist either of only a silver or copper wire bent into a ring at the upper end and wound to a spiral shape at the lower end (small earring, Pl. XXIX, Fig. 7), or of a silver wire bent into the shape of a large ring, on the upper and lower parts of which are strung large glass beads or circular disks of a grayish-white or greenish-white stone (jadeite) and pierced in the center (large earring, Pl. XXIX, Fig. 6). The men always wear only one earring in each lobe, the women, however, often two and three large pendants, sometimes several inches long, in each one, the weight of which distends the ear lobes far downward. Among Gilyak children I have occasionally seen, besides the metallic ring, a tuft of fox hair worn at the ear lobe, which may serve as protection against the cold as well as adornment. It is noteworthy that, aside from

Gi
[301]

the earrings, the /417/ Gilyak, Olcha, Orok, and, as far as I know, also the Negda wear no other ornament on a head or facial part. Among the Samagir on the Gorin, the Goldi, and

Gi
301

the Orochi, however, there is a second and similar ornament, which, to be sure, is limited to the female sex (1), among

1. Only once, quite as an exception, did Maack (Puteshi. na Amur", p. 224) see this
2 [See Category 116, P. 1009-- Analyst]

1. (cont.)
ornament on a male individual, a Goldi from Mylki. I did not come across such a case.

whom, however, it is never absent, so that by it one can immediately distinguish the women of these nationalities from those of the Olcha and Gilyak. This is a nose ring shaped exactly like the small earring described above, but still smaller, which hangs down from the pierced septum to the upper lip -- a most peculiar, ugly ornament and one which in addition impedes cleanliness, in which all these peoples are so deficient anyway. Finally, among the Orochi the same situation is found with regard to the kinds of ornaments discussed as with regard to the hair style: the northern Orochi, such as those on Kaiserhafen Hadshi Bay), correspond in this with the Olcha and Gilyak, but the southern ones, or Ta-dse, along the seacoast at least from Olga Bay downward (2) and along the right Ussuri tributaries, corre-

2. Olympiada Wassiljewa, op. cit., p. 67.

spond with the Goldi and Samagir, that is, the former wear only earrings, and the latter, those of the female sex, also nose rings. Moreover, one sees among the Orochi women or girls, and sometimes also among those of the Goldi along the Ussuri and on the Amur near the mouth of the Ussuri, just such a small ring in the right or the left nostril (3). From what has been said, it is readily

3. According to Przewalski (op. cit., p. 105) in the right nostril; according to Nadarof (op. cit., p. 78) and Maack (op. cit., p. 179) in the one or the other nostril.

From what has been said, it is readily seen that the custom of wearing nose rings, strangely enough, has spread among the peoples of the lower Amur region only as far as the Manchu-Chinese hair style has been accepted by them; where this has not been taken up by them, there are likewise no nose rings in either the nostrils or the nasal septum. I would not know,

/417 cont./

however, how to explain such a coincidence of the Chinese hair style and the unusual use of nose rings among the natives of the lower Amur region, for, as is well known, the Chinese do not wear such an ornament. Moreover, this coincidence is found only in the lower, not in the upper Amur region. To be sure, the Manchu-Chinese hair style has also spread into the latter, and even far more than in the former, and yet none of the tribes there wears nose rings, neither the Birar, the Manegir, nor the Orochon. Thus the custom is limited, on the whole, to only a few of the many Tungus tribes of the Amur region and may perhaps be regarded as only a remnant from an earlier time when it was presumably more widespread.

A more common customary ornament among all the peoples of the Amur region, in particular for the female sex, are silver or copper finger rings, several of which are sometimes stuck on one finger, and bangles (Gilyak tyisj) made out of the same material or out of bone, /418/ which are worn above the wrist. On Plate XXIX, Figs. 8 and 9, a few such bangles of Gilyak workmanship made out of copper with inlaid silver disks and small engravings are shown.

Another piece likewise generally widespread in the Amur region is more interesting -- it is the large and strong ring worn only by men on the thumb of the right hand. Among the Gilyak, who call it aam, it is of the shape and size shown on Plate XLV, Fig. 5 /in the original work; the size of the figure has been reduced for the translation/, made of copper or lead, decorated with various figures that are engraved or consist of inlaid brass and silver and provided in the inner circumference with a silver hoop securely soldered and overlapping on the outside. This ring, by the way, is not merely adornment, but has a definite practical purpose. La Pérouse, who saw it among the Orochi (or Olcha) on de Castries Bay, was of the opinion that it serves them as a prop in skinning and cutting up fish (1). This work, however, is not done by the men, but by the women.

/418 cont./

is even more the case in China, where one sometimes sees it made with beautiful workmanship out of ivory, jasper, agate, etc. on the hands of high officials and mandarins (5). Undoubtedly

5. Davis, La Chine, trans. from the English by Pichard, Paris, 1837, Vol. I, p. 222. According to Neuhof (Die Gesandtschaft der Ost-Indisch.-Gesellsch. in den verein. Niederländern an den Tartar. Cham und nunmehr auch Sinischen Kaiser, Amsterdam, 1666, p. 64), the viceroy of Canton, at the time the Dutch embassy was there (1655), wore a thumb ring made of ivory. Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 303, 317) saw thumb rings of greenish-white jasper on two mandarins, one of whom belonged to the military forces in the city of Shanhai-Kuan on the seacoast close to the Great Wall. Freiherr von Hübner (Ein Spaziergang um die Welt /A Walk around the World/, second edition, Leipzig, 1875, Vol. III, p. 96) remarks that highly placed men in China always wear a large ring of white or green jade on the thumb.

/419/ the explanation for such regard and high esteem for the thumb ring may be found in its original purpose discussed above.

In concluding this section I must still raise the question as to whether and to what extent the custom of coloring, painting or tattooing, certain parts of the body is found among the peoples of the Amur region?

/419 cont./

First, as far as the Gilyak are concerned, I believe I can state with certainty that nothing of the kind occurs among them today. At least no trace of such a custom among them was encountered by me, despite frequent contact with them for several years. This is noteworthy inasmuch as this custom is found among their immediate neighbors on Sakhalin, the Ainu, and more or less among all the other Paleo-Asiatic peoples, even though it may be gradually disappearing. In the Ainu area, the coloring or tattooing of certain parts of the body is practiced chiefly on Jesso /Yesso/. In the Japanese descriptions of this island, the Jeso-ki of Kannemon (1652) and Arai Tsikugo-no-Kami (1720), it is said that the Ainu women color their lips with the juice of the kudsi-gusa (or mouth-plant) and produce various flower- and cloud-like figures all around the mouth, as well as on the forehead, face, hands and feet, by means of needle pricks and rubbing in a black substance (1). These tattooings are applied

Footwear, robes and overcoats were made of specially prepared skins of carp, Siberian salmon and pike, as well as seal and elk skin, dog-fur, etc.

Before the Revolution, neither men nor women cut their hair; they wore it braided—the men, in a single braid, the women, in two braids.

Social Relations and Religion

Problems of the ancient social order of the Nivkhi are particularly interesting in connection with the study of the origins of the family and marriage. Thanks to the well-known works of the Russian ethnographer L. Ya. Shternberg, we have a detailed descritpion of the clan organization of the Nivkhi (or Gilyaks, as they were called in the past) at the end of the last century. Shternberg conducted ethnographic studies of the Nivkhi for a number of years, and collected materials which attracted the attention of F. Engels. Engels wrote about Shternberg's work in a special article, "A Recently Discovered Instance of Group Marriage" (first published in Die Neue Zeit, 1892, and later, as an appendix to "The Origin of the Family, Private Property, and the State").

The Nivkhi were divided into exogamous clans (kk'khal), of which there were several dozen. Most of their names were taken from rivers, such as: Mybing, i.e., "those who live on the My River," Chombing—"those who live on the Chom River," and so on. Already in Shternberg's time, the Nivkhi clans no longer represented territorial and economic entities. A Nivkhi village was inhabited by members of various clans. However, the Nivkhi clan preserved many forms of social ties among clan kinsmen, expressed chiefly in family and marriage norms, and in religious rituals and customs.

The Nivkhi clan was patriarchal, with but a few relics of the more ancient matriarchal order. These relics included the special relationship with the mother's brother, who took part in receiving ransom for the murder of his sister's son, and also the custom of sending gifts and a share of every catch to sons- or brothers-in-law—which may have been a remnant of matrilocal marriage.

The Nivkhi clan was a group of kinsmen along the male line, bound by strictly observed rules of clan exogamy: mutual duties in payment of blood-money (tkhusind), which replaced the vendetta among the Nivkhi; participation of clan members in the payment of bride-price and burial expenses; and the common clan cult (clan fire, clan organization of the bear festival, the clan storehouse for ritual objects, etc.).

In distinction to the Tunguso-Manchurian peoples of the Amur region, the Nivkhi took their wives, not from the clan to which they gave their women, but from a third clan. Thus, each clan was bound by marriage ties to at least two other clans. For example, the Khyyyegnung clan took its women from the Kegnang, the Kegnang from the Tykfing, and the latter from the Khyyyegnung. This was connected with the Nivkhi rule, which, in distinction to those of their Tunguso-Manchurian neighbors, permitted a man to marry the daughter of his mother's brother, but not the daughter of his father's sister. The clan from which men of a given clan took their wives was the former's akhmal'k (father-in-law); conversely, the clan to which the women of a given clan were given was called ymg'i (son-in-law). Hence, the Nivkhi themselves defined the clan as follows: "We have one (i.e., a common) akhmal'k (father-in-law), one ym'gi (son-in-law), one fire, one bear, one tkhusind (blood-money), and one sin."

9: Hawes--157-158 T-3 (1901) 1903 Gilyak
116, 142, 302

"The Gilyak is short of stature, about 5 feet 3 inches in height, spare of limb, and, though often wiry, scarcely robust. His women-folk scarcely exceed 4 feet 6 inches. His complexion is tawny, gipsy-like, but not yellow, and his hair, which he wears in a pigtail, is raven black. Altogether his features betoken a mixed race. Though he has the brachycephalic (round) head, the broad face, and high cheek-bones of the Mongol, [158] yet the slight brow ridges, big mouth, prominent lips, and flattened nasal bridge of the latter are considerably modified in his case. The majority of Gilyaks possess the hairless faces of the Mongol, and perhaps the exceptions who have bushy beards are descendants of Ainu and Gilyak ancestors."

854 Nursing infants are bathed twice daily, but, on the other
515 hand, larger children are seldom bathed. Adult Gilyak
302 consider bathing a luxury, some never do it and leave it to chance, if they are caught in the rain or fall in the water; some, however, wash occasionally, even with soap which they buy from the Russians. They comb their hair with a wooden (Chinese) comb and at the same time rub it with fat and hunt for lice. They do not by any means comb their hair every day.

854 Children nurse for about two years. Tiny babies are kept in a cradle which stands on the floor, but as soon as they are three to four months old they are placed in a trough-like bed. The little trough is open at one end and somewhat pointed; on the other end it has a hole in the bottom. The [130] child is laid with its back against the bottom, its head against the open end; it is tied down and the whole thing is hung up slantwise. The hole serves as a conduit. When the mother leaves the house for a longer time, she ties this cradle to her back.

868 When the Gilyak lad no longer needs his mother's care,
276 he begins to accompany his father on trips and thus gradually
147 learns what he needs for his life. Many children even smoke but all fathers do not permit this. (1)

> 1. The disciples of a one-sided etiology of disease might cite the Gilyak as living examples of the harmlessness of tobacco:this race is on the average healthier than civilized man, their teeth are white and strong, and yet both sexes smoke from childhood. Nevertheless, this would be a false inference: a single given cause always has a different effect according to the mode of living in general. Thus, for instance, the effect of a strong cigar is very different if one smokes outside in cold weather or sitting in a warm room doing head work. In the latter case it will soon lead to nervous palpitation. Furthermore, the organic constitution with which a person is equipped must be taken into consideration. Civilized man would have to live through the tests which the Gilyak endures at birth in order to be compared with him.

855 The parents are tender and indulgent with their children.
524 The children are kissed by their mothers, licked with saliva,

SS: A Gilyak man and woman] were a filthy-looking pair, clad in dirty, garments, with naked feet and legs, and their long, coarse, uncombed hair, been braided, hung down their backs in queues. That of the man (for ere represented) was arranged much like the 'tail' of a Chinaman, in a with the exception that no part of his head was shaven. The woman wore or what had once been such, since her hair, as well as that of her husband, t mass of tangle, and becoming more so every moment through the wing and digging of several long, unwashed fingers.

have experienced some little difficulty in deciding which was the man and man had it not been for a long-stemmed pipe, with amber mouth-piece and ass bowl, which the former smoked, while his fair partner carried a e, large, freshly-caught fish."

231 like a Pawnee concert. There were big dogs and little dogs, white, black, grey, brown, and yellow dogs, and not one friendly. They did not appear courageous, but I was not altogether certain of their dispositions. Their owners sought to quiet them, but they refused comfort.

These dogs had some peculiarities of those in Kamchatka, but their blood was evidently much debased; they appeared to be a mixture of Kamchadale, greyhound, bull dog, and cur, the latter predominating. They are used for hunting at all seasons, and for towing boats in summer and dragging sledges in winter. I was told that since the Russian settlement of the Amoor the Gilyak dogs have degenerated, in consequence of too much familiarity with Muscovite canines. Nicolayevsk appeared quite cosmopolitan in the matter of dogs, and it was impossible to say what breed was most numerous. One day I saw nineteen in a single group and no two alike.

ABOUT FULL.

609 Near the entrance of the village an old man was repairing his nets, which were stretched along a fence. He did not regard us as we scrutinized his jacket of blue cotton, and he made no response to a question which Borasdine asked. Further along were two women putting fish upon poles for drying, and a third was engaged in skinning a large salmon. The women did not look up from their work, and were not 142 inclined to amiability. They had Mongol features, complex-
• 302 ion, eyes, and hair, the latter thick and black. Some of the

•302 men wear it plaited into queues, and others let it grow pretty much at will. Each woman I saw had it braided in two queues, which hung over her shoulders. In their ears they wore long pendants, and their dresses were generally arranged with taste.

000 When recalled by the steam whistle we left the village and took a short route down a steep bank to the boat. In descending, my feet passed from under me, and I had the pleasure of sliding about ten yards before stopping. Had it not been for a Cossack who happened in my way I should have entered the Amoor after the manner of an otter, and afforded much amusement to the spectators, though comparatively little to myself. The sliding attracted no special attention as it was supposed to be the American custom, and I did not deem it prudent to make an explanation lest the story might bring discredit to my nationality.

G
K /421 cont./

304 In the whole series of Paleo-Asiatic peoples from Jesso to
171 Greenland we find only two small tribes who lack the custom of tattooing -- the Italmen on Kamchatka and the Gilyak on the Amur and on Sakhalin. Under these circumstances one might think that the custom of tattooing was formerly indigenous among these two peoples, too, but had disappeared in the course of time. Such an assumption, however, is not permissible. Steller's and Krascheninnikof's reports on the Italmen come from a time when the latter had by no means lost their national characteristics to such an extent that such a prominent and, if it existed among them, ancient custom as tattooing could have already completely disappeared without any remnants or traces and even without having left behind any accounts in the traditions. And, as was pointed out at the very beginning of this work, I became fully acquainted with the Gilyak at a time when they were still in full possession of their individuality. The complete lack of tattooing among the former as well as among the latter must therefore be regarded as part of their individuality in contrast to the other Paleo-Asiatic peoples.

Gi At first glance it might seem that this individuality of the
304 Gilyak in the Amur region was also shared by other peoples, in
171 particular those living adjacent to the Gilyak, for the Olcha, the Orok on Sakhalin, the Negda, and Samagir do not have the custom of tattooing. But the situation is essentially different among them. I think I can say with certainty that tattooing is not at all customary at present among the Olcha, /422/ for I became acquainted with them on several voyages throughout their habitation area. I became acquainted with the Samagir on the Gorin only in Ngagha, the largest of their villages, to be sure, and concerning the Orok on Sakhalin and the Negda, I met only isolated individuals, but other travelers, too, who had more contact with them, did not observe any kind of tattooing among them, for example, neither Middendorff and Schmidt among the Negda nor Poljakof, after a stay of several weeks on the east coast of Sakhalin, among the Orok there. This is very noteworthy

/650 cont./

114 and widows, unmarried people, orphans, and the needy; 3-4,
175 often 6-7 pieces of gold cloth are paid per head, but young and
567 stupid persons, however, who cannot be used for any services,
[435] are exchanged for crude goods." According to him, even the
[439] Ainu from Jesso /Yesso/ and from the island of Risiri come over
Sakhalin in order to buy there human beings in the situations named. He adds: "This is why one finds tattooed women in the
[304] country of the Smerenkur" -- a perfectly correct conclusion, for as has already been pointed out (2), tattooing is by no means

2. See pp. 631 ff. above.

customary among the Gilyak. Rinsô's observation concerning the
[184] slave trade of the Ainu correspond completely with ours above and substantially supplement them, but his latter remark leaves no doubt that not only the Gilyak on the mainland but also those of Sakhalin keep slaves, or at any rate female slaves, among them whom the latter obtain probably exclusively from the Ainu. Be-
175 sides purchase, however, the Santaner, as Rinsô reports, also get
567 their slaves in another, more brutal manner by taking to their country as security the brothers, sisters, and children of those Ai who owe them debts in trading and are unable to settle these debts in the following year when they return. Needless to say, they become slaves there. The Japanese government, which had
[648] absolute domination over southern Sakhalin and its main trade center, Ssiranussi, did not /651/ feel bound to check this scandalous practice, which ceased only after the island passed into Russian possession.

Before I go further in describing the family relations of the
567 Gilyak, I should like to insert some data concerning slavery
171 among other Paleo-Asiatic peoples for comparison. As disgraceful as the Ainu practice of selling fellow tribesmen as slaves to the Gilyak and Olcha is, yet nothing is reported, either by Rinsô or by other travelers, to the effect that they keep persons from their own tribe as slaves. What kept them from it, whether it was their own kindheartedness and weakness or a prohibition of the Japanese acting as absolute rulers, may be left undecided

posture in rowing. Paunches and hunchbacks, etc. are not to be found, and in general bodily abnormalities and deformities are much less often found among these savages than among civilized peoples. Their features are not beautiful, although the Gilyak are by no means the ugliest race of men. Their heads are broad and markedly brachycephalic. Their thick black hair, parted in the middle, falls down their back in a braid. Their eyebrows are thick, black and often bristly toward the root of the nose. Their eyes are small, but not conspicuously so, as is the case with some other races. (1) They are straight and slant somewhat upward and outward. Their color is without exception dark. The cheek bones are moderately prominent, the nose short and usually flat. In women the column of the nose is not pierced as is the case with Goldi women who wear nose rings. They do not have a large mouth, their lips are thick and red. They frequently hold their mouths open, showing two complete rows of strong, white teeth. If one examines their mouths closely one discovers that the incisors are more or less worn down from their pipes. Their beards and moustaches are black, but thin. The ear-lobes of both men and women are pierced for earrings.

1. Thus, in my opinion, the eyes of the Buryats, rather than those of the Gilyak are like slits.

Their complexion is brownish. Their facial expression is serious; friendly faces are less often found among them than among the Goldi. However, the women have a gentler expression, although their type is very similar to that of the men. They wear two braids which are often tied together at the bottom.

Tattooing is not common among the Gilyak. Their bodies, also, are not exceptionally hairy. Their skin, if it does not happen to be covered with eruptions, is very smooth, but usually dirty. Their hair, which they oil copiously, is usually not free of lice. The odor characteristic of the Gilyak is a mixture of smoke and fish, with the former predominating.

As far as muscular strength is concerned, it seems to fall below that of Europeans, but they have more physical endurance; the women, moreover, are relatively strong. One cannot say that the Gilyak excel in speed [107] and agility of bodily movement. Only in rowing and mountain climbing are

586 usually favors them and the first husband must abandon his
claims. In recent years many Gilyak have resorted to a
177 special ruse in order to make sure of their wives. Such
586 chaps who are probably not of the best and who may thus be
797 faced with the prospect of eventually being deserted by their
wives, have themselves baptized by a Russian priest, because they know that, according to the Greek religion, marriage must be permanent, and they would consequently, in case of desertion, be entitled to the ispravnik's protection. However, it is doubtful whether this maneuver will help them much in the long run, for such baptized individuals who later have no intention of keeping their Christianity alive, are soon forgotten in official circles. No one knows who or where they are, the wilderness is vast, and looking for them is more than troublesome.

If the abducted woman had had children by her first marriage, these usually remain with the father. [129]

171 Child training. Toward the end of her pregnancy, a
844 woman is taken out of the house for 10 (1) days and brought to
183
343

1. The duration of this exile is not the same everywhere. From some Gilyak I learned that eight days sufficed; on the island of Sakhalin, however, 12 days were given.

a hut made of birch bark, in which a small fire is burning. This custom which is known to exist among other primitive peoples, for instance among the Ostyaks, is, up to the present, very strictly observed by the Gilyak even in winter during the most severe cold, as a result of which the newly-born child often freezes to death. Conceivably a child which survives such a test must be strong. The mother also proves by this what rigors these people are capable of enduring. During her entire stay in the hut only women are permitted to come to her, often she must be her own mid-wife. No one could tell me the actual meaning of this custom: most probably it cannot be explained on the basis of "impurity" of the woman, but it is related to another superstition of which we shall speak later, and which was originally perhaps some hygienic regulation. That no mystical idea of "impurity" underlies it may be seen from the fact that when the woman
854 returns to her house she undergoes no "purifying" ritual.
515 The bathing of the newly-born is also done in the impro-
302 vised lying-in establishment, and it is given its other baths there.

Gilyak in summe

r clothing.

293 /396 cont./
377 Fig. 4) that is very peculiar with regard to the material as well
415 as the form and arrangement. It is made out of the skin of a
[53] sturgeon that is softened beforehand for the purpose and later
[239] hardening like wood: on the Amur out of the skin of the tukki-
tscho of the Gilyak (Acipenser Schrenckii Brandt), on Sakhalin
out of that of an allegedly similar kind occurring in the
northern part of the Sea of Japan and called okras by the Gilyak.
The mlo consists of two quite similar pieces that may be in-
verted over each other and at their upper or lower edge are bent
into a spiral and attached to a leather strap in such a way that,
after pushing away a bone tube running on the latter, the upper
372 piece can be lifted off the lower one. Like the tinder box, the
293 steel, too, often hangs down from the belt on a long chain
(Gilyak kessj-kessj) equipped with various appendages (Pl. XXVIII,
Fig. 1,[2] and Pl. XXIX, Fig. 1).[2] Sometimes there is also found
293 on this a bent, little iron rod pointed at the bottom (Pl. XXVIII,
412 Figs. 1 and 2), which is also carried separately and serves for
all kinds of purposes, at one time for making a hole in a strap,
at another time for loosening a knot or cleaning the pipe, etc.
● [321] This instrument (Gil. kedak) is not infrequently also made of
[53] horn or bone, and as insignificant and unessential as it is in
itself, nevertheless it is usually decorated with all sorts of carved
293 figures (Pl. XXVIII, Fig. 3). Finally, various other odds and
ends usually hang in the belt of the Gilyak as he happens to find
them, for instance, a boar's tusk or tooth, a piece of antelope
horn or deer antler, etc.

291 In winter, the Gilyak women also wear coats of dog fur,
237 which are made like those of the men; nevertheless they are
sometimes seen, though rarely, in coats of more precious furs.
In the winter of 1856, for instance, in Tangi on Sakhalin, I saw
one of the wives of the Gilyak Kombrein wrapped in a coat of
fox skins with the fur turned to the outside, under which two
under-coats of blue and of patterned Chinese material trimmed
with otter and sable furs were visible. On neatly dressed girls,
children of well-to-do parents, one sometimes sees on the dog-fur
coat a narrow fox-fur collar, the so-called mungrusk in Gilyak,

G 276 wooden piece. The lower piece, bow-shaped, runs into a small
192 bowl-shaped head, which is turned upward. The upper piece, or
G mouthpiece, is of metal (brass) only for a common man; every
[554] well-to-do Gilyak strives to imitate the Chinese and to procure for
● [321] his pipe a stone mouthpiece made of jadeite or perhaps even of
chalcedony, carnelian, or nephrite, such as are made in the
Sungari region (3), especially in Tsitsikar and other places (4).

3. Barabash", "Sungarsk. eksp." (Voen. Sborn., 1874, No. 2, p. 351).

G 276 192 4. The lower metallic piece, with the bowl, is called kott in Gilyak, the mouthpiece ilmf, the wooden middle piece connecting them twamdasir.

A The greatest correspondence prevails among all the peoples of the
276 Amur region in the form of the pipe, since the parts making it
439 up always come from the Sungari region, where they are factory-
made. Only the Ainu on Sakhalin have differently shaped pipes,
because they get them from another source, from the Japanese.
I saw pipes of two forms among them: one with a very small
head, squared off at the top, into which the tip of the little
finger scarcely fitted, and then also one with a larger, bowl-
A shaped head. In addition, however, they /469/ also make their
824 own pipe heads from the wood of the Hydrangea paniculata Sieb.
et Zucc., which are used by the women in particular (1).

A 191 [29] 1. Fr. Schmidt, to whom I owe this information, adds that he saw these pipe heads in use even in Kussunai and Manue, even though the Hydrangea paniculata occurs only in Aniwa Bay and on the west coast of Sakhalin south of Notosama. See his

175 /566 cont./ During his captivity in Siberia at the beginning of the previous
114 century, Strahlenberg was told that a people living at the mouth
411 of the Amur, the Kilani, whom the Russians call "Kilaki,"
326 "make excellent, fine weapons, and among them the best bows,
[10] and work in iron" (2) -- a report which was given so little credenc

[113] 2. Ph. Joh. v. Strahlenberg, Das Nord- und Ostliche Theil von Europa und Asia /The Northern and Eastern Parts of Europe and Asia/, Stockholm, 1730, p. 386.

by a later traveler, Gmelin, chiefly no doubt on account of the indeed very strange linking of the Kilani with the Persian province of Gilan and the Awaren /Avar/ to it, that he felt obliged to question the very existence of such a people (3). Gmelin thought

3. See p. 203 above.

that if there were a people there which was especially distinguished by its weapons-making, all of Siberia must be filled with them, and these weapons would long since have been available, if not from the people themselves, at least through the
[53] Chinese (4). Nevertheless, the report which came to Strahlenberg
● [321]

4. J. G. Gmelin, Reise durch Sibirien, Göttingen, 1752, Vol. II, Preface.

attention more than one and a half centuries ago is now confirmed, for both the above-mentioned bows faced with buffalo horn and decorated with silver and the beautiful lances, spears, and knives with inlaid figures in copper, brass, and silver, which have no equal among any of the Siberian peoples, are of Gilyak
326 workmanship. If, however, these beautiful weapons were unknown
411 in Siberia in Gmelin's time, and even today scarcely go beyond
the Amur region, the reason lies, on the one hand, in the small
556 quantity of metal available to the Gilyak, and, on the other hand,
and even more, in the high value which they themselves put on

Gilyak implements: 1, 2 -- iron pipe-cleaner; 3 -- the same made of bone; 4 -- tinder box of sturgeon skin; 5 -- the same made of seal leather; 6 -- tobacco-oil pouch.

/640 cont./

462 would think that for the man, too, there could never be any lack
411 of domestic work. But these objects are by no means made every-
[463] where and by everyone, but rather at only a few places by expert
[439] Gilyak and used for trade (1), so that one need only make a wooden

1. A large portion of them, as was mentioned above (p. 894), are bought in crude form from the Orok and only given the finishing touches by the Gilyak.

handle or shaft and fasten the iron to it in order to produce the
462 complete weapon. The situation is similar with respect to bows,
•321 boats, and other implements that are used specifically or chiefly
322 by the men. The domestic activities of the men among the
517 Gilyak, therefore, are not very numerous and are mostly limited to a few manual tasks with the knife or the drill to produce sleds, ski, animal traps, and other implements of wood or bone, and he still has much time left for idleness, smoking, and sleeping.

593 The domestic tasks and accomplishments of the wife, however,
[462] are far from exhausted by what has been presented above, for in addition to all that there are still the maternal duties, the care and tending of the children. The Gilyak, husband as well as wife, find great pleasure in children and not infrequently express it, though they are generally very reserved about expressing their feelings. I never saw a Gilyak give his wife a kiss, not even when he was about to leave on a journey or returned from one.

[855] On the other hand, I have often seen a Gilyak man, not to speak
593 of the women, tenderly caress and kiss small children. Every
842 married Gilyak wants as large a swarm of children as possible, and one who has them prides himself on it. One in Xyi was boasting in front of me about his many children, but to my question as to how many he had, he could only answer: tammlà, tammlà, that is, many, many. Mixed in with this joy, however,
[592] there is also an egoistical, utilitarian viewpoint, for in his growing sons he will soon have helpers in his lucrative hunting, fishing, and trading business, and the daughters promise, /641/ apart from the help that they give in the household, a fine bride price.

322

322 WOODWORKING--methods of seasoning wood; techniques of shaping (e.g., cutting, planing, burning, warping); treatment of special materials (e.g., coconut, bamboo, gourds, bark); use of special apparatus; finishing techniques (e.g., oiling, lacquering); elaborated woodworking crafts (e.g., cooperage, cabinet making), manufacture of wooden and other furniture; specialized personnel and organization; wooden products not elsewhere described; etc. See also:

XXXIII, Fig. 6), and, to be sure, more often noisily drunk than eaten with a spoon. For the enjoyment of solid food, fish, meat blubber, and the like, rectangular shallow bowls, Gilyak es-ngir

[104] 3. The s is soft in this word and is to be pronounced like the French z.

415 (ibid., Fig. 7), are used. Also used for the same purpose are wooden, circular, rather shallow bowls or plates (Pl. XXXIV, Fig 2 and 3), about a foot in diameter, which among the Gilyak bear the name aam-ngir, ring bowls or thumb-ring bowls, obviously o account of their round form similar to the above-mentioned thum
[439] ring (aam) (4). The Gilyak, however, do not make them them-

[192] 4. Among the Olcha they are called kota.

selves, but obtain them from the Goldi, who occupy themselves
415 with turning them. At the bear festivals they are used in great
531 numbers by the Gilyak, as well as by the Olcha, in particular for
796 eating the above-mentioned kinds of groats, though they are not any means /447/ implements used exclusively in connection with these festivities, as might be concluded from their exotic origin the complete lack of any ornamentation and carving. I myself s the Gilyak use them often enough in their everyday life. In cont to these mass-produced, undecorated bowls turned by the Goldi, all the other above-mentioned vessels made freehandedly by the Gilyak themselves always stand out because of all sorts of decora tions put on them, which, however, remain far behind the artisti carvings which we shall discover on the implements used exclusi
•322 at the bear festivals. For the manufacture of all the vessels pre-
412 sented above, bowls, spoons, etc., for the execution of the carv on them and on other utensils, the Gilyak use, in addition to the

/322 cont./

342 half feet high and five to six feet wide and is interrupted only at
35 the two rear corners of the yurt. These corners (f, f) are usually rounded off, like those in front, and are used for putting away various utensils, chests, and boxes, sleds, and the like. This creates a partition, even though only a very incomplete one, between the two side-benches and the rear bench, which is regarded as the best and most distinguished place in the yurt. Opposite the inner edge of the benches, somewhat above the height of a man, there are crosspoles running between the supporting posts, which serve for hanging up clothing and the like. In the middle of the yurt, between the three plank-beds and only about three feet from each one, is the hearth (g), a platform about four feet wide, twice that in length, and the same height as the benches. It is very simple in nature, in that it consists of only a wooden frame put together with boards, /323/ which is filled with stamped earth. Over the hearth, somewhat above the height of a man, there are several crosspoles, two across the front part and one across the rear, which are borne by the above-mentioned crosspoles put be-
[417] tween the supporting posts. Sticks are fastened to these crosspoles over the hearth and at their lower end terminate in hooks on which the kettles are hung over the fire made in the hearth. In the front part of the hearth three stones (h) are set upright in a triangle and firmly embedded in the earth, on which stands the large kettle used for cooking the soup for the dogs. In large yurts there are sometimes two such large kettles, also serving for human use, incidentally, as was the case, for example, in the large yurt at Tyk, in which I stayed repeatedly and for several days, and where I sketched the plan presented here. The fire is made in the rear part of the hearth, that is, somewhat more in the center between the three plank-beds, serving for heat and for
[415] illuminating the yurt at night. In front of the hearth stands one or
[312] more large receptable, usually tubs (i) made of birch bark, with drinking water, and along the front wall (k), right and left of the entrance, or in one of the front corners (l, l) of the yurt, a supply of dry firewood is always piled up. Finally, at the top, exactly above the fireplace, there is the smoke vent in the form of a longish rectangle that is placed either with its lengthwise

/445 cont./

263 439 few Gilyak are familiar with it (4). On the other hand, they are

4. Mamia Rinsô (Siebold, Nippon, VII, p. 193) says that the Gilyak (Smerenkur) on Sakhalin found the Japanese sugar that he gave them to try very tasty, but did not ask for more of it.

123 On the other hand, they are
263 very avid for Russian sugar; at the time of my stay there, next to tobacco, it was the main object of their frequent and very importunate begging, during which, as a rule, they pushed the children forward and, to arouse sympathy, pretended that they had an eye disease, maintaining that it could be cured only with sugar.
439 Not infrequently they also bought some in Nikolayevsk in order to
252 add it to their dishes, especially to the aforementioned flour-cakes
263 and to those prepared with cranberries or bilberries and the like. They even declared that they would not hesitate to do this to the dishes prepared for the bear festival, if it were available in sufficient quantity, which shows their entirely different attitude toward sugar and salt.

128 To conclude our statements on the food of the Gilyak, there
415 follows here a brief discussion of their most important implements and utensils used for holding the foodstuffs, as well as for the preparation and consumption of the dishes. First, only the ordinary objects of this kind used in daily life will be mentioned, while the special utensils used in connection with the bear festivals will be
312 discussed later at the proper place. As was already stated above,
415 close to the entrance of the yurt there is a bucket made of birch
[824] bark and filled with water, on which hangs a couple of bowls for dipping and drinking. The water for this and for the other house-
[482] hold needs is brought from the river by the women in pails, likewise made of birch bark, hung on a shoulder yoke /Pl. XXXIII, Figs. 1 and 2, Gilyak dshamda and kormulk, respectively). /446/ Similarly
415 consideration has been given above to the large iron kettle (Gilyak
179 ormotsch(?)-wunj) which in the winter house is embedded in each of

[See category 116, p. 1013--Analyst]

161 Nikolayevsk.
621 Of the two sexes, there are fewer women, as far as may be judged on the basis of several examples. Thus, among 90 accurately counted Gilyak (1) there were 50 men and 40

1. This count was taken of the population in the houses in which a halt is made along the winter road to Sakhalin, namely, in the villages from Vasin Mys to Chëmi.

women. It has been proved that the same is true among other primitive tribes of Russia. As far as age distribution is concerned, there are not a great many children, but also
163 not very few. Large families of children which frequently occur among the Russian settlers here, are not to be found among the Gilyak. Nevertheless, the birth rate is not so small that one might see in it a cause for a decrease of this tribe. Among 240 persons of both sexes from various villages, I found, for example one-third of them were children of 0-10 years, which just about equals the condition existing in Western Europe.
161 Although nothing has been done in the way of gathering
177 regular statistics on the Gilyak tribe, there is nevertheless no doubt that the tribe has diminished since the Russian occupation of the country. Some villages are now only half as large as they were. We find a repetition here of the same sad phenomenon which we also observe in other countries where civilization and a natural state are contiguous. The more direct causes of this decrease I shall consider below. [RCH: see category 116, p.249]

II. The Country of the Gilyak

133 The lower Amur valley and Sakhalin are mountainous
312 countries. The mountain ranges of the mainland belong to the so-called Tatar range, Sikhote-Alin, which covers the region between the lower Amur section, the Ussuri, and the sea. The Amur whose lower third flows northeastward becomes even more gigantic here than farther up-stream. It is one and one-half versts wide; the depth varies, but even in low water large steamers can travel up and down without difficulty. At Nikolayevsk (60 versts from the ocean) sea-going vessels lie at anchor that do not draw over 12-14 feet [101] but even the largest could enter if it were not for a short, shallow stretch (sand bar). In stormy weather the Amur has such high waves that the river steamers must seek shelter along the shore, and people get sea-sick, just as

133 they do on the ocean. The current in the middle of the stream
312 is torrential. In general the water here is pure and does not have an admixture of particles. (1) It is very soft. (2)

1. The middle section of the lower Amur, on the other hand, at the mouth of the Sungari, contains many earthy ingredients which only gradually sink to the bottom.

2. According to my analyses (Reports of the Commitee of the Medical Society of Eastern Siberia for 1879), the water taken from mid-stream, opposite Nikolayevsk, contains only 0.050 to 0.053 soluble matter per liter of which 0.033 is inorganic. Its hardness is only two degrees according to the French scale.

133 The Amur takes up a great many rivers and brooks from
361 both sides; in many places it forms wide branches and low islands. The general character of the land is that of a majestic wilderness. The mountains along the shore appear partly as bare rocks, partly as green hills; farther inland they are terraced or form chains, and the peaks are generally not more than 1000 to 1500 feet high. The whole region is covered with vast dark green forests. Only here and there the stillness and loneliness of the wilderness is enlivened by the sights and sounds of human or animal life. On high, isolated spots along the shore there are Russian villages surrounded by grain fields and kitchen gardens. Lower down, at the foot of a mountain, insignificant-looking Gilyak villages nestle, surrounded by swarms of barking dogs. Occasionally a noisy steamer hurries by, or a Russian bark
136 or Gilyak row boat glide by. Here and there a motionless heron is seen on the shore, or an eagle floats high up, a fish splashes in the water, or the snow-white body of a dolphin emerges only to disappear again instantly. In general, however, the large animal kingdom is not so frequently revealed to the traveler as he might have expected and as is the case in other regions, - for instance, along the Sungacha, a tributary of the Ussuri.
136 The forests are permeated with the refreshing odor of fir
137 and larch; occasionally the pungent odor of ledum palustre is wafted toward one. The stillness of the forest is broken by

/638 cont./

586 material reasons, which are always decisive to a great extent among the Gilyak, each of the two parties avoids taking the initiative in the dissolution of the marriage.

462 For the most part similar utilitarian considerations lie at the root of the peaceful life shared by the husband and wife and the good treatment which the latter receives from the former. /639/ The Gilyak is much too practical and too intent on the preservation and increase of his possessions not to realize the great usefulness of his wife and to appreciate the tremendous amount of work she achieves through her industriousness, skill, patience, and experience. In the division of labor between husband and wife for their common household, the greater share by far falls to her. In 462 22 general, the man only has to attend to providing the most important means of subsistence. Hunting, catching sturgeon and hausen, killing the seal and dolphin, and trade, and, in particular, the many trips and voyages required for it, [251] make up the field of action that is exclusively his. To be sure, he also does other fishing and, at the time of the mass migrations of the various species of salmon, even does this in a very energetic fashion, but in this the women are of great help to him, and the tiresome work of cleaning the tremendous amount of fish brought ashore, of cutting them up and hanging them on the racks to dry in the sun, falls entirely on them. They also collect, in part with the help of the children, all the winter supplies of vegetable foods inso as they are part of the native flora, the various edible berries, 462 roots, herbs, moss, and the like. In addition, the wife has to tend to the entire household and everything pertaining to it. The single thing that the man does for it directly is to • [313] cut the needed firewood in the nearby forest, split it, and bring it to the front of the house. To carry it into the house as needed, however, is again left to the women, just as they are obliged to fetch the water needed for drinking and cooking -- a task which in winter and in bad weather involves much toil and effort in the villages that lie high above the river. These are, as a rule, also the first tasks of the day,

314

314 FOREST PRODUCTS--exploitation of forests and other uncultivated areas
products other than timber or food (e.g., gums and resins, rubber, vege
oils, dyestuffs, medicines, bark, textile fibers, peat); intermediate proc
(e.g., refining of palm oil or rubber, production of charcoal); organizati
labor and production; etc. See also:

42 posture in rowing. Paunches and hunchbacks, etc. are not
46 to be found, and in general bodily abnormalities and de-
32 formities are much less often found among these savages than among civilized peoples. Their features are not beautiful, although the Gilyak are by no means the ugliest race of men. Their heads are broad and markedly brachycephalic. Their thick black hair, parted in the middle, falls down their back in a braid. Their eyebrows are thick, black and often bristly toward the root of the nose. Their eyes are small, but not conspicuously so, as is the case with some other races. (1) They are straight and slant somewhat up-

1. Thus, in my opinion, the eyes of the Buryats, rather than those of the Gilyak are like slits.

ward and outward. Their color is without exception dark. The cheek bones are moderately prominent, the nose short and usually flat. In women the column of the nose is not pierced as is the case with Goldi women who wear nose rings. They do not have a large mouth, their lips are thick and red. They frequently hold their mouths open, showing two complete rows of strong, white teeth. If one examines their mouths closely one discovers that the incisors are more or less worn down from their pipes. Their beards and moustaches are black, but thin. The ear-lobes of both men and women are pierced for earrings.

2 Their complexion is brownish. Their facial expression is
2 serious; friendly faces are less often found among them than among the Goldi. However, the women have a gentler expression, although their type is very similar to that of the men. They wear two braids which are often tied together at the bottom.

1 Tattooing is not common among the Gilyak. Their bodies,
4 also, are not exceptionally hairy. Their skin, if it does not happen to be covered with eruptions, is very smooth, but usually dirty. Their hair, which they oil copiously, is usually not free of lice. The odor characteristic of the Gilyak is a mixture of smoke and fish, with the former predominating.

6 As far as muscular strength is concerned, it seems to fall
- below that of Europeans, but they have more physical endurance; the women, moreover, are relatively strong. One cannot say that the Gilyak excel in speed [107] and agility of bodily movement. Only in rowing and mountain climbing are

312

312 WATER SUPPLY--sources of water (e.g., springs, wells, rainwater catchment); waters with special properties (e.g., mineral water); waterworks (e.g., dams, reservoirs, settling basins); transportation of water (e.g., containers, pipes, aqueducts, canals); irrigation and drainage systems; construction, maintenance, and regulation of water supply systems; etc. See also:

purga (snow-storm) blows up everything is so completely buried that only those trees can be seen which, at the beginning of winter when the post roads are being laid, are pounded into the ice at regular intervals. Then everything is buried under an enormously thick covering of snow which lies immovable for half a year. During this time the forests are accessible to man only with the help of snow-shoes and dog sleds. Through the stillness of this white solitude the unlovely but energetic voice of the raven is heard; or the stillness is broken by the rapid ringing of a Russian post bell or by the "takh", "takh" which is the Gilyak's signal to his dogs. The raging purgas which last for several days are followed by weeks of cloudless skies when during the day everything lies in a dazzling white glow, and at night the icy heavens are resplendent with bright stars.

The sea coast of the Gilyak country is very picturesque, but hardly charming. From the foam of the breakers up to the peaks of the mountains everything is covered with dark forests, and even the picture of the summer landscape is often clouded with rain and fog which are almost continuous throughout the warmer season. (1) And during the other half

1. The cold arctic current travels past this coast and condenses with the moisture-laden southeast winds.

of the year everything is rigid with snow and ice, so that in winter one can travel with dogs from the mainland to Sakhalin.

This is the general picture of the native land of the Gilyak. There remains for us to add a few details, insofar as these have been ascertained.

With respect to geology, it may be said that argillite seems to occur more extensively, but many igneous minerals also appear. Thus the shores of the De Kastri bay consist of trachyte and basalt. Limestone occurs only seldom, which accounts for the softness of the water. The mountains are rich in metals -at least in various localities gold, iron, and lead were found, and it is well known that on the island of Sakhalin there are large coal beds.

The flora is varied and abundant. The conifers are represented by the fir and the larch, but the pine is absent. Of deciduous trees [104] there are oaks, maple, alder, birch, aspen, elm, among others. There are many berries, especially cranberries, raspberries, and rubus chamae morus.

313

Then she pressed tubers of dry shrub into the opening for the eyes and nose of the sivuch and put the head into the kettle.

When the heads were cooked, Xitkun, his son and other hunters started to eat. They were served meat on flat wooden dishes. At the same time they were given a small bottle with salt and a tiny cup containing finely cut cheremsha. While one may eat cooked meat with salt, one must not cook meat or fish with salt. In former times the Gilyaks had no salt. They learned the use of salt from the Chinese. In 1926 I was told in the village Chayvo that the ancient Gilyaks used a solution of ashes instead of salt. I was told the same thing in 1931, in the village Kul. According to my informants the ancient Gilyaks burned boughs and stems of trees thrown up by the sea. They dissolved the ashes of those trees, saturated with the salts contained in the sea, in water taken from a well or river. When the ashes settled at the bottom there remained, as the Gilyaks of Chayvo put it, "water as clear as alcohol." It is this water which they used instead of salt. I brought from the village Kul to the Muzeĭ Antropologii i Etnografii a wooden plate of the ancient Gilyaks, black with age. This plate, which was sold to me by old man Tujun, was specially made for seal meat. In the sides of this "plate" were carved two tiny cups which as Tujun informed me, would be filled with salt water for dipping pieces of meat in it.

On the following day, after the meat was taken off the heads, the Gilyaks prepared them for throwing in the sea. The heads are dumped in the sea by women and not by men-hunters. As we shall see, it is also the women who bring pay to the fire. Xitkun prepared tiny white, thin shavings of qosk-pāks 'rowan.' These shavings are called iugrusps. He handed the shavings to his wife Hemany. The old woman stuck the shavings in the nasal openings in the heads of the two sivuchs and smeared them with cowberry juice. Then she tied the lower jaws to the heads of the sivuchs using stalks of burdock-pas. In a row with the skulls lay jugular vertebrae (mar't) and bone splinters from the broken skulls. The heads were placed on a board. The other wife of Xitkun took the board with the heads and the mug containing the eyes and went towards the sea. I followed her. Standing at [95] the very edge of the water she threw the heads of the sivuch into the sea as far away from the shore as possible. next she threw the contents of the mug into the sea as far as possible and then she threw into the sea the skull

would think that for the man, too, there could never be any lack of domestic work. But these objects are by no means made everywhere and by everyone, but rather at only a few places by expert Gilyak and used for trade (1), so that one need only make a wooden

1. A large portion of them, as was mentioned above (p. 896), are bought in crude form from the Orok and only given the finishing touches by the Gilyak.

handle or shaft and fasten the iron to it in order to produce the complete weapon. The situation is similar with respect to bows, which also they buy in the material and use specifically or chiefly by the men. The domestic activities of the men among the Gilyak, therefore, are not very numerous and are mostly limited to a few manual tasks with the knife or the drill to produce sleds, ski, animal traps, and other implements of wood or bone, and to still less time left for smoking, and sleeping.

The domestic tasks and accomplishments of the wife, however, are far from exhausted by what has been mentioned above; for in addition to all that there is still the maternal duties, the care and tending of the children. The Gilyak husband as well as wife find great pleasure in children and not infrequently express it, though they are generally very reserved about expressing their feelings. I never saw a Gilyak give his wife a kiss, but even when he can about to leave on a journey or returned from one, on the other hand, I have often seen a Gilyak man, not to speak of the women, tenderly caress and kiss small children. Every married Gilyak wants as large a swarm of children as possible, and one who has this pride himself on it. One (X Xyi) was boasting in front of me about his many children, but to my question as to how many he had, he could answer: ламгин, ламгин, ламгин, that is, many, many. Mixed in with this joy, however, there is also an egotistical, militarian viewpoint, for in his growing sons he will soon have helpers in the maintenance hunting, fishing, and trading business, and the daughters promise /641/ apart from the bride price they will be a welcome help in the

/704 cont./

described above, for the latter was done after the hind legs of the animal had already been fettered in the cage, but here the bear could make full and free use of all four extremities and its teeth. While the procession halted outside the house, all the ropes and straps required for carrying out the feast were held in readiness. Setting at the moment when the mighty animal stood fully erect, one of the Gilyak threw himself from the front around its neck and embraced it as firmly as he could. At the same moment a second one mounted the animal. Simultaneously several others seized the animal from the rear, pulled its hind legs from under it by means of ropes, and laid it down on the ground. The bear fell on its front paws, but here, too, someone was ready to press them against the ground with a pole and to fetter them. This through quick and concerted action they have the animal so completely disarmed and helpless that in instant, and now the auxiliary ropes needed on its neck-band could be put on in peace and safety. As soon as this was done, all the Gilyak jumped off the bear, all the knots and nooses fastened around its snout and paws with special skill were loosened with one jerk, and the bear again stood there as its claws entirely free and unfettered, except for the neck and body band, roaring madly, whereupon the young boys carried on the sticks, the women in their arms, it was led back into the house and regaled there with finely crushed ice and cowberries /Brickeberen/, whereupon, after a short pause, the same procedure was again repeated several times, that is, the small bear was taken immediately from Jolin's house to another one, but the large bear only after having been led in and out four times, or sometimes only twice.

Immediately after the bears had been removed, the male youth of the village began to carry large and small sticks of alder and mountain ash into the house and to deposit them at the place where the bears had stood, until there was a large pile of them. Everyone who had a knife, except for the women and girls, began to cut the sticks at one end; or, more properly, to whittle them. that is, to make the pointed end of the stick into a kind of

1. The j here is to be pronounced soft, like the French ج.

/704 cont./

Many of them were whittled with the knife on only one side, but most of them on two opposite sides, and some all around; indeed, from some of them very fine and gracefully curled wood-shavings (the repeatedly mentioned so-called catch of the Gilyak) hung down from the upper end of the stick to the lower one. This symbol, which among the Gilyak accompanies all religious performances based on the fear of the influence of evil spirits, such as the giving of offerings to the river (1) conjuring away storms (2), etc.,

2. See pp. 802-804 above.

3. See p. 1088 above.

may not. of course, be absent from the bear festival. This we already see it exhibited over the roof of the house in which a bear festival is to be celebrated and at the same time in the part of the bear cult is to be enacted. We were to /705/ encounter it in more copious masses as the bear festival progressed. For the moment, however, the whole heap of whittled sticks was again carried out. in order to be used on the following day. While the men, young and old, were busying themselves in this way, there appeared a fresh supply of ennep, into which this time they also mixed pulverized fir needles (from Picea ajanensis, Fisch., Gilyak name) as an activity which lasted until evening.

Meanwhile the leading of the bears in and out of the other house, in which the bears were not without disturbance, the Gilyak can never have enough of this entertainment, and they take as timely an interest in all the individual incidents that occur in connection with it as is shown among other peoples at. say, concerts, festive games, or dances with the merry music. which in the bear feast is the Gilyak's only music. Everyone has an opportunity as the head of the one or the other row of bear-leaders, and, as I could by presence intensity, and pressure of mind; the closer he allows the infuriated animal to approach him, the greater the danger to which he exposes himself, the louder is his share of the applause and the greater his fame and distinction among the people. Every detail is followed attentively and afterward

/714 cont./

Toad made out of birch bark.

the gra; beards, as a high post of honor; the women and girls, the boys and youths are excluded, and it therefore proceeds very slowly. Siberian, and, so to speak, solemnly. The place in the kettle in the fireplace was surrounded with a thick wreath of wood shavings, and a similar half-wreath was spread in front of the vent hole. This the kettle was filled with water for it to clinch up water for cooking bear meat, and the fire under the kettle was kindled with shavings and the hatchet, with the latter also used for incense from time to time. Simultaneously a large wooden trough was hung on straps directly under the bears' noses so that it hung about three feet above the floor. The trough was richly decorated with all sorts of arabesques and figures and in particular on one side showed a bear carved in relief and on the other side a toad likewise executed in relief.

The work of the old men proceeded so slowly that it was not until toward evening that they began to cut up the meat of the large bear. Each leg was first placed upon the chopping block, and, as the bears, as though to ask him for their permission to prepare it; and was it cut up and put in the kettle. The cooked piece were fished out of the kettle with an iron hook and transferred to the trough

/716 cont./

begging in front of the bears so that they taste them first. Besides the elders, only a dog remained in the house, and, to be sure, to it appears, only to lick clean the implements used in the cooking and the transfer to the trough.

Early in the morning on the following day (January 28) the old men started their work of cutting up and cooking the meat, which was interrupted only by the usual feeding of the dogs in the house and a rare beforehand with specially decorated animals dragging behind them only the tail of a fox or dog, as was mentioned above. Next, a number of articles were brought in from the storehouse, /717/ All of which were hung or otherwise attached to the bear rack in colorful confusion: pieces of fur and the skin of paws of previously killed bears, the chains on which they were led while alive, dried bear-paws wrapped in birch bark, knives which at the point of attachment of the blade have a bonite of hair from the bear's pelvic region around them, the so-called ninda-dokako of the Gilyak, with which it is clinch to cut anything other than bear meat and so on (see Plate II /To 1351/, Fig. 3), and a number of nicely carved spoons and peculiarly shaped bowls. The latter were put to use immediately, being filled with the broth obtained from the bear meat, which was cooked directly in it with the help of the spoons. This service, used by the Gilyak only when performing bears, is very interesting and deserves detailed discussion.

The bowls called nichrey-ngar or nichrey-ngash, i.e., bear-spoon bowls, by the Gilyak after the bear spoons nichrey, are always carved out of a single, rather thick, good-size piece of wood, which about in the middle or near the one or the other end has either a rather deep or only a shallow oval hollow (Plate I /p. 1250/, Figs. 1 and 2). The former are specifically intended for eating the bear-meat broth, the latter (the same Plate, Fig. 2) for the bear meat or fat. What makes these bowls especially interesting, however, is that sometimes the one, sometimes the other end of the piece of wood, and sometimes both the front and the handle end, are provided with various carvings referring to the bears and the bear festival. The latter are also found in profusion on the handles and sometimes

/718 cont./

even on the lower end of the spoon which are used by the Gilyak at the bear-festival feasts. I succeeded in bringing back to our museum quite a number of bear-festival bowls and spoons which had belonged to the distinguished Gilyak, Stogin in Kuik, and came into my hands only through a lucky accident. At the time of my visit the Gilyak refused any offer, however high, for a similar used in connection with bear feast, with the assertion that such a transaction would be too greatly sinch. If one examines these carvings more closely, one discovers that they attempt to depict the bear in all the various situations and positions in which it is put during the bear festival. on Plate I /p.1250/, Fig. 1, for instance, it is drawn with the neck and body band, on Plate I, Fig. 3, and Plate III /p 1252/, Figs. 3 and 5, attention is called to the revolving ring on the upper side of its body band. Plate III, Fig. 6, shows it eating from the bear spoon; Plate II /p 1251/, Fig. 6, shows how, led on a chain, it defends itself against its attackers, and the same figure, as well as Fig. 1 in Plate III, shows the bear's head in the tilting and later looking down from the rack in the house. The most interesting, however, is the spoon illustrated on Plate II, Fig. 6, not only because it can be regarded as a masterpiece of Gilyak wood-carving, but also because in a case shown about all the situations of the bear at the festival held in connection with it and, in addition, by linking the bear's head looking down from the rack in the house with the toad depicted in the bowl of the spoon, it shows the bear's close spiritual relation of the whale bear festival. These bowls and spoons are always made only during the bear festival, and here in /718/ Tebach two Gilyak set on the floor in front of the bears busily occupied with the carving of such implements.

In the afternoon of the same day new quantities of bear meat were brought from the storage chambers and placed on the floor covered with fir branches in front of the bears. A barbecue, the kettle was filled with water, and the cooking now proceeded more energetically -- but always without any salt, the use of which is strictly forbidden, only in the prepared bear meat broth, and sometimes both the front and the handle end, are provided with various carvings referring to the bears and the bear festival. The latter are also found in profusion on the handles and sometimes

/718 cont./

stagnon lying in front of the bears, and a little to one side, in an unsuitable place, so to speak, where they could not be seen by the bears, quite a number of bear-festival bowls and spoons which had belonged to the distinguished Gilyak, Stogin in Kuik, came into my hands only through a lucky accident. At the time of my visit the Gilyak refused any offer, however high, for a similar used in connection with bear feast, with the assertion that such a transaction would be too greatly sinch. interpretation for this symbolic act in connection with what has been said above other than the following. With the cutting up of the meat, the cooking of the broth, and the eating of the bear meat and broth, but also for all other food during the bear festival,

/754 cont./

826 753 sick and dies, if he does not use the proper means to free himself of the mipitsch. The only means that can help him, however, 755 is a shaman. He conjures up a ldgn (a good god), who removes 756 the mipitsch from the sick person. At the same time a mipitsch 757 carved by the shaman himself or by someone else at the order of (780) the shaman is hung around the patient's neck and must be worn by the sick person from then on to protect himself in the future. A sick man wears a single mipitsch, a woman a double one. The mipitsch are always carved out of wood, especially the vagmipitsch. It is only on the snout-band of the dead bear (see pp. 822 1156, 1162) that a single mipitsch of birch bark may be found. 746 It is made by the women, but the wooden ones are always 824 made by the men, since wood carving of all kinds is an occupation for only the men, while the women are skilled at cutting arabesques and figures out of cloth and therefore also out of birch bark.

753 The ideas of the Gilyak concerning the lizard (mkjingai) are 755 similar to those concerning the toad and snake, except that much 825 less power is attributed to it. It allegedly crawls into the head of the sleeping person and is removed in a way similar to the above by a shaman and by putting an iron amulet-ring (halb) (1)

1. See Appendix 6 /p. 1196 /.

around the head. This ring bears the representation of a lizard on either side, in the region of the temples; in front, closer to the forehead, there is a human figure on either side, supposedly indicating a man on one side, a woman on the other. Finally, at the very front, on the forehead, the laiz bears a frog shape. This is striking, since the frog (dhal) is not regarded as unlucky, is not magi. (Bm. II, pp. 44-46.)

756 30. Gilyak. Amazing, miraculous acts which the Gilyak 554 shaman performs are chiefly the means by which he wins admiration and esteem among his countrymen. The more these acts deviate from the natural course of things, the greater is the reputation of the sorcerer. Such is enjoyed, for example, by the Gilyak

Playing a wooden percussion instrument.

The wooden religious sculpture was akin to that of the Orochi, Ulchi 534 and Nanay. The figurines of bears on dippers and spoons used in the 324 bear festival were finely made and realistic in style. The bear dippers 1071 were often remarkable in their craftmanship. Some of them were carved 746 with pictographs, relating the history of the hunt or rearing of a given bear. The carvings on the dipper handles were also symbolic; they indicated by a variety of symbols whether the bear was killed in a hunt or reared in captivity, whether it was killed in the summer, and so forth.

The musical culture of the Nivkhi was very poor. They played a 534 primitive one-string instrument (t'ygytyg) and a lip jew's-harp (khangai). 1046 During the bear festivals they used, instead of musical instruments, an 871 ordinary log, which the women struck with sticks. 1042

Education was entirely lacking among the Nivkhi before the Revolution. The Nivkhi-Nanay school was opened in the 1890's by the missionary, Protopopov, who was assisted by the Nivkhi.

Protopopov also established the first school, which was opened in the city of Mariinsk; two two others were opened in 1899. By 1905 they were closed for lack of funds. Only a few individual Nivkhi attended Russian schools.

Contemporary Life of the Nivkhi

175 In 1918, soon after the establishment of the Soviet government in the 648 Far East, this area, and especially the Amur Basin and Sakhalin, became the scene of civil war and intervention. Guerrilla units were organized to fight the White Guards and interventionists. The bitter fighting lasted

/350 cont./

197 themselves give a reason other than the scarcity of iron for this. 325 As recently as a generation ago a steel was a valuable thing, /351/ 871 and sometimes an entire clan possessed a single communal steel. 1042 Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in 197 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 Even at the present time, the basic food of the Gilyak is 741 the ready products of nature -- fish, fowl, berries, roots; he 18 is as yet incapable of helping nature along and accelerating her 472 creation of foodstuffs. He does not plant or sow, or raise domes- 255 tic animals for meat. This is the fundamental feature of a 18 "savage" state. Moreover, Gilyak traditions of times when 323 water was boiled in troughs by means of hot stones and their 194 memories of wooden dishes coated with clay, and the absence 172 of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savagery." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

/447 cont./

302 yi-dhakko already mentioned, several knives of special shape. 412 Thus, to hollow out wood, a knife with a fluted, bent blade of various sizes, the unjir-wen of the Gilyak (Pl. XXXII, Fig. 4), 2 is used; for fine carving, the kydr-dhakko, a knife with a very narrow and pointed blade (ibid., Fig. 3), etc. Finally, among 412 the table utensils of the Gilyak the chopsticks (Gilyak tschakhr) (1)

[192] 1. Presumably borrowed from the Manchurian tschakcha. Among the Olcha: alako.

copied from the Chinese must be mentioned, a specimen of which, from the village of Wasej, is shown on Plate XXXIII, Fig. 6. These owe their origin among the Gilyak more to the imitative instinct, which readily makes itself felt in particular with regard to anything Chinese, than to a real need, because they are practically never found in use among them.

As one sees from the above, all the household and table 445 equipment made by the Gilyak themselves is exclusively of wood 323 or birch bark. Earthenware is not found among them at all; they 322 neither make any themselves nor is there used among them, in spite of their contacts with the Chinese and Japanese, the porcelain made by these peoples, for at most a single piece of it, usually one or several of the small porcelain bowls used by the Chinese for drinking brandy, is kept here and there by a well-to-do Gilyak as an article of value or as an oddity. The fact that pottery, even 323 in its beginnings, is completely foreign to the Gilyak, despite 114 their being surrounded by people skilled in other things, for example, in woodworking and, as we shall see later, at the smith's trade, certainly merits full consideration, and I am therefore permitting myself a few remarks about it. In order first to put their fate itself still further beyond doubt, I must expressly emphasize that despite my long and various stays among them I never saw a piece of pottery of any kind in their households nor did I even hear of any from others. Hence, some entirely different statements in Mamia Rinš's report on his travels on Sakhalin (Krafto) and in the Amur 197 region were all the more striking to me. He found that the earthenware and porcelain of the Gilyak (Smerenkur) on Sakhalin was

/447 cont./

323 similar in shape to that of the Olcha and the Japanese (2). /448/ 114 114 648 [113] 2. Mamia Rinš, "Tôsats kiko" (Siebold, Nippon, VII, p. 194).

322 One might suppose that the traveler was concerned with, not 114 originally Gilyak, but only with imported Chinese and Japanese 114 pottery which he saw among the Gilyak, but this would still not 114 remove the contradiction with my above statements, because Mamia Rinso goes on to say that there were especially many porcelain factories along the Amur (Manšô) near Kidzi (1). This,

1. Op. cit., p. 172.

however, no longer refers to the Gilyak, whose territory does not begin until somewhat below Kidzi, but even among the Olcha, to whom it must refer, and still farther upstream among the Goldi, at least as far as the Usuri, I never saw such factories or any 323 their products. And Maack had the same experience, except that 114 in the Goldi village of Sulbi he saw some earthenware pots among the household utensils of the natives (2). This village, however,

[113] 2. Maak", Puteši. na Amur" /A Journey to the Amur/, p. 143.

323 is in the vicinity of the Sungari, where, as we shall presently see, 114 totally different conditions prevail in this respect. If, therefore, one is to believe Mamia Rinš's report, and, according to my experience, they fully merit it, one is forced to assume that the Olcha, and presumably also the lower Goldi, at the beginning of this century were making pottery and porcelain and sold the products even among the Gilyak as far as Sakhalin, and that the latter were likewise familiar with this industry -- an industry which had been completely lost fifty years later when I explored 323 the Amur region. How this happened will be illustrated as 114 much as possible in one of the following chapters in the discussion 648

/448 cont./

323 of the trade relations of the Amur peoples, and especially of the 114 Gilyak, with the neighboring civilized peoples. For the moment, 648 it will suffice to make the general remark that it most probably was brought by violent seizure and devastation plundered by the Manchu-Chinese government itself for political reasons and to which Mamia Rinso's voyage may even have given rise. Through the devastating blow that the government, feared by the natives, executed, among other things, against the pottery and porcelain manufacturing of the Olcha on the Amur, they were forced back, like their neighbors upstream and downstream, the lower Goldi and Gilyak, to their traditional woodworking industry and were so strongly and lastingly prejudiced against all pottery and porcelain that from then on even articles of this sort made in China or Japan could not find approval and acceptance among them. This destruction of the pottery manufacturing in the lower Amur region, 415 on the other hand, may have prompted the Goldi to take up the 114 mass production of wooden implements, to turn those large bowls 114 322 and plates which are still generally used by the Gilyak and Olcha under the designations aam-ngir and kota, respectively.

Whereas the pottery and porcelain industry was destroyed 323 along the lower Amur by the Manchu, it made rapid and unimpeded 114 progress in southern Manchuria and along the Sungari and its tribu- 648 taries. /449/ According to the notes of the Chinese U-tsien in 1722, the Manchu at that time did not have any earthenware, but only wooden vessels, bowls, and plates (1). With the increasing

[115] 1. Vasil'ev", "Zapiski o Ningutse /Notes on Ninguta/" (Zap. Imp. russk. Geogr. Obšch., Vol. XII, 1857, p. 96).

colonization of the country by the Chinese, however, many pottery and porcelain factories also arose there. Near Sur-mu-tsching in Liao-tong Williamson (2) saw many such factories and various

323 utensils produced there, some of them of very good qua- 171 were shipped far away, and, according to Barabash (3),

[113] 3. Barabash", "Sungar. ekspedicia 1872 g. /The Sungari Expedition of 1872/" (Voenn. Sborn., 1874, No. 2, p. 351).

one or several of them in every Sungari town. The pot- Maack saw in Sulbi on the Amur probably also came fr Sungari. The fact that it does not go farther down the ever, to the lower Goldi, Olcha, and Gilyak, in spite 323 annual trade voyages to the Sungari, attests all too clea 17 aversion that they entertain against such utensils.

If, from the statements by Mamia Rinš given ab 323 must draw the conclusion that the Gilyak and Olcha, th 17 do not use pottery in their households today, nevertheless they must have been familiar with it in the past, for they 415 it themselves, it may also be gathered from them that 114 means an art practiced since ancient times, but rather 114 learned it through the Chinese and Japanese in relatio 114 He found the pieces seen by him on Sakhalin, as was sa 114 to those of the Chinese and Japanese, and it is highly p 114 the main porcelain factories near Kidzi which he ment 114 under Chinese influence and with Chinese co-operation 114 it was recent and foreign, this art could so easily again 114 altogether among the Gilyak and Olcha amidst the subs 114 favorable conditions, without leaving any trace other t 114 aversion against its products. My view that the mainl 114 was originally foreign to the Gilyak and was temporarily 114 by them from the Chinese only in recent times is also 114 by the fact that this art, as among the Gilyak, it missi 114 was missing up to a short time ago, among all the other 114 Asiatic peoples, with one single exception. Mamia Rin

yï-dshakko already mentioned, several knives of special shape. Thus, to hollow out wood, a knife with a fluted, bent blade of various sizes, the us(i)r-wossj of the Gilyak (Pl. XXXII, Fig. 4), is used; for finer carving, the kydr-dshakko, a knife with a very narrow and pointed blade (ibid., Fig. 3), etc. Finally, among the table utensils of the Gilyak the chopsticks (Gilyak tschawkr) (1)

1. Presumably borrowed from the Manchurian tschabcha. Among the Olcha: alako.

copied from the Chinese must be mentioned, a specimen of which, from the village of Wassj, is shown on Plate XXXIII, Fig. 6. These owe their origin among the Gilyak more to the imitative instinct, which readily makes itself felt in particular with regard to anything Chinese, than to a real need, because they are practically never found in use among them.

As one sees from the above, all the household and table equipment made by the Gilyak themselves is exclusively of wood or birch bark. Earthenware is not found among them at all; they neither make any themselves nor is there used among them, in spite of their contacts with the Chinese and Japanese, the porcelain made by these peoples, for at most a single piece of it, usually one or several of the small porcelain bowls used by the Chinese for drinking brandy, is kept here and there by a well-to-do Gilyak as an article of value or as an oddity. The fact that pottery, even in its beginnings, is completely foreign to the Gilyak, despite their being exceedingly skilled in other things, for example, in woodworking and, as we shall see later, at the smith's trade, certainly merits full consideration, and I am therefore permitting myself a few remarks about it. In order first to put the fact itself still further beyond doubt, I must expressly emphasize that despite my long and various stays among them I never saw a piece of pottery of any kind in their households nor did I even hear of any from others. Hence, some entirely different statements in Mamia Rinsô's report on his travels on Sakhalin (Krafto) and in the Amur region were all the more striking to me. He found that the earthenware and porcelain of the Gilyak (Smerenkur) on Sakhalin was

323 /448 cont./
171 of the trade relations of the Amur peoples, and especially of the
174 Gilyak, with the neighboring civilized peoples. For the moment,
648 it will suffice to make the general remark that it most probably was brought about by violent seizure and devastation plotted by the Manchu-Chinese government itself for political reasons and to which Mamia Rinso's voyage may even have given rise. Through the devastating blow that the government, feared by the natives, executed, among other things, against the pottery and porcelain manufacturing of the Olcha on the Amur, they were forced back, like their neighbors upstream and downstream, the lower Goldi and Gilyak, to their traditional woodworking industry and were so strongly and lastingly prejudiced against all pottery and porcelain that from then on even articles of this sort made in China or Japan could not find approval and acceptance among them. This
415 destruction of the pottery manufacturing in the lower Amur region,
174 on the other hand, may have prompted the Goldi to take up the
171 mass production of wooden implements, to turn those large bowls
322 and plates which are still generally used by the Gilyak and Olcha under the designations aam-ngir and kota, respectively.

323 Whereas the pottery and porcelain industry was destroyed
171 along the lower Amur by the Manchu, it made rapid and unimpeded
[648] progress in southern Manchuria and along the Sungari and its tributaries. /449/ According to the notes of the Chinese U-tschen in 1722, the Manchu at that time did not have any earthenware, but only wooden vessels, bowls, and plates (1). With the increasing

among the earthenware vessels made by the Eskimo which he saw on the Yukon (Kwichpak), a few of which are illustrated in his book on Alaska, one was obviously modeled after a Russian model. This may have been the case, for since the Russians settled in this country some Russian dishes and troughs were soon unfindable in reached the natives there. Nevertheless, the making of pottery by the Aleutian Eskimo is so way came from the Russians. The latter found it there already, and Dawydof, like Sagaskin, represents the acquaintance with copper kettles and other implements, which the Eskimo owed to the Russians, and considerable late among them the relatively general distribution of pottery vessels of their own manufacture, was which Dall, too, agrees. Finally, also arguing for the great antiquity of the art of pottery among the Eskimo, Nordenskjöld (7) says that the simple and primitive fashion in which it is practiced. the vessels are shaped freehandedly, and therefore are not quite circular or symmetrical (1), and then are smoothed and decorated by means

1. As can be seen from the illustrations in Dawydof's travel account (pp. 214 and 215).

of peculiar and likewise very simple instruments (2). Without

/451 cont./ 4. (cont.) beads either straight, wavy, and zigzag lines, and, in general, the ornamentation

essentially wholly similar to pieces of this type found in other regions under similar conditions, here, too, belonged to an early period in the history of the Gilyaks, and, in particular, to a relationship with the present. Nevertheless I must add here that the articles found along the Petchi River (see /453/ note 3 on p. 490) were not to many Gilyak (?) to find out from them

1. As is expressly pointed out in the above-mentioned periodical (Vremeshnoe Pomor'e)

whether they will had similar tools, or why tradition referring to them — they were completely unfamiliar to them, however. Lopatin continued the idea and Czech in Tarakha above the stone tools and potsherds found there. The latter, to be sure, declared that dating the ware the Aino had gone into hiding in the earth after the arrival of the Gilyak in the Amur region, but the Nivx themselves were totally unfamiliar with the stone tools. On the other hand, the old men of Tymovsk knew of a legend which another than jects in a people called Tsisei who formerly inhabited these regions but later moved to the Amur. The remains of the ancient Tsisei now lived degenerate on the Gulf of Petlance, near Cape Tatarovo, and of other places on Sakhalin are also ascribed to them. Lopatin found this legend throughout part of southern Sakhalin through which he traveled (5).

5. Since the alleged name of the people from whom, according to the legend, the stone tools and old potsheres are supposed to come actually only means Tungusic, it can be seen from the above-mentioned statement by Mamin Sibirsk concerning the pottery of Tymovsk (7 Tymovsk, 1 E-5, Esc.then.pan)

123 METALLURGY—smelting and refining of ores, alloys, methods of casting, hot and cold forging; tempering; welding; welding; special operations (e.g. bellows, anvils, pincers) and scientific metallurgical knowledge etc. See also Ethnology, Industrial Arts, Mining, Technology, Commerce of metals" 123, 00 Metallurgy, general, 123, 01 Iron

1: Sibirsk/ng—501 E-5 (1890-1897, 1910)1903 RXI Gilyak 83 Sakhalin

/200 cont./ Manchu reached them also and installed elected tsiseis. There was such a seasons, for example, in Tangis. It was from the Manchu that the Gilyak learned to obtain all those objects which they could not produce themselves.

Gilyak (?) Iron was known to them, however, in the earliest times as the most sacred method of obtaining fire — a method used in ancient times by the ancestors. All the other hollowwage are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but the most consequence these borrowings have inevitably brought the Gilyak with culture... But let us return to that on which their civilization stopped.

The Gilyak, in their primitive state, the basic food of the Gilyak is the ready products of nature — fish, fowl, berries, roots; he is the only one that knows how to catch fish and to obtain and accelerating his creation of foodstuffs. He does not plant or sow, or raise domestic animals, or hunt game. This is the fundamental feature of a "savage" state. Moreover, Gilyak traditions of time when the Gilyak was ignorant of hoeing and sowing

/568 cont./
with the latter probably extend back into earlier times than those with the former, in that, as the latter do not show the Golds (in the other groups (i.e., before they came to the south region of the Amur.

1. See p. 214 above /unrevised/.

they already had a homeland on Sakhalin, where they were directly in contact with the Ainu and thus also indirectly with the Japanese -- this circumstance points to the latter as the source of the Gilyak's knowledge of iron and other metals, and as their teachers, even though only indirectly, in the minh's art. And a series of facts corroborate this in this view.

If the use and the working of iron had come to the Gilyak from the Chinese, that is to say, down the Sungari and Amur through the intermediation of the Manchu and Goldi, one would expect in the opposite direction, going upstream from the Gilyak, an increase in skill in the forging of iron. Actually, however, in the direction mentioned there is not only no increase, but, on the contrary, a decrease in the fineness and neatness of the metalwork. For the Chiba, to be sure, the Gilyak actually into skilled ironsmiths, and especially armorers, than their teachers, the Gilyak, but far behind the Golds and the Chiba in this (b).

2. The Manchu opinion also pen his Yutenb. ia Amur", pp. 175 and 207).

though they are extraordinarily skilled at many other things, such as boat-building, sewing, embroidery, and plaiting. In this connection, they do something different from the Gilyak in forging in that they use only one bellows, and also accumulate iron are not insignificantly /569/ different, for instance, an anvil shaped quite differently, and the like (1). Finally, it is not in

1. See Maack, op. cit., p. 207 and Plate II, Figs. 11, 12, 13, and 24.

be overlooked that the Goldi designation for these things have nothing in common with the Gilyak one. All this seems to suggest that the Goldi obtained their smith's art from a party, that they owe their knowledge of iron and its treatment to the Japanese. Exactly the same manner of forging iron as among the Gilyak is also found among the Ainu on Sakhalin. Mamia Rinsh devotes a special section to this subject in the description of his journey through Krafto (Sakhalin) and a part of the lower Amur region (b). In his time (1808) iron-forging was

2. Siebold, Nippon, VII, p. 187.

practiced only very little by the Ainu on Sakhalin, indeed, only here and there by a few old people, because the iron was then imported from Japan, which naturally were of much better workmanship, and already had been generally disseminated among them. Prior to this, however, they devoted themselves to manufacturing what they needed in iron weapons and utensils themselves, and, to be sure, out of pieces which they obtained by trading with the Japanese in Sakmarai. Mamia Rinsh describes their procedure in forging the iron, which again corroborates what we can described above for the Gilyak; he mentions the two bellows made out of sealskin or fish skins and lying on the ground side by side, the bellows tubes covered or weighted down with earth up to the common opening, the simultaneous participation of two men in the work, etc. Subsequently (b), in speaking of the

3. Ibid., p. 194.

Sternenkur (Gilyak) of Sakhalin, he expressly states that they have the same method of forging iron as the Ainu. To be sure, despite the fact that he further notes that the Ainu make the

/569 cont./
cutting edges of their weapons in Japanese fashion and that in general their method of forging is "approximately the same as in Japan," still Mamia Rinsh does not draw the obvious conclusion that the Ainu have to thank the Japanese for their knowledge of iron and other metals and the working of them, and, indeed, he maintains instead that they did not learn their manner of forging iron from any other people, but rather seem to have invented it themselves. This should not surprise us, however, because the careful traveler gives in his short and sober report only what was seen and experienced by him and may even have been of categorization and conclusion. It therefore even more establishes beyond doubt that the spread of iron and the art of working it took place from Japan to the Ainu of Sakhalin and from Sakhalin and Japan to the Gilyak in a very ancient period, a period which is too far back for any accounts or traditions concerning that event to have been preserved among the Ainu at Rinsh's time.

/570/ Finally, the fact, too, that the Gilyak iron utensils and weapons, bowls, spears, and the like are more like those part of the same form as those of the Ainu and that the figures engraved on them are more like those of the Ainu than those of Japan are often reminiscent of Japanese pattern -- as was noted above (1)

1. See p. 597.

with reference to the decorations on their clothing and on various wooden and bone implements -- this fact stands in agreement, to a least not in contradiction, with the Japanese origin of the familiarity of the Gilyak with iron and the working of it. There is only one thing that might appear strange at first glance, namely, the fact that the greatest skill of the Gilyak in forging iron is not found on Sakhalin, but on the Amur and therefore in that section of their habitation area which is the farthest from Japan and, on the other hand, is most open to Manchu-Chinese influence. This can be explained, however, on the basis of political conditions. According to Mamia Rinsh's testimony,

/570 cont./ According to Mamia Rinsh's testimony, the Ainu on Sakhalin (Krafto) lost their skill at forging iron more and more and finally practically gave it up entirely as a result, in part, of the Japanese prohibition against forging. We must add that this step backward by the Ainu certainly had another, deeper reason, which the Japanese traveler probably would not or could not mention -- the oppressive bondage in which they found themselves in relation to the Japanese, connected with merciless exploitation by the latter, under which they were bound to sink more and more into poverty, misery, and indolence. The Gilyak of Sakhalin, on the other hand, were in a more favorable situation because of the greater distance of their sites from the Japanese. Thanks to these circumstances and, at the same time, their greater energy and strong character, they were able to remain independent of them. Indeed, fear of the Japanese and the sad fate which had befallen their neighbors, the Ainu, may have had a salutary effect upon them in regard to the more northward on Sakhalin and, finally, even to emigrate, or, in consideration of a more distant past, perhaps accounted also, said, to migrate back in large part to the opposite mainland (2).

2. Concerning this emigration or migration back by the Gilyak from Sakhalin to the mainland, see pp. 214 and 247 above /unrevised/.

At any rate, the political independence which they were able to maintain on Sakhalin with regard to the Japanese and in the Amur region with regard to the Manchu-Chinese was a powerful lever for the preservation and increase of their well-being, as well as for the further development of their material skills, among them the art of metal forging, and all the more to the more abundantly the springs of their subsistence flowed, as was especially the case along the large and fish-rich Amur River.

Like the Ainu and Gilyak, the third people on Sakhalin, the Oroch, also owed their knowledge of iron and the working of it to the Japanese, though they did not obtain it directly from

/572 cont./
their eyes, of course, were accustomed with the sea of great waves, so that they could not see the other bays, inlets, and the like which they themselves (the Ainu) prized so highly and paid for so dearly to trade with them, and, indeed, much (the) so the case can be seen from Stellar's information that the Kurile Ainu gladly gave 20 sea beavers for an old Japanese saber and thought that they had made a very good trade, but were much taken aback only on festive days or during festive processions and made "the strangest figure during the welcoming" with them.

For the moment it must remain undecided whether the above-mentioned iron needles, which came from Japan to the Kamchadals, were brought by Japanese sailors, or from the latter to their neighbors, the Koryak and the Chukches, before iron needles were then brought by the Russians. At any rate, three Paleo-Asiatic peoples, the Ainu, the Gilyak, and the Kamchadal, received iron from Japan, and this was a central occurrence of the geographical history of Asia, in consideration of the vast number of the peoples, for just to the north of Nippon, the principal island of Japan, is the Asiatic continent, the region of the Ainu (1).

1. The view advanced chiefly by Ph. Siebold that the Ainu formerly also inhabited the north of Nippon (see above, p. 150) has recently been attacked by Braun ("Die Bevölker der japanischen Inselwelt. /"Ie Inhabitants of the Japanese Island-Realm)" in the Jahrescber. der Frankfurter Verein fir Geogr. u. Statist., Years 48 and 49, 1885-1886, 1886-1887, Berlin, Part, pp. 5 ff).

which, in turn, on the one hand, leads to the half-Gilyak Sakhalin, and, on the other hand, via the chain of the Kuriles, to Kamchatka. In speaking of the former (on Sakhalin) at the time when these peoples lived farther in the interior

/572 cont./
of the continent (2), as may be presumed for various reasons,

2. See p. 247 above /unrevised/.

they still had no knowledge of iron and obtained this only after they had become peripheral peoples, that is, after they had been pushed to the sea-shore, and had taken up fishing and hunting on the islands and peninsulas lying in front of it and had thus arrived in the vicinity of Japan (3).

3. The question as to the origin and development of the Gilyak, which, of course, outside the scope of this work.

If we now return to the Gilyak after this digression, this is the place, in concluding the above discussion of their weapons and of hunting on land and on the water, to mention a few other pieces of their armament. First to be mentioned here are two long very valuable and very estimated 2.5 meters long, which happened that the owner of such a shield has pawned it to a Russian merchant, but as soon as he got some money, he bought back his property.

K. Marriage and the Bearing of Children

Not much can be reported concerning this, and, indeed, summarized, and it is even rarer to find married men with more than one or two wives, for the reason a certain amount of means is needed, there are too few women. The beginning of a [126] marriage requires the payment of a ransom (kalym). This dare not consist of money, but of certain necessary items-weapons, dog sleds, etc. An average kalym amounts to 200-300 rubles. There are no special marriage ceremonies, but the wedding celebrations are much alike to be given by the bridegroom last a rather long time,-a week or more. Besides millet, fish and tea, a great deal of alcohol is consumed.

A various, although not altogether unique custom are marriages between four and five year old children. As soon as the parents reach an agreement, a boy and girl, the one known and wed. The father of the boy pays the kalym and takes the girl home, in order to bring her up with her "husband"; sometimes, however, she remains a few more

10. instead of this point some arrows have a crescent-shaped piece of pointed iron. This latter device is used for duck hunting and hence is called "duck arrow" (1). The other arrows are usually kept in a quiver, which usually does not [illegible] more than 1 meter long and 0.25 meter in diameter.
11. small board and is usually decorated on the outside with various decorations and ornaments. It is fastened to the belt.
The lance consists of a shaft about one and three-quarters meters long with a flat iron tip. Some lances made by Gilyak are decorated with silver and gold figures. Moreover, all weapons except firearms are made by the Gilyak themselves. Forging is done without a pneumatic hearth, but the fire is kindled with a bellows. Iron is brought from the Russians and Japanese. Nowadays, however, the Chinese pots are made over into knives, etc.
178 Finally, I must mention the shield of which few examples are still to be found among the Gilyak. These shields are 45 cm. wide and 1.5 meters long, made of very sturdy wood, and 45 cm. wide and 1.5 meters long, made of very sturdy wood, 4/5 lashkoed, and consist of iron rings. They come from China and at present have no other value than that of being a means of carrying them. Nevertheless they are regarded as something very valuable and are estimated at 20 rubles. It has happened that the owner of such a shield has pawned it to a Russian merchant, but as soon as he got some money, he bought back his property.

especially well-worked pieces and which causes them neither to use such pieces nor to sell them, but rather /567/ to store them away carefully as capital, so to speak, and to bequeath them, or at most use them to buy a wife, whereby they change owners, to be sure, but still remain in the realm of the Gilyak. Moreover, in view of the inadequacy of their tools, much time may be spent on the manufacture of each individual piece of this kind, and, as is always and everywhere the case, not everybody may have a great skill. At the time of my stay in the Amur region, the village of Chylk (1), located on the Amur directly above

1. On the ethnographic map of the Amur region appended to this volume, the location of this village is indicated, but its name is not entered.

Patt, was regarded as the place where the most beautiful spears, lances, and knives were manufactured, and the specimens illustrated on Plate XXXI /see p.1011/, Fig. 2, and Plate XLVI /see p.1026/, Figs. 4 and 5, which belonged to the wealthy Gilyak Judin in Tebach and his sons and which I acquired from them for a high price in exchange for various wares were said to have been made there. Unfortunately, I passed this unattractive settlement consisting of only two houses at a time when I as yet knew nothing about its industrial importance for the Gilyak. In the summer of 1855, the Russian settlement of Michailofskoje was founded directly beside it, indeed, almost at the same spot (2), which presumably later prompted the Gilyak to abandon

2. This appears on the map of the Amur region which is appended to the first volume of this work.

their home there.

114 325 326 192

On the other hand, I did have the opportunity of watching the Gilyak forge iron in the village of Tyk on Sakhalin. The smithy was set up in the very rear of the earth yurt, opposite the entrance. For this purpose several boards from the sleeping benches had been removed there, so that the earthen floor underneath was exposed. Here lay two longish bellows (Gilyak chigr) made out of sealskin, whose long tubes converged toward the ends into one common tube. In front of its mouth was set up a semicircular block made of hard, dry clay (Gilyak chugn), which on its lower side was provided with a cutout, the size of which corresponded exactly to the mouth of the bellows tube, and immediately in front of it was the fire, into which were thrust the iron pieces to be forged. In order to keep the bellows tube immovably in place, the two arms were weighted down by several longish and narrow boxes such as are used among the Gilyak, placed on top of one another. A youth worked the two bellows, alternately lifting the one and lowering the other, and another, adult Gilyak, with a pair of tongs (Gilyak watsch) (3), took the

[104] 3. The w is pronounced here like the English w.

iron pieces to be forged out of the fire in order to hammer them on a nearby small, triangular, iron anvil (Gilyak mik). These tongs are of varying sizes depending on the size of the iron pieces to be wrought. Made in my presence were a blade for an ordi-
[293] nary knife used for cutting wood, and the like, a so-called yi-dshakko (4), and a second, finer piece, a so-called kessj-kessj,

For this type of work among the Gilyak, in addition to iron (Gilyak wytsch), other metals, as has been mentioned, are also used, especially copper (Gilyak paghla, i.e., red), brass (Gilyak tussj), and silver (Gilyak totta) (2). The more of the

[192] 2. The quicksilver which they saw in my possession was totally new to them and caused great surprise among them, but they immediately gave it the characteristic designation of "totta-tschach," that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of the piece. Since it is used only for this purpose or to make orna-
[439] ments, such as rings, ear pendants, clasps, and the like, they prefer the Chinese silver above all others as the softest, because pure, and therefore the easiest to use for their purposes (3).

[436] 3. A few words about the use of silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

[174] The high degree of skill that is expressed in the above-mentioned Gilyak spears, knives, and the like indicates that the forging of iron and other metals is an art practiced by the Gilyak for a long time, and the above-mentioned report by Strahlenberg
325 stands in agreement with this. Undoubtedly, however, they have
197 borrowed this art from one of the two civilized peoples of East
174 Asia neighboring them. The only question is whether from the Chinese or from the Japanese. The circumstance that their relatic

225 of a small board equipped with a harpoon-tip, attached to a stick from 10 to 30 meters long. The lykh was lowered into the water; the hunter hid himself nearby in his boat or on the shore. When he caught sight of his quarry, the hunter carefully directed the lykh at it and quickly drove it into the animal.

324 As compared with its role among other Amur peoples, hunting played a 362 smaller part among the Nivkhi. The hunting season began in autumn, after 22 the end of the fish-runs. At this time bears come down to rivers to treat [184] themselves to the delicacy of fish, and the Nivkhi awaited them with bows or guns. Sometimes they set crossbows for them. In winter, they hunted bears with spears. The bear season was followed by the sable-hunting season. Sable and certain other fur animals (otter, lynx and marten) played an important part in the Nivkhi economy. The Amur Nivkhi went out every autumn in their large, heavy boats made of boards, to hunt sable in Sakhalin, returning from there only in early spring. This was due to the abundance of sable on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees which served the sables as crossings.

324 The main weapon in hunting was the gun, which in the early 20th century [177] replaced the compound Nivkhi bow with its horn covering. However, the bow [178] was preserved in the bear festival and in children's games. Squirrel and foxes were hunted with dogs. Crossbows were set for both small and large animals.

241 Agriculture already began to appear among the Nivkhi in the middle of the 19th century, when they first learned to plant potatoes. Individual Nivkhi had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths in some of the villages, who reforged Japanese, Chinese, and later Russian metal articles for their own needs; they made knives, straight and curved, adapted to wood-carving; arrowheads, tips for harpoons, spears, and so forth. The smiths used double bellows, an anvil and hammer. Pieces of massive chains preserved from the past speak of the high skill of the old smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. The 887 old men wove ropes from bast and nettle, built sleds and made dog-harness.

Men's work included fishing, hunting, making the tools required in these 462 occupations, including tackle and means of transportation, the preparation and transportation of firewood, and blacksmithery. The women processed the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and ornamented clothing, made birchbark utensils, gathered plant products, did the housework and took care of the dogs.

By the time the Far East was Sovietized, commodity relations were quite 177 strongly developed among the continental Nivkhi. The old forms of collective 433 production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked the necessary gear were compelled to hire out as lumberjacks and other hired laborers, transport goods, etc. The smallness of the income from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Amur Nivkhi. The catch of seal, white whale and sea lion went mainly to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. Workers were also hired, on a half-share basis. Some Nivkhi worked during the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in 22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola 262 took the place of bread. Meat was eaten rarely. Food was prepared with

462 takes trips on various business matters, and so forth; he also takes care of fishing. The woman spins, makes nets and clothing, cooks, takes care of the children and the dogs.

286 Weaving is entirely unknown to the Gilyak, artificial ma-
326 terials, such as twine and needles are bought; the latter,
463 moreover, they formerly fashioned in a very primitive manner. In general it can be said that every Gilyak man and woman knows how to do all the work necessary for their existence, although not in the same degree. For instance, with respect to metal work: everyone knows how to make a knife, not everyone can make a hatchet, and only a few, finally, concern themselves with the making of a jew's harp (to be described below) and the more intricate weapons, as for example lances with silver decorations.

372 This is the place for us to say something of fire-making. The Gilyak customarily wears a pouch on his belt, containing flint, steel and tinder. The birch fungus is used as tinder, flint is found in abundance on the banks of the Amur. If they should lack fire tools they make fire, just as other primitive peoples do, by friction. A dry stick, on both ends of which is tied a bit of fungus, is put into a groove on a block of wood; one person holds the stick upright, another winds a string around it, takes the ends of the string in his hands and makes a sawing motion back and forth. Usually fire is produced after a half hour.

IX. Weapons

411 The Gilyak customarily carries no other weapon except his knife which is seldom used for defense. The knife consists of a pointed blade and a wooden handle. The blade and half the handle are carried in a leather sheath which is worn on the belt. To the actual weapons belong lances, bows and arrows and at present also the gun which many of them have obtained.

The bow is made of wood but has an underlayer of whale bone which is glued to the wood with fish glue. They like best to use ash wood (frax. mandshurica). On the inner, i. e., the whale bone side not far from the ends there are two [125] small grooved strips for the bow string. The unstretched bow is bent so that the whale bone faces outward, but in use it is on the inside, otherwise it might be damaged. The string consists of intertwined sinews of rope. It requires some effort to stretch the bow, and the shot is powerful. The arrow has three small feathers at one end, the other end is somewhat thicker and has an iron point which is barbed, but

2. (cont.)
Finnish Languages/, Helsingfors, 1875, p. 105). Gradually, however, it became common among them for all the dwellings of same, of whatever kind they might be, in contrast to the log or beam houses of the Russian peasants (Russ.: izba) or to other European houses, and one also often finds it used in this wider sense in the travel accounts referring to Siberia. Accordingly, the Russians in the Amur region as a rule call the Gilyak winter-house a yurt, and this term is used in the same sense in this work.

342 house or Chinese winter-yurt. The earth yurt, toryf of the Gilyak, is built exactly on the pattern of a tent: in actuality it is nothing more than a more or less spacious, immovable tent half sunk into the ground and roofed over with beams. If there is to be such a large yurt of this kind, a hole about 20-22 feet square and about 3-4 feet deep is dug in the ground; its walls are smoothed or, at least the upper part, covered with thin beams. Around it there is erected a pyramidal /322/ roof slanting upward evenly on all sides, which consists of thin beams placed close to one another and resting on four crossbeams, which, in turn, are supported by four supporting posts (a) inside the yurt. /Illustration appears here./ Only at the peak of the roof is an opening left to serve as a smoke vent. In order to make the roof airtight, it is covered on the outside with dry grass and soil. In the autumn when snow falls on it, the whole yurt from the outside merely looks like a snow-covered hill slightly blackened at the top by the rising smoke. The entrance (b) is found on the side of the yurt which is away from the prevailing winds or is most protected from the wind. It does not lead directly into the yurt, however, but rather into a quite long, low, gradually descending passageway (c), likewise roofed over with thin beams or tree branches and dry grass, in which, at both sides, either a few household utensils are kept or the place for the dogs is

[335]

[354]

342

1. This plate is to serve at the same time to illustrate the house decorations customary during the bear festival and some of the entertainment going on in front of it, which will be discussed later. ⁂

[335] The walls consist of thin, horizontal beams, which are not joined at their ends, but are pointed and fitted into the lateral grooves of a few thicker, upright beams. On the transverse walls, which rise higher, and especially in the middle of them, these vertical beams are of a considerable thickness. The gaps between the beams are plugged with moss and daubed with mud on the outside. The large, rather flat roof, which in winter has to carry a considerable burden of snow, requires very complicated timberwork for its construction and support. /Illustration appears here./ It has a regular roof framework made up of longitudinal beams and crossbeams. The ridge is supported, in addition to the central, upright beams of the two transverse walls (see Pl. XI), also by two thick, towering posts in the interior of the house (a) on the accompanying plan). Sometimes, instead of one post, two standing not far apart rise in each place. Similar, but much smaller and thinner posts (b) sometimes rise up here and there at the sides and, together with the two nearest vertical beams of the transverse wall, serve as supports for the middle part of the roof, and in the lower part it is supported by the longitudinal walls of the yurt. Longitudinal beams and crossbeams in turn run here and there between the towering posts in the interior, and similarly to the upper edges of the longitudinal walls -- a framework that /327/ serves to connect the walls to one another and thus to steady the walls and keep them upright. In addition, the lower part of it, up to a little above the height of a man, is used for the storage of various articles and for hanging up clothing, and so forth. On our Plate XI one sees the ends of the aforementioned longitudinal beams at the transverse wall, as well as at the ridge and the side edges of the roof, project out quite far, whereby the side beams of the latter intersect each other far out at the gable

[411]

At various places in the foregoing, mention has been made of the iron utensils and iron weapons of the Gilyak, in the course of which we have come across, especially among the latter, specimens of very artistic workmanship. This is therefore the place to inquire into the origin and eventually into the manner of the manufacture of these objects. The circumstance that the Gilyak do not use any iron in the exterior or interior construction of their houses, and likewise in the making of boats, sleds, etc. always use only wooden pegs instead of iron nails to join the individual pieces together, does not lead one to expect them to be masters in the craft of forging, and at first glance suggests the conjecture that the numerous and in part neat and artistically worked iron utensils and weapons found among them are of foreign origin. Nevertheless, this is by no means the case. Even in the earliest reports they are described as skilled armorers. During his captivity in Siberia at the beginning of the previous

/17 cont./

194 Thus, it is indisputable that the Gilyak are relatively late arrivals on Sakhalin. There are, however, many reasons for believing that the territory occupied by the Gilyak at the present time cannot be considered very ancient, that, strange as it seems, the Gilyak arrived in their present territory from more northerly areas closer to the Arctic Circle. Indeed, some of the peculiarities of Gilyak life seem to be clear survivals from a period of residence in
174 a colder climate. The most typical proof of this kind is a remnant
171 connected with their winter abode -- the dugout. The Gilyak dug-
342 out is built in the manner of the Kamchadal. But while there is no door in the Kamchadal yurt, because of the severity of the arctic winter, and its function is performed by the smoke opening, among the Gilyak, due to the lesser severity of the winter, the dugout has a passageway from which a low, sliding door leads into the yurt.

342 There are also times when the smoke opening in the Gilyak
196 yurt once again performs the function of a door as among the
178 Kamchadal. This is during the days of the bear festival, when the furthest echoes from the most remote antiquity come to life from the mist of millenniums, when a ritual which has not changed for tens of centuries is observed with reverential strictness. Then there returns the memory of the smoke opening, which at one time served as the only entrance into the yurt; through this opening a Gilyak with the skin and the meat of the bear killed during the festival descends down a pole which is specially set up for this occasion. At the end of the festival all the accessories of the ritual, as well as the bones of the bear, are carried out of the yurt through the same smoke opening. The violation of this ritual is regarded as the greatest sin. Those Gilyak who have adopted the Manchu
[199] yurt, where there is no smoke opening, are forced to open their windows of fish skin during the days of the festival, in spite of the February frost, so that in this extraordinary /18/ way they can take the sacred relics in and out and thus, albeit approximately, perform the ancient ritual. That the fact cited by us is actually a
[192] remnant of their way of life is clearly proved by the fact that the very concepts for "enter" and "exit" from the yurt are expressed in Gilyak by words whose literal meaning is "dive in" and "dive out"

342 /18 cont./
198 (kuzind and jugynd), which is fully consistent with the manner of
178 entering and leaving through the smoke opening.
192

I shall not at this point speak of any other aspect of the
171 arctic way of life. I shall mention only the remarkable fact that
174 riding on dogs (we encounter it among the Yukagir, the Chukchee,
492 the Eskimo, the Aleut, the Koryak, and the Kamchadal) is undoubtedly a characteristic peculiarity of the purely arctic way of life adopted by the natives of the Amur region, the Ainu, the Goldi, and the Orochi, from the Gilyak. The Gilyak term "tu" -- dog sled -- became the property of both the Ainu and the Tungus tribes. The priority, as it were, of the Gilyak in this respect is clearly revealed in everything. The Ainu and the Tungus tribes (the Goldi and the Orochi) have adopted from the Gilyak not only the term and the principle of conveyance on dogs, but also the details of building the sled, the ways of sitting on the sled (astride, with the feet on ski along the sides of the sled), the harness of the dogs, and driving them. It is remarkable that among the reindeer Chukchee, among whom dog-raising is preserved only in legends, the Gilyak way of sitting on the sled (astride) has been preserved to the present. The same way of sitting was habitual among the Kamchadal as well.

In connection with this hypothesis, it is interesting to compare a very widespread legend.

173 Among the numerous legends that I have collected about
174 the origin of the Gilyak clans, I have frequently encountered a
133 legend about how this or that clan came to Sakhalin on the so-
[614] called "hovykh." By "hovykh" the Gilyak mean everything that is carried on the current of a river or sea, for the most part clods of earth or tundra turf broken off from the bank, and also floes of ice which are carried on a sea current. One such hovykh is still pointed out on the eastern shore of Sakhalin in Nyyvo Bay, where it formed a minuscule island opposite the settlement of Takrvo.
[614] It is alleged that a part of the clan now living in the settlement of Tangi on the western shore appeared on this hovykh. There is nothing impossible about conveyance on a hovykh. It not infrequently happens that during the spring hunt for seals a sudden

/27 cont./ In
22 spring, with the seals and the first fish that travel in masses upstream to spawn, the koryushka, herring, the Gilyak is again revived, and in the course of the summer months in the expectation of the autumn catch he again begins to make visits and dolce far niente.

574 In speaking of guests I cannot fail to mention a peculiar
252 festive dish and the favorite food item to which Gilyak guests are treated -- the so-called mos'. It is prepared from a sticky broth of fish skins, seal fat, berries, rice, sometimes with the addition of small pieces of yukola. All this is mixed together and cooled. Sometimes, to add color and flavor, a solution of white clay is added to the mixture. Without any fastidiousness, the boiled fish skins are squeezed out into a trough by the dirty hands of the Gilyak women, and for more flavor the small pieces of yukola are first ground with the teeth and spat out with the saliva into the dish...

342 The exterior living conditions of the Gilyak are very simple.
354 Only in some places closest to the Amur have the Gilyak adopted
352 the Manchu type of winter dwellings, which, by the way, are also
[197] very primitive. In form they are large sheds /28/ built with poles and spars, in which large pipes made of stone or wood and smeared with clay, and connected at the openings with the stove, are laid on the floor along each wall. Laid out over the pipes are plank beds, which are always heated by the warmth of the pipes. The smoke of the stove goes out through an underground passage into a high, vertical pipe which rises straight up from the surface of the ground. The role of this pipe, which resembles those on our factories, is played by a hollow tree. In the middle of a yurt there is a high rectangular scaffold on which the packs of dogs are let out when they are to be fed. A more primitive yurt is a dugout, which is half in the ground and covered with poles and spars smeared with clay or covered with earth. The entrance from the passageway is through a low door along several steps. The hearth is in the middle of the yurt and is surrounded by passages between the plank
[132] beds; over the hearth is the smoke opening. In winter, even in the yurts of the first type, it is sometimes so cold that the mercury in the thermometer freezes, and with the least wind the yurt becomes
352 full of smoke. One sleeps on the plank beds with the head toward
516 the hearth and on skins or quilted bedding; under the head there are

/28 cont./
352 roller-like pillows stuffed with hair or feathers. The favorite posi-
[516] tion of the Gilyak is either to sit in Turkish fashion or to lie
[492] sprawled out on his plank bed. In the depths of the plank bed are placed boxes with valuables, Chinese silks, robes, expensive spears, furs, and other things that play a role on the solemn occasions of one's life: when a beloved person who has died is sent off on the long road to the settlement of the dead; when a daughter is provided with a dowry and sent off to her husband's house; when it is necessary to pay ransom in affairs of vengeance, or to pay the bride money for a bride bought for a son or brother, and on similar occasions.

342 The summer dwelling is a hut placed directly on the ground, or a pile structure made of spars and poles.

411 The weapons of the Gilyak consist of a bow, already beginning, by the way, to go out of use, a spear with a long tip and frequently adorned with skillfully made silver inlays, and of late a gun, with which he has already become familiar. In addition one can mention crossbows of various types and a harpoon for hunting sea animals, which is attached to a very long, sectional shaft, several meters in length.

492 As the means of transportation, sleds serve in winter, boats
[501] in summer. The Gilyak dog-sled is in its way beyond perfecting. Being about two meters in length and about 30 centimeters in height and width, put together from slender birch bars with /29/ a light binding in the seat, they are so light that a person can lift them with one hand without any difficulty, and at the same time they are so sturdy that they can carry a weight of a quarter of a ton; in elasticity and sturdiness only the ancient Kamchadal dog-sled can compare with them.

Overturned, runners up, they have the shape of a flattened segment which touches the ground with the smallest part of its surface. Because of the small area of friction, they are very light when in motion, are easily carried over difficult places, and on a smooth road, and especially on ice, they glide like the
492 best English skates. The manner of steering them is very original.
493 Because of their very small width, they are very unstable and lose their balance at the least unevenness. Therefore, the

/30 cont./
221 purchase fish, while in many places (for example, on the Ty the inhabitants set out in whole settlements to travel several h dred kilometers to the seashore for the spring seal-hunting, o to return half a year later for the fall run of fish in their nativ
574 places. The Gilyak likes to travel, however, even without
517 serious reasons for it. To make visits, receive guests, arrang
[484] celebrations, and live gregariously are the greatest pleasures
[157] the Gilyak. Gloomy and stern while alone, he is transformed society and becomes playful, gay, and garrulous.

342 In the north, in winter, between 30 and 40 people live
159 the big yurts of the Manchu type. It is here that sociablenes which is inherent anyway in the conditions of the social frame
128 work of the Gilyak, is cultivated. Now, however, we must l the external aspect of the life of the Gilyak and pass to its in ternal structure, with whose unique peculiarities I intend mai to acquaint my readers.

III.

601 Kinship System. Marriage Norms and Their Influence
171 on the Family-Clan Structure.
174

Of all the peculiarities of the Gilyak way of life nothin characteristically distinguishes them from the surrounding nat alities as their classificatory system of kinship and the rules t regulate their sexual relations and marriage. In this respect Gilyak stand equally far from their southern neighbors, the A and from the Tungus tribes that surround them. The Ainu are only nationality of the Priamur krai who have preserved featu
[611] maternality /materniteta/. The Gilyak family and clan are
[614] patriarchal institutions. As for the Tungus tribes, although t
[595] classificatory system of kinship and certain characteristics of marriage analogous to those discovered by me in 1891 among Gilyak were discovered by me among them, a careful compa of this institution among the Tungus tribes and among the Gil leads to the conclusion that they /31/ belong to quite differe

252 their mouths and chew it. Each person spits out what he has
264 chewed into an individual small basket made of birch bark.
415 The contents of all the little baskets are then gathered and put into a pot; to this are added fresh, unsalted fish, berries, cedar nuts, flour and seal blubber, and the whole is then cooked. The soup is not eaten with spoons but drunk out of wooden mugs; from these they also eat their porridge. They eat with their fingers; instead of plates and bowls for dry food they use small wooden boards with legs. Both sexes eat together; they sit crosslegged on benches on which also the bowls and little trays stand about.

VI. Dwellings

343 Gilyak villages lie along the river banks in low places
361 which, however, are usually not reached by flood waters.
417 The houses stand in a row, usually three in number, seldom 12 or more. The front of the village is usually more or less hidden by the high scaffolding on which the fish are dried. The only out-buildings are small storage houses. Neither stalls nor places to house their idols, neither kitchen gardens nor cultivated fields are to be seen around such a village. (1) The scaffolds consist of high perpendicular poles

> 1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the dogs are usually assembled. Some Gilyak villages have separate bear houses, a small square made of beams where a bear is kept and fattened!

333 Their house (2) somewhat resembles a common farm house,

> 2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has no glass at the windows, and no smoke vent in the roof. It consists of only one room. The walls are made of thin fir beams. The cracks are stuffed with moss and smeared over with clay. The floor consists of pressed clay, the roof of birch bark or coarse dried grass (calamagrostis purpurae) on which earth is sprinkled; the roof is also sometimes weighted with stones, to offer resistance to the wind. Sanctifying the house. On the eve of sanctification, on the day of the sanctification, on the setting of the sun, a reliable man must make his way there and be attentive for a cracking sound or streaks of light.

If a cracking sound is heard during the sunset, or purple streaks of light are noticed, this is a bad sign. If the cracking is at dawn or the streaks of light are bright light -- this is a good sign. The bad sign means that not a real "master," but a devil -- kins has settled in the house. Then the shaman must be called, and he makes a chihinyr chihinx, a grass figure, and drives out the demon. A real "master" is fed two times -- in autumn (cleaning) (I) and another time when one wishes. They

1. Evidently speaking of the cleaning of the hearth by feeding the "master" of the fire.

feed all the posts, the door posts, the threshold, the matrix, the stone under the threshold near the door, where the old man or the old woman lives, guarding the house against the entering of the evil spirit.

/318/ Driving out the evil spirit takes place in the following fashion: a grass figure -- chihinxi, on three legs, is placed in the middle of the yurt. A man holds it by a string tied to his hand; in his other hand he holds a club. A shaman shamanizes with a tambourine. The evil spirit must hide. The shaman enumerates the walls, boxes, and various things in the yurt from which his kejihn must drive out the evil spirit, and he does not mention only one corner -- it is there that the evil spirit is hiding.

The shaman then says: "gu, gu (i.e., 'good'), in such and such a corner there is no evil spirit." And all answer: "Z-z-gu, z-z-gu," such and such a corner does not have any spirit." Finally the shaman says: "The kings has hidden in such and such a corner. Ntasu (apparently the spirit -- assistant of the shaman), go and get him, and the rest make a battue!" "There, he went out, he went out as a dog..." (speaking to the kehhn, i.e., to the spirit).

/318 cont./
"Make a battue, drive him toward this grass figure. Ah! He has turned into a mouse." The chorus: "He is going there. He turned into a human form... he turned into a bird. He got into the pots!"

Finally, there is no other place, and he has to get into the chihinxi -- the grass figure, whether he wants to or not. When he has entered it, the hand of the person holding the thread appears to shake. The shaman shouts: "Pik hisu!" And that one hits. They light a candle, throw light on it, and inspect the grass figure: it again does not have its head toward the threshold. The shaman searches for him again. He finds him. Again the same thing. Finally, the chihinxi has its head toward the threshold, which means that the evil spirit has gone out. The shaman leaves his hanxi to keep watch overnight. In the evening of the following day the shaman calls the rest "master." He has one answer that he was late. The real "master" is generally hidden under the earth, the shaman looks for him and addresses to him the request: "Here they have built an isba, be the matter, they will feed you. watch over it, protect it!" Finally the master has appeared in the middle of the floor and stuck out his head. "Come out," says the shaman, "do not be shy, say what you want, we will prepare everything!" The master answers: "Kill the dog, rub the corner with its blood, boil its meat so that the dog steam fills the house. Boil kosterka. Boil mlyk marcha (a fish with two fins at the tail), boil the white lin'ka, the puchka, the head of the Siberian salmon, treat each post to the steam, do that, make a fumigating smoke with marsh tea, drive in a piece of pig iron several pieces by the threshold and in other places of the floor, then the floor will be iron. Strengthen it thus."

/234 cont./
One may not sleep with a woman when nooses and traps are being set, i.e., during the narkhund, and also during a bear festival and when a child was born.

III.

The Building of a House and Rites and Ideas Connected with the House

A flint and some sweetbrier are placed under the post. The sweetbrier guards against the milk, while the flint is there so that there will be no hole in the wood, and then the milk (evil spirit) cannot come through. The hanxi is made.

When a new yurt is finished, a festival is held. They make an iinu chihinxi (chihinx) efn (I) ehhlung: Ady-Tymti in the shape of a human face on each of four posts (narki khsr) of the house, and,for the sturdiest of the house, inau are tied to the cross rafters (narki). Then they kill a dog, tie it to the narki khsr closest to the door, and rub the chihinxi with the blood of its heart. The meat of the dog is boiled. Mos' is made, and the chihinxinau, the kelgelnan'ch, or (in Arkyro) the lymyznman, and the mich are fed. These fetid fats are then placed in the hearth and tied up with two saranka -- bound with puchka (ehhr); for some reason these bindings are called "heart." After this, mos' wrapped in inau is put in three places under the ground. At night when everybody has gone to bed, it is necessary to burn the fire and say a prayer.

In the fire nearest the exit is the tugur-mam, and beyond the fire the old man tugur-yehhh. The tugur, the master of the fire, is fed with all sorts of viands; they throw them into the fire and say: "Ungur inji, urlantaf muqit" (i.e., "eat well, be a good house"). Next they feed each /335/ corner, repeating: "Urlan tugur muqitalu urlaf parkif, hinlan taf muqif ta cho'ihsiff" -- "In a good fire, do everything well, be a house that brings luck in the hunt, do not get broken!" (it is understood that the old woman

/335 cont./
of the fire, the tugurmam, lives there). Then they feed the four inau. Furthermore, a hole is dug at the left front corner of the hearth, and they put sacrifices there, saying, "Ungur ch'ef, nehhlung kun k-khoiaf khavyr hunivagqin" -- "after eating well, make your children live without sickness," and after these words the hole is filled up. Finally, they feed the ka'lung anikh -- "the hatch looking into a behind." At night, when everybody has gone to bed, it is necessary to burn a fir and say a prayer.

When the hearth is renewed in the winter quarters, small inau are set with sacrifices. In the evening they place three fats, tie them up with saranka and puchka, and then, when everyone has gone to sleep, they throw sacrifices up through the pipe: one is thrown by the woman, another by the man. Before the beginning of the festival, the hearth is cleaned, covered with fresh earth, and lighted with the blood.

The spirits living in the house. Tav yzin -- the master of the house - four chihinxi, two male, two female, all pile hejmar -- old men. Tavyzing tugur, -- This yzing was a tribesman in the past. His soul lives in the yurt in the tugur (flint box).

When the yurt breaks, the tugur must not be touched.

If one breaks the tugur (box), he pays a fine.

Lymyr'a-mam -- mistress of the threshold. She is in fish skin, hanchebacked, gray, lulls crying children. When the ceremony of stamping the threshold is held, when a woman leaves or arrives, she lies in the corner at the entrance, near the caps which are placed on both sides of the threshold.

IV.

Women, Childbirth, and Children

Means for love. There is medicine to make another person fall in love with one. The brain of a cuckoo is mixed into tobacco (then a man soon dies),or a cuckoo feather is sewed in a dress. The girl then goes around like a mad person.

/350 cont./
in boots or sleds, according to the time of the year. The attack was ordinarily made at night. In expectation of it, the whole adult male population, armed, /359/ gathered in one yurt. The women and children remained alone in other yurts, since, by the international law of the Gilyak, the women, children, and also the property of the foe was inviolate in time of war. In each yurt there was a secret exit in case of an unexpected attack. At the first alarm of war they went out by the secret passage and organized an ambuscade somewhere beyond the yurts. The struggle continued for the night in one variant, longer according to others, but there is no doubt that there was a customary period of time for slaughter. Some Gilyak have indicated the period of time, the foe departed, while those attacked began to count the dead. If a smaller number had fallen on their side than on the side of the assailants, the affair had no sequel; otherwise they were obliged to reply to the attack with a war. The attacking side, in any case, had to consider itself satisfied. For the eventuality of meeting at sea an enemy boat which might be of wood and birch bark with metal kettles. They forge iron and artfully work with carpenters' and cabinetmakers' tools. They build yurts in the Manchu style and make stoves and tremendous chimneys of stone. They master Japanese sabers and they preserve very expensive swords decorated with silver inlays. They wear robes and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of groats). They have finally begun to plant potatoes. In the south-east tribes they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

Of all the borrowings made by the Gilyak, the use of iron is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to reforge iron, but they do not know how to make use of it. Recently iron itself was very expensive among them. Their boats and sleds do not contain a single iron nail. Though the Gilyak

/358 cont./

/362 cont./
Thus it is that kinship and social bonds attach the Gilyak to his clan. Without some particular need the Gilyak will not abandon the settlement of his clan, the tombs of his clan. No matter where the Gilyak may grow rich, he finally returns to his homeland. The writer has seen Gilyak who had become completely Russified, who had grown up in service among the Russians, but who, having married, settled down and returned to the settlement of their clan. And this is so easily done. The Gilyak does not find it absolutely necessary to construct a yurt, since in any village there will always be two to three square arshins on the plank bed for the family of a clansman. He does not even need a boat and a net; he will always find owners of these things, with whom he will go fishing on a basis of equal rights. The inevitable affiliation of every Gilyak to the great clan union has placed an indelible stamp on his entire spiritual make-up, on his character, customs, and intellectual development. The habit of judging all jointly, this necessity of entering into the interests of his clansmen, this mutual responsibility in matters of vengeance, these communal festivals and sacrifices, this fraternal bond of numerous fathers, brothers, and children, and finally the necessity and practice of living in large yurts together with dozens of one's fellows -- a necessity that compels the Gilyak to live continually in the eyes of others -- all this must have developed a social, communal, loquacious, serious character, non-like in matters of friendship.

Enter one of the large winter yurts, which are so frequent in the north, enter one of these authilis on a winter's evening, and you will be pleasantly surprised. The huge yurt is lighted up only by the flame of the stoves; in the far corners it is completely dark, but you will hear the sedate conversation of the old men, the loud talk of the middle-aged, merry laughter, the jokes and music of the youth. Here boredom has no place...

/366 cont./
the god gives meat to man, and the bones are returned as the creative element for future fish and seals. For the same reason the Gilyak carefully buries the eyes in the sand of the shore, and any underwater fish is placed in the interior of a seal. To the Gilyak a sacrifice is not a ritual or a routine matter, but serious business on which his welfare depends. In addition to the solemn sacrifices offered at the opening of the seal season, the Gilyak with special ceremony gives presents to his god at the beginning of the sable season. He offers this sacrifice all by himself in the taiga, at the side of the same small balagan which serves as a night shelter the whole time he watches over his snares and traps. Besides his usual gifts, he necessarily sacrifices a dog for this occasion. After striking the sacrificial animal in the heart, he gives its blood to the god, but eats the meat at a solemn feast with his kinsmen. He usually gives his client gifts to his god, although just a little at a time, believing that a hundred fish mean as little to a god as a handful of rice or saranka means to a Gilyak. Offerings made during a journey can be touching. I remember that once during a journey to northern Sakhalin we came to the crest of a mountain ridge unexpectedly, and suddenly there unfolded the magical panorama of the mountains. The "head of the earth" towered majestically before us. My Gilyak companions were deeply moved. One of them took from his pocket a little sack with saranka, tobacco, tweet roots, and so forth, and, moving off about 30 steps to the right, he squatted down, buried a handful of each in the snow, and repeated his prayer for a long time. When he got up, he moved a few steps to the left and did the same thing. Then, his face suffused with emotion, he returned to us and distributed the remains of his sacrifice. He had prayed that we be granted a happy journey. Later, he was able to boast that his prayers had been heard... There is a tremendous difference between the religious feeling of a Gilyak and the religious feeling of not only a Christian, Jew, or Moslem, but even of a Buddhist. "Contrition," the utility of the sacrifice, the idea of a God, in our meaning, all seem to be incomprehensible things to a Gilyak. For him, in religion everything is simple /367/ and clear; there are no doubts and no suffering. He does not wage any religious conflicts

/377 cont./
permission, the emigrant builds a yurt, fishes, kills seals, hunts
361 fowl, etc.; only the streams are prohibited to him for the setting
of nets for sable.

342 /378/ Only in exceptional cases does the Gilyak live
alone with his family in the yurt. Customarily he lives with his
brothers and classmen, sometimes with his father-in-law, more
rarely with members of other clans. The winter yurts of northern
Sakhalin are frequently enormous, holding as many as 50 people,
frequently all classmen. The economic advantage of such communal dwellings consists in the fact that heating, which consumes
a great deal of wood among the Gilyak by reason of the unsatisfactory construction of the houses, is not so costly for each individual taken separately. Moreover, these dwellings guarantee security from abduction for the women. The summer yurts are built
smaller and ordinarily house from one to three families. The winter
yurts are built through the joint efforts of several brothers or
classmen, the summer ones -- frequently by one person. But all
those who live in the yurt, temporary or permanent inhabitants
classmen or members of other clans who had no part in building
it, all live in the yurt without any compensation to the builders,
and it is doubtful whether the latter enjoy any special privileges
in obtaining firewood. If the yurt becomes congested, there
will always be found a pair of persons who on their own initiative
will undertake the construction of a new yurt, into which the
builders themselves move and gladly welcome co-dwellers. Thus,
the dwelling of the Gilyak is, it is true, the common property of
several families who participated in its construction, but at the
same time it is an object of gratuitous utilization by classmen
(074) and, in general, by anyone who desires it. This is a vestige of
the time when the dwelling was built by the joint efforts of the
clan and was an object of collective property.

342 The views of the Gilyak concerning movable property
are perfectly clear and strictly defined. The ordinary articles of
movable property among them are boats, nets, kettles, arms,
dogs, sleds, supplies of dried fish, etc. It often happens that a
boat, a net, or dogs are the common property of two or three

/386 cont./ To make some money,
166 115 individuals, i.e., one-sixth of the adult population, make
423 a living by sledding, sealing, etc. The settlements richest in seals and
(Z04) dolphins are Tamlyvo, Viskvo, Pontr, and Tangi; this last is
(Z05) also richer in sables than the others. Potatoes are raised by the
(Z06) Gilyak of Khoe and Tangi. In the settlements of Tyki, the
(Z07) Gilyak have made a request concerning the settlement among
(Z08) them of at least one Russian with whose help they could raise
(Z09) vegetables. The settlement of Tyd should be mentioned for several other reasons. In the first place, starting from this point
(Z10) the Gilyak are ceasing to hunt sables because of the overwhelming
(Z11) competition from the Tungus who have killed off the sables in the
vicinity of the settlement and now pursue them on their reindeer.

Before the appearance of the Tungus, the Gilyak were very
342 successful hunters of wild deer and sables. In the second place, be-
(Z12) ginning at this settlement one notices a progressive improvement
(Z13) in the construction of the winter yurts. In Tyki the dugout rises
(Z14) above the ground, it has windows made of fish skin, and
(Z15) on one yurt even of glass; in the middle of the yurt, instead
of a smoking hearth, one finds a chimney-like stove with a pipe.
Farther north, beginning with the settlement of Tengi, one encounters
enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The
horizontal channels which lead out from the stove and stretch
along the wall under the plank beds serve mainly to heat these
latter; the smoke goes through a subterranean passage into a
vertical pipe which is made of a hollow tree trunk especially
(Z16) adapted for this purpose. A similar system of heating is used by
(Z17) the Amur Gilyak and in the *fanza* /house/ of the Manchu, from
(Z18) whom, it may have been borrowed.

As to the character of the region, the maritime sections
133 of the western coast are mostly tundra-like, with sparse vegeta-
(Z19) tion; road runs partly along the sea, partly through the
(Z20) taiga, and occasionally over the mountain ridges. Near the
settlement of Pontr the coast becomes more elevated, and, beginning at the summer settlement of Mut'vo, it strikingly

/300 cont./
361 1. (cont.)
Amur was covered with ice. In the spring of
1855, I found the Gilyak in the village of
Sasaoch, the first above Nikolayevsk, already
in their summer dwellings located beside the
winter houses on May 16 (28); in the villages
farther upstream, however, up to Tadi, they
had not yet moved into them at that time.

361 Sometimes the Gilyak living together in one village
342 in winter separate to go to different places for the summer, only
114 to come together again in the fall. If the winter and summer
houses are located beside one another, as, for instance, in Wair
(or Weir, as the Russians call it), the summer houses are larger
and more populous than it actually is. More than half of all
the houses are then the summer houses, much smaller in com-
parison with them, large winter-houses, and some of the
larger storehouses, /321/ similar to the former in construction,
could easily be taken for living quarters. This explains the
excessively great number of houses that I gave in some instances
for individual villages (1). On the other hand, if the

1. Krusenstern (Reise um die Welt /Journey
around the World/, St. Petersburg, 1811,
Vol. II, p. 162) counted 27 houses in one
Gilyak (according to him, "natarischen")
village, which was located on the northern
end of Sakhalin between the capes Elizabeth
and Maria. For another village, on Baddaka
Bay, he gives 16 to 18 houses, but the de-
scription of it clearly permits one to recog-
nize summer and winter dwellings the latter
of which, moreover, stood empty (op. cit.,
pp. 178, 182, 183). Orlof, on the occasion
of his first trip to the Gilyak on the Sea of
Okhotsk (in July, 1849), gave the number of
houses in the village of Kuli as 46 (cf.
Tikhmenev*, Ист. Опис. обоз. Рос.-

/301 cont./
192 1. (cont.)
361 Amurik. Komp. /Historical Survey of the Forma-
342 tions of the Russian-American Company/, Part II,
(113) St. Petersburg, 1863, p. 64), many of which were
certainly only storehouses.

summer and winter houses lie apart as two separate villages, the
number of individual villages appears larger to the uninitiated
traveler and in another way he again gets the impression of a
larger population for the region than it actually has. Later on I
shall return to the number of houses in the individual villages of
the Gilyak, after we have first come to know in greater detail the
construction and nature of their summer and winter dwellings.

342 It is certainly for reasons that make it necessary for the
136 Gilyak to build separate dwellings for winter and for summer. In
winter it is important to be protected against the exceedingly
severe cold; they accompanied by violent storms and snowfalls;
in summer, on the other hand, to counteract the excessive
humidity which is caused by the maritime location and the con-
stant overflow of houses that is by no means rare. The summer rooms
that are as tight as possible and enclosed by windproof walls,
while the latter, on the contrary, can be achieved only by more
open dwellings with a constant circulation of air. To contribute
both adequately in one structure seems to be beyond the strength
and means of a primitive people. Let us now see how the Gilyak
have solved this problem.

342 The winter houses of the Gilyak are of two types: a simpler one,
peculiar and primitive -- the *earth* yurt, and a more complicated
one copied from the Chinese design, which deserves the name of
house rather than yurt (2), and which I shall call simply winter

2. The Russians originally designated the tent-
like dwellings of the Siberian natives with this
word (Russ.: yurta) of Finnish-Tataric origin (cf.
Ahlqvist, Die Culturwörter der westfinnischen
Sprachen /The Cultivated Words of the West

/321 cont./
2. (cont.)
Finnish Languages/, Helsingfors, 1875, p. 106).
Gradually, however, it became common among
them for all the dwellings of same, of whatever
kind they might be, in contrast to the log or beam
houses of the Russian peasants (Russ.: izba) or to
other European houses, and one also often finds
it used in this wider sense in the official accounts
referring to Siberia. Accordingly, the Russians
in the Amur region as a rule call the Gilyak
winter-house a yurt, and this term is used in the
same sense in this work.

342 house or Chinese winter-yurt. The earth yurt, *tarvf* of the Gilyak,
is built exactly on the pattern of a tent: in actuality it is noth-
ing more than a more or less spacious, immovable tent half
sunk into the ground and roofed over with beams. If there is to
be such a large yurt of this kind, a hole about 20-22 feet square
and about 3-4 feet deep is dug in the ground; its walls are
smoothed off, at least the upper part, and roofed with beams.
342 Around it there is erected a pyramidal /322/ roof slanting upward
(336) evenly on all sides, which consists of thin beams placed close to
one another and resting on four vertical posts, in turn, it is
supported by four supporting posts (a) inside the yurt. /Illustration
(B54) appears here./ Only at the peak of the roof is an opening left to
serve as a smoke vent. In order to make the roof airtight, it is
covered on the outside with dry grass and soil. In the autumn
when snow falls on it, the whole yurt from the outside merely
looks like a snow-covered hill slightly blackened at the top by
the rising smoke. The entrance (b) is found on the side of the
yurt which is away from the prevailing winds or is most protected
from the wind. It does not lead directly into the yurt, however,
but rather into a quite long, low, gradually descending passage-
way (c). Likewise roofed over with thin beams or tree
branches and dry grass, in which, at both sides, either
a few household utensils are kept or the place for the dogs is

/322 cont./
342 Plan of a Gilyak Earth Yurt (*tarvf*).
(113)

floats. At the end of this passageway one reaches the door
(d), which is either vertically hinged, or is turned up, or is
formed by a board placed horizontally, which can be pushed
aside (Pl. X) (i). Directly behind it, or below it, a few steps

1. On this plate, showing the interior of a
Gilyak earth-yurt, the door, through which
one can pass only in a extremely stooped
position, is too high.

lead down to the floor of the hut, which consists of stamped earth.
342 In the yurt, along both sides and in the rear, between the sup-
35 porting posts and the earth wall, runs a sitting and
sleeping bench or plank bed (e), which is about one and a
half feet Category 116, P.990 -- Analyst)

/322 cont./
342 half feet high and five to six feet wide and is interrupted only at
35 the two rear corners of the yurt. These corners (f, f) are usually
rounded off, like those in front, and are used for putting away
various utensils, clothing, and sleds, and the like. This
creates a partition, even though only a very incomplete one, be-
tween the two side-benches and the rear bench, which is regarded
as the best and most distinguished place in the yurt. Opposite the
inner edge of the benches, somewhat above the height of a man,
there are cross-poles running between the supporting posts, which
serve for hanging up clothing and the like. In the middle of the
yurt, between the three plank-beds and only about three feet
from each one, is the hearth (g), a platform about four feet wide,
twice that in length, and three inches high, made of clay, or
very simple in nature, in that it consists of only a wooden frame
put together with boards, /323/ which is filled with stamped
earth. Over the hearth, another stone platform is laid, the inside vent is so
very high above the hearth; the passage-way leading to the do
has disappeared or shrunk to a few sheltering projections -- in
short, the yurt has become a tent made of thin wooden beams.
(Z21) Such was the small yurt of Tafiz-wo in the Tymy Valley on
(Z22) Sakhalin where I spent the night of February 18 (March 1), 1856
and found the mercury in the thermometer freezes the next morn-
ing. I am unable to say whether this was only a temporary stru
ture, or, any rate, it was occupied by a Gilyak family with chil
dren, and their summer yurt stood not far off. This winter yurt
Tafiz-wo was distinguished only by its stronger material and
larger dimensions from the emergency tent that the Gilyak usu
erect when during their winter journeys they are taken by surp
by a violent snowstorm. On my /324/ winter journey in 1855
(Z23) was forced to spend the night of Feb. 6/18 in the forest on
high nashore somewhat south of Cape Wangi (I) on the west

/323 cont./
342 and crosswise diameters corresponding to the hearth or crosswi
35 to it.

The smaller earth-yurts of the Gilyak are quite similar in
nature, except that in them all the dimensions are more or less
considerably smaller. In some cases, for instance, the hole
dug in the ground for building the yurt is so shallow that there
is nothing to be seen of any wall behind the plank beds, but
rather the timber of the roof begins immediately. In order to
gain space in such small yurts, the two rear corners are also
equipped with plank beds, so that, with the exception of the
front wall and the two front corners, one continuous sitting or
sleeping bench extends all around. If the dimensions of the yu
are reduced even more, it finally becomes quite shallow, and
hearth and plank beds, framed by narrow, upright boards, ar
rise above the ground, the latter only as much as the thickness
of the layer of boards serving as a bed. In the smaller yurts, ther
very high above the hearth; the passage-way leading to the do

X.

The Building of a House, Its Plan, and Rites Connected with the House

342 [087] Before laying down the first row of logs, they try sprinkling flour: if in the morning there is an imprint of a human foot, this is good; if of a human hand or of a beast, this is bad, and then they change the place. If there are no imprints of any kind, this is also good.

342 354 Explanation of the plan of a house (see drawing). 1. Shy -- door. 2. Tol-erkh pusk fakh -- window facing the hearth of the "master" of the sea. 3. Kem-fakh -- second window to the left of the door. 4. Ponakh-fakh -- window over the middle plank-bed. 5. Pal-erkh ponakh-fakh -- window facing the master of the mountain. 6. Kyly nakh fakh (mat'k:as' n'ekh fakh) -- window alongside the long plank-bed. 7. Mat' k:as' akhr fakh -- window near a small post. 8. Pal-erkh pusk fakh -- window on the side 342 of the mountain. 9. Kangyl -- the place for tying dogs. 10. Tly k:as' -- large post. 11. Kil erkh mat' k:as' -- small post. 12. Tol erkh mat' k:as' -- post on the side of the sea. 13. Mat k:as' -- small post. 14. Hytyfi mat k:as' -- middle small post. 15. Pi'la digr-irku k:as' -- large elongated post under the matka. 16. Pal erkh' mat k:as' -- small post on the side of the mountain. 17. Kylynã mat' k:as' -- long and slender little post. 18. Shyvos n'ich fakh -- small stone near the threshold. 19. Pi'la k:as' nir fakh -- small stone at the threshold on the level of the floor. 20. Pi'la digr -- elongated matka. 21. Pal erkh tuur -- hearth of [354] the master of the mountain. 22. Tol erkh tuur -- hearth of the [335] master of the sea. 23. Tyjf -- cross log, foundation of the house. 24. Kylzhutã -- the middle of the plank bed where they put a person who has been wounded by a bear. 25. Uig dz:onkh -- tabooed [778] corner for the bear's head and so forth. 26. Ke dz:onkh -- upper corner. 27. A dz:onkh -- lower corner. 28. Pal erkh pusk dz:onkh -- corner on the side of the mountain for tabooed things. [776] 29. The floor is divided into two halves: a) pal erkh kyl, and b) tol erkh kyl. On each half is placed only that which has to do with the appropriate spirit, with tol or pal'.

/315 cont./

342 782 Sacrifices (sacrificed dishes -- chmãus) are placed on the appropriate half; if there is not enough space, then on the appropriate nau (tol or pal'). /316/ /Sketch of the house-plan appears here./

342 [776] /317/ Tyvyz -- "master" of the house; he lives either under the post (10) or under a stone (19). Sometimes he is an old man, sometimes an old woman or a young woman.

The master of the house and his family occupy the tol' erkh pusk; if the family is large then also the kemfakh (3) and ponakh (4). The bear's head is placed in the middle (25).

[356] [782] In autumn, during cleaning, everything is abundantly fed: the walls, the floor, the supports under the plank beds, the edges of the plank beds, and so forth.

Rites upon the completion of a house. When a new house is completed, they place two sticks, one in the front and the other in the back (of the house), and on a thread stretched between them are hung images of the sun (keng) and the moon (long chakh). They are not renewed later.

342 782 When the house is completed, sacrifices are made: They prepare mos' 1) alys -- berries, 2) rak: -- a porridge of rice or wheat, and feed the four corners (chonkh), four posts (mon'-nakh) and the two posts in the middle -- the front one, amkhas', and the rear one, kemkhas', in which the master lives; they also feed the crossbeam -- tyjf (edz:). Here the old man says: "Urla dyf muja' nolagu kýnynguch: humguja', ta sikhydz kh:olaf ta humguja'" -- be a good house (sit firmly). Make it felicitous for my children, and so that there be no kind of sickness." In autumn the [356] house is cleaned, plastered with clay, and they sacrifice -- tyv arnydz:.

342 778 776 Tyv yz' bakh -- a stone before the threshold or beyond the threshold, or a piece of pig iron; under it sits the "master," who guards against the entry of the milk'.

342 782 776 Lym yz' -- threshold. Beyond the threshold, under the ground, they place different foods (chyudz:) -- for the earth -- the master and the tol fynydz:.

Plan of the House of the Amur Gilyak

Section 3: "Ethnographie, auf Grund des von Dr. Karl von Scherzer gesammelt. Materials bearb. von Friedrich Müller /Ethnography, on the Basis of Material Collected by Dr. Karl von Scherzer and worked up by F. Müller/," Vienna, 1868, p. 158. In the last-named work the heating by pipes is called "Russian type," though this is by no means a national Russian arrangement.

by means of which an evenness of temperature is attained in the house to an extent inconceivable in the primitive dwellings of the Amur peoples.

352
354
516
171
513
[179]

Finally, the fact that the heated sleeping benches are used by the Gilyak and all the other Amur peoples in exactly the same way as by the Chinese also /353/ argues in favor of the Chinese origin of them. According to U-tschen, the Chinese always lie crosswise on the kang (1), with their feet

1. Cf. Wassilijef's translation of U-tschen's writing, op. cit., p. 98.

toward the wall (2), and the same is also observed by the Gilyak

2. Pallas, op. cit. In the Amur region, too, I have never seen Chinese sleep otherwise on the kang.

and the other Amur peoples with superstitious strictness, whereas in the earth yurts, one sleeps in the opposite position, with the head toward the wall. In a Gilyak winter-house on the Amur, when I once placed my head against the wall, as in the earth yurt, in order to have a support for my pillow, it aroused general indignation among the Gilyak, and the cry "uïtsch, uïtsch," which means the same as "misfortune" or "unlucky, forbidden," rang out on all sides. The reason why the Chinese always assume this position on the kang is said to be that the part of the sleeping bench that joins the wall is especially warm because of the pipe

[123]
[184]
[177]

G /353 cont./
352 running under it and therefore is better suited for the feet th
354 for the head. There is another justification for this custom
513 the winter houses of the Amur peoples. If one lies with his
516 head against the wall, he exposes himself so that the rats,
171 which are exceedingly abundant in these houses and which
[136] ways run along the walls, would be constantly running over
G face. This alone, however, would not make the Gilyak ref
[184] to allow even a stranger to assume this position on their 'kan
[199] if superstition did not demand strict observance of the tradi-
tional custom, and afraid of any violation of it, no matter
G whom, as misfortune for all the inhabitants of the house.
342 Due to the lack of historical data, it cannot be deter-
171 mined when the Chinese winter-yurt reached the Gilyak on
Amur and, gradually spreading downstream, supplanting the
earth yurt, reached the Amur-Liman, the coast of the Sea o
G Okhotsk, and the Liman coast of Sakhalin. In the reports o
[175] Pojarkof and Nagiba, who spent the winter among the Gilya
at the mouth of the Amur and along the Sea of Okhotsk in 1
45 and 1652 (3), there are, unfortunately, no hints which w

3. See pp. 216, 219 ff. above.

K permit conclusions about the nature of the Gilyak houses at
342 time. In the case of another Paleo-Asiatic people, the Kam
177 chadal, we see the original earth-yurt completely disappea
175 before an imported, foreign type of house construction with
the short space of about 50 years. At the time of Krascheni
and Steller (in the forties of the previous century), all the
Kamchadal still lived in earth yurts of the type described al
Even in 1779, when Clerke, the successor of Cook on the la
third voyage, visited Kamchatka, at least the south of the
peninsula, between Peter-and-Paul's Harbor and Bolscherez

4. Tagebuch einer Entdeckungsreise nach der Südsee in den Jahren 1776-1780 unter Anführ. der Capitäne Cook, Clerke, Gore und King, transl. by J.R.Forster, Berlin, 1781, p. 333.

/324 cont./

(417) origin, or, on the mainland, Chinese, with a rather long, straight
(417) beard, and a thick blade almost equally broad to the end, as is
(418) shown on Plate XXX[illegible] in the hand of a Goldi boy. At that time
(419) the Gilyak lived entirely on human food, with a short, somewhat
(420) sloping handle and a little more than a pit's few feet deep in the
(421) snow, lined the bottom and the walls with fir branches, spread
(422) a cover of fish skins over it on the north side, over sticks stuck
(423) obliquely in the snow, and in the center built a small fire, over
(424) which hung the kettle. The wind increased during the night, and
(425) in the morning the storm was so severe that further travel was
(426) inconceivable. The Gilyak immediately set to work to make a
(427) camp better protected from the storm and snow. First they dug
(428) a circular cavity in the snow, stuck sticks around it, coming
(429) together conically at the top, and spread several fish-skin
(430) covers over them in such a way that only an opening at the top
(431) was left for a smoke vent; a tip of the cover that could
(432) be folded back served as a door. Then the walls of the pit and the
(433) ground around it were covered with fir branches, and over that were
(434) spread the bear skins used for a bed, which the Gilyak always take
(435) with them on their winter journeys. Next came the setting up of a
(436) hearth in the little dwelling. The important thing was to create
(437) the base for the fire, because otherwise, made directly over
(438) the snow, it would soon degrade into a pit and could no longer
(439) warm those sitting around it. For this purpose several very flat
(440) pieces of wood were placed as exactly and as close to one another
(441) as possible, framed on all four sides by other, thicker and set on
(442) edge, and these latter were fastened in position by wooden pegs.
(443) In this manner a rectangular cavity was obtained for the
(444) hearth. At the bottom of it the Gilyak now spread pieces of larch-
(445) tree bark, then brought lumps of frozen sand from the high em-
(446) bankment along the seacoast, cut them up with their axes, which
(447) they always carry with them on such journeys in order to procure
(448) the necessary firewood for the nightly campfire, and with this
(449) filled the cavity made for the hearth up to the rim. In passing I
(450) must mention that the axes commonly used for housebuilding
(451) and the like by the Gilyak and their neighbors at the time of my
(452) stay among them were either, on Sakhalin, of Japanese shape and

/324 cont./

(453) Tyrmy Gilyak and one from the village
(454) of Tyk, who were traveling along the same route, camped next
(455) to me. With a moderate northerly wind, there was a very heavy
(456) snowfall. The Gilyak dug out a pit a few feet deep in the
(457) snow, lined the bottom and the walls with fir branches, spread
(458) a cover of fish skins over it on the north side, over sticks stuck
(459) obliquely in the snow, and in the center built a small fire, over
(460) which hung the kettle. The wind increased during the night, and
(461) in the morning the storm was so severe that further travel was
(462) inconceivable. The Gilyak immediately set to work to make a
(463) camp better protected from the storm and snow. First they dug
(464) a circular cavity in the snow, stuck sticks around it, coming
(465) together conically at the top, and spread several fish-skin
(466) covers over them in such a way that only an opening at the top
(467) was left for a smoke vent; a tip of the cover that could
(468) be folded back served as a door. Then the walls of the pit and the
(469) ground around it were covered with fir branches, and over that were
(470) spread the bear skins used for a bed, which the Gilyak always take
(471) with them on their winter journeys. Next came the setting up of a
(472) hearth in the little dwelling. The important thing was to create
(473) the base for the fire, because otherwise, made directly over
(474) the snow, it would soon degrade into a pit and could no longer
(475) warm those sitting around it. For this purpose several very flat
(476) pieces of wood were placed as exactly and as close to one another
(477) as possible, framed on all four sides by other, thicker and set on
(478) edge, and these latter were fastened in position by wooden pegs.
(479) In this manner a rectangular cavity was obtained for the
(480) hearth. At the bottom of it the Gilyak now spread pieces of larch-
(481) tree bark, then brought lumps of frozen sand from the high em-
(482) bankment along the seacoast, cut them up with their axes, which
(483) they always carry with them on such journeys in order to procure
(484) the necessary firewood for the nightly campfire, and with this
(485) filled the cavity made for the hearth up to the rim. In passing I
(486) must mention that the axes commonly used for housebuilding
(487) and the like by the Gilyak and their neighbors at the time of my
(488) stay among them were either, on Sakhalin, of Japanese shape and

/325 cont./

(489) in front of the door, but in no way eliminated, and if the door
(490) remains open, such a strong draft is produced between it and the
(491) smoke vent, that even in the middle of the day, when the latter
(492) is deprived of all its warmth in no time and comes close to having
(493) the temperature of the air outside. And yet this experiment must
(494) often be repeated several times a day precisely during very cold
(495) and stormy weather, because then it frequently happens that a
(496) man of cold air sinks down through the smoke vent, or an eddy
(497) of wind gets into it, forces back the smoke, and temporarily
(498) blocks it from getting out. In the shortest time the small room
(499) is then filled with suffocating smoke affecting the eyes, throat,
(500) and lungs, and there is nothing left to do but quickly open the
(501) door, clearing the air again. This is why all the beams in
(502) the yurt are blackened by smoke and covered with a more or less
(503) thick layer of soot near the smoke vent. The temperature in
(504) the earth yurt is even more perceptible at night, for after the fire,
(505) beside which one has fallen asleep, goes out, the yurt is soon
(506) filled with cold air coming down through the smoke vent. It is be-
(507) sure, it is said that this can be closed, but I have never seen it
(508) done, though I spent many a night among the Gilyak. And to be
(509) sure, the air inside is all the worse the smaller the yurt is and the
(510) lower the smoke vent is over the hearth and the sleeping benches.
(511) At night in the small tent-yurt of Tafiz-wo, where one could
(512) reach the smoke vent with the hand and where so big and lasting
(513) fire was therefore possible, /286/ we soon had the temperature
(514) of the outside air, which, in addition, set in accompanied by a
(515) noticeable difference between the temperature in the yurt, and so
(516) preferred in a night's rest in the open air with a steadily burning
(517) fire, even if it should be very cold, as long as there is no snow-
(518) storm!

342 (519) The winter yurt built after the Chinese pattern tschadyf of
342 (520) the Gilyak, is completely different in character. It always has
(521) the appearance of a house provided with walls and a roof. It is
(522) an approximately square structure, though, as a rule, somewhat
(523) longer than it is wide, about 6-7 fathoms long and about 5-6
(524) fathoms wide, with low walls and a large roof sloping down finally
(525) toward the two longitudinal sides (see Pl. XI) (1). The walls

/326 cont./

342 (526) of the walls, horizontal beams, which are not joined at their
(527) ends, but are pointed and fitted into the lateral grooves of a few
(528) thicker, upright beams. On the transverse walls, which rise
(529) higher, and especially in the middle of them, these vertical
(530) beams are of a considerable thickness. The gaps between the
(531) vertical and horizontal beams are chinked with moss and caulked
(532) with clay. The rafters, rather flat roof, which in winter has to carry
342 (533) a considerable burden of snow, requires very complicated timber-
(534) work for its construction and support. The construction appears here
(535) It has a regular roof framework made up of longitudinal beams
(536) and crossbeams. The ridge is supported, in addition to the cen-
(537) tral, upright post of the two transverse walls (see Pl. XI), also
(538) by two thick, towering posts in the interior of the house (a) on
(539) the accompanying plan). Sometimes, instead of one post, two
(540) are used, and the latter is placed in the middle. Similar, but much
(541) smaller and thinner posts (b) sometimes rise up here and there
(542) at the sides and, together with the two nearest vertical beams of
(543) the transverse wall, serve as supports for the middle part of the
(544) roof, and in the lower part it is supported by the longitudinal
(545) walls of the yurt. Longitudinal beams and crossbeams in turn
(546) rest here and there between the towering posts in the middle and
(547) similarly to the upper edges of the longitudinal walls -- a framework
(548) that /327/ serves to connect the walls to one another and thus to
342 (549) steady the walls and keep them from plain. In addition, the lower
342 (550) part of it, up to a little above the height of a man, is used for
(551) the storage of various articles and for hanging up clothing, and so
(552) forth. On our Plate XI one sees the ends of the aforementioned
(553) longitudinal beams at the transverse wall, as well as at the ridge
(554) and the side edges of the roof, project out quite far, whereby the
(555) ends of the latter intersect each other far out at the gable
(556) ¾ [See Category 116, p. 491 - Analysis]

/327 cont./

342 (557) and with the ridge. The remaining finer latticework of the
342 (558) roof is made up of thin poles and sticks put crosswise and then
(559) covered with mats (c) or the large reeds, which, finally with
(560) a layer of dry grass or Calamogromis straw, etc., which is
(561) pressed down and held in place by a series of poles placed para-
(562) llel to the ridge of the roof. The entrance is found in one corner
(563) of the house, and, to be sure, if one stands in front of one of
(564) its long sides, always to the right, in the transverse wall or in
(565) the longitudinal wall, with an ordinary door (d), which consists
(566) of several boards held together by a few cross-strips, and also
(567) always with a high threshold by means of which the influx of
(568) cold air into the house is, at least, somewhat lessened. In the single
(569) pipe serving the two hearths and at the same time as outlet
(570) for the smoke there is one of the most frequently used open sa-
(571) far away into an identically-shaped, vertical, high chimney (e,
342 (572) Gilyak: kin) usually higher than the house. The benches are
(573) covered with mats usually put up by the Gilyak themselves out
(574) of a kind of reed, with only the edge of the bench left uncovered,
(575) and not infrequently the walls, too, are covered with such mats in
(576) place. In the center of the house, between the two posts sup-
(577) porting the ridge, there is a large, heavy table (f), about two
(578) fathoms long and half as wide, on which the dogs are fed, and
(579) which, I shall therefore simply call the dogs' table (Russian: [illegible]).
(580) The top of it, which, along its longitudinal edges usually projects
(581) out in crudely carved, pyramidal, cone or hook-shaped continua-
(582) tion, rests upon four posts, and only rarely stands on four posts
(583) and, if necessary, when more space is needed in the house, dur-
(584) ing the bear festival, for instance, can be lifted off of them.
(585) Above the two ends of the dogs' table there hangs down from
(586) the central longitudinal beam of the house, and a long pole
(587) can be stuck between them, to which the dogs are tied during
(588) the feeding. Our Plate XII shows the feeding of the dogs,
(589) to be discussed later, also gives some insight into the nature of
(590) the interior of a Gilyak winter-house; I must mention, however,
(591) that the dogs' table as it is there shown is little too small and, on the
(592) other hand, the space between it and the plank bed is too wide.
(593) Subsequent pictures which are to illustrate the bear festival and
(594) the mourning ceremonies among the Gilyak give more accurate
¾ [See Category 116, p. 492 - Analysis]

/327 cont./

342 (595) reduced as much as possible. The house is provided with windows
342 (596) (g) on all four or at least three sides, and, to be sure, the two
(597) longitudinal walls and the one transverse wall on the side of the dogs
(598) and under certain circumstances even food for human beings are
(599) prepared. Directly adjacent to the benches and the sitting and
(600) lying-down benches of plank bed with their high edges, which are in
(601) very little and are somewhat low, about one and a half feet high
(602) and one fathom deep, and run all around the walls. Their chief
(603) characteristic is that they are warmed from below by means of
(604) wooden pipes (i) lined with clay, which come out from both
(605) hearths, run under the benches, and join in the corner of the
(606) house diagonally across from the entrance, and in this single
(607) pipe serving the two hearths and at the same time as outlet
(608) for the smoke there is one of the most frequently used open sa-
(609) far away into an identically-shaped, vertical, high chimney (e,
342 (610) Gilyak: kin) usually higher than the house. The benches are
(611) covered with mats usually put up by the Gilyak themselves out
(612) of a kind of reed, with only the edge of the bench left uncovered,
(613) and not infrequently the walls, too, are covered with such mats in
(614) place. In the center of the house, between the two posts sup-
(615) porting the ridge, there is a large, heavy table (f), about two
(616) fathoms long and half as wide, on which the dogs are fed, and
(617) which, I shall therefore simply call the dogs' table (Russian: [illegible]).
(618) The top of it, which, along its longitudinal edges usually projects
(619) out in crudely carved, pyramidal, cone or hook-shaped continua-
(620) tion, rests upon four posts, and only rarely stands on four posts
(621) and, if necessary, when more space is needed in the house, dur-
(622) ing the bear festival, for instance, can be lifted off of them.
(623) Above the two ends of the dogs' table there hangs down from
(624) the central longitudinal beam of the house, and a long pole
(625) can be stuck between them, to which the dogs are tied during
(626) the feeding. Our Plate XII shows the feeding of the dogs,
(627) to be discussed later, also gives some insight into the nature of
(628) the interior of a Gilyak winter-house; I must mention, however,
(629) that the dogs' table as it is there shown is little too small and, on the
(630) other hand, the space between it and the plank bed is too wide.
(631) Subsequent pictures which are to illustrate the bear festival and
(632) the mourning ceremonies among the Gilyak give more accurate

/328 cont./

(633) proportions in this respect and at the same time show other pe-
(634) culiarity discussed details in the construction and interior arrange-
(635) ment of a Gilyak winter-house. In contrast to the summer-house
(636) I make mention that along the walls (h), immediately to the right
(637) and left of the entrance, there are sometimes shelves or cupboards
(638) for storing household utensils, and, to be sure, there are also
(639) one or more large receptacles which contain the water needed for
(640) drinking and cooking the food. An open cabinet with various
(641) cooking and eating implements similarly hangs on the wall behind
(642) the hearth. Finally, it should be noted that in the front transverse
(643) wall of the house, close to the roof, there is a round hole which
(644) can be closed with a similarly-shaped, round board and serves for
(645) ventilating the house when it is filled with smoke and steam during
(646) the preparation of the fish broth for the dogs or with smoke
(647) of the bear's fat, in the middle of the house, and when the window in
(648) the rear longitudinal wall is absent, so that the number of windows
(649) in them is reduced to three. Nevertheless, even these, because
(650) of their considerable size, light the interior of the house sufficient-
(651) ly. The windows are sometimes square, three to four feet in size,
(652) sometimes somewhat wider than high, or vice versa. They have no
(653) glass panes, but instead only a number of little sticks or sticks
(654) distant from one another, and fish skin take the place of glass
(655) between them. In particular there are skins from Salmo
(656) [illegible]ghalian Gilyak: [illegible]-tscho, or, on Sakhalin, [illegible]-tscho (7).

(192) 2. Known by the Russian throughout Siberia
under the name [illegible]

the most common kind of salmon in the Amur River, made at
this and transparent as possible by scraping and pounding, and
then sewed together in such a way that the seams form many
longitudinal lines and a few transverse lines running in a zigzag.
The windows do not open, but are only lifted out with the whole
frame. The floor inside the house consists of stamped clayey
earth. To the right and left of the entrance are the two benches
(Gilyak: [illegible]) made of clay. They are fed through square

/329 cont./

(657) same time in order to let out excessive steam or smoke. The
(658) [illegible] and along the walls of the house are placed the sleeping
(659) benches, the plank beds, on the contrary, are often quite warm.
(516) The Gilyak, to be sure, suffer little from them, since they usually
(517) sleep on the plank bed with their feet stretched out toward the
(518) fire and are convinced of how very hot and therefore uncomfortable
(519) these can become, when in January, 1896, I attended the bear
(520) festival in Tebach for several days. In order to feed the numer-
(521) ous guests, a strong fire was maintained uninterruptedly in both
(522) hearths, and, as a consequence, the temperature of the plank
(523) beds rose so much that some nearby stories on hand in my leather
(524) suitcase which I kept next to me melted completely. The heat
(525) during the bear festival, however, is an exceptional case and great
(526) things that they greatly promote the increase of many kinds of
(527) vermin. Under them, in inaccessible hidden spots, along the
(528) pipes, etc., countless rats (Mus decumanus) make their home and
(529) ravage at night in search of food. Often, when everybody had
(530) gone to bed and I was still writing in my journals, I would see
(531) rats come out from their hiding places and go about the house
(532) not far from me. They do not disdain even to crawl up the un-
(533) [illegible] beam of the house; when I once, in order to escape other
(534) vermin, had a hammock put up between two posts, the great rats
(535) the rats would gnaw through the leather straps and the mat would
(536) fall down. But the vermin against which I sought such protection
(537) are more annoying: the water bugs (Blattidae) and bedbugs
(538) which find refuge in the crevices of the coarse straw-mats. In
(539) summer, if one enters an empty Gilyak winter-house, he is
(540) literally covered with them in an instant. I even discovered that
(541) it is advise to set up a tent in the vicinity of such a house, or the
(542) surrounding smooth and firm ground. Undoubtedly /326/ the
(543) vermin that makes why the Gilyak leave their winter-houses
(544) spring comes and move into differently constructed dwellings
(545) in the hot months of vermin, and in particular of fleas, as well
(546) as the impossibility of staying on the heated plank bed in summer

1. The question now arises as to which one of the two types of winter houses described above prevails among the Gilyak in the various parts of their territory. At the time of my stay in the Amur region (1854-1856) the earth yurt was almost exclusively confined to Sakhalin, but there it far predominated over the Chinese winter-yurts. The area east of the island and the Tymy Valley had only the earth yurt. (In the west coast of Sakhalin,

2. Specifically they were the Gilyak Jalkun and Pryngan from the village of Dobongi, and Tamkin from the village of Ngaur-wo on the Limun.

A FEW YEARS LATER (1863) Dybovski through a section of this coast and made a list of all the villages there, as well as the number and nature of their yurts (4). In comparing my data with his, though they

essentially agree, they nevertheless show some differences which are almost entirely of little value and lead one to conclude that there has been a decrease in the population in this part of Sakhalin during this interval of time. For instance, the number of villages in my list, especially the small ones with only one earth yurt, is larger than in Glebov's, in which the names are scrap, but combined with other designations as referring to one and the same, no smaller settlement. Likewise, for the larger villages, my list shows significantly greater a larger number of yurts than Glebov's. This depopulation which took place after my time is fully explained by the decimation of the native population by epidemic which ravaged precisely this part of the Amur region in the winter of 1857/58. As has been noted, many a yurt died out completely, and in Sakhalin generally almost since in 1856 and 1858 I was at this place no less than four times

along the Limun and the Sea of Okhotsk up to the northern tip of the island, there were villages containing sometimes of earth yurts, sometimes of Chinese yurts, and at times both types of winter dwellings occurred beside each other. I myself have not been in this part of Sakhalin, but have collected detailed information on the villages in it, as well as on the number and character of their yurts, from, among others, Gilyak residing there, who visited me at the Nikolayevsk post in the company of Tschebarbach-Gilyak friends of mine (3). A few years later

Nikolaevsk. Accordingly, at that time, to begin with, three villages, each consisting of a single earth yurt, still lay to the north of Pogbobi. In Dabong, consisting of four yurts, one stood earth yurt and one Chinese yurt, beginning with Tulbij (1).

1. In Gleben it is called Jordört-tigr-wo.

there is a series of villages which consist only of houses of the latter type. This, as has been said, is the most populous part of Sakhalin, with the largest villages, among them Tymi-mula-wo, in my large sketch-map is referred to in pedantry population, and, according to the Gilyak, numbering over 12 houses (2). The last of these

2. Gleben found only nine. The great number of houses and inhabitants of this village is indicated by its name, for tamla, tamlamch, or tamlamch means "numerous" in Gilyak.

tschebrs' villages on Sakhalin, lying in an uninterrupted row, in Pontyr-wo in Tymi-wo on the Sea of Okhotsk. Glebs did not go northward beyond that village and gives only earth yurts for the remaining part of the west coast of Sakhalin up to the northern tip of the island. According to my information, however, the Chinese winter-yurt also predominates there, for after a small interval village, Mainb-wo (in Gleben, Maiyb), there follows Pilja-wo with one earth yurt and one Chinese yurt, which was formerly probably larger, and then there are two more, tschabiyf villages, Tumi-wo and Ngyw-wo (in Gleben, Ngyb), the latter of which is made up of four yurts (and does not lie far from the northern tip of the island (the Mif-yurt, as the Gilyak designated it to me). According to its location on the small bay which Krusenstern called Nadezhda Bay, Ngyw-wo must be the same village that this navigator visited in 1805. From his quite detailed

2) Schrenck—669 E-5 (1854-1856) 1881-1895 RXI Gilyak RX2.

description one learns that the Gilyak ("Tatarem") at the time — it was August 15/27 — lived in their summer yurts. Somewhat farther, Ngyw-wo, larger, by other, apparently larger houses, provided with fireplaces and chimneys, which, however, stood empty at the time (3) — evidently the above-described winter

3. Krusenstern, Reise um die Welt, Vol. II, pp. 178, 185.

houses of the Gilyak. Here, therefore, is other proof of the presence of tschabiyf villages in this part of Sakhalin, too (4).

4. In order to supplement and verify my above data and at the same time to make it possible to compare them more accurately with Glebov's, I am adding here the whole list of the villages explored by me north of Pogbobi on Sakhalin, with a statement of the number and nature of their yurts. To be sure, we did not always hear the name of the village exactly the same, but it is not difficult to recognize them. I am also adding in parentheses the number of yurts given by Glebs, for from this one can judge the extent of the depopulation caused by the smallpox epidemic of 1857-1858, especially for the part of the coast extending south of Pontyr-wo, where Glebs himself visited most of the points and counted their yurts. The following villages lie north of Pogbobi:

Ngamuyf	-	earth yurt	
Wanj - - -	-	1 (4)	"
Ngynb - - -	-	1 (4)	"
Tschebrs - -	-	1 (1)	Chinese yurt

Ngyw-wo - -	-	1 (4)	"

/331/ Among the Gilyak of the mainland the Chinese winter-yurt predominates to a much greater extent than the earth yurt on Sakhalin. Indeed, in my time there was only one earth yurt left, which presumably has since disappeared. It was the small earth yurt of Pjtnach, directly on the Limun just north of the mouth of the Amur. I visited it in March, 1856. It was located at some distance from the Chinese winter-yurt of the same place and was constructed exactly like the smaller earth-yurts on Sakhalin. It could be maintained with some ease that it was almost accordingly simple and primitive construction in imitation of a tent, in the fact that with only slight modifications it is also found among all the other Palaeo-Asiatic peoples.

there are certainly no longer any earth yurts. Along the bays of Tugur and Ulban, where Sakhalin approaches most closely the Gilyak, they live in the winter, as I gather from his handwritten notes (1), in exactly the same type of houses as on the

1. In his travel report, too (see Beitr. zur Kenntn. des Russ. Reichs, Vol. XX, Part 2, p. 619), he mentions the "functional pipes carrying heat under the sleeping benches in the houses" of the Gilyak there.

Limun and Amur. It therefore cannot be assumed that matters are different in the area between Kuli and Ulban Bay, the only search for which so far has yielded no ethnographic accounts. The Gilyak, too, though I often asked them about it, knew of no earth yurt on the mainland to report to me other than the above-mentioned one of Pjtnach.

In brief, therefore, among the Gilyak on the mainland, as far as their distribution extends, the Chinese yurt at present represents the only form of winter dwelling: on the island of Sakhalin, however, it occurs only on the west coast opposite the mainland, along the Limun, and on the Sea of Okhotsk, interspersed with earth yurts, while in all the other Gilyak parts of the island, only the latter form is found. Form this distribution of two types of winter dwellings one may conclude that the earth yurt is the original dwelling particular to the Gilyakh, which was formerly also used generally on the mainland, but later was driven out, little by little and finally entirely on the mainland and in large part on the coast of Sakhalin adjacent to it, by a foreign form that came down the Amur, and Ajtkh has been preserved only among the Gilyak of Sakhalin. Perhaps, I am bringing in favor of this view that the earth yurt is in fact the original winter dwelling of the Gilyak, that it is the only one that is constructed accordingly simple and primitive construction in imitation of a tent, in the fact that with only slight modifications it is also found among all the other Palaeo-Asiatic peoples.

1. Ventsmirnof, op. cit., p. 201.

After this digression, which acquainted us with the earth yurt in its various modifications in the original winter dwelling of all the Palaeo-Asiatic peoples as far as Greenland and the extreme northern part of America, let us again return to our point of departure, the Amur region and the Gilyak. While the earth yurt, the tanf, is the original, national winter-dwelling of the Gilyak, the tschabiyf, erected on level ground and equipped with pipe heating, must be designated as a later form of winter dwelling brought to them from the outside. Into contact with other peoples, chiefly through Chinese influence. I have therefore called it above simply the Chinese winter-yurt. Glebs (2),

2. "Reisebericht von der Insel Sachalin" (Beiträge zur Kenntn. des Russischen Reichs, Vol. XXV, 1867, pp. 133 ff.).

yurt," but, if this is not merely another one of those frequent confusions of the Chinese in the Amur region with the Manchu, as was discussed above (3), as I believe it to be, then it can be

3. See, p. 144, and note 2, in this work.

argued that the Manchu borrowed their way of constructing their winter houses from the Chinese. That is reached the Gilyak from the south, down the Amur, in Bowsi, as was mentioned above, by the distribution of the earth yurt and the Chinese winter-yurt in their area, in particular by the fact that on Sakhalin the latter are found only along the west coast of the island facing the Chinese mainland. Moreover, the type of construction of the winter house can be followed continuously from the south to the north of the Amur region lying upstream from the Gilyak, up to the Chinese along the Unori and Sungari. There is a prevalent everywhere among the Manchu, Chinese and Dwar (2). For example, the Chinese

Nevertheless, this type of house construction, with a system of pipes carrying the heat underneath, under the sleeping benches, and opening into a chimney standing outside the house, is by no means of Chinese provenance, but rather is a product of undoubtedly Chinese origin, introduced by the Chinese from the motherland to Manchuria as well as to their other colonies. For the same type of house construction is found everywhere in North China (6) and in other countries which, like Manchuria, are

4. Though there is hardly a work about China in which there is not also mention of the kang as a characteristic peculiarity of the Chinese dwelling, I want to mention here a few, in part only incidental, in part more discussion or descriptions of it: for example, in Du Halde (Description de l'empire de la Chine et de la Tartarie, Paris, 1735, Vol. II, p. 87), Van Braam (Gesandtschaftsreise in Ambassade de la Comp. des Indes orientales nach Peking, Leipzig, 1798, Vol. II, p. 364), Grenée (Reise durch Sibirien, Berlin, 1858, Vol. II, p. 44b), by Moreau de St. Méry, Paris, year VI (1798), Vol. I, p. 340, Davis (La Chine, traduit de l'anglais, Paris, 1844, Vol. I, p. 120), Fortune (Reise durch China, transl. from Eng. by Fischer, Paris, 1857, Vol. I, p. 301), Huc (L'Empire Chinois, Paris, 1854, Vol. II, p. 380), Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 187-190 and 251 among others), Poussielgue (Voyage du Prince de Joinville dans l'Asie Ch. et de Mme. de Bourboulon, Paris, 1866, p. 24), and Grand-Jean (Souvenirs d'un Voyage dans l'Asie orientale, Paris, 1869, Vol. II, p. 384), among others.

/353 cont./

shortly thereafter, however, in 1790, Saatyschof reported /354/ from his journey through the country that there were no longer any earth yurts anywhere and that instead of them Russian-style houses (log houses, plaited huts) had been built everywhere, only the summer dwellings of the Kamchadal, which are like-wise peculiar, had been retained (1). On the basis of a remark by

1. Sarychev*, Putesh. po Sieverovost. chasti Sibiri, Pt. I, p. 179.

Mamia Rinof on his voyage in 1809 from Deren down the Amur, one might think at first glance that the same thing had happened among the Gilyak on the Amur, too. Coming from the territory of the S'ksma (Olcha), when he entered the territory of the Smienouhar (Gilyak) at Horo (Chipere), he noticed that from there on people, clothing, implements, and way of life changed and became exactly the same as on Krafto (Sakhalin) (2). One might

2. Siebold (Nippon, VII, p. 177). Cf. also p. 248 above.

think, therefore, that at that time the Gilyak on the Amur were still living in earth yurts as on Sakhalin. But this is impossible, for, as mentioned above (p. 466), four years earlier Krusenstern had found the earth dwelling prevalent among the Gilyak on the northern tip of Sakhalin, that is, at the farthermost point, as far as these dwellings are found even today. If, in addition, one considers the fact that Mamia Rinof was traveling in summer, there can be no doubt but that his above remark referred to the summer dwellings, which in fact, as we shall see in a moment, are quite different among the Gilyak on the Amur and on Sakhalin than among their neighbors, the Olcha, and the other Tungusic Amur-peoples. Conditions in Kamchatka and in the lower Amur region were too different to have produced an equally rapid disappearance of national peculiarities in both places. In the former, the Russians, after conquering the region, settled

/354 cont./

permanently among the natives, who were greatly decimated by the previous bloody battles, building their houses in their own way (as already mentioned, peaceful relations with the Kamchadal, even mixing with them more and more. It is therefore not surprising that their style of building soon became the commonly use house throughout the region. Matters were different in the lower Amur region among the Chinese and Manchu: a conquest and colonization of this region by the peoples named have never taken place. As we discussed above in detail (3),

3. See pp. 119, 142-144 above.

it instead was and is visited only from time to time by individual Manchu officials and Chinese merchants who, in a few places, during the year have their own houses, always take up residence in the houses of the natives, and this only among the Tungusic Amur-peoples, for the Gilyak have even denied the Chinese trader entry into their region. Hence, it undoubtedly must have taken a long time before the Chinese winter-yurt replaced the Gilyak from the Chinese on the Sungari, spreading along the Ussuri and the Amur from people to people, and the trading expeditions which the Goldi, Olcha, and Gilyak from ancient times to now have conducted annually to the Chinese along the Sungari and on which they have had repeated opportunities to become familiar with and to appreciate the type of construction of the Chinese house, must certainly have contributed most of all to its adoption and further spread among the Amur peoples.

/355/ In April and May, when spring comes, the Gilyak find it necessary to abandon their winter dwellings and to move into their summer dwellings. First the inhabitants of the earth yurts move out of their houses, because they are made wet and uninhabitable by the water running in both from the top and the sides as a consequence of the melting snow and the thawing of the ground. The Chinese winter-yurts, set on level ground, are more serviceable, even in spring and summer, though even in them water sometimes comes through or over

/355 cont./

the low threshold and soaks the floor when the snow melts quickly or when there are heavy rains. Even these dwellings, however, become uninhabitable in summer because of the warm sleeping benches, which inevitably are heated each time food is cooked, and because of the above-mentioned vermin, and, finally, the crowding of fish carried on in this season of the year requires the move into the summer dwellings, which are more favorably and conveniently located for it.

The summer dwelling of the Gilyak is of the same type everywhere, on the continent as well as on Sakhalin, and bears the same designation in both places *kŷ-f*. The most striking exterior feature is that it rests on piles which rise four to five feet above the ground. Only at isolated points on the east coast of Sakhalin, south of the Amur, especially in Tangi, Choji, Arkai, and Dui, did I see summer houses set on level ground, but otherwise of exactly the same type, outside and in, as those resting on piles (1). The aim that the Gilyak have in

1. The large village on Nadezhda Bay at the northernmost tip of Sakhalin (map, see p. 467 above), which was visited by Krusenstern, had summer houses resting on piles. See his Reise um die Welt, Vol. II, p. 182.

mind with this construction on piles is a twofold one: first, to protect their dwellings against inundations, since the Amur, as a result of prolonged rainfall, often rises considerably and floods the lower stretches of its basin, and then also to make the houses airier and drier by setting them not directly upon the damp ground but somewhat above it, with a constant flow of air under them and penetrating even into the house through the crevices in the floor, this is all the more necessary since part of the fish supply is stored in them. Both may also be necessary for the Gilyak living on the Amur itself, for there, too, depending on the locality, a sudden rise of the waters as a result of stormy winds must be reckoned with, and

/356 cont./

one might call a narrow balcony (1). On the accompanying plan of a Gilyak summer-house it is the space a bounded with a dotted line toward the front. The entrance to it (b) is precisely in the middle of the front side of the house, or, as in the illustration on Plate XIII, somewhat to the side. Through this, however, one

a = Sill or narrow balcony along the front side of the yurt. b, c = Doors. d = Anteroom for the storage of implements and supplies. e = Actual living quarters. f = Sleeping benches. g = Hearth. h = Stone triangle for the big kettle. i = Corners for odds and ends.

Plan of a Gilyak Summer-Yurt (Ailyŷ).

first enters a good-sized front space (d), which is used for the storage of various implements, as well as for storing supplies of fish and the like, and only behind it is the living room proper (e) found (2). This is exactly like the interior of the earth yurts,

1. Krusenstern (op. cit.) calls it a gallery.

2. Krusenstern found this room locked and though that it was the room for this women, which fitted in with his general conception of a Mohammedan Gilyak population consisting of "Tatars," which, however, does not at all correspond with reality.

/357/ This is exactly like the interior of the earth yurts, in that low and wide plank-beds or sleeping benches (f) run along the sides of the room, on both sides and the entrance, leaving a passage door (g), and in the middle, between them, there rises a hearth, shaped as they are there, over which an opening in the roof serves as the front side of the house, or, as in the illustration on Plate XIII, somewhat to the side. Through this, however, one

/357 cont./

yurt, between the piles, for protection against the rain, and the dogs, too, find a suitable shelter under the same protective roof.

The above description also applies, apart from the specific reference to the pile-construction, to the summer dwellings of the Gilyak on the Amur and in addition to those on Sakhalin and, as has already been mentioned, of very similar nature, and it will therefore suffice to add to it only the following remarks referring specifically to the latter. If the yurt is on level ground, the flat sill, space a, projecting along its front side is likewise on the ground. As long as it is still winter, this space is used for the erection of a shelter before the entrance to the yurt, even though only a crude one. For this purpose, on both sides and in front, where the domed line is on the plan a-f-a, poles are set up vertically and, with the exception of a passage, are bound together with plaited switches, and the spaces between them /358/ are filled with grass and brushwood, so that a shelter is produced. This is assigned to the dogs for their abode, where, posted at both sides of the entrance to the house, they make good sentinels for it.

Since the main occupation of the Gilyak during the summer is fishing and preparing the supplies of fish for the winter, one always sees beside the summer dwellings several contrivances for this purpose. Thus, more or less numerous, upon racks for vertically placed boards which can easily be removed in any number desired, as had been done in the case of the yurt at Sibi at the time it was set up, usually, another dwelling, usually one, to be sure, but a very important one in its consequences for the Gilyak, must be mentioned in connection with the construction of their dwellings. In order to make them inaccessible to the great number of rats in the winter yurts, a vital necessity because of the fish supplies assembled in them, a piece of birch bark is placed over the upper end of each of the pole-supporting the yurt, extending around it on all sides, which, as experience has shown, is perfectly adequate to prevent the rats from climbing up the poles to get into the yurt. The sled are hung under the

/358/ merely an approximately square hole which is just big enough so that a person can go through it in a stooped position, and whose cover is a board that fits it exactly, before which a crosspiece of wood is advanced instead of a bolt (1). The interior of the store-

1. An illustration of the front side of such a storehouse, among other things, will be found below on a plate showing a funeral procession of the Gilyak.

house is usually divided by a partition into two sections, which are connected by a door, so that in it, as the accompanying plan indicates, there are eleven separate, large and small, or smaller wall surfaces, along which the supplies of fish are stacked.

/359/ Like the earth yurt, all the pile buildings mentioned above, the summer yurt, the storehouse, etc., are original, peculiarly Gilyak structures which the neighbors of the Gilyak, the Tungusic Amur-peoples, lack, but which recur among many other Paleo-Asiatic tribes. For example, according to Krasheninnikof's and Steller's descriptions and an illustration given by the latter, the summer dwellings of the Kamchadal are pyramidal huts built on top of pillars, and the pile hutsgen by the Russians (1). The Eskimos of the American Northwest along

1. Krasheninnikow*, "Opis. semli Kamchatki" (Poln. sobr. uchen. pusch. po Rossii, Vol. II, St. Petersburg, 1818, p. 87). Steller, Beschreib. von dem Lande Kamtschatka, Frankfort and Leipzig, 1774, p. 318. Steller also gives the dampness of the air and the ground as the compelling reason for the construction of such "dry dwellings" on Kamchatka. This explains why these peculiar dwellings can be found also in other parts of the earth yurts, as mentioned above, had already been forced out by Russian-type dwellings.

/359 cont./ the Eskimos of the American Northwest also the Kwikpak, Norton Sound, and the Arctic Ocean erect their storehouses on high piles above the ground in order to safeguard the supplies of fish, dried meat, and the like against the dampening the summer both against the humidity and against attacks by mice, foxes, wolves, and especially the dogs, which are always hungry during the summer (2).
